MYSORE (Oct. 7).—Mining operations for month ending Sept. 30. —Satisfactory progress has been made in the different bargains throughout the mine. The 890 south of winze north of Rowse's shaft has been driven 20 ft.; the lode has been 3 ft. wide, and assaying 5 ozs., but recently it came in contact with some loose and disjointed ground, which for the time has disordered the lode, but we hope it will improve again soon, as there is a good stream of water coming out of the present end. The lode in the 890 north of winze is 2 ft. wide, and assaying 2 ozs. 0 dwts. 7 grs. The 620 south of incline shaft on the west lode has been driven 44 ft.; total distance, 192 ft.; the lode is 3 ft. wide, and assaying 3 dwts. 6 grs. The 550 south of incline shaft (on the west lode) has been driven 47 ft. 6 ins.; total distance, 237 ft. 6 ins.; the lode is 4 ft. wide, assaying 6 dwts. 12 grs. Glen shaft: The 250 north of shaft has been driven 80 ft. 10 ins.; total distance, 495 ft. 8 ins.; the lode is $1\frac{1}{2}$ ft. wide, and contains a branch 3 ins. wide; assaying 3 ozs., which is an improvement on anything we have had here before. Tennant's shaft: The 360 north of shaft has been driven 14 ft. 5 ins.; total distance, 670 ft. 5 ins.; the lode is 2 ft. wide, and estimated to be worth 5 dwts. The 360 south of shaft has been driven 8 ft. 6 ins.; total distance, 150 ft.; the lode is small and unproductive. The 290 north of shaft has been driven 30 ft.; total distance of 948 ft.; at this point it came into contact with old men's workings, and has been suspended; these men have also driven the 290 south of the cross-cut north of shaft 37 ft. in a lode 4 ft. wide, and assaying 9 dwts. 6 grs. The 235 north of winze north of shaft has been driven 34 ft.; total distance, 109 ft. 6 ins.; the lode is 3 ft. wide, and assays 3 dwts. 6 grs. This level is now up to Gilbert's shaft, and is going through a large arch of ground left by the former workers, which will be a good support for strengthening Gilbert's shaft. Schaw's shaft: The 450 north of shaft has been driven 32 ft. 6 ins.; total distance, 514 ft. 6 ins.; the lode is small and poor. These men have also cross-cutted east towards McTaggart's shaft 22 ft. 6 ins., and we expect to cut the east lode in driving about 80 ft. further. The 450 south of shaft has been driven 12 ft. 6 ins.; total distance, 131 ft. 6 ins.; the lode is 1 ft. wide, and yielding a little quartz, but not sufficient to value. The 320 north of shaft has been driven 4 ft. 6 ins.; total distance, 194 ft.; the lode is small and poor. The 320 south of shaft has been driven 9 ft.; total distance, 263 ft.; the lode is 1 ft. 6 ins. wide, and assaying 2 dwts. 14 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 3 ft. wide, and assaying 4 ozs. 8 dwts. 4 grs. The lode in No. 2 stope in back of this level on the fold is $3\frac{1}{2}$ ft. wide, and assaying 1 oz. 3 dwts. 12 grs. The lode in stope in back of the 700 north of Rowse's shaft is $2\frac{1}{2}$ ft. wide, and assaying 2 ozs. 7 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. 5 dwts. 1 gr. The lode in stope in back of the 700 south of Rowse's is 2 ft. wide, and assaying 1 oz. 16 dwts. 14 grs. The lode in stope in bottom of the 700 south of incline shaft on the wide lode is 3 ft. wide, and assaying 1 dwt. 7 grs. The lode in stope in back of this level south of shaft is 2 ft. wide, and assaying 1 oz. 18 dwts. 6 grs. The lode in stope in back of the 620 north of Rowse's shaft is 1 ft. wide, and assaying 2 ozs. 8 dwts. 2 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in bottom of this level is 2 ft. wide, and assaying 3 ozs. 16 dwts. The lode in stope in back of the 550 north of Rowse's is $1\frac{1}{2}$ ft. wide, and assaying 1 oz. 0 dwts. 5 grs. The lode in stope in back of the 550 on west lode is 3 ft. wide, and estimated to be worth 5 dwts. The lode in stope in bottom of the 466 ft. north of Taylor's shaft is 3 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in bottom of the 400 north of shaft is 2 ft. wide, and assaying 2 dwts. 12 grs. The lode in back of this level south of shaft is 3 ft. wide, and assaying 5 dwts. 6 grs. The lode in stope in back of the 400 north of Rowse's shaft is 3 ft. wide, and assaying 7 dwts. 3 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 5 dwts. 5 grs. The lode in stope in back of the 296 north of shaft is 3 ft. wide, and assaying 9 dwts. 11 grs. The lode in stope in back of the 296 north of Rowse's shaft is $2\frac{1}{2}$ ft. wide, and assaying 15 dwts. 3 grs. The lode in stope in back of the 236 north of Rowse's shaft is 2 ft. wide, and assaying 1 dwt. 7 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 6 dwts. The lode in stope in back of the 360 north of Tennant's shaft is 1 ft. wide, and assaying 2 ozs. 0 dwts. 11 grs. The lode in stope in back of the 290 north of shaft is 3 ft. wide, and assaying 2 ozs. 7 dwts. 22 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 2 ozs. 0 dwt. 11 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 2 ozs. 5 dwts. 17 grs. Rising: The rise in back of the 890 west of Rowse's shaft has been put up 3 ft. 6 ins.; the country rock contains branches of quartz, but nothing to value. The rise in back of the 290 north of Tennant's shaft has been put up 7 ft. in a lode 2 ft. wide, and estimated to be worth 10 dwts. Sinking: Rowse's shaft has been sunk 27 ft. 4 ins.; total distance, 53 ft. 4 ins. below the 890; the ground is of a congenial character, and the progress satisfactory. The winze in bottom of the 780 has been sunk 15 ft. 2 ins.; total distance, 66 ft.; the lode in the bottom is $2\frac{1}{2}$ ft. wide, and assaying 5 ozs. The winze in bottom of the 290 south of Tennant's shaft has been sunk 24 ft.; total distance, 36 ft.; the lode is $1\frac{1}{2}$ ft. wide, and assaying 19 dwts. 14 grs. Gilbert's shaft has been sunk 22 ft.; total distance from surface, 192 ft. This is going down through ancient workings, but it will meet with the lode in a few fathoms further sinking. This shaft has also been sunk 19 ft. 6 ins. below the 290 in a lode 2 ft. wide, and assaying 9 dwts. 2 grs. We are still suffering from a scarcity of water for our dressing operations, but have sufficient to keep on both mills and the tailings machinery part of the time, and with a good flood

of rain, which we are daily expecting, everything would be in full swing again. Our new surface works have been rather retarded by the sickness prevailing on the field, but we hope the worst is over, and that the coolies will soon return to the camp. Mill samples—New mill, 3 ozs. 5 dwts. 8 grs.; old mill, 2 ozs. 0 dwts. 9 grs. Tailings—New mill, 7 dwts. 19 grs.; old mill, 6 dwts.—J. GILBERT.

MYSORE NAGAR (Oct. 29).—Auriferous deposits throughout the district; have traced reef 1,500 yds. from Temple; shall commence washing in five days.

MYSORE REEFS (Oct. 7).—Fortnightly report.—Harvey's shaft: The cross-cut east of the 520-ft. level north has been advanced 3 ft.; now 24 ft. 3 ins. from level; we are not yet through the lode. A sample of the quartz gave, according to assay, 11 dwts. 17 grs. of gold to the ton. The 520-ft. level south: This end has been extended 4 ft.; now 66 ft. 6 ins. from cross-cut; the lode is of greater width than the drirage, composed of quartz and a little arsenical pyrites, assaying 3 dwts. 6 grs. of gold to the ton. Winze below the 460-ft. level has been sunk 1 ft. 3 ins., now 35 ft. 3 ins. below the level; the lode is of great width, composed of low-grade quartz. The 400-ft. level south has been advanced 6 ft., now 208 ft. 6 ins. from shaft; the lode is 1 ft. 6 ins. wide, composed of quartz and pyrites, assaying 3 dwts. 6 grs. of gold per ton. The 400-ft. level north has been extended 11 ft., now 272 ft. 7 ins. from shaft; the lode is rather small, but carries a good hanging-wall with little quartz and pyrites against it, and is leaving out a good deal of water. The outbreak of cholera has very much retarded the work during the past fortnight; a great many of the coolies having left. I am pleased to say that no case has occurred for several days, and the men are returning to work.—M. SCANTLEBURY.

MYSORE WYNAAD CONSOLIDATED AND MYSORE WEST.—The mining manager reports by mail for the fortnight ended Oct. 7:—North shaft: This shaft has been sunk 5 ft. 3 ins., making a total depth of 203 ft. from surface; there is no change. We shall stop to put in a cistern at the 173 this week, and shall then do away with the hindrances caused by the water. The 173 level: The 173 south of cross-cut has been advanced 2 ft. 6 ins.; total distance, 18 ft.; there is no change here. The winze in the bottom north of cross-cut has been sunk 3 ft.; there is a small lode about 8 ins. wide going down, and worth about 6 dwts. of gold per ton. The cross-cut west has been advanced 3 ft. from the plat; the rock is very hard. South shaft: This shaft has been sunk 4 ft. 6 ins., making a total depth of 125 ft. from surface; the rock continues very hard and tough. All our machinery is running satisfactorily.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Oct. 1:—The 186-ft. level—Drive west: Driven 5 ft.; total, 81 ft. The 186-ft. level—Drive east: Driven 2 ft.; total, 28 ft. The 186-ft. level—No. 4 winze: Sunk 4 ft.; total, 46½ ft. There are no changes to report. Drilling machinery running well.

NEW EBERHARDT (Oct. 11).—The mine manager reports:—Eberhardt: North drift, No. 2 upraise, advanced for the week 4 ft.; total length, 53 ft. The ground in this drift is a little harder than it was last week, but the face of our drivings show considerable low-grade quartz. South drift, No. 2 upraise, advanced for the week 4 ft.; total length, 57 ft. This drift still continues in spar, with some bunches of quartz mixed through it. Cross-cut east from No. 3 upraise advanced for the week 5 ft.; total length, 83 ft. We are still running along the brake in which we found some little quartz. The face of this drift is nearly all lime. No. 3 cross-cut west advanced for the week 10 ft.; total length, 79 ft.; face of drift is as yet in a mixture of black and white spar and quartz, which looks quite as favourable as last reported, but what the result will be is at this time impossible to determine. John Wild north: The men I have working at this point have been repairing and putting in ladders. There is considerable quartz in and around the John Wild Mine, and I thought I would do some prospecting around for say the next few weeks until the cold weather comes, then I expect to commence sinking in the tunnel, and shall again take these men from this place. Beecher cross-cut east advanced for the week 7 ft.; total length, 73 ft. Face of drift in hard spar and lime.

(Continued on page 647.)

REPORTS OF MEETINGS.

SCOTTISH AUSTRALIAN MINING CO., LIMITED.

COMPETITION WITH ENGLISH COAL—EFFECTS OF LABOUR STRUGGLES—DIVIDEND OF 10 PER CENT.

The half-yearly ordinary general meeting of the shareholders of the above-named company was held at Winchester House, Old Broad Street, E.C., yesterday.

Mr. George Smith

presided.

Mr. F. W. TURNER (secretary) read the notice convening the meeting, and the directors' report was taken as read.

AN IMPROVED YIELD.

The CHAIRMAN said: Gentlemen, we have the pleasure of meeting you to-day, under circumstances which do not greatly differ from those prevailing at the time of our last meeting. Our coal business has been going steadily on, and we have done better in the last six months than we did in the corresponding period of 1890, to the extent of 24,821 tons. This is, so far, satisfactory, but we must bear in mind that the time with which the comparison is made was an abnormally slack one in the annals of the company's business experience. The trade of the collieries generally is not now as large as could be wished, the shipments to foreign ports being still much kept down by what I have often referred to, viz., the low rates of freight from this country, which enable English coal, although higher in price than Australian, to be laid down in India, China, and Western American ports, at prices which compete very severely with Australian. Then there is another cause which bears more particularly upon the Associated Northern Collieries and affects this company, and that is the increase of collieries outside of the association which, under the circumstances of a slack general demand, are pushing off their coal at prices below the rate of the association, and so taking away business that would otherwise be done by Lambton and others in association.

PRODUCTION EXCEEDS CONSUMPTION.

In fact, just now, the coal-producing power is a good deal in excess

of the consumption, and I need not tell you that that is a state of things which does not contribute to the remunerative character of any business, or to the comfort of those engaged in it. We have not been troubled with strikes during the past half-year; that is to say, not in the coal trade. But Australia has been most seriously and injuriously disturbed by labour commotions, accompanied by much violence, which have taken place in her staple industry, and pastoralists have been severely put to it to hold their own against a strong labour organisation, which wanted to dictate to employers what labour they should employ and the conditions of such employment. The movement, happily, has not succeeded, but trade was seriously injured and hampered during the struggle, and the effects of this were felt, of course, by an article of such general necessity in manufactures and locomotion as coal. Our own miners have worked steadily and peacefully, but their action last year in stopping the coal trade of the colony in order to take part in a labour dispute that did not directly concern them, diverted business from the New South Wales Collieries, and left a legacy of dulness that affects the men in their earnings as well as the colliery proprietor in his. I hope, however, that we may have entered upon

A PERIOD OF QUIET

in regard to labour questions, which can be utilised in the promotion of the company's permanent interests, but I am conscious, in expressing this hope, that the elements of labour disturbance are very widely spread, and may at any time manifest themselves in one direction or another. I am very glad to be able to state that, so far as the management, in the colony, of this company is concerned, a sincere desire to promote the welfare of the men who work in its business exists, and always has existed, to mutual advantage.

REDUCTION IN THE PRICE OF COAL.

Since the report was issued we have received a telegram announcing that the Associated Collieries have resolved to reduce the price of coal, from Jan. 1 next, from 11s. to 10s. a ton. The circumstances of the trade to which I have already referred, and particularly the underselling of the outside collieries have caused the subject of a reduction of price to be a good deal discussed recently, and the telegram, therefore, does not come as any surprise to us. We have to see what the effect of the reduction will be, I cannot foretell it, but it is expected that it will cause business to come back to the Associated Collieries, and if that should turn out to be the case, the step will prove a beneficial one, for a colliery working full time can earn as good or a better profit per ton at the lower price, than one only working half time can earn at the higher, the heavy permanent charges being spread over a wider area.

NEW COLLIERY AT DURHAM.

As regards the new colliery that we are opening at Durham, to take some day the place of Lambton, Mr. Croudace, the colliery manager, has been called by the board to this country in order to gather experience of all the most recent labour-saving machinery in use here, with the view of equipping Durham in the most efficient manner. We have, of course, most fully considered and discussed the subject with him, and he will be happy to answer any questions to-day, which any of you may like to put to him in connection with this or any other matter coming within his province as colliery manager. We have a good seam of coal at Durham, about 5 ft. 6 ins. thick, in a very compact form, and I think, in due time, we shall develop a valuable colliery there.

THE CADIA PROPERTIES.

At the Cadia properties operations were practically stopped at Dec. 31 last, but Capt. Holman expressed a strong desire to go a little further with a drive to the west until it should cut the great iron lode, and the board sanctioned his doing so. It has to be seen what may come of this; the expense is small. Some 20 tons of copper from the properties have been sold here. The proceeds will go to recoup, *pro tanto*, the cost of the recent explorations. Before selling the copper the board caused an analysis to be made of it, and it was found to contain an appreciable amount of gold to the ton (nearly ½ oz.) and a few ozs. of silver. This fact is confirmatory of the gold-bearing character of the Cadia lodes, although up to the present time a vein of gold of a payable amount for extraction has not yet been found in them.

SUCCESSFUL NEW ISSUE OF SHARES.

The new shares that were created at the last meeting have all been taken up. The allotment was made to the shareholders *pro rata* to their then holdings. As is usual in such cases, a few shares remained over, and a circular was issued to those who had already taken their proportions, giving them the opportunity of taking a few more. The applications made were for about four times the number of shares to be allotted, and a proportional allotment was made. I think this shows that the shareholders appreciate the company's shares, and with good reason, for, taking a look back over the past career of the company, it has proved an excellent investment to them. Looking forward, I should say that there is every reason for hopefulness. Our business is in the centre of a great industry, in colonies of vast resources and potentialities, and I can see no reason why (with inevitable fluctuations from time to time) it should not continue to prosper. I beg to move, "That the report of the directors be received and adopted, and that the dividend proposed therein at the rate of 10 per cent. per annum upon the paid up capital of the company, entitled to participate in the profits of the half-year ending at June 30, 1891, 160,000l., be confirmed, the same to be payable, free of income tax, on and after Saturday, Nov. 7 next."

Mr. FREDERICK P. WARD (director) seconded the motion.

SATISFACTION.

Mr. FERGUSSON: Gentlemen, I concur in the board's satisfaction with the business done at the Lambton Colliery; and also in their confidence that the Australian coal trade must steadily increase with the growth and development of the Colonies themselves. As regards English coal competing with Australian coal, that depends on the price of coal in England, as well as on the rates of freight; and I cannot doubt that our excellent coal, raised at a moderate cost in the Colony, must, in the long run, hold its own. A business such as ours must always be liable to fluctuations; and it would not be reasonable to expect 20 per cent. always. The 10 per cent. dividend now proposed is

AN EXCELLENT RETURN

for our money. I may, perhaps, be allowed to say that the board were

wise in deciding that Mr. Croudace should visit England; and we are all glad to see this valued manager of our colliery, whose inspection of collieries in the old country must prove useful to himself and advantageous to all concerned. In present circumstances I am not going to trouble the directors on the subject of further developing the Cadia properties. The board's policy in this matter is unquestionably wise and prudent; but I do wish that somehow or other the mineral contents of the great iron lode, of no less than 120 ft. in width, could be thoroughly explored, for at present I feel as if I had

A HUGE SACK OF VALUABLES

so sealed and locked up that I cannot get in and make use of my wealth. I am quite aware that this important matter occupies the board's constant attention; and that it may safely be left to them. I will, therefore, say no more, but conclude by asking one question, viz.: Can you, sir, give us any idea of the cost per ton of gaining the 20 tons of copper ore which have been sold for 51*l.* 15*s.* per ton, as stated in the report?

ALLUVIAL GOLD.

Mr. Frewer: I rise principally to congratulate you, gentlemen, and ourselves, upon the improved yield during the half-year, there being an increase in the sales of 24,000 tons. I think, considering the exceptional circumstances through which the colliery is passing, that is a very favourable feature. I also find that, in addition to the larger yield, our profits were something like 2*d.* per ton more. I hope that will go on. I see they are still discovering on the Cadia property some alluvial gold, and I believe that the company is entitled to a royalty in respect of that. Can you tell what is the actual amount of gold recovered there, so that we may know that we get our fair proportion as royalty? I know the amount at present is very small, but are we sure that we get the right amount? I know it is somewhat difficult to ascertain this. In quartz mining the gold can be measured, but in alluvial mining we must depend upon the honesty of our tributers.

Mr. C. G. Roberts: I think, Mr. Chairman, it is not generally a subject for congratulation when the price of an article you have to sell goes down, but in the particular case in point I feel, personally, very great gratification at hearing the news contained in the telegram which you gave us—that the Associated Collieries are about to reduce the price of coal from 11*s.* to 10*s.*, because I think there were two considerable dangers arising out of the fact that the price that the Associated Collieries were selling their coal at was higher than that of the outsiders. There was in the first place the danger of their proportion of trade decreasing, whilst the others increased; and secondly, it would have resulted in the opening up of other collieries. I think it is a matter of satisfaction that the Associated Collieries have taken this step, because it was not in the power of the board to act singly in the matter. (Hear, hear.)

THE CHAIRMAN'S REPLY.

The Chairman: In reply to Mr. Frewer, I may say that the copper ores have been raised incidentally to the general work of exploring the great iron lode for gold, and I cannot apportion to it the exact cost applicable to obtaining it. The proceeds of the copper will be so much to the good in recouping the general cost of the explorations. There are 12 more tons coming. As to the tributers rendering a proper account of the gold they get, Capt. Holman lives on the property, and takes charge of everything that is produced. The matter is, I think, perfectly safe in his hands. Perhaps you will now be glad to hear a word from Mr. Croudace, our colliery manager.

VIEWS OF THE COLLIERY MANAGER.

Mr. Croudace (who was received with cheers) said: Mr. Chairman, ladies and gentlemen, I do not know that I can say very much more than what our chairman has said to us. I have listened with a great deal of pleasure to the report, for I felt that from beginning to end it was an honest, straightforward, and truthful statement of our position; and it deals with the broad question of what we may expect in the future. I can only tell you that, of course, where any person in business is highly successful, it makes others envious of his success, and so successful have we been in the coal trade of Newcastle that we have been enabled to pay you, not only the 20 per cent. that you have received from time to time lately, but also to add to the reserve fund substantial sums of money. (Hear, hear.) You must be aware that this is not confined to ourselves alone, but by the circulation of our reports, and the reports in the papers, this prosperity reaches the ears and knowledge of others; and it is this fact that has led so many competitors in New South Wales into our coal trade. The result of it is unfortunately that the power of production is now exceeding, and has for some time past exceeded, the demand for coal; and you know when that is the state of the natural law the only result is either a combination amongst the producers, such as we have had during the last few years, or competition for the trade.

COMBINATION.

The association has fairly and honestly tried to induce many of the new collieries to join them, but I suppose in their wisdom they thought that they could do better by playing a lone hand outside of us. I have a letter from a friend interested in the coal trade, which I received yesterday, telling me that the collieries outside are selling at 9*s.*, 9*s.* 6*d.*, and 10*s.*, less the 2½ per cent. discount. Now, I think you will agree with me in feeling that the reduction that has been arrived at is the proper course to meet these collieries who are underselling the association. It is the only way in which we can hold our own—of that I am firmly convinced. Of course, there is the question of keeping down the cost of production; for it is the difference between the cost of production and the price at which you sell that your profits are derived from. I have been very glad recently to have the opportunity of inspecting many of the largest collieries in this country, and I find that they are in a very similar position with ourselves—that is, from labour troubles and competition. The coal owners of this country are compelled to seek, and devise, and apply such mechanical contrivances as will reduce the cost of coal.

IMPROVED PLANT.

I am glad to say that I shall be enabled to erect at our new colliery at Durham a plant which will be thoroughly efficient, which will combine all the recent improvements, and I am sure it will receive, not only the approval of the directors, but of yourselves, to know

that we will start with machinery in all respects up to date, and a plant which will materially reduce the cost of getting the coal as compared with our old system pursued in the Colony. I have also decided in my own mind that not only shall that plant be applied at Durham at our new colliery—of course, there I have a new field to work upon—but I have also determined to alter the existing arrangements at Lambton as regards the screening and banking out, by which I hope to save labour, and consequently reduce the cost of getting the coal. I think you will not be displeased to hear that because it will be a *per contra*, as it were, to the reduction which we are about to make, and you will not feel the shilling so very heavy. You must also bear in mind that with this reduction of 1*s.* in the future price of our coal the miners' wages will be reduced. We have a sliding scale in our agreement with the men, so that it will not be altogether a whole shilling that will be reduced in our profits, but only a proportion; and with the improvements I have mentioned, which will tend towards a saving, I hope you will not feel it so severely as you might otherwise do. In conclusion, I have only to say that I shall do my best, so far as I am concerned, to meet the altered circumstances, and I think you will accord to me at some future period the same kindly reception that you have just granted. (Applause.)

The resolution for the adoption of the report was then put and carried unanimously.

On the motion of a SHAREHOLDER, it was resolved that the sum of 20 guineas each be paid to Messrs. J. R. Frewer and C. G. Roberts for auditing the books and accounts for the year ended June 30 last.

THANKS.

Mr. Fergusson: May I be allowed to propose a cordial vote of thanks to Mr. Croudace? I have been quite delighted with his speech. I am glad to hear that we are not likely to lose so much by this reduction of 1*s.* I am quite sure that Mr. Croudace has derived much benefit from his visit to this country.

Mr. Frewer seconded the motion, which was carried unanimously.

Mr. Croudace: I can only say I thank you most heartily, gentlemen, indeed. I know that you would not like me to reiterate what I have already said, but I must assure you that such an expression of opinion coming from yourselves is highly satisfactory to me. I hope that I have merited it in the past. (Hear, hear.)

THIRTY YEARS SERVICE.

It is just 30 years last month since I joined the company. During that time I have tried to do my best, and I shall endeavour in the remaining years of my life to devote them to your best interests, and I trust that I may be as successful in the future as I have been in the past.

Mr. Joslin: I think we should be sorry to separate without giving a very hearty vote of thanks to the directors. I feel—and I am sure, gentlemen, you will feel with me—that during the past half-year the directors must have experienced a sense of heavy responsibility and some anxiety with reference to the calling up of new capital and the issuing of new shares. It has naturally entailed upon them a great deal of extra work, so that I think our thanks are specially due to them for the able way in which they have carried our affairs through. I hope this money will bear good interest in the future. I cordially endorse the remarks that have been made about our able colliery manager, Mr. Croudace, and the excellent way in which he carries on the business of his department.

Mr. Blundell seconded the motion, which was carried unanimously, and the chairman having briefly returned thanks, the proceedings closed.

ST. AUGUSTINE, LIMITED.

CONFIRMATION OF RESOLUTIONS FOR RE-CONSTRUCTION.

AN extraordinary general meeting of the shareholders in this company was held at the Cannon Street Hotel, on Thursday, Oct. 29, for the purpose of confirming the resolutions providing for the re-construction of the company, passed on Oct. 14.

Col. G. B. Malleon, C.S.I.,

presided.

The SECRETARY having read the notice convening the meeting, The CHAIRMAN said: Ladies and gentlemen, this resolution which the secretary has just read to you was submitted to a meeting of the shareholders in this building on Oct. 14 last, and was carried unanimously. On that occasion it was my privilege to lay before the shareholders not only the position of the company, but the prospects we had before us, and we were favoured on that occasion by the presence of one of the miners of the St. Augustine Mine, who, when the mine was closed up in consequence of the want of funds, paid his own passage to England, and came here for the express purpose of assuring the shareholders that the ore was in sight, and to implore them not to abandon their work on which so much money had been spent. It so happened on that occasion there were two experts present, Mr. Giles, M.P. for Southampton, and his son, who is a mining engineer, and from the speech of the miner, Mr. Giles drew a rough plan, which confirmed those which were set out to us from the late Mr. Hartley. That, at all events, proved to any who were doubters, and there was only one doubter in the room, that the evidence of the miner was absolutely genuine. I do not think to any sensible man there can be a doubt as to the propriety of confirming this resolution. We have sunk the mine to such a depth that we are within 100 ft. of the blue that contains the diamonds. If we carry through this scheme we shall have

40,000*l.* READY TO BE SPENT ON THE MINE.

That would secure at least three years' work. We have no debts, and, therefore, the whole of the money will be spent on the mine. In anticipation of your passing this resolution, your board have made provisional arrangements with certain men of tried capacity to go out and work this mine, and amongst others will be the miner who came here. I now beg formally to propose the first resolution which has been read to you.

Mr. Shaw (director) seconded the motion, which was carried with one dissentient.

The resolutions for the appointment and remuneration of the liquidator were then put to the meeting and carried unanimously, after which the proceedings closed.

Wright and Greig, Preference	6 per cent.
Wright and Greig, Ordinary	12 1/2 per cent.

MAID OF ERIN SILVER MINES, LIMITED.

The Financial and Mining Record (New York) says:—"The Maid of Erin Mine last month produced 4,450 tons of ore, of an average value probably slightly above that of previous months. The yield is a decrease over past months, which, however, is satisfactorily accounted for by the management, and will be made up in the future. At the beginning of last month the contracts of the company with various Colorado smelters for the reduction of carbonate ores expired and could not be

renewed, except at greatly increased reduction charges, as all the smelters were overloaded with carbonate of lead ores. As a consequence, the manager, Mr. Eben Smith, decided to suspend the production of this class of ores until the surplus at the smelters could be reduced and former prices offered. The delay has proved no loss to the company, as advantage was taken of the suspension to re-timber the Upper Henriett shaft, a task which was completed a few days ago, after a month's hard work. Better smelting terms are now offered, and the shaft, which has yielded millions of dollars' worth of ore in the past, is again in shape to maintain a large and steady output. While sulphide ore constitutes the principal output of this mine, and the bulk of the yield comes from the large Maid of Erin shaft, yet the importance of the carbonate ore production will be appreciated when it is known that last month, while the repairs were in progress, but 671 tons were hoisted, against 2,679 tons of carbonate ore during the previous month. A further decrease was brought about by the closing of the concentrating mill, which is again running full, and yielding 50 tons of concentrates daily. The developments to the south of the main Maid workings continue in large ore bodies, indicating the existence of a strong parallel or shoot, which will unquestionably add greatly to the producing capacity of the mine. In the large ore bodies contiguous to the Maid shaft, work shows the resources to be greater than ever dreamed of. The mineral zone here is over 100 ft. in thickness, fully two-thirds of which is good shipping ore, with a mass of ore 20 to 70 ft. in thickness, extending over as great an area as controlled by the Maid Combination, it is next to impossible to estimate or comprehend the probable output and earnings of the company.

Cablegram:—"Gross yield for the week ending Oct. 24: 1,500 tons; estimated value, \$30,000.

SOUTH CROFTY.

CALL OF 4s. PER SHARE.

A sixteen-week's meeting of the shareholders of South Crofty was held on the mine on Thursday,

Mr. H. J. Lean,

(purser), presided. The accounts showed that the labour costs amounted to 3,176l.; merchants' bills, 1,297l.; total costs, 4,474l. On the other side, 62 tons. 1 cwt. 1 qr. 24 lbs. of tin had been sold, realising 3,331l.; extra carriage, 10l.; sundries, 37l.; total credits, 3,345l., showing a loss of 1,129l.

The accounts and report having been adopted, it was agreed, on the motion of Mr. F. HARVEY, seconded by Mr. WICKETT, that a call of 4s. per share should be made.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

D. B. D. (Worcester).—Very risky. Sell.
Chump.—You have no cause for alarm. Hold.
W. W. Aberdeen.—Hold. In fact, purchase more.
H. Down.—Never will pay a dividend. The management is anything but good.
M. B. (Chesapeake).—Do not sell. A good future is before this concern, we consider.
Bonds.—Sell. No hope.
W. Meanley.—In anticipation of a rise which is likely soon to take place, we advise you to hold.
Chorister.—A swindle pure and simple, in our opinion.
Simpkins.—Thoroughly sound, and shares should be held.
New Queen.—Sell them.
Onlooker.—Very low price, and possibly might double very soon.
J. R. Dollond.—If you purchased before they were quoted ex div. claim the amount from your broker. A very good property, and likely to improve.
Vengeance.—May possibly be carried higher, but even the price of the day is far above real value. Purely a gamble, in which we advise you not to join.
Chaplet.—You must be prepared to lock up your money for some time, although at any moment the shares may rise.
St. John del Rey.—An excellent lock up.
Scotchman.—Purchase 3 and 7 for quick rise. Do not advise others.
B. R. R.—Always take a fair profit. You have a good chance now.
Spot.—More likely to fall.
Jessamine.—You must pay the call, as the shares were purchased before it was made. The call letters were only sent out a few days ago.
Rushed.—Very unreliable. Cannot advise a purchase.
Investor (Durham).—Yes. Mysore West and Kapanga seem both good and cheap purchases, particularly the former. Take your profit on the others.
Disappointed.—Roth are almost unsaleable just now.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

OOREGUM—POSITION OF THE PREFERENCE AND ORDINARY SHARES.

THERE are in the Ooregum Co. 120,000 10 per cent. preference shares of 17. each, entitled to a 10 per cent. dividend on the full nominal value out of the profits of each year, and afterwards to share and share alike, share by share, with the ordinary stock in all the remaining profits. The ordinary shares number now 145,000, making the total capital of the company 265,000. The capital was altered a few months ago, it will be remembered, by a purchase of additional land from Goldfields of Mysore. The object of the lawsuit, about which our readers have heard so much, is to try and make such original holders as still remain on the books liable for 15s. per share. The quantity of such shares does not exceed 33,000 or 40,000. They are principally in the hands of one shareholder, who is a director of the Company, and who has stood by it all through. In fact he can say almost in the language of Othello "I have done Ooregum some service and the shareholders know it." The lawsuit was brought by the holder of 10 ordinary shares and pending its final decision in the House of Lords, which is expected before the end of this year, none of these 33 or 40 thousand shares can be dealt in on the market. They are in fact blocked, and cannot be sold even if the holder wished to part with them. The rest of the preference shares can, however, be dealt with and are apparently not liable for the 15s. It is important to remember that the preference is perpetual. For the year ending Dec. 31, 1890, the preference dividend was paid in full and all the shares of the Company, preference and ordinary, received in addition a dividend of 1s. a share. On account of this current year the preference shares have received their dividend of 2s. a

share, and *all* the shares have in addition received a dividend of 1s. per share. It is anticipated that there will be further dividend of 2s. a share on both classes to close this year. The preference shareholders having already had their preference dividend do not of course get it again this year, but next year they will be entitled to their preference as before, and then to share equally with the ordinary shareholders in further dividends, which judging from the nature of the reports received for many months past, are likely to be large. These reports would read almost like a fairy tale, were it not known that there are the solid evidences of wealth behind to support every statement that is made, and every assay that is given.

A LARGE SHAREHOLDER.

DEATH OF MR. W. H. ROWSE.

To many of our readers the news will come with surprise and regret that Mr. William Henry Rowse, the esteemed secretary of the Mysore, Nundydroog and other companies, is no more. He died at Watford on Saturday evening last of inflammation following a severe chill. Mr. Rowse had not been in good health recently. At the same time, the sudden termination of his useful life was not expected, and has come as a severe shock to his many personal friends.

That Mr. Rowse was no amateur in mining will have been evident to those who heard, or subsequently read, his far-sighted addresses after his return from his recent visit to India. He may be said to have lived in the atmosphere of mining all his life, and was, with one interval, in the service of Messrs. John Taylor and Sons during the whole of his connection with that industry. We first hear of him in 1854, when, almost a boy, in connection with the famous old Wheal Friendship Mine, in the capacity of purser's clerk to the late Mr. Joseph Matthews, as well as in connection with other mines in the Tavistock district. Afterwards he went to Plymouth in the service of Mr. John Bailey, of Messrs. Bailey and Fox, and whilst there also acted as secretary to Mr. Richard Taylor, who at that time resided at Langdon Court, near that town. He next went to Aberystwyth to act as accountant and paymaster under Messrs. John Taylor and Sons, in connection with the Lisburne, Cwmystwyth, East Darren, Goginan, and other mines, the very mention of which recalls, perhaps, the halcyon period of British lead mining. From Aberystwyth, about 1871, he repaired to London to become secretary and accountant to Pestarena, West Canada, and other companies, also under the management of Messrs. John Taylor and Sons, and was entrusted during that time with a special mission to the West Canada Copper Mine, on Lake Huron. About 10 years ago he entered into business on his own account, but after the death of Mr. W. G. Williams, the first secretary of the Mysore, Nundydroog, and Ouro Preto companies, he again re-entered the service of Messrs. John Taylor and Sons to become secretary of those companies, and subsequently of Balaghat and Nine Reefs.

Perhaps the most important service Mr. Rowse rendered to mining was his visit a year ago to the Colar Goldfield. He remained away for several months, during which time he made the most complete and searching examination of the Colar Gold Mines to which they have probably ever been subjected. Whilst devoting his attention specially to those with which he was officially connected, he did not fail to acquaint himself thoroughly with the circumstances of other concerns in the locality also under the management of the Messrs. Taylor. It is almost needless to say that his life-long experience of mining entitled the conclusions at which he arrived, and the opinions he formed, to be received with attention and respect. On his return he, in a series of admirably-arranged and thoughtful addresses, which betrayed a complete mastery of the subject, laid bare the whole position of affairs to the public in general and to the shareholders in particular. His speeches, whilst confined to the details of the concerns with which he was connected, imparted a great deal of information with regard to the field as a whole, and will often be referred to by those who wish to follow intelligently the ramifications of Indian gold mining. His conclusions, deduced from the facts as they presented themselves to him on the spot, occurred to his hearers at the time, and must have struck the readers of his speeches afterwards, as based on common sense and reason, and though, all too soon, his valuable life has been shortened, he lived long enough to see their correctness confirmed by the almost fortnightly news from the mines. One remark he made we have often quoted, and may be forgiven for doing so again, because of its importance. He said that the value of the Indian Mines was in proportion to the depth to which they had been developed. Every mail bears testimony to the accuracy of this statement.

At the time of his death Mr. Rowse was 52 years of age. He leaves a widow with two sons and four daughters to lament his loss. He gained, as indeed he merited, the respect and confidence of all with whom he was brought into contact, and whilst some may only think of him as a courteous and obliging official, many more will mourn his loss as that of a personal friend.

POOR SILATI.

THE accounts from Silati are not encouraging. The news as it leaks out in the South African papers more and more confirms the report

of Mr. Alford, who cursed the property by bell, book and candle. The development of the Swiss reef, as to which Mr. Conybeare indulged in lofty oratorical and geological flights, is at what the French would call zero, and the fields themselves as a whole are laconically called "a frost." Meanwhile the company has pretty nearly reached the end of its tether. It has only 1s. to call, and it is evident that soon the Silati balloon, inflated by the gaseous oratory of Mr. Conybeare, will do what we may not very elegantly express as a "financial buster." Mr. Conybeare, according to his recent speech at Leysdorp, when addressing some people to whom Silati has not proved so costly as it has to the shareholders in this country, said he was looking for the advent of the railway, just as we ever since the period of childhood have been looking for the man in the moon, but have not yet seen him. He does not say in the meantime what is to become of the shareholders, while the railway, which is to save them, is in course of construction, and it does not want that one should proceed very far in the study of geology to know that even a railway cannot put gold into the Silati reefs if it is not there.

YURUARI.

WHATEVER may be said of the Yuruari board it cannot be alleged that they have been deficient in the matter of giving information to the shareholders. Whether the information has always toed the line when it came to the point of performance is quite another matter. Early this week the shareholders received from the directors under one cover no fewer than nine communications. The first and most important naturally was the report of the directors to June 30 last; the second was a very clear map of the mine; the third, a report from the late manager, Mr. Pryor; the fourth, a report from Mr. M. B. Rochfort, his successor; the fifth, extracts from the letters of the company's attorney in Guacipati; the sixth, notice of resolutions to wind up under the liquidatorship of the chairman Mr. Hugh Watt, M.P.; the seventh, notice of the ordinary business meeting; the eighth, proxy form in favour of the board for the meeting; the ninth, proxy form in favour of the board for the special meeting. Without casting any disrespect on the intermediate documents, the greatest importance is to be attached to the first and to the last; that is to the directors' report and the forms of proxy. The question that shareholders will ask themselves on reading the former is, ought we to fill up the latter?

Judging from the tenor of our correspondence, and it is positively burdensome as regards Yuruari, we should say the majority of the shareholders will be disposed to say no. But the extraordinary fact remains that, unpopular as Mr. Watt in particular, and the directors in general, seem to be with the shareholders—in general meeting the malcontents are practically nowhere on a division, and the board triumph all along the line. Will the meeting next Wednesday be a repetition of this performance, and will the opposition as heretofore show rather the vigour of its lungs than the strength of its backbone? We shall see.

It has an opportunity such as it never had before. Yuruari is in the by no means novel position of having reached the end of its tether, and re-construction is not only in the air, but on the notice paper. What we have never been able to understand about Yuruari is why, if the mine were properly managed, the crushings should not be continuous. Take the case of any well-conducted mine—Mysore for example. The company goes on crushing regularly, but not so Yuruari. It crushes by spasms. As the poet says, "By fits 'tis mad—by starts 'tis wild." For a month or two the crushings go on merrily, and then, as if exhausted by the effort, Yuruari shuts down its mill and the manager comes home and writes his valedictory report from Cornwall, instead of from Venezuela. Then there is a long interregnum unpleasantly varied by a fresh re-construction, sixpenny calls, squabbles at the meetings, followed by triumphant majorities for the board, and the non-fulfilment of the promises of managers and directors alike. No re-construction of Yuruari has ever taken place without the proverbial small amount being required "to complete development." Here in this very report all that is wanted to turn Yuruari lamentations into rejoicings is a miserable sum of 3,000*l.* or 4,000*l.* Provide that, and Mr. Hugh Watt, like a mining Moses, will lead his followers from the wilderness across the Jordan into the Promised Land. This miserable sum we are not surprised to read because we have read it before, "should amply suffice to complete the necessary underground work." Why has not this underground work been completed before? Original shareholders will tell Mr. Watt and his colleagues that they have paid from 27*s.* to 30*s.* for the shares they now hold, which have been "done" this week on the market at the microscopic price of 1*d.* Another point that has struck us about Yuruari is the enormous quantity of gold that has been got out of the mine without anybody apparently receiving any benefit. Great is the mystery of Yuruari, and though the shareholders are now entering upon a new phase of their chequered history, it is not an unfamiliar one, but the period is at all events quite appropriate to consider whether judicious changes on the board may not be productive of some good.

ETHERIDGE.

WHEN the shareholders cavalierly dismissed the Malleson board, at the meeting held some six or eight months ago, they did not suffi-

ciently think of the consequences that would follow. It was with great surprise that we saw them act after the manner of a French mob, who upset everything without any prior arrangement as to the form of rule that is to take its place. We warned Etheridge shareholders at the time that they had acted with a precipitation they would later on regret. The period of repentance has come. The board that has succeeded that which had Col. Malleson as its chairman is divided in opinion. Mr. Thorn and Mr. Tredgold are in favour of proceeding with the workings, whilst Mr. Lane, who unquestionably has had great mining experience, and whose opinions are entitled to respect, is against it. We regret the decision of Mr. Lane, because the report of Mr. John James, the manager of Gympie Great Eastern (who was chosen by Messrs. John Taylor and Sons to make the inspection of the mine), is distinctly favourable. With two of the properties owned by the company, the Lord Nelson and Canadian Reef, he was favourably impressed, but he does not recommend the working of any of its other mines. Now, if the shareholders, instead of getting rid, by a catch vote, of all the experience the former board must have acquired, had added to its number practical men like Mr. Lane or his colleagues, we think that in the greater multitude of counsellors there might have been, if not more wisdom, at least a nearer approach to a united opinion.

Mr. Lane will no doubt give his reasons for dissenting from the views of his colleagues at the forthcoming meeting. We can almost anticipate what he will say. He will probably declare that the company has not sufficient capital (9d. per share), that more money must be raised, and that it would be impossible to pay dividends out of the proceeds of these mines, even if of more than ordinary value, without a drastic re-arrangement of the capital account. On the other hand, his colleagues will say, "We have done, gentlemen, what you asked us to do. You authorised 3d. per share to be called up for the purpose, amongst others, of obtaining a special report by an agent sent by Messrs. John Taylor and Sons, in whose selection everyone must have confidence. That report, they will say, has been made, and is distinctly favourable, and 1,297 shareholders have subscribed for 321,738 shares, and are ready to go on, in which case the Messrs. Taylor are willing to take the management." The decision, as the circular of the secretary aptly puts it, "must be left with the shareholders," but we fancy that their determination will be to go on, particularly as they have the guarantee that the direction of the mine will be in the experienced hands of the firm we have named. In any case, it will be a great advantage to the shareholders if Mr. Lane can be induced to continue as a director. He has had great experience in mining, particularly in connection with the successful Wheal Grenville Co., which has been paying dividends for many years. Should he decline to serve, then the board might be strengthened by re-inviting two or more of its former members to join it and assist the gentlemen who differ from Mr. Lane. Surely the experience the former directors gained during their years of management cannot be without service to a company in the position of Etheridge.

BALAGHAT.

THIS company having now secured the option to purchase a block of land from the Gold Fields of Mysore Company, a meeting has been called for Nov. 4, for the purpose of providing the wherewithal for completing the purchase. The resolutions to be submitted provide, in the first place, for the issue of 35,000l. in debentures of 10l. each, bearing interest at 10 per cent. per annum, and re-payable in five years, or earlier, with a bonus of 25 per cent.; and, in the second place, for the creation of 50,000 new shares of 1l. each. The Gold Fields Company is to receive 10,000l. in cash, and 10,000 in the shares of the company. It is always gratifying to see a company in a sufficiently strong position to be able to raise money by debentures instead of having to resort to the costly process of re-construction. We can only advise the shareholders to pass the resolutions and apply for the debentures.

BRATSBERG COPPER AND SMELTING COMPANIES.

THE past year has been a somewhat trying one for copper companies, but the Bratsberg directors have devoted their main energies to perfecting their arrangements for increasing the output from the mine, and improving the treatment of the smelting works. In both tasks they have met with a considerable measure of success. During the year Mr. John B. Ball, the chairman of the company, paid a visit to the property which has been wholly productive of good. In the smelting works particularly great difficulties have had to be surmounted, but the board, with Mr. Holman, their manager, seem simply to have regarded difficulties as things to be overcome. So far as the smelting works are concerned, it is pretty plain sailing now. As an earnest of better things to come, there have been weekly consignments of copper, averaging about 5 tons, and everything points to what Mr. Hodgkinson (a director) said—a great success. In regard to the copper company, there has been the old difficulty of getting labour, but owing to the action of Mr. Ball when on the spot, in conjunction with Mr. Holman, steps have been taken which will no doubt improve the supply. At all events the shareholders will be able to see the state of affairs in this respect in the reports from the mine published regularly in our columns, for these

will in future state the number of men at work. In regard to the mines, Mr. Ball spoke favourably of the Howard lode, and also of the Mosnap Mine. We gather from the full statement Mr. Ball made, that the general position of the properties is considerably improved, and corroborative testimony was borne by a shareholder to the substantiality and reality of the work going on. This, at least, may be said of the Bratsberg Copper and Smelting Companies, that both of them are in a position to take advantage of any turn for the better in the copper market, and the signs are not wanting that there may be in the near future a good time for this metal.

GOLDEN LEAF.

GOLDEN LEAF may claim to take a place in the list of successfully re-constructed companies. The holders of the 60,000 shares, who declined to have any part or lot in the re-construction, will probably regret their decision, now that prices, almost every week of late, are showing an upward tendency. Mr. Stewart Wallace, having paid another of his useful visits to the property, yesterday told the story of all he saw and did when on the spot. He told it well. For a whole hour he retained the attention of the shareholders—no easy task when it is considered that he spoke in the busiest part of the day to men whose time for the most part was emphatically money. Shareholders must have left the room feeling that in Empire and Golden Leaf they have properties of considerable value that the near future will declare in a more unmistakable way than the past has done. We devote upwards of five columns to the *verbatim* re-production of Mr. Wallace's speech, and commend it to the careful attention of the shareholders who were not privileged to be present to hear it, as well as to those of our readers who may be looking for a good mining purchase at a low price. In Mr. Wallace's address all the facts are before them. Would that every mining company had a Mr. Wallace at its head. Many of them would not be the miserable *fiascos* they are at present.

SOUTH-EAST MYSORE.

THE shareholders of this company did well to vote for the re-construction proposals of the board, submitted on Thursday. Let them consider their wise decision in the face of the great advance in the value of neighbouring properties that has taken place this very week—Ooregum ordinary touching nearly 3; the preference 4; Nundydroog 3; and so on. South-East Mysore Mine is sunk to a depth of 600 ft., at which point a valuable lode has been struck, which has justified Messrs. John Taylor and Sons (who have recently taken over the management) in recommending that active work should be at once resumed. The mining position was ably explained by Mr. Frank Taylor—the re-construction position by the solicitor, Mr. Blunt. The speech of the former should be carefully read, particular heed being paid to its closing sentence, that "the quartz has continued persistently auriferous and payable—that is, auriferous and payable from the top to the bottom." As to the re-construction scheme, the pressure upon the shareholders is made as light as possible, and will fall more heavily upon Genl. Beresford, the esteemed chairman of the company, than upon any other shareholder, by reason of his very large holding. It is difficult to see how a better-considered scheme could have been submitted to the meeting than that which was adopted on Thursday. There was a proposal to adjourn the meeting to formulate another scheme, but in our judgment this would only have led to an expenditure of time which can be better employed in raising the necessary funds to proceed with the development work indicated in Mr. Frank Taylor's speech.

NEWS FROM SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, Oct. 5, 1891.

NUTS TO CRACK.

NOTWITHSTANDING the roseate hue which pervaded the speech of Mr. Barnato at the De Beers Co.'s annual meeting, a summary of which I sent you last week, it has not altogether passed unchallenged. Your readers will have observed the item, under investments, of 210,000l., Chartered Co.'s shares, which the chairman explained were taken up at par when the market price was 7l. Business men here are wondering why the company did not take this handsome profit at the time, and re-purchase their holding at a lower figure, for it was patent to all that the shares could not remain at that price, nor does anyone here believe that they will again reach it for many years to come. Unkind people say that the transaction was put through in order that the Chartered Co. might have a "big brother" to fall back on. The next item freely criticised is that of "sundry investments, 103,886l." The charming vagueness of this item has attracted considerable attention, and its being passed by at the meeting without question or comment is a tolerably clear proof that the shareholders have unlimited faith in their directors in trusting to their investing so large a sum entirely upon their own discretion. Out here we consider 12,895l. to be a very long price for the half share in a mine on Waaldrift Coal Farm, which admittedly produces a low quality article. There are known to be more than a score of coal-bearing

farms in the Free State, anyone of which could be bought to-day for less than half the money. And, lastly, under the head of "general charges" is the sum of 33,717*l.*; of course, it is understood that all this cannot be given in detail, but inquisitive shareholders want to know how much is actually spent in charges incidental to the working of the company. It is an open secret that a very large slice of this item goes away under the curious cognomen of "secret service." If any English shareholders want any explanations they will have to come out to the next half-yearly meeting, for no one here is likely to ask any awkward questions.

THE NEW RUSH.

A lot of people are at work at the new rush I alluded to in my postscript last week. I hear the deposit looks very promising, but as yet no diamonds have been found.

THE KLEIN LETABA GOLDFIELDS.

A mail or two back I sent you some particulars regarding these fields. Since then they have been publicly proclaimed by the Transvaal Government, and I have it on good authority that the quartz on the Birthday reef is proving rich beyond measure, even at the surface. A 10-stamp battery has been erected, together with engine-house, pumping gear, and all the necessary appliances to ensure the carrying on of the work in a proper and systematic manner. Fifteen hundred tons of ore have been stacked, and crushing is to commence forthwith. It is estimated that the yield of gold will be phenomenally high. Another rich property is the Ellerton, where work is to be commenced at once.

THE GILEAD P. BECK PETROLEUM AND MINING CO.

An ordinary general meeting of the shareholders of this company was held here last Monday, Mr. G. Beveridge in the chair.

Mr. De Kock called attention to the item amongst the assets—James Trevor Smith. 43*l.* 12*s.* 10*d.* Was it discovered that Mr. Smith owed the money before the last meeting, and if so, was it discussed at that meeting?

The Chairman said that the discrepancy had been discovered before the last meeting, and Mr. Smith had been spoken to about it. He said there was no discrepancy, and that he had actually paid out the money on behalf of the company.

Mr. Beaton asked what the directors proposed to do in the matter?

The Chairman said they did not know what to do. They expected him to come out and explain the matter. When he was in London he met Mr. Smith, who then promised he would come out and explain, but he had not done so.

It was resolved that the directors should take such steps as they might deem necessary to recover the money.

In their report the directors regretted that owing to the financial position of the company they were compelled to close down the works on Oct. 27, 1890, and although they had made efforts in London to re-float the company, up to the present, owing to the great depression existing in the English financial market, they had not succeeded in doing so.

The Chairman, in moving the report, said the reason why the works had been closed down was that the directors did not wish to get the company into debt. They were clear of that at the present time, and all the money they had had was spent in prospecting work. Unfortunately, all their tools had been buried by a fall of rock, and they could not get at them. It has been asked why, seeing that the De Beers Co. had such a large interest in the company, they did not take it up themselves. The directors had asked the De Beers Co. to do so, but they had replied, giving several reasons why they could not do so. They were not prepared to go in for any outside speculations at present.

Mr. Beaton hoped if there was any chance of the company being re-floated the shareholders would be called together at once.

The Chairman said of course an extraordinary meeting of the shareholders would be called. They did not know what the De Beers Co. might do for them yet. They had asked Mr. Gardner Williams to examine and report on the property. The directors had not seen the report, but they thought it must have been favourable, as the De Beers Co. had since paid their reserve shares.

The report was adopted, and the proceedings closed.

PINOS ALTOS.

THE shareholders of this company who attended the meeting yesterday, and those who read our report of the same this morning, will, we venture to think, be satisfied with the hopeful position which has now been arrived at. That there have been difficulties both great and many no one will be prepared to doubt, and that the report presented to the shareholders was not as good as was expected, few will deny, but the fact, nevertheless, remains, that the company is in a healthy state, and is likely, ere long, again to justify its existence. A discovery of rich ore was made in July of the present year which is likely to have an important bearing on the future of the mine. It is also expected that other discoveries of an important nature will be made. Doubting shareholders must have felt re-assured when the chairman told them that the directors and their relatives held about one-third of the shares. We sincerely hope that this company will shortly resume the payment of the large dividends it formerly paid.

THE SAPPHIRE AND RUBY CO. OF MONTANA, LIMITED.

THE capital of this company will, in all probability, be subscribed upon the bold statement of that expert in precious stones, Mr. Edwin Streeter, who says, "Excepting only the South African Diamond Fields, I consider the Sapphire and Ruby Mines of Montana to be the most important gem discovery of modern times." We observe that this gentleman has given proof of his confidence in the company by joining its board. It is said that careful prospecting has demonstrated the existence of sapphires and rubies (chiefly the former) "in quantities unprecedented in the history of gem discovery." The stones, it is alleged, "comprise a large variety of shades—green, light blue, yellow and violet, including tints regarded as rare and valuable, whilst their brilliancy is remarkable." The precious stones, it appears, are found on the bed-rock of an ancient river channel, now a dry and elevated terrace skirted by the Missouri river, and covered by a deposit of gravel from which they can be cheaply extracted. Of the 4,000 acres comprised within the purchase, work has hitherto been chiefly done upon 1,583 acres near the westerly end, as well as upon a more limited scale, six miles distant, leaving about one-half of the property, believed to be equally rich, untouched. The report of Mr. D. A. Louis indicates "an average yield per square yard of bed-rock of 64 carats, equal, if maintained, to 309,760 carats of precious stones per acre, and it is further estimated (*vide* Mr. Edwin W. Streeter's report) that from a gross yield of 309,760 carats per acre, there will be obtained at least 27,104 carats of cut and polished gems suitable for jewellery." Basing the returns upon 20*s.* per carat, on a yield of 27,104 carats, after deducting all expenses, the prospectus estimates that there would be a net return of 18,828*l.* per acre. Then assuming that only 10 acres were dealt with per annum, after allowing for contingencies, a return is estimated at 40 per cent. upon the capital of the company. A second string to the company's bow is the alluvial washing, the proceeds from which will it is judged meet all working expenses. Work can be carried on in all seasons of the year, and the statement is made that merely with an experimental machine separator recently set up at Ruby Bar 35,000 carats of stones were obtained, but the prospectus is defective in this sense that it does not go more deeply into the results of past workings. At the same time there appears to have been no lack of investigation. The property has been inspected by English experts, but, as a further precaution, no part of the purchase money will be obtained until two or more of the directors shall have visited and proved the property.

It has been asked—why did not the directors investigate the property first? but the answer seems to be perfect, as given in the prospectus—that no fewer than eight experts have, in one way or another, been employed over this business, the whole of whose reports are favourable, and may be seen at the office of the company. Several of the experts employed are well-known in English mining, and, if we may use the expression, "gem" circles. The titles are secured by United States patents. The purchase price is 400,000*l.*, of which one-half is to be satisfied by ordinary fully-paid shares, and the other half by a cash payment. The present issue provides for 25,000*l.* working capital, which is considered ample. The purchase price certainly appears large, but if the statements of the prospectus are correct it is not really so. In considering this point the names and reputation of the persons by whom its statements are endorsed are to be borne in mind. We have naturally attached weight to the opinion of Mr. Streeter as an expert, and in support of his views there are the reports and certificates of eight other persons whose names are given. Then also we have a board of directors with the Right Hon. Lord Chelmsford, G.C.B., at its head, and which, taken as a whole, may claim to be one of the most influential that has ever appeared upon a public prospectus. Lastly, there are the founders, who have guaranteed the whole of the capital now offered for subscription, many of whom are persons walking in the highest circles of social and commercial life. In fact, the list of founders is generally spoken of about the Stock Exchange as being the most notable that has ever appeared in connection with any joint-stock enterprise. It is to be presumed that all these people have more or less inquired into and satisfied themselves as to the *bona fide* nature of the statements of the prospectus. The capital of the company is 450,400*l.*, the ordinary shares being 450,000, and the founders' shares 400, and upon the latter no dividend will be paid until the former have received 20 per cent., after which they will be entitled to half the surplus profits. 225,000 shares are now offered for public subscription, and it is these that the founders have guaranteed.

THE MONEY MARKET.

(CITY, FRIDAY EVENING.)

ADVANCE OF THE BANK RATE.

WITH the continuance of the export of gold from the Bank, which reached $\frac{3}{4}$ of a million on the *Gazette* week, it became apparent that the directors could no longer delay making the expected advance. This they had evidently been preparing for by borrowing in the market on Consols and other stock, and on Wednesday they were charging 3½ per cent. for loans. Under these circumstances, the rise of 1 per cent. to 4 per cent. has given confidence rather than alarm, and rates would have settled down more quietly, but that doubts were raised as to the supply of money, which at length has become at least temporarily scarce, and in demand at 2½, 3, and upwards. Discount was, therefore, rather nominal at 3¼ per cent. for all bills alike. The Banks now allow 2½ per cent. on deposits and the discount houses, 2¼ and 2½ respectively for money at call and notice. At the Stock Exchange loans for the new accounts were available at 3 to 3½ per cent., and rates of continuation were about the same as last time, or a little stiffer, but ran off rather towards the close. The advance in the rate has checked

the fall in the exchanges and turned them more in our favour. The Bank return shows a decrease in the reserve of 148,000*l.*, to 13,246,000*l.*, against 11,600,000*l.* last year, and with a reduction of liability under deposits the proportion is 1 better at 38½ per cent.

At the Stock Exchange business has been very slack, partly due to the state of the weather, the fears of dearer money, the arrangement of the account, and the unsettled position of affairs on the Paris Bourse, under which prices suffered. To some extent these conditions have been latterly ameliorated, for the Bank rate has been advanced, thus putting an end to the suspense. The settlement has been satisfactorily concluded, and the weather has improved and become more seasonable, and the consequence has been a sharp recovery from the worst in Foreign Stocks, and a rise in all Home Railways, but the American market, in the absence of any activity at New York owing to the elections, has continued to fall away, and shows a reduction throughout. The Funds were temporarily weaker, in anticipation of a rise in the rate, but recovered, and the prices are the same as last week, stock continuing scarce, notwithstanding the borrowing of money on the security by the Bank and others. India Stocks have been slightly weaker, and Colonial have been flat, with a fall in Victoria Stocks on the proposed new loan of six millions, to be issued two millions annually. In spite of the adverse indications, the determination to raise a further loan is suicidal to the credit of the Colony and destructive to the market. In Foreign Stocks, Spanish have fluctuated most, and show a recovery of 1½, bears buying back on the arrangements for assistance in Paris. Portuguese have rallied 1 in sympathy, but other stocks are mostly lower, including 1½ in Russian, while Egyptian were depressed by the discussion in the French Chamber. Argentine, particularly the Railways, have partially improved on the fall in the gold premium to 313 per cent. In Home Rails the advance is most conspicuous in the Scotch lines (which have recovered their fall and show a rise of ¾), Brighton "A," Metropolitan and Sheffield, and the heavy lines, which are all 1 to 2 per cent. higher. The Scotch lines have risen on the agreement to pool traffic, and the Sheffield on the Great Northern Company having withdrawn their opposition to the Extension Bill. The American Market has been minus any special feature, but while shares have been neglected, and ¾ to 1½ lower, bonds have been in better demand. Grand Trunks have been steady, however, and Mexican issues have advanced ½ to 1½ per cent. on the closing of "bear" accounts. Lombards have fallen over 1 per share on the proposed lease of the line by the State, and in Miscellaneous securities Allsopp's have receded 1 to 2 per cent., but Guinness's have risen 3, Hudson's Bay and Rio Tinto are both ½ lower. There were no bullion operations to-day at the Bank of England. The discount market was more settled, and a fair business was transacted. But there was a slight re-actionary tendency, and three months' bills were disposed of at 3½, ¾ per cent. Call money remained in demand at 2½. Bar silver is unaltered at 44½, and Rupee Paper declined to 74½, ¾.

To-day the Stock Markets opened with a firmer appearance, and a good tone was generally maintained until near the close, when a relapse followed a fall in stocks dealt in between London and Paris, and closed dull. The Funds were steady, although the rate of continuation to the December account was high at 3 to 3½ per cent., and Consols left off at 95, ½ for money and account.

Annexed are the final quotations to-day:—Consols Account, 95, 95½; Egyptian Preference, 87½, 87¾; Egyptian Unified, 95½, 95¾; French Four-and-a-Half per Cents., 104½, 104¾; Hungarian, 89½, 89¾; Italian, 88, 88½; Mexican, 85½, 85¾; Peru Five per Cents., 9½, 9¾; Peru Six per Cents., 27½, 27¾; Russian 1889, 94, 94½; Portuguese, 36½, 36¾; Spanish, 67½, 67¾; Turkish 1871, 91, 91½; Turkish Defence, 86½, 87¾; Caledonian Railway, 119½, 120½; Great Eastern, 87½, 87¾; Great Western, 158½, 158¾; Brighton "A," 146½, 146¾; North Western, 171, 171½; Metropolitan, 86½, 86¾; Metropolitan District, 30½, 31½; Midland, 162½, 162¾; North British, 43½, 44; North Eastern, 157½, 157¾; South Eastern "A," 84½, 84¾; Mexican Ordinary, 31½, 32; Grand Trunk, 10½, 10¾; Grand Trunk First Preference, 69½, 70½; Grand Trunk Second, 49½, 49¾; Grand Trunk Third, 26½, 27½; Canadian Pacific, 90½, 91½; Denver, Pref. 49, 49½; Erie, 31½, 31¾; Milwaukee, 78½, 78¾; Lake Shore, 128½, 128¾; Louisville, 81½, 81¾; Atlantic First, 38½, 39½; Ontario, 20½, 20¾; Ohio, 22½, 23½; Norfolk and Western, 53½, 54½; Reading, 21½, 21¾; Reading Bonds, 87, 88; Union Pacific, 42½, 42¾; Wabash Preference, 30½, 30¾; Ottoman Bank, 11½, 11¾; Anglo-Telegraph, 49, 50; National Telephone, 4½, 4¾; Hudson's Bay, 15½, 16½; Suez Canal, 109½, 109¾; Guinness 315, 317; Allsopp's Ordinary, 22, 24; Bryant and May, 13½, 14; Eastman, Ordinary, 3½, 3¾; Elmore's Company, 3, 3½.

THE NEW GUSTON CO., LIMITED.

MINE LOOKS WELL.

MR. HARVEY, the mine superintendent, under date Sept. 22, reports on the mines, viz.:—No. 6 level—South drift—New stope: Length of stope 34 ft.; height over back of No. 6 level, 41 ft.; width of ore, 9 ft. for 15 ft. in length; value from 40 to 140 ozs. silver per ton; gold, from ½ oz. to ¾ oz. per ton; copper, 2 to 4 per cent. 25 ft. back (or north) from new stope: We have commenced opening over back of level for a stope on the continuation of the ore being worked in the new stope; height of stope over back of level, 9 ft.; width of ore, 3 ft.; value from 50 to 120 ozs. silver per ton; gold, ¼ oz. to 1 oz. per ton; copper, 2 per cent. to 5 per cent. North level—South drift: Distance driven, 10 ft.; total distance extended from south end of winze, 77 ft.; width of ore in the forebreast, 2 ft.; value, from 20 to 50 ozs. silver per ton; gold, from ¼ oz. to ¾ oz. per ton. North level—Pioneer level: Distance driven, 3 ft.; total distance driven from north end of winze, 52 ft. There is favourable ground for mineral in the forebreast, but nothing of value has yet been met with. North level—South stope: Length of stope, 55 ft.; height over back of level, 43 ft.; thickness of ore, 1 ft.; value from 20 to 40 ozs. silver per ton; gold, ¼ oz. to ½ oz. per ton. North level—North stope: Length of stope, 45 ft.; height over back of level, 43 ft.; width of ore, 4 ft.; value from 45 to 500 ozs. silver per ton; gold, ¼ oz. to ¾ oz. per ton. No. 7 level—No. 7 ore body stope: Length of stope, 40 ft.; height over back of level, 36 ft.; width of ore, 13 ft. for length of stope; value from 30 to 150 ozs. silver per ton; gold, ½ to 1 oz. per ton; copper, 2 per cent. to 7 per cent.

South drift—Middle stope: 47 ft. south from the south end of No. 7 ore body stope we have opened over the roof of drift for what we shall call the middle stope; length of stope 12 ft.; height over back of level, 8 ft. 6 ins.; width of ore, 2 ft.; value, from 40 to 100 ozs. per ton; gold, ¼ to ¾ oz. per ton; copper, 2 per cent. to 5 per cent. South drift: Distance driven, 11 ft.; total length extended, 95 ft. There is scattered ore in the forebreast averaging 18 ins. thick; value from 35 to 60 ozs. silver per ton; gold, ¼ to ½ oz. per ton; copper, 2 per cent. to 3 per cent. Shaft: We have completed the skip road from No. 7 station to No. 8 station. The skip works admirably over the turn where the shaft was altered from an underlay and carried down vertical. No. 8 station: Fair progress is being made in cutting No. 8 station. The mine continues to look well.—A. HEBDEN, Secretary, (*pro tem.*)

YANKEE GIRL SILVER MINES, LIMITED.

PROGRESS REPORT.

MR. HARVEY, the mine superintendent, under date Oct. 14, reports on the mines, viz.:—Robinson Mine—No. 1 level, south drift. No. 1 stope: Length of stope, 69 ft.; height over back of level, 35 ft.; width of ore, 12 ft.; value from 10 to 40 ozs. per ton. No. 3 level—South drift, No. 3 stope: Height of stope over back of level, 57 ft.; length, 48 ft.; average width of ore, 18 ins.; value from 10 to 40 ozs. silver per ton. Shaft: The main shaft has been sunk a further depth of 32 ft.; total depth below base of No. 5 station, 59 ft. Remarks: Owing to a scarcity of men a number of the miners have been employed on surface, excavating for new pipe line. Yankee Girl Mine—No. 2 level—Orphan Boy ore body, stope: Length of stope, 24 ft.; height over back of level, 34 ft.; ore scattered in appearance; value, from 20 to 140 ozs. per ton. No. 6 level—North-east drift: During the past fortnight the men have been engaged timbering the drift; 50 ft. of drift has been securely timbered. Main drift: The old or main drift referred to in my last (under the head of west cross-drift) as being choked, has been cleared and re-timbered for a length of 60 ft. This work has been done for the purpose of getting at and prospecting the Orphan Boy ore body at this level. Six and half level—Yankee Girl ore body, winze stope: Length of stope, 40 ft.; ore broken in appearance; value, from 20 to 1,000 ozs. silver per ton. No. 7 level—South-west ore body: Operations have been commenced by opening for a stope on the south-west ore body; height of stope over back of level, 5 ft.; length of stope, 13 ft.; width of ore, 2 ft. 6 ins.; value, from 15 to 70 ozs. silver per ton; copper, 12 to 18 per cent. No. 8 level—South-west ore body: Length of stope, 31 ft.; height over back of level, 51 ft.; ore, 2 ft. 6 ins. wide; value from 15 to 35 ozs. silver per ton. West ore body: Operations have recently been resumed here in the old stope; length of stope, 24 ft.; height over back of level, 26 ft.; ore scattered in appearance; value from 10 to 30 ozs. silver per ton; copper from 5 per cent. to 10 per cent. No. 9 level—South-west drift: Drift extended through ore 8 ft.; total length driven from station, 175 ft.; width of ore in forebreast, 3 ft. 6 ins.; value from 15 to 75 ozs. silver per ton; copper 10 per cent. to 15 per cent. South-west ore body—Stope: Length of stope, 43 ft.; height over back of level, 18 ft.; width of ore in south-west portion of stope (for 14 ft. in length), 11 ft. North-east part of stope: Width of ore, 3 ft. for 29 ft. long; value from 20 to 50 ozs. silver per ton. There is considerable galena and copper associated with the ore from this point. Lead from 10 per cent. to 15 per cent.; copper, 10 per cent. to 15 per cent. Shaft: A pump has been placed in position at No. 9 station, and the water forked out to No. 10 station. We anticipate commencing operations in a day or two at No. 10 level. Surface improvements—Pipe line: 5,400 lineal ft. of ditch has been excavated for a depth of 2 ft. 3 ins.; also 5,450 ft. of 3-in. pipe laid and covered. A substantial dam 60 ft. in length has been built, in order to take up the water. The water has been turned on, and is now being used in the Yankee Girl and Robinson boilers; also at the Robinson concentrating mill. This will, I hope, for ever prevent the necessity of using acidulated mine water in the various boilers.—T. NEAL, Secretary (*pro tem.*)

AMERICAN BELLE MINES, LIMITED.

PROGRESS REPORT.

CAPT. HARVEY reports as follows under date Oct. 13:—National Belle Mine—Shaft: The main shaft has been sunk a further depth of 35 ft.; total depth below base of No. 3 station, 70 ft. Silver Bell Mine—No. 1 or adit level—South drift—No. 1 stope: Length of stope, 74 ft.; height over back of level, 21 ft. North portion of stope: Ore 2 ft. wide for 10 ft. in length. South part of stope: Ore 3 ft. wide for 14 ft. in length; value of ore, from 17 ozs. to 85 ozs. silver per ton. No. 6 level—South-east drift: Drift extended 12 ft.; there is no change to report. No. 7 level—South drift—No. 1 stope: Length of stope, 68 ft.; height over back of level, 63 ft. North-west part of stope: Width of ore, 4 ft. for 32 ft. in length. South-east portion of stope: Width of ore, 8 ft. for 10 ft. in length; value of ore, from 16 to 40 ozs. silver per ton. No. 8 level—South drift—No. 1 stope: Length of stope, 31 ft.; height over back of level, 43 ft.; width of ore, 6 ft. for 10 ft. in length. Remaining portion of stope: Ore broken in appearance; value, from 17 to 40 ozs. silver per ton. South drift—No. 2 stope: Length of stope, 70 ft.; height over back of level north part of stope, 19 ft. for 35 ft. long. South portion of stope: Height over back of level, 14 ft. for 35 ft. in length; width of ore, 4 ft. for 20 ft. in length. Remaining portion of stope: Ore scattered; value of ore, from 16 to 35 ozs. silver per ton. South drift: Drift extended 6 ft.; total length driven from shaft, 330 ft. No. 9 level: Operations have been commenced at a point 100 ft. below No. 8 station by commencing to drift from the shaft towards the ore bodies. We purpose opening out for No. 9 station after driving some little distance from the shaft, thereby opening for station and continuing the drift at the same time. Shaft: The water has been forked out of the shaft. In a few days we expect to commence opening out for No. 10 station.—T. NEAL, Secretary (*pro tem.*)

WHEEL METAL AND FLOW (Oct. 26).—The lode in the 27 end east is still split up, but the country rock it is embedded in looks well for the production of mineral. We have plenty of water now, and I am hoping to have a good sale of tin again this month.—S. P. CURTIS.

REPORTS OF MEETINGS.

THE BRATSBERG SMELTING AND REFINING WORKS, LIMITED.

DIFFICULTIES OVERCOME, AND THE BASIS LAID FOR A PROFIT-ABLE BUSINESS—VISIT OF THE CHAIRMAN TO THE WORKS.

The third ordinary general meeting was held at the Guildhall Tavern, on Thursday.

Mr. John B. Ball

(chairman of the company) presided.

Mr. C. RIDDELL (secretary) read the notice of meeting.

DIFFICULTIES SURMOUNTED.

The CHAIRMAN: Gentlemen, the directors have had an anxious time since the last meeting in consequence of the difficulty experienced in carrying out that part of the smelting process, which consisted of the Bessemerising. Some of these difficulties I explained at the meeting of the copper company in Mar. last, but others occurred subsequently. However, I am glad to say they have been surmounted, and it is therefore not worth while to refer to these at length unless further information is required. Mr. Holman's report will give you some idea of the difficulties we have experienced from the unusual severity of the weather that was experienced in Norway at the end of last year and at the beginning of this year, and then he goes on to give details about the various processes which you will, no doubt, have read with interest. Under the head of the electro-deposition department he refers to the Mosnap, and to the advantage it would be if we could get a cupreous flux to mix with the copper company's ores in lieu of the limestone we are using at present. If we had a cupreous flux we should be able to save some of the copper out of it, and have a better output, instead of using limestone as at present, which does not yield any copper at all. In the last letter received from Norway, which arrived on Tuesday, Mr. Smith stated that Mr. Holman was away visiting the mine, which he considered was likely to furnish us with such a flux. We hoped to have heard before the meeting that Mr. Holman had succeeded, but we have not had a letter, possibly owing to the time it takes for mails to come in this stormy weather. There is one difficulty which we still experience with regard to the slime ore, or the less valuable ore, which is in a very finely divided state, and blows out of the top of the furnace; but we already adopt means of catching that, and have also tried another method on a small scale, but we hope to try it on a larger as soon as we can obtain the necessary machinery. There is another matter which has our attention, and that is

A BRAND FOR OUR COPPER.

As we are getting it forward regularly, and it has been represented by our brokers who sell it that it is desirable to have a brand. Our copper is equal to any that is in the market, and they say if we had a brand for it it would be more easy to sell. We have practically settled on a brand, which will in future be put upon it. The next matter referred to in the report is

MY VISIT TO THE MINE.

The smelting works and the mines are contiguous and overlap each other. The two photos exhibited in the room may give you some idea of the works. They were made by Mr. Jerome, our electrician. The first shows the depositing and electrician's houses. With the report we sent out a small plate of these, but the photograph is a more satisfactory picture. The other gives a general view of the works—both the smelting and dressing departments. The big house represented is that of the manager, and was built before we had anything to do with the company. In going up to the works, I was delighted to have the company of one of our shareholders, who, I think, was fairly well satisfied with his visit—in fact, I am sure he was. (Hear, hear.) He was some days there, and after he left it became desirable in my opinion, and in that of Mr. Holman, to make another trial with the smelters and converter. The gentleman who had charge was not originally intended to be the superintendent of the smelting works. We relied upon Mr. Manhes' assertion that he would be able to send us a man whenever we started who would put our men in the way of working without difficulty. Unfortunately, that was not the case, and so we put this gentleman in charge and gave him every opportunity of learning his duties. We sent him to Røros for a month, where they work the Bessemer process, and we were in hopes that when he came back he would be able to do it for us. We decided to let him have a trial, but in the result found that he was not successful, and I dispensed with his services on the best terms I could make. I am happy to say that now we have a man there, a Swede, who is both intelligent and able to carry out the Bessemerising process without difficulty, and the Frenchman we employed will soon be leaving us, so that we shall save that expense. When I found the man in charge could not carry out the process I wrote very strongly to Mr. Manhes to send us a competent man. With regard to electrolytic copper, this is the state of things at present. It is not up to my expectations, and is not up to the pitch we hope to get it shortly, but we are having

WEEKLY CONSIGNMENTS OF COPPER.

On Sept. 26 we had nearly 6 tons; on Oct. 3, 4 tons; Oct. 11, nearly 6 tons, and Oct. 17, over 6 tons, and we have had some mud which contains the silver. We are advised that it will be better not to have it in smaller quantities than a ton at a time, and we have given directions to that effect. We shall have to put up extra tanks, for which there is plenty of room, to keep the electrolytic department turning out the quantity of copper we shall be able to deliver from the smelting. The views of the works sent with the report we thought would be of interest, especially as they did not cost much to produce. The first of them shows the large blowing engine, which gave us so much trouble in getting to the spot. There it is now, and a fine looking engine it is, and working beautifully with

little expense as it is driven by a turbine. The next picture shows the interior of the smelting house, with the water-jacket furnace at the back. The slag pots are on the platforms. On the right is the Bessemer converter, which has given us so much trouble, and a very lively kind of article it is. You would be astonished when the blast is put on to see the showers of sparks that come out of it. We have now mastered it I am happy to say. The next picture shows the depositing and electrician's houses, and the last one the interior of the depositing house, which shows the rows of tanks, there is room there for others against the sides of the house, but this cannot be seen clearly in the picture. What struck me as remarkable here was the automatic way in which it is worked. The electrician has, of course, to see that the deposition is going on satisfactorily, and his plates have to be put in and taken out with a certain amount of labour; but while the depositing goes on it is quite automatic, and, therefore, not expensive. I think the accounts are clear and understandable. Management expenses will be very much reduced, seeing that two of the gentlemen who are represented under that heading (618L.) are no longer with us. When we were putting up the works we did not know exactly what would be our requirements, but now we are able to dispense with the services of these two gentlemen. As to the whole total of 3,000L., I think it might be fairly debited to capital account, as the amount of copper turned out during the period was only an experimental quantity. We never got fairly to work until after the date of the balance-sheet. You may, perhaps, have noticed that against the amount due to the copper company we have put the words "subject to adjustment as per agreement." You will remember that our object in making the agreement with the smelting company was to render it as far as possible independent of market fluctuations of copper, and the way that was done was this:—We arranged that a preliminary payment was to be made to the copper company three months after the ore was delivered, but that the final and adjusting payment was not to be made until it had been sold in London, and that the price paid was to be regulated by the price obtained, so that the

SMELTING WORKS SHOULD STAND ON THEIR OWN BASIS,

and retain their profit, except so far as they had to hand over a certain surplus to the mining company, but that in the first instance they should make the profit on the smelting and refining alone, and that should be kept distinct from the fluctuations in the price of copper. We have some unissued shares (about 2,700L.), which we shall be glad to see taken up, because a great deal of capital has to be employed in maintaining stocks, and it takes time to turn out the copper. Meanwhile, we are short of funds. We may have to get advances upon our copper as it comes over, which is not desirable if we can do without it. I will conclude by proposing the adoption of the report and accounts. (Cheers.)

Mr. FRANK HODGKINSON (director) seconded the motion, which was carried unanimously.

Mr. G. H. REW proposed "That the sum of 3,045L. 10s. 5d., consisting of expenditure during construction and experimental working, shall be written off to capital account."

Mr. F. O'S. B. READE seconded the motion, which was carried.

On the motion of the CHAIRMAN, Mr. FRANK HODGKINSON was unanimously re-elected a director of the company.

Mr. HODGKINSON said he had been associated with Bratsberg from its infancy, and the smelting company from its inception, and believed that they would yet make a great success of it now that most of the difficulties were overcome.

On the motion of the CHAIRMAN, seconded by Mr. F. O'S. B. READE, the auditors, Messrs. Cash, Stone and Co., were re-elected.

The chairman was thanked for presiding.

Report for week ending Oct. 17:—Smelting department: Nothing was done here last week, owing to the non-arrival of the converter wheels, due to the fact of the floods having entirely stopped all traffic between Ulefos and Strengen, either by land or water. We hope this state of things will soon alter; but although yesterday was fine, to-day it is still pouring. We are quite ready to start as soon as the wheels arrive. Electro deposition is proceeding with regularity, and we sent off to you last week 6 tons 2 qrs. 3 lbs. electro copper and some battery mud, which we hope will reach you safely. There is a stock of copper here sufficient to keep the works going this week, even if smelting cannot be resumed.—T. F. SMITH.

THE BRATSBERG COPPER CO., LIMITED.

MR. BALL VISITS THE MINES—VARIOUS IMPROVEMENTS EFFECTED—POSITION OF THE COMPANY DECIDEDLY BETTER—VIEWS OF A SHAREHOLDER WHO SAW THE PROPERTY.

The fifth ordinary general meeting was held at the Guildhall Tavern, on Thursday, for the transaction of the ordinary business of the company.

Mr. John B. Ball

(chairman of the company) presided.

Mr. C. E. RIDDELL (secretary) read the notice of meeting.

LABOUR DIFFICULTY.

The CHAIRMAN: Gentlemen, the first subject dealt with in the report is the position of the smelting company, which is a matter of great importance to us as a mining company. A good many of you have heard what I just said about the shipments of copper that have been received, but I will repeat them for the benefit of those who were not then present. On Sept. 26 we had nearly 6 tons; on Oct. 3, 4 tons; Oct. 11, nearly 6 tons; and Oct. 17, over 6 tons, and we have had some mud which contains the silver. With regard to the subject of miners, that is a matter of great consequence to the wellbeing of the company, and

I will read you the latest news we have from Mr. Holman on the subject. On Oct. 12 he writes: "You will be glad to hear that matters are improving, and that the outlook is brighter. I think there are now, all told, on the mine, with the number just arrived, 87 miners, with prospects of several more to come shortly." On Oct. 19 (the last words we have from him on the subject), he writes: "There have been no fresh arrivals, but we hear more are coming soon." We have written to him to ask him in future to report the number of miners weekly in his report, so that you who see the reports in the MINING WORLD may be able to have the information at the earliest possible moment. That letter was acknowledged on Oct. 20, and I have no doubt in the next report you will see the number of miners given. As to the fire at the dressing house that was very unfortunate, but I cannot find out that anyone was to blame. The system of heating the dressing house was very antiquated. It was heated by means of stoves, and it was believed that the chimneys of these stoves, heated as they were, caused the fire to take place. We have taken precautions against the recurrence of such a calamity as that. In the first place, we have sent out pipes for heating the dressing house by steam instead of by these stoves; and in the second place, we have had the opportunity of buying a fire-engine that belonged to another mining company which came to grief, and which we bought very cheaply. Mr. Holman says, respecting it, "It is on the spot and overhauled, and placed at a convenient spot. It is an excellent engine, and will throw a large stream of water over the highest building we have." The next item is stores, steamer, and cottages, which I will take *seriatim*. With regard to inducements to the miners to come to our property, I found, on discussing the matter with Mr. Holman, that there were two great difficulties, one being the question of cottages, and the other the cost of supplies. After much deliberation we agreed (having obtained the sanction of the directors in London) to

GIVE THE WORKMEN AN INTEREST IN THE STORES.

I have a letter here which I wrote home at the time, which will explain the matter clearly:—

"I have been giving special attention to the short supply of miners, and Mr. Holman advises the cost of living, owing to the barrenness of country and the sparseness of the population, with the want of supplies of fish, which are to be obtained nearer the coast, as well as the want of housing, as obstacles; and after considerable discussion and consultation, have come to the conclusion that it would produce a good effect if we could announce that we would run the stores only for the benefit of the men, that is to say, distribute amongst them the net profit that remains, in proportion to their purchases, after deducting a reasonable amount for expenses and 5 per cent. interest on capital employed."

This will not altogether wipe out the figure of profit we have, but will transfer some of it to another heading—interest on capital instead of profit on stores. There has been a considerable amount of business done at the stores, and the profits, subject to the deductions mentioned, and a charge for rent, would leave about 236%, which would give the men a return of about 5 per cent. on their purchases. Mr. Holman will endeavour to obtain publicity for this in the usual way, and to attract miners to us, and he will also possibly stop the threatened competition of two of our neighbours into the full details of which I need not go. With regard to the sale of the steamer, that may be a matter of consideration later on. Up to the present time we have come to the conclusion that we cannot do without it. If we got rid of it freight would be raised upon us, for there would be then no competition. It may be that when the canal is fully opened, which will not be for some time—Mr. Holman says probably not until next June, though we have had our steamer through it—we may be able to do without it, but certainly not until then. So far the canal has been blocked with timber, which it will take a little time to clear away, but the canal is a very substantial structure, which has cost double the amount of the estimate, but that does not affect us as our contribution was a fixed one. The steamer at present is paying a fair profit. In the matter of cottages we have asked some of the gentlemen who had debentures with us to leave the money for the further period, so that we may be able to put up some.

WE HAVE AT PRESENT 77 COTTAGES,

20 of which are free of rent, because the men receive less wages in consideration of free tenancy, but that is a system we do not like and should prefer to do away with. Some of these men have been in these houses for many years, and have improved the land so that it is a difficulty to alter the status upon which they hold them. Those paying a rental yield about 8 per cent. per annum, and Mr. Holman believes now that we have a circular saw in operation, as he can cut timber more cheaply, he will be able to build the cottages more cheaply and make them pay 10 per cent. The money is well laid out, not only from the investment point of view, but because more miners will be attracted to us. On my visit I had the pleasure of having with me one of our largest shareholders, and I only wish that a good many others had been there at the same time. Mechanical traction is a question that will require attention. We are now a mile into the hill, and every year the distance is getting greater. If we could get some kind of mechanical traction—either compressed air or electrical power (we have some of the machinery) with a suitable engine—it would be most desirable. I went over

THE HOWARD LODE

with Mr. Holman. It is distinct from the Hoffnung, which has produced almost the whole of the ore to the present time. We cross-cutted to it some time ago, and I am pleased to say that in one particular place I visited there was what Mr. Holman considered the best stope in the mine showing about 2 tons to the fm. I see, on looking through the reports recently, that it is not worth so much as that—only about 1½ tons—but even that is a very good showing indeed. The sorting is now done by hand labour, but if we could employ machinery we would have several more men available for other work, besides getting the sorting done more quickly. We have already bought a second-hand engine from the mines from which we bought the fire engine, and it is on the spot. Mr. Holman will take advantage of the stopping of the dressing machinery, when the frost becomes too severe in Jan. or Feb., to complete that improvement. We have had several other suggestions from Mr. Holman, as for example, the erection of a steam rammer and an iron foundry (we have a lot of scrap iron we could use up), and the provision of the electric light,

which would be a great advantage, but we have not felt financially strong enough to adopt any of these suggestions. While I was there also Mr. Holman suggested that we should go and see

A MINE CALLED MOSNAP,

which is 1,000 ft. higher up the mountain, and 6 miles from the Hoffnung Mine. I am afraid it is not a thing we could deal with at present, but I mention it as one of the incidents of my visit. At this mine there is an extraordinary quantity of rich blue ore lying about. No work has been done for years upon it, and at some time or other it may be worth our while to see what can be done with it, as its produce would be admirable to mix with our poorer ores. A day after we were there we learnt that

TWO BEARS HAD ALSO VISITED THE MINE—

not the kind of "bears" found on the Stock Exchange. (Laughter.) We have arranged also for a better supply of dynamite with the Nitro Glycerine Co., who have always liberally treated us in the past, and who have now, thanks to Mr. Holman, made a reduction in the price. The engineers' report is very full and complete, and deals satisfactorily with the points raised in it. As to the debentures, we received 2,730%, out of the 6,000% asked for, and have been able to carry on with that. If we had had the larger amount we should have done better. Mr. Holman has taken 400% of this issue himself, which, at all events, shows that he has confidence in the company. (Cheers.) We have paid off the drawn bonds of those who did not renew. I had hoped to have got a map of the property which would have shown the shareholders what it consisted of, but Norway is a poor country, and a large scale map has not yet been made. I now move the reception and adoption of the report and accounts. (Cheers.)

Mr. BERGTHEIL (director) seconded the motion.

DISCUSSION.

Mr. BELLINGHAM: I presume you have an arrangement with the smelting company for taking your ore at a fair price? ("Yes.") What price do they give?

Mr. ROBBINS: Will the increased number of men enable you to work at a profit? and are you in a position to say at what price we can produce copper at a profit?

A SHAREHOLDER: You stated that a shareholder had visited the mine with you. If present, it would be satisfactory to hear the views he formed when on the spot.

VIEWS OF AN INDEPENDENT SHAREHOLDER WHO RECENTLY SAW THE MINE.

Mr. F. O'S. B. READE: I have great pleasure in informing you of the satisfaction I derived from my visit. I am a large shareholder in both companies, and naturally felt anxious as time went on that I was getting no return for my money. I, therefore, thought I would like to go out and see the property. I accidentally heard that the chairman thought of going over, and when I expressed a wish that I should like to go also, he suggested I should do so with him. I took advantage of the opportunity, arrived at the mine, and was more than agreeably surprised with what I saw. You might imagine that there is nothing to represent our money, but there is a great deal in buildings of first-class character, excellent machinery, and the like. The great difficulty has been the want of miners. I am not an able speaker, but should like to address you for a few minutes to tell you all I saw. I went through the principal levels and was exceedingly pleased with them and also with Mr. Holman. Although not an expert by any means, I have an interest in many mines, and was certainly pleased with what I saw here. I feel sure you would be surprised if you went over and saw how substantially everything is done. There is

NO IDEA OF COMING TO GRIEF ABOUT IT.

The whole of my visit was extremely gratifying, and I went simply as an independent shareholder. (Cheers.)

The CHAIRMAN: Mr. Reade paid his own expenses.

IMPORTANT QUESTIONS.

Mr. BELLINGHAM: Have you any method of catching the oxide of copper that goes away with the water?

Mr. ROBBINS: Do you see any prospect of the mine paying in the future? It appears to me that the time must come when we shall have to close.

The CHAIRMAN: As to the price of ore—the ore is sold to the smelting company upon an agreement intended to make the latter independent of the price of copper. A preliminary payment is made by that company to the copper company three months after delivery, at the price the copper company would have obtained had it sent its ore to England; and then, when produced and sold in England, the price is adjusted, if necessary, by the auditors, who are different officials in each company. The price is, in fact, regulated by the analysis. As to whether this will be a paying mine

DEPENDS MOST LARGELY UPON THE PRICE OF COPPER,

but our endeavour is to increase the output by getting more labour, so that market fluctuations will affect us less. I have been struggling to get at the price actually at which we can produce copper, and have pressed Mr. Holman to make a trial of a week, but he has written to say it is impossible, as we must run for a time, and then have a clean up. As to the method of catching copper going away in the water—I think we lose very little. We have valuable machinery and buildings, and must utilise them, and I do not see why this should not eventually become a paying concern. (Hear, hear.)

A SHAREHOLDER: What is the value of the steamer?

The CHAIRMAN: We have it in our accounts as only 500%, but it cost seven times as much. Mr. Holman is the general manager of both companies, and the directors are not quite, though nearly, the same.

The report was adopted.

The CHAIRMAN proposed, and Mr. BERGTHEIL seconded, the reelection of Mr. Frank Hodgkinson as a director.

WORK DONE.

Mr. HODGKINSON: In Mr. Ball's office there is more attention paid to this company than to any other with which I have ever been connected. I am surprised at the amount of attention to detail and the letters that are sent out from that office to the directors.

The motion was carried unanimously. Mr. REED proposed, and Mr. C. HARRISON SMITH seconded, the re-election of the auditors, Messrs. Theobald Bros. and Miall, which was carried unanimously, as was also the cordial vote of thanks to the chairman, which concluded the proceedings.

Report for week ending Oct. 17.—Hoffnung Mine: No. 2 adit is now unproductive, the lode being very small, in fact, altogether disturbed in its general character, apparently by a very hard formation of strata. No. 1 rise in the back is worth 1 ton per fm., and we think that No. 2 rise will shortly improve in value; now worth $\frac{1}{2}$ ton per fm. At No. 3 adit level the lode is still looking very well, and there is now a leader thickly impregnated with ore, hence we hope to report value here next week. The rise is producing about 1 ton per fm. No. 4 level is without change, and the same remark applies to Murchison's trial level. Johannes Mine: The western level on Howard lode is unproductive again, but the rise in the back is worth $\frac{1}{2}$ tons per fm. The eastern level is looking well, and yielding 1 ton per fm., and the rise in the back here $\frac{3}{4}$ ton per fm. Surface work and remarks: Heavy rain continued for the greatest part of the week, and it has been very hindering for all outdoor work. Our road has been damaged, and the road between Ulefos and Strengen inundated, and otherwise blocked, inasmuch as the post did not arrive on Saturday night, and the other traffic is for the present suspended. No official report has reached us, but we presume the block will soon be cleared, and the road open again in a day or two. The temperature is falling, and, consequently, the floods are lessening.—J. D. HOLMAN.

GOLDEN LEAF, LIMITED.

MR. STEWART WALLACE DESCRIBES THE GREAT IMPROVEMENTS THAT HAVE OCCURRED IN THE EMPIRE AND GOLDEN LEAF MINES, AND THE BIG POSSIBILITIES THAT ARE BEFORE THE SHAREHOLDERS.

A MEETING of this company was held yesterday at the City Terminus Hotel to hear a statement from Mr. J. Stewart Wallace, the chairman, as to his recent visit to the properties in the United States.

Mr. J. Stewart Wallace

presided.

The notice calling the meeting was read by the SECRETARY (Mr. H. Cameron Richardson).

TRIBUTE TO THE LATE CHAIRMAN.

The CHAIRMAN, who was received with a burst of applause, said: Gentlemen, it is rather unusual for a large body of gentlemen to assemble after the lapse of time since our last meeting without having something to regret, and I am sorry to say that this is no exception to the general rule. You will at once understand that I refer to the deeply-regretted demise of our late chairman—(hear, hear)—than whom there could be no gentleman more devoted to the interests of a company, or more conscientious in the discharge of his duty as chairman. (Cheers.) His attention to the necessary details of his office has set me an example that I shall endeavour to follow, and I venture to hope I shall not be unsuccessful in the attempt. For myself, personally, I feel I have lost a friend, and I would ask you to accept my assurance that I am not using the hysterical language of hyperbole when I say that I should much have preferred serving under him to reigning in his stead. However, by the kindness of my colleagues in the circumstances in which we were placed, I have had to be found for this concern, and with the characteristic unanimity of our board, my colleagues selected me for this office of chairman. So far as I am concerned, I shall endeavour to discharge the duty in the same high-minded manner that distinguished Mr. Cavendish, and before him the late Mr. Bladon. (Hear, hear.)

MR. WALLACE'S VISIT TO THE PROPERTIES.

As you have been told, this meeting has been specially called so that I might give you an account of what I saw when visiting the property in Montana, and I take it that this large meeting is a sufficient endorsement of the views of the board that it was desirable some one should visit the property this summer—(cheers)—and in accordance with their desire I proceeded to the spot. I will endeavour to give, naught extenuating nor omitting, aught that I think it is desirable you should know, so that you may be fully acquainted with the possibilities of this concern—the Golden Leaf, Limited. It may be that I may have to go into details, as I am rather anxious you should be fully informed, in order that you may be able to form an estimate of the value of your property.

CARLISLE.

I shall follow the example of our late chairman, by first referring to the Carlisle, and I am sorry to say that I have no better report to give of that property than was given upon the last occasion. I think it was intimated on a former occasion that our manager there had bequeathed us an *heriditas damnosa* in the way he had managed affairs, and in the state in which he had left the property. By great labour we have endeavoured to undo the mischief he created, and in the course of a short time we hope to put matters in such a state that we may be able to effect a sale which might relieve us from that portion of the property. Somewhat to minimise the expense we have been put to there, we have arranged to work some 10 stamps on customs' ores, so that we may be able to sell as a going concern, which obviously will be more easily disposed of than if at a complete standstill. On going to America, I went first to the company's property, situated at Empire, and on arriving there found that the opinions I had formed and the prognostications I had made when last I had the pleasure of addressing you on the results of a similar expedition, had been fulfilled in a most marked manner by

OUR MANAGER MR. JOHN HENRY LONGMAID.

The mill I found in most excellent working order. Owing to insuffi-

ciency of supervision (to put it on no other ground) in the first construction of the mill, unsuitable materials had been supplied in its working parts. Those have been altogether removed and replaced by the latest approved steel fittings, so that the mill is in first-class order. The alterations to which I referred have, been effected, with the result that, as you have seen, my forecast, that we would increase the output from 2,500 to 5,000 tons per month, has now been verified. We have been able to crush as against the former \$6 or \$7 a ton at a cost as low as \$1.78c. Taking the entire 10 months' expenses, the total costs of every kind, including administration charges, have only amounted to \$2.19c. But in that there are included 5,000 tons of ore that are already broken in the mine at a cost of something like 1,000%. If we credit those 5,000 tons, the actual working expenses, including administration for the whole of the 10 months, are exactly \$2.5c., thus quite vindicating the position I took up last year when recommending the opening up of the Empire property. (Cheers.) I should also point out that contributing to the marked decrease in the expense there is an element I did not mention before, which I consider most important. Under our management

WE PERMIT NO DRINKING SALOONS OR GAMBLING HELLS IN OUR CAMPS.

(Loud cheers.) Contrast that, gentlemen, with the state of things under the former management, when no fewer than six drinking saloons were allowed and three gambling hells. Any men who are engaged in heavy manual labour, especially mining, cannot after drinking, carousing and gambling over night, give a fair day's work for a fair day's pay. (Cheers.) I consider they cannot, so that we have adopted the policy of entirely avoiding temptations to our men in our own camp. Not only so, but any man who is seen going over the dividing line to Marysville too frequently, is allowed to go there permanently, for we have no intention of permitting him to indulge in Marysville in so-called pleasures which we deny to him at Empire, because the result would be a marked diminution of his labour. (Cheers.) Those points have a direct bearing on our improved condition. Regarding the mill, it is one of 60 stamps, and during the 10 months 20 stamps have been entirely occupied in crushing Smithville ore, and leaving the other 40 engaged on Empire ore, so that we can tell the results in each department of our work and know what we are doing. If we have put the whole together we might have been making a profit at Empire and a loss at Smithville, but we have each result tested, and proved on its own account.

THE MINE.

I will now proceed to the mine. If you will recollect, this time last year I anticipated there would be 12 to 18 months' work for our 60 stamps on the admittedly low-grade ore then in sight. We have been at work 10 months, and there are still about four months work on hand of the old ore that we have, apart from the new, distinguished from the new and important strikes we have made in the course of the 12 months. We set ourselves to develop the property, because many of our shareholders thought that although the Empire had been closed down, in reality the mine had not been properly worked, and that if it were properly explored, important discoveries might be made. We carried out that policy, and during the 12 months we have done about 900 ft. of exploring work at a cost of about 4¢ per ft. That seems a large sum, but the results I am glad to say have justified that policy. We have on the lower level (the 400 ft.) I am glad to say

STRUCK A VERY IMPORTANT ORE BODY.

Reference to the map will show that the part coloured blue illustrates our development work this year. To Mr. Longmaid is entirely due the credit of urging upon us the desirability of pushing on beyond this line of demarcation, and I should be the last man to detract from the credit justly owing to one in his position. (Cheers.) He argued fairly, as events have proved, that the probabilities were that these two lodes, approaching each other, would at a certain depth perhaps converge. We drove, and within a comparatively few feet his prognostications were fulfilled. We have struck a very large ore body. It was struck while I was there, so that I had an opportunity of seeing it myself. In that ore body we ran 50 ft. It is 8 to 9 ft. wide, and assayed \$25, \$20, \$80, \$87, \$301, \$357, and \$781 to the ton, giving an average for the entire 8 ft. of something like \$20. If we are making money now, and we have made it from \$3½ ore, what may we not hope to do with, say \$15 ore? (Cheers.) The figures are startling, but you can work them out for yourselves as to what our profit may be. Of course, it is the intention at once to sink upon this strike. We will immediately begin sinking, so that we may explore it in depth, and Mr. Longmaid believes (he cannot, of course, be certain, though his arguments are reasonable) that we have

STRUCK THE APEX OF A VERY LARGE FRESH BODY OF ORE,

with all the indications that it will increase in richness as we descend, but, of course, gentlemen, you can judge of that as well as we, as you have the facts. It is our intention immediately to sink a winze, and thus see what we have in depth, because we have tapped 50 ft. on the top. The part coloured yellow on map (showing plan) shows that to which I referred last year as the ore in sight, low grade, that we would work, but we have still three or four months' supply on hand. When I was there this year we went through all the tunnels, and Mr. Longmaid pointed out where there were indications in No. 2 tunnel of possible ore lower down. He argued then that our proper course was to pursue No. 3 tunnel, which we did, and we have now a cable stating that he has struck another ore body in the No. 3 level, which he believes are the same body as the indications shown above in tunnel No. 2. I will read the cable received yesterday bearing upon that particular point, as showing again how as, on most occasions, Mr. Longmaid's judgment may be reasonably relied upon.

IMPORTANT CABLE.

It is dated yesterday:—

"Empire: Have struck pay ore tunnel No. 3 between 1,350 and 1,400. Ore improving in quality as developed there. We are now taking out ore of fair grade from stopes G 1,100 and 1,200. These will supply us with ore enough to last through the winter." We have a supply for seven or eight months above the No. 4 level in addition to the three or four months supply we have scattered over the upper levels, thus showing again the correctness of Mr. Longmaid's judgment. From No. 4 tunnel we are going to make an upraise

to join winze No. 4 from No. 3 tunnel. We shall then proceed sinking to develop the new strike in the 400-ft. level. When I was there the winter season was coming on, and as it was then somewhat difficult and inconvenient to get supplies the question was whether we would be justified in laying in a large stock for seven or eight months to carry us over the winter, and, after discussion, we decided the probabilities were so in favour of the continuance of the winter's work that we might undertake the risk. The result has more than fulfilled our expectations, because, without our new strike in the 4th level, we have in the upper levels, including the new strike in the No. 3 level, more than seven months' supply on hand. I consider that a most gratifying report to have to make on the Empire Mine. (Cheers.) We have

OPENED A STORE IN EMPIRE,

because while we prohibit men from indulging in too much alcohol, we try to provide them with all the necessities of life at cheaper rates than they can get them at Marysville. We have, therefore, started a new store, in which we have 2,000l. to 3,000l. worth of goods, and on which we make a profit of \$400 to \$500 a month. It is a source of revenue to the company, as well as keeping the men in the Empire territory, and giving them no excuse to wander away. We are able to buy our supplies of every kind on the best possible terms. We pay cash for everything with the result that we get a discount of 2 per cent. for prompt cash, which is a very happy state of matters. When I said last year (and some of our opponents in other mines were rather inclined to hold me up to scorn for doing so as a man who came here with "creations of his imaginations") I believe some of our shareholders who did not endorse that, yet were inclined to say, "doubtless Wallace means well, but is a little of an enthusiast." At all events some formulated their ideas, and, of course, there are always wiseacres who know much better than the man who has been on the spot to see, and who shook their heads, saying this is the explanation of Mr. Wallace and Mr. Longmaid's proceedings—they simply took out the sieves through which the ore, when crushed, must all pass, and what they did was to put in a coarse one instead. If the wiseacres had known anything, they would have known that with \$3½ ore, it was more necessary to crush the ore finer than with a higher grade ore, because it was more essential to bring each particle of gold into more intimate connection with the quicksilver than if it were richer ore; but instead of our having done so, we actually increased the sieves from 784 openings per square inch to 900. I wish to be accurate so that my friend Mr. Bayliss may get no advantage of me. Thus, there could be no explanation more opposed to truth than that which our opponents gave, because we are actually crushing it smaller, as it is more necessary to do so, with the result that with \$3½ ore we have been able to make a profit of 8,000l., and I predicted 10,000l. We have realised this in 10 months, not a bad result from an abandoned mine. (Cheers.) I will now take you to Golden Leaf. I should, however, say that the strike in the Empire had not been made at my first visit. I happened to be at Golden Leaf some time afterwards when the report came it had been struck, and I immediately started off so that I might say I had seen it, taken the samples unguided by anyone, and had them assayed, confirming the reports I wrote to you.

AVERAGE VALUE OF THE NEW STRIKE.

The average actual samples gave something like \$22 per ton. That is the new strike in the No. 4 tunnel of the Empire. Now, the Golden Leaf just following the same order will have to go through the mill first. I should tell you we had an extraordinarily wet season, which seriously embarrassed Mr. Longmaid in his preparations. When he first communicated with us on the subject, he said he would undertake to put up and complete the mill in 90 days. Now, though I had unbounded confidence in Mr. Longmaid, and knew from considerable experience of him that he would do his best, I thought he was giving himself the minimum of time, though I did not tell him so. There came a very wet season. For no fewer than 15 days in succession rain continued, with the result that they entirely ran out of the necessary material for the construction of the mill, and instead of keeping a large staff unemployed, waiting for what did not appear near at hand, Mr. Longmaid had to discharge the whole gang, and I need not tell you how seriously that embarrassed his position. But, notwithstanding these difficulties, and that he had to dismiss the entire staff, he accomplished the whole matter in 122 days, as against the 90 days that he had asked for. Instead of three months, he had the whole of the mill going in four months and one day, and for this he is entitled to great credit. He had innumerable difficulties to overcome to get the mill constructed in such a limited period; but he never sacrificed economy to speed. We have an automatic mill constructed of the best materials, including a tramway 200 yds. long, ore bins at the mouth of the mine capable of holding 300 tons, including the whole of the plant for the necessary working of both the gold and silver processes, for a cost of about \$30,000. We have a new 80 h.-p. engine with sufficient power to drive 30 stamps, of which 10 are in operation, and as we are pursuing a cautious policy it was considered more judicious to begin crushing with 10 stamps, but we can add another 10 at a cost not exceeding 1,000l. when we consider it desirable. (Cheers.) I am in hopes that we shall very soon consider it desirable to do so, but we must have sufficient reserves in sight.

THE MILL IS ENTIRELY AUTOMATIC.

From the time the ore is brought to the mouth of the mine and deposited in the bins until it leaves the mill it is never handled again but; once our entire working expenses are reduced to a minimum. Some of my friends are somewhat anxious on the point as to why we have not milling returns from the mine. I hope to satisfy you, and though you are a little impatient I do not blame you for it. I am impatient myself, and I sympathise with you, but let us be fair there and appreciate the circumstances. This is not a gold mine where the ore undergoes but one process, but it is a silver mine which requires a great deal more machinery with which to operate. It involves a delicate chemical process, and the steaming in pans from four to eight hours, with the addition of chloride of sodium, sulphate of copper and other materials, all of which constitute a chemical operation. No two silver mines are exactly alike. It always takes time before the best chemical treatment adapted to the ore can be found. It may require four or eight hours steaming; it may require more bluestone or less, more chloride of sodium or less. All these points can only be found out by actual experi-

ments, and you can obviously see that a wise man would not, until he had actually discovered the most economical and best way of working his ore, run his mill continuously at its fullest capacity. I was there for 21 days, and Mr. Longmaid was devoting himself to the solution of the difficulties he met with in the treatment, and I will explain that if it be not properly treated, instead of being recovered in the various pans in the form of amalgam, it is allowed to go in the tailings running to waste. The first day it was found that no fewer than \$14 per ton were being wasted in the tailings. Mr. Longmaid and I would have been much to blame had we permitted the 10 stamps to be occupied in that way. You would have blamed me, and deservedly so, as your chairman, and so we had to carry on the experiments with only part of the plant intermittently, because until the various changes could take place, we did not know whether the best plan had been discovered, but we reduced the loss from \$14 to \$8, and Mr. Longmaid is still engaged in experimenting, because he hopes to get this down to \$5 or \$6. If he succeed and recovers 80 per cent. to 85 per cent., he will have accomplished a very great work indeed. I hope, therefore, you will approve of the counsel I gave him, to take a little time in finding out the most economical and profitable way to work. (Cheers.) There were not 30 days' run of the machinery during the month, and, therefore, he could not cable a thing that did not exist. In addition to the works mentioned, included in the \$30,000, I should point out that we have an assay house, a retort house, and several houses for stores that are needed, because at Golden Leaf, under Mr. Longmaid's management, such a thing as persons bringing stores and handing them over bodily to persons to be used, does not exist. Everything coming in is entered in a store book, and the stores are kept and given out and debited, not only to the department, but to the individual to whom they are handed. It is the duty of the storekeeper to give out the goods, and also to see that they are actually required, so that we have introduced the greatest economy into every department. On the point of buildings I should say we have erected a large store, for we are

ADOPTING THE SAME POLICY AS AT EMPIRE.

We have a stock of goods in the store of 4,000l. or 5,000l. sterling, the best of its kind in the neighbourhood, by which we are not only commanding the trade of our own men, but also of a portion of the surrounding country, which is the best evidence to our own men that the value we give them is good, and that we are not charging them unduly. We have a profit on that store of something like \$500 a month. Not only do we make the profit on the store, but we have the additional advantage of getting all stores we require for the mill not in retail quantities, charged at excessive prices, but at moderate wholesale prices, plus a charge of 10 per cent. for handling in our store. We have also provided for the comforts of our men by building them substantial dwellings. I admit that at Golden Leaf there is not much gilding or embellishment on these establishments, nor are they picked out in paints of many colors, but they are comfortably and substantially constructed. Our men there have comfortable houses, and in our boarding house (that we have rented at a good price, and on which we have a fair return for our money) they sit down to a most excellent table. I took care to see what was provided, for above all things I dislike being connected with any concern where the workmen have a real grievance on the ground of insufficient food and uncomfortable dwellings, and I took care to satisfy myself on these two points. Now,

I COME TO THE MINE.

If my description of the Empire Mine was roseate, I am glad to say that the Golden Leaf exceeds in anticipation even the Empire. We have gone on during the year with our development, but, of course, have not proceeded so vigorously in the latter months, as Mr. Longmaid has given his time and attention to the mill, but in every direction that we have gone we have opened into ore. On the Shenon tunnel, from which there are drifts cut north and south, I will tell you what has been done. On raises 4, 5 and 6, although they are showing second-class ore, with good indications, to follow them has been impossible, owing to Mr. Longmaid being occupied otherwise; but we have progressed with No. 3, in which we find a vein 3 ft. wide, with assays \$100 to \$200; and on the No. 4 raise, which runs 300 ft. from the level of which I have been speaking, to the surface, 300 ft. In the course of cutting the 300 ft., we cut through three distinct bodies of ore, the one measuring 20 ft., the other 30 ft., and the other 50 ft.—that is to say, of the 300 ft. we have

OPENED THROUGH 100 FT. OF ORE,

which assays from a trace up to \$2,200. That seems astounding, and I wait, therefore, for you to take it in. (Laughter.) You are no more astounded than I was. If we have but a very small proportion (and, of course, we only have that) of \$2,200 ore, see how it raises our average. That was looking most promising when I was there, and now I had better read you the last of two letters I had from Mr. Longmaid while I was still in America:—

"Sept. 28.—Golden Leaf new strike in bottom of south drift still continues very good, and the ore in No. 4 is very encouraging to-day. One sample over \$200; another 95 and another 12. The body, as it opens out, is very fine, and the mill ore to-day averages \$37."

(Cheers.) I cannot tell you, neither can Mr. Longmaid, how far on in these 100 ft. opened up in the No. 4 raise the ore may extend. He believes it will do so a considerable distance, and it seems to me, as a business man, that there were good grounds for his belief, but I do not unduly wish to over-colour the situation. You have the fact as I have it, and can judge for yourselves. That disposes of the development work on the No. 1 tunnel; but just where the tunnel makes the point of junction with these drifts we have opened and sunk a winze 100 ft., and at 50 ft. deep and also at 100 ft., we have begun again to drift north and south. In the whole of the four points I am glad to say we are in ore of an exceedingly rich character. We are now at the lower workings, and to the south we have reached 400 ft., and for the last 30 or 40 ft. the assay is from a trace to \$400 and \$500 ore. Our intention is in running north to run some 700 or 800 ft. further to tap what we believe is a large ore body in the junction claim, situated to the north-west (again referring to the plan). There are surface indications and shafts which have been sunk on a lode from which quantities of very good pay ore have been removed. We are running

through this drift to intersect that body of ore at a depth of 700 or 800 ft., and it is very encouraging, while we develop ore in that distance, that in the meantime we are running through ore assaying up to \$500. (Cheers.) This is

A VERY ENCOURAGING SORT OF PROSPECTING.

(Cheers.) Pursuing the south drift, which is in the direction of Wadam's section, we have run 400 ft., and have left to run 900 before we again tap a large ore body that exists in the same way, of which indications appear on the surface, and from which quantities of good ore have been extracted, and we are going to intersect that at a depth of something like 700 ft. We are opening a tunnel direct from the side of the hill into Wadam's claim. We have suspended operations upon the south drift until we know the result of the running of the tunnel, of which now 400 ft. have been completed, and of which 500 ft. yet remain to be completed, but we hope to complete it in six months, when, if we strike the ore body in Wadam's, we will continue the south drift, and run it to 200 ft. under that; so that you will see we are developing the property upon a most comprehensive and lasting scale, by which we hope properly to demonstrate and judge of its value. Roughly that disposes of the development work there, except that we have been obliged to suspend work, for the reason that miners require some oxygen, and the air at present is so bad at the end of the 400, that until we complete a connection above to which we are working, we must suspend operations for this reason. Miners cannot work any longer there until we get a current of air to pass through. We are sinking a winze now from the Shenon level, to which I referred before, a little ahead of the 400 ft., in which we have struck ore of considerable value, thus showing, in all probability, that we have there too a body of ore still unexplored. The net result of the mine is this, that in every direction we have explored, we have struck ore of an exceedingly rich character, giving us an average for our mill of from \$30 to \$40, and you can judge when we have that, the immense profit that must accrue when we manage to get the loss in the tailings down to the minimum we hope shortly to do. Mr. Longmaid estimated, when I was there, that, without additional strikes, we had then 12 months' ore in sight absolutely for our mill, and since then we have made an additional strike, as you will see. He writes, Sept. 27:—

"The new strike in bottom of mine gave out completely for some distance, but yesterday we again opened out to a finer body of ore, assaying \$203 and \$155 respectively, with some lower grade." It seems to me we require very little exploring indeed to enable us to feel safe in erecting the other 10 stamps. It is impossible to predicate how long it may take, but when we proceed to the north-west and tap the ore body in the junction claim, and get in with the Wadam's tunnel and tap a large body of ore there, the time will have fully arrived when in the opinion of the directors we can put up the other 10 stamps. I hope you will approve of our policy of not over-stamping the place, but of always having a reasonable amount of ore in sight for the number of stamps we work. (Applause.)

REGULAR *versus* SPASMODIC RETURNS.

We do not want to have large returns, and then a closing down of the mine because of insufficient reserves. Therefore, I ask you to be patient. We are giving our earnest attention to the development of this mine in the quickest possible manner, and entertain no doubt that we have an exceedingly valuable property, I am more convinced of this than when I first addressed you two years ago, because the developments since made have opened out into ore of such good quality. I hope I am not keeping you too long. (Cheers.) I do feel I have no right to keep back anything you ought to know, and therefore I am telling you what may even appear trivial, so as to put you in possession of the same facts in order that you may judge for yourselves, what you ought, or ought not to do with your own property. It would be very unbecoming in me to withhold my meed of

PRAISE AND APPRECIATION OF THE EFFORTS OF MR. LONGMAID in your interest. I am aware some of you thought last year I had acted injudiciously in re-engaging Mr. Longmaid, but I am proud to say that my knowledge of human nature has been verified on this occasion. He has fully justified the confidence I have placed in him, and I know of no man in the position of manager whom I have ever met in connection with any mining, commercial, or industrial undertaking who is more deserving of the confidence of shareholders than *Mr. John Henry Longmaid*—and I lay stress on his full name. I am gratified that he has got married since I saw him last, but, of course, he will be none the less devoted to your interests on account of that; but I need not say—Mrs. Longmaid being a discreet lady—we need not fear petticoats peddling in our property.

NOW, AS TO FINANCE.

When we entered into this re-organisation, it was estimated that 7s. per share on the Empire, and 2s. 6d. on the Carlisle, would be necessary to enable us to carry this enterprise to a successful conclusion. For reasons best known to themselves—reasons which I think in time they will regret—the holders of 60,000 shares did not take them up. That seemed awkward, but by an effort 20,000 of these shares were taken by the directors and friends over and above what they were called upon to take under their holdings. From evidence we had, we hoped that this would be a great success, and we were anxious, naturally, not to allow it to lapse. The result was that we were 14,000% short of the capital estimated as needed to carry this enterprise to a successful issue. We had to make momentary arrangements, the details of which I need not trouble you with, but they were satisfactory. Now we are in the happy position of saying that we have all this property free from debt. We are able to pay cash to everybody, and we have something in the bank. (Cheers.) Bear in mind that these 40,000 shares cannot be issued except at par; therefore, you need not be afraid that the directors will become competitors with you, and that when you see your shares at 10s. or 15s. they will flood the market with these. When our property gets to the position that we can realise par for them, I have no doubt you will be so satisfied that if we see anything that will add to the prosperity of this company (we have nothing in our minds at present), you will have no objection to our parting with a few of those 40,000 shares at par for capital purposes. But

WE CANNOT DO SO UNDER PAR.

I hope I have not been unnecessarily diffuse. (Cheers.)

hope you have approved of what I have had to say, but you know that you have the privilege of asking questions, and I am the last man who would seek to curtail you of your privileges. When I had the pleasure of speaking to you on May 3, 1890, I closed with these words: "I mean to go and see the property for myself, because I feel a personal responsibility in the course I have pursued, and am anxious that nothing I can do shall be left undone to make it a success. If the present board be re-elected"—(and I would be unjust to withhold my meed of praise from my colleagues who have so admirably attended to their duties)—"if the present board be re-elected, I can assure you that efficiency with economy shall be our watchword." I claim to-day and—I hope that you admit the justice of the claim—that we have lived up to our pledges.

The CHAIRMAN: I am glad to think that—as there are no questions to ask—I have covered all points of interest to the shareholders.

Mr. SHORT: Should these 40,000 shares be issued will they be offered, in the first instance, *pro rata* to the shareholders?

The CHAIRMAN: Most decidedly. That would be only just and fair; but we have no intention of issuing them at all.

CHAIRMAN AND MR. LONGMAID THANKED.

Mr. SHORT: I hope you will now allow me to propose a vote of thanks to Mr. J. Stewart Wallace for the trouble he has been at in visiting the property, and making himself conversant with its working details, and so lucidly putting the matter before us to-day. (Loud cheers.)

Mr. PYKE: I have great pleasure in proposing the thanks of the meeting to Mr. Longmaid for the assiduous way in which he is carrying out his work. (Cheers.)

Both motions were carried by acclamation.

The CHAIRMAN: I thank you for your expressions of approval. Anything I can say could not do more than do justice to Mr. Longmaid in his efforts to serve you, or to the loyalty with which he has carried out, in my absence, the policy fore-shadowed while I was there. He has left nothing undone that a man could possibly do. As to myself, it would be the veriest affectation to say that I am indifferent to an expression of approval from a meeting such as this, for, after all, life is not so desirable if we do not know we have the appreciation of those with whom we come in contact, and therefore I feel gratified that the policy of the board has met with your approval. We shall endeavour in the future to merit your expressions of goodwill, and leave nothing undone to deserve them.

THE PINOS ALTOS BULLION CO., LIMITED.

THE RESULT FOR THE YEAR 1890—CIRCUMSTANCES WHICH HAVE MITIGATED AGAINST THE COMPANY—PROMISING OUT-LOOK FOR THE FUTURE.

THE sixth ordinary general meeting of the shareholders of the above company was held yesterday at the Cannon Street Hotel, London, E.C., for the purpose of transacting the ordinary business of the company.

Mr. A. Buchan-Hepburn

(the chairman of the company) presided.

Mr. J. B. PALMER (secretary) read the notice convening the meeting.

DEATH OF THE MANAGER.

The CHAIRMAN: Gentlemen, I regret to have to mention to you (a regret which I am sure you will all share) the sudden and unexpected death of Mr. Waithman, which occurred at the mine last week. Very lately he tendered his resignation as manager, which had been accepted by the directors. Next, I wish to explain to you the great disappointment the directors feel at the long delay which has occurred in holding this meeting. You know from the report in your hands that one of the causes of this was the miscarriage of the letters conveying the reports from the mine, and that it was therefore impossible to hold the meeting earlier. Another reason was that the directors wished to call you together at a time when as many shareholders as possible could be present, so that they could confer with you on the affairs of the company. The delay also enables me to tell you rather better than I could have done earlier what are the immediate prospects of our company. You will see, on looking at the report, that the results show a loss for 1890 of 10,129l. 19s. 6d., which is made up of two items—the first being loss on exchange 5,417l. 11s. 7d., and the second the reduced quantity of ore at the surface—5,540l. 0s. 8d. The first of these items was caused by the manager having to draw for the expenses of the tunnel at a period of the year when the rate of exchange was at its highest, and the output of bullion from the mine at its lowest. To show you how abnormal that figure is, I may just mention to you the effect of the exchange during the last four years. In 1886 there was 167l. against us; in 1889, 1,000l. in our favour; in 1888, 520l. against us; and in 1889, 671l. in our favour. That shows you how unlikely it is that such a large sum as 5,000l. will occur again. Then as regards the ore in hand: In 1889 it was valued at close on 8,000l., and in 1890 2,402l. If you deduct the 5,417l. 11s. 7d. and 5,540l. 0s. 8d. from the loss, you will find that the mine was practically

ALMOST SELF-SUPPORTING,

even with the low-grade ore being worked at that time. There is another item I would like to draw your attention to, which will have to be carried over to the debit of the current year, namely, the amount of the dividend paid in May, 1890. At the time of the declaration of that dividend the profits were such that the directors felt justified in paying it, but previously to this they telegraphed to the manager, asking him what his expectations and beliefs were, to which he cabled a reply that he expected the profits for the present year would be the same as those for the previous year, namely, 21,000l. This has proved to have been completely wrong, and it is naturally a source of much regret to your directors. If you turn to the balance-sheet you will find there is a sum of 90,898l. as a debit against the property, but if you place against that sum the items on the other side from "stores" down to "cash at the mine," which are really the assets immediately realisable by the company, you will find it represents a sum of nearly 52,000l., leaving a balance of only about 39,000l., and this represents the increased value of the property.

As regards the mine, I can quite reiterate the words with which Mr. Waithman begins his report, that he could not, at the beginning of the year, have believed it possible that the mine would show such poor returns, because no one could tell that the ore was going down in value in such a disappointing and unexpected manner. Perhaps it will be best if I first refer to these more disappointing portions of the business, and then come to those that appear more promising.

THE DISAPPOINTMENTS.

Of course, the chief disappointment which we experienced during the year was the failure of the ore body behind the 11th level which we expected to develop into a body of 20,000 or 30,000 tons, because although the winze which was being raised from the 11th to the 9th level, went up in almost uniformly good ore it was found east and west for a very short distance only. That deprived us of a very large amount of stoping ore which we had a fair right to count on. The operations on the west portion of the mine were also disappointing, and the fear of striking water, which would prevent our sinking altogether, compelled us to cease operations there. Since the connection with the tunnel has been made developments have been prosecuted in that direction. The very decided improvement in the ore value caused myself and my colleagues very great anxiety, because it looked as if when we got down to the lower parts of the mine the ore would become practically valueless to us. That anxiety has been entirely removed by the ore that was struck on the tunnel level a little to the west from the line of the tunnel, that, of course, being the deepest point of the mine, and the value of the ore was better than anything we had had below the 14th level. No doubt in time further good shoots of ore will be found. We can sum up the misfortunes of the year under two heads—one the reduced value of the ore, which was quite unlooked for, and the other the excessive loss of time in the milling, which was caused by the scarcity of labour in the mine, which was insufficient to supply the mill with ore. We lost about 70 days on account of this, leaving out the other delays which occurred from the ordinary breakages in the mill which we must always make allowance for. The loss from decreased value of ore represented altogether something like 20,000%. The labour question has been fairly well solved as regards the mine by the importation of labour. We have had considerable difficulties however, and, although the people came under a six months' contract and everything possible was done to induce them to stop, their wives and families being taken out we were unable to keep them. It was found that the wives induced them to go home again they getting homesick. The manager says in future it will be advisable to contract for single men.

THE ENCOURAGEMENTS.

I should like to draw your attention to one or two points which promise a brighter future, and on which we may properly congratulate ourselves. The first in importance is the tunnel, and perhaps it would be interesting to you and convenient if I give you a short account of the history of the tunnel during the year under consideration. The latest report I have got on the subject is dated Sept. 25 of this year, and it is signed by Mr. Cotton, the assistant manager. He says:—

"In accordance with your request, I submit the following report of the work performed and the results obtained, in the tunnel since Dec. 31, 1890. At that date the face of the tunnel was in 3,213 ft. At about 3,335 ft. the vein was cut, and we continued to cross-cut it for about 200 ft., striking the hanging-wall at 3,535 ft. from the mouth of the tunnel. The vein consists of hard white quartz, and averages gold \$2.51; silver, \$7.29; total, \$9.80. At a point 3,483 ft., from the tunnel mouth two drifts were started, one towards the east to communicate with the shaft, and the other towards the west to prospect the ledge. The east drift met the shaft at a distance of 90 ft., and averaged, gold, \$2.86; silver, \$7.97; total, \$10.83. At present the west drift has a length of 83 ft., and the ore encountered assayed, gold, \$10.45; silver, \$15.76; total, \$26.21. The face, just now, is looking rather poorly, owing to the fact, ascertained later, that the ore shoot inclines towards the footwall, thus leaving the face of the drift outside of its limits. This will be rectified when work is commenced again in the tunnel level. In order to ascertain the size of the ore body discovered in this drift, hand-drillers were set at work, stoping out toward the foot and hanging-wall, and for a distance of 30 ft. have shown the width to be 16 ft., with good ore still on the footwall side and the face of the stope. The cleaned ore from this place averaged—gold, \$15.38; silver, \$26.77; total, \$42.15. From all present indications this is the continuation of the western ore body, and a renewal of work will, without much doubt, open up a respectable shoot of ore. Since the communication with the shaft was made all mining at the tunnel level has been stopped, and advantage taken of the delay in the arrival of the rock-breakers for the mill to re-timber the tunnel where needed (about 100 sets), re-lay the track upon an even grade, and enlarge the main shaft below the 17th level in order to accommodate an ore shoot as well as ladder-way and skip roads. This work is about finished, and will be entirely so by the time that the rock-breakers are in place and ready to receive ore. As soon as the enlargement of the shaft is accomplished the machine-drills will be removed from there to the tunnel level, and the two drifts will be advanced as fast as possible—the east to discover the eastern ore shoot, and the west to develop the ore body already encountered. A raise will also be started at once to communicate with the 17th and 12th winzes, a distance of about 48 ft., thus giving us two shoots for the removal of ore and waste from the upper workings by means of the tunnel. The 6-in. air pipe has been removed from the tunnel, and will be placed in the shaft, the old water column being used as an air conductor in the meantime, for in future the air compressor in the hoisting room will be the only one employed." That report shows that we have

AN ENORMOUS BODY OF QUARTZ

in that spot where the tunnel traverses it, of 200 ft., the whole of which averages \$9.80 in value, which of course is too poor for our use until we can find some means for concentrating it. The whole of that body is, however, mineralised to the value of 2% per ton. Exploring a vast mass of quartz like that is almost like looking for a needle in a haystack. Up to the present moment the only advantage we have so far gained from the tunnel has been in the saving on the pumping. Now with regard to the mill, I think on the whole the milling for the year, considering the low class of ore, was satisfactory. There was a decided increase in the

crushing by the batteries, which shows careful management, and there was a very considerable saving in quicksilver to the extent of about 900%, which also shows careful milling.

THE PARTING WORKS.

Amongst the improvements in the mill you will notice one that is most important to us. The parting works have been an unqualified success, and a report has been sent over about it, which perhaps I might read to you as it gives the result. The works were erected in 1890. The report states:—

"The Parting Works at the mill were started in July, 1890, by Mr. Moebeus, the inventor. The original cost of the plant was \$6,500. United States Gold: Mr. Moebeus' royalty is at the rate of 1-3 cent. gold per oz. of crude bullion separated. To give a longer period over which to calculate the price of operations, I will take the thirteen months from July 1, 1890, to August, 1891. The number of Troy ounces treated of crude bullion in this period was 258,437. The costs were:—Royalty, gold, \$861.46; labour, gold, \$1,105.84; materials, gold, \$614.43; total, \$2,581.23; or a little less than one cent. per oz. of crude bullion parted. The price of labour is only estimated, and at a high rate, as the men employed in the parting works are only employed there part of each month, the rest of their time being occupied in other departments. The operations of the plant have been most satisfactory, the silver always coming out very pure and fine, generally being over 990, and sometimes over 999 fine. The gold has not been produced as fine as it can be procured, as the difference in expense of shipping the impurer bar does not equal the cost of time, labour and materials, which would be required in the parting works to further refine the gold."

The manager's report, which dates back a long time ago now, is most disappointing, but our experience since then has been that there is a decided break in the clouds, and times are improving. We are all very largely interested in the success of the concern, and we must all try to work together and do the best under the circumstances; but speaking from my own impression, the future certainly

LOOKS MUCH BRIGHTER

than it has done for the last 18 months, and I sincerely hope the next time I have the pleasure of meeting the shareholders we shall be able to present a report which will be more satisfactory both to ourselves and to them. As I told you at the commencement, very lately Mr. Waithman tendered his resignation, and although he was willing to stay in the service of the company, he made certain propositions which led us to feel he was not inclined to continue with us, as he felt that the company had reason to be disappointed, although through no fault of his. The directors, therefore, felt that his resignation should be accepted, and a gentleman has been appointed to succeed him as general manager, who has been very strongly recommended to us, and appears to be just the kind of man of which we are in need. This gentleman will have under him thoroughly competent mining and milling managers, so that he will be able to devote himself to the financial and general good conduct of the business. It has also been decided

TO SEND OUT AN EXPERT,

and this gentleman will either accompany the new manager, who will start about the 15th of next month, or possibly he will go a little later. He will then make a full report, and will also be able to consult and advise with your new manager. He is a gentleman whom I daresay is known to some of you (Mr. Grothe), and the replies to inquiries I have been able to make are all very much in his favour. I have had the pleasure of seeing him, and I am very favourably impressed. Any questions you like to ask I shall be glad to answer, as far as they are in my power, and I now beg to move that the directors' report and accounts for the year 1890 be received and adopted.

DISCUSSION.

Major LITTLE seconded the motion.

A SHAREHOLDER: What is the name of the new manager?

The CHAIRMAN: His name is Mr. Echebarria, and he is a Spaniard.

A SHAREHOLDER: By whom was he recommended?

The CHAIRMAN: By several people, but especially by Mr. Gillendies, and he has been highly spoken of.

Mr. HARVEY: At the last meeting you made some allusion to the railways in progress.

The CHAIRMAN: They are still going on, I believe. We have asked for the details several times, and the answer has always been it is rapidly being pushed forward. It has not got to Guerrero yet, but it certainly is not in a moribund state.

Mr. HARVEY: When it is completed what do you estimate the saving to the company at?

The CHAIRMAN: As far as we can tell it will be 20,000% to 24,000% a year.

Mr. WALKER: Does the ore now being produced come from the tunnel?

The CHAIRMAN: No; the ore before it goes to the mill has to be crushed in a rock-breaker so that the batteries may do their full amount of work on the ore. That is done on a preliminary machine called a rock-breaker. Hitherto that has been done close to the shaft mouth, but now the ore being taken through the tunnel as it will be taken, the ore breakers, which are new and larger ones, had to be placed just above the ore bins at the mill. I may mention that the delay which has occurred in getting those rock-breakers to the mine has been owing to the freighters refusing to carry the awkward pieces of machinery to the mine when they could get other work.

Mr. HARVEY: When do you expect the whole thing complete?

The CHAIRMAN: It ought to be very nearly complete by this time.

THE COMPANY'S DEBT.

A SHAREHOLDER: With regard to this debt of 90,000%, to whom do we owe it, and what arrangements have been made?

The CHAIRMAN: That brings me to a point which I did not draw attention to at the commencement, with regard to debentures. Of course, there was a question of issuing debentures to pay this off, and letters were sent to the shareholders, but it was found they did not respond to a sufficient amount, and the creditors of the company, who are really the agents of the company, asked for some kind of tangible security, and the directors felt they were not altering the position in any way by acceding to their request, because the debt would always be a debt, whether it was held in one way or another.

The directors, therefore, decided to deposit a debenture with them temporarily as a collateral security. When the company is in a position to issue debentures they can reduce their claim. Perhaps I ought to mention that Messrs. Murietta has given us all the assistance in their power, and every attention, doing all they could for the company in which they are themselves large shareholders.

Mr. HARVEY: I presume, if this lode continues as valuable as it is, dividends will be paid in a short time.

The CHAIRMAN: I do not like to anticipate anything that I do not see my way to carrying out. We have to see what the lode develops into, and also what further lodes we can open up. We cannot supply the mill from one stope or two stopes, but if we could get three shoots of ore like the one in the tunnel there would be no difficulty whatever in paying dividends, because I do not imagine it would be necessary to repay the whole of the claims against the company before paying a dividend. That would be a matter for mutual arrangement.

A SHAREHOLDER: Have any of the directors sold a part of their holding?

The CHAIRMAN: No, not a share.

Mr. HARVEY suggested that the shareholders should be supplied with a monthly report from the mine.

Col. LANGLEY asked whether the directors anticipated any decrease in the expenditure at the mine when the tunnel was finished and other improvements carried out.

The CHAIRMAN: The only estimate I can give you is the one of the manager. He thought he would be able to mine and mill for \$14 to \$15 silver, as against \$18 or \$19 now. That you see would be a very important reduction.

A SHAREHOLDER asked what rate of interest the company was paying on its debts in Mexico?

The CHAIRMAN: Five per cent.

A SHAREHOLDER: Do the agents hold a mortgage on the company?

The CHAIRMAN: No; it is a floating debenture.

The SHAREHOLDER: Have they the right of foreclosure?

The CHAIRMAN: They have the right of foreclosure as they would have the right of proceeding against the company for their debt in Mexico.

A SHAREHOLDER: Have you any intimation from the Government as to what steps they are going to take with regard to bullion export. There is an idea they are going to tax the export of bullion from Mexico.

The CHAIRMAN: That is crude ore, and does not affect us.

Mr. ALTEN said he hoped the directors had made a good choice in the new manager. The success of the company would depend on him. He was very glad to see the directors had acceded to the general wish of the shareholders in sending out an independent expert, and he was very glad they had chosen Mr. Grothe, who was well known to him personally. He could only express the hope that those two gentlemen would find some means of working the mines, which would bring profits into the pockets of the shareholders.

BIG HOLDING OF DIRECTORS.

The CHAIRMAN said he thought it only right for him to say that it was not the fault of the board that Mr. Grothe did not start before. The directors were deeply interested in the success of the company, and they held among them and their near relations about one-third of the shares.

Mr. ROBERTS did not think the reason given by the chairman for paying the dividend was satisfactory. He did not think a mining company had any right to pay a dividend unless they had the cash actually in hand.

The CHAIRMAN said he was sorry the reason he had given did not meet with the gentleman's approval, but it was the only reason he could give. The directors acted on the knowledge they had at the time, but if the gentleman did not feel happy with the money it was quite within his power to pay it back.

Mr. ROBERTS: I am in the position of one who has not received the dividend because I was not a shareholder at the time. (Laughter.)

The motion was then put to the meeting and carried *nem. con.*

ROUTINE BUSINESS.

The CHAIRMAN then proposed the re-election of Mr. Thomas J. Bewick.

Col. HOME (director) seconded the motion, which was carried unanimously.

Lieut.-Col. CHAS. D. RICH was re-elected a director of the company.

Mr. BEWICK, in returning thanks, said the past year had been one of very great anxiety to every member of the board. The fact of the directors not receiving fees had not made the slightest difference to them in giving their attention to the affairs of the company. (Hear, hear.)

Mr. ALTEN proposed the re-election of the auditors.

Mr. ROBINSON seconded the motion, which was carried unanimously.

The proceedings closed with the usual vote of thanks to the chairman.

FOREIGN MINING INTELLIGENCE.

(Continued from page 632.)

NEW GOLD HILL (Oct. 17).—I am in receipt of yours of 3rd, and the same is before me for reply. I received the cable as stated, and, as already explained, did not at once begin new mill on account of not being able to obtain the lumber and timber required. I am now using all means in my power to get it as soon as possible, and believe I will have it all on the ground by the 21st, so as to begin building on the 26th. The minute I begin building will reduce the mining to six men, and devote all my time and men to the erection of new mill. The board request that I should do this work and run the old mill at the same time. This would be impossible with the small number of hands (six), and especially now that we have milled up the ore in stock, and that said ore is not paying. With your sanction my plan is as follows:—Stop the mill next week, as we will be out of mined ore. Concentrate all work on new mill, which will consist of a building 36 by 20 ft. with an amalgamation house shedded on 24 by 65 ft. In this mill will be an old crusher we have in stock, ten of the stamps with the

necessary tables, rockers, &c. An engine that we had in stock with shafting, &c. The boiler we shall have to purchase, and it will cost about \$600. This will stand in the Barnhardt boiler house, and at the side of the present boiler, so that one fireman or engineer attends to both boilers and engines. When this mill is completed, I hope to have mined enough ore to keep it going day and night for some time. When the (new) mill is put into operation, I would advise that we take on the regular number of hands so as to keep enough ore mined, and, at the same time, breaking into new ground for the discovery of new bodies. This new mill will be run at much less expense, and will save more per ton in gold. But it cannot save all the gold on account of the refractory nature of the ore. But this mill will be one step towards my plan as proposed for working the ores as they should be worked. In other words we will have a good free milling department, after which we must add in the future as the next step, the concentrating department, &c. If I devote all my energies to new mill we will soon have it up and in operation. Regarding the mine, I have nothing new to report. As I have said before, we are driving on veins that are well-defined and full of heavy sulphurets which may at any foot develop into rich ore; at present it is low-grade. Miller shaft, 160-ft. level north-east: Six men have made 8 ft. for the week; total from shaft, 30 ft., and all in a good strong vein that will average 3 ft. in width; the ore is low-grade, about 2 dwts. gold and 3 per cent. copper. On the south-west two men have made 4 ft. on a very small vein that carries a little gold and some native copper; total from shaft, 90 ft. The 300-ft. level: On this level south-west of winzes six men have made 6 ft. in hard ground that is impregnated with seams of heavy sulphuret; total from winze, 42 ft. On the north-east two men have made 2 ft.; total from winze, 12 ft.; fine 2 ft. vein of heavy sulphurets. Martin shaft: We have been stripping down the wall necessary to taking out the ore, and find the vein very small, yet good. It is so tempting and promising that we shall drive on, hoping it may enlarge in width. Have been excavating for engine and stamp foundation, and placing engine, hauling rock, wood, sand, &c., repairing the engineer's house, and getting ready with such material as we have on hand for the new mill. Mill: The mill has been doing regular duty, and everything is working well. Shall clean up next week, and cable result, which will be very poor and discouraging, both to you and myself.—R. EAMES, jun.

NEW VIOLA (Oct. 5).—The manager writes:—The total expenditure for Sept. amounted to \$2,309.80, and the total work done in sinking and driving the various shafts amounted to 256 ft. In sinking the Discovery shaft on the Barkis claim, some iron-stained limestone was found. From the configuration of the surface I concluded there might be a parallel vein or deposit near this point; the shafts in No. 22 were sunk accordingly. A highly iron-stained limestone and shale was encountered in each shaft, near the surface, and followed down to solid formation. Some quartz was found scattered through the soft material, but nothing encouraging was encountered after penetrating the hard rock a few feet. The necessary assessment work was done on three of the old claims to prevent anyone from "jumping" them. The drift from the bottom of the shaft in Q 25, was only run 10 ft. when solid limestone was struck, and as nothing in the form of mineral had been met with, I concluded it was best to abandon this section for the present. The drift from the bottom of shaft L V 45 was extended 37 ft. through hard rock; the last 10 or 12 ft. has been in better material—a short blocky lime stained with iron. The horse of hard rock was wider than I expected. If the ground remains good we will have that section pretty thoroughly prospected by the 15th or 20th of this month. Shaft W V 48 is down 89 ft. The bottom is in a soft stratum of lime mixed with a little spar. I will sink through this material, and unless the indications are more favourable, will start a drift on the purple-coloured limestone passed through at about 70 ft. from the surface. We were compelled to suspend operations at the mine for two days this month on account of a blizzard. The weather remains cold, but I do not think we need fear further storms until the first part of Nov.

—The following was received under date of Oct. 11:—The drift from the bottom of shaft L is in a softer material, and looks somewhat encouraging. A 10-in. streak of yellow decomposed talcy lime was encountered in the bottom of shaft W. The quartzite underlies this material. I have started a drift on this seam hoping it will prove to be a feeder to something better. I am now working two shifts on each of the drifts, and hope to make good headway for the remainder of the month. We have had several cold snaps, but I do not expect the weather will interfere with our operations for three or four weeks yet.

NUNDYDROOG (Oct. 7).—Report of work done for the month of Sept.:—The 600 south: Distance driven, 58 ft., by two Italians with a rock-drill; they also rose 7 ft. in the back of the level and holed to the winze in the back of the 520 south; the lode is a very fine one, averaging over 7 ft. in width for the distance already driven on it, 76 ft.; the last assay value is over 2 ozs. per ton. The 520 north: Distance driven, 38 ft., by one Italian with a rock-drill; total length, 285 ft.; the lode has varied a good deal in width during the month, having opened out twice to about 3 ft.; it is now 1 ft. wide, and assays 1 oz. 2 dwts. 18 grs. per ton. The 520 south—Stope and rise in back: Ground stoped, 20 fms., by two Italians with a rock-drill; the lode is a very strong one, 4 ft. in width, while the quartz is of good quality, assaying 2 ozs. 4 dwts. 12 grs. per ton. The 480 intermediate level north: Distance driven 9 ft. 6 ins.; and 450 south—Stope in bottom: Ground stoped 18 fms., by one Italian with a rock-drill; the lode is a fine one, 3½ ft. wide, and worth by assay 2 ozs. 6 dwts. 12 grs. per ton. The 480 north from Webb's winze in bottom sunk 17 ft., and 520 north from winze driven 25 ft., by one Italian with a rock-drill; we hope to hole this level to the 520 south to-day. The 370 north: Distance driven, 35 ft., by one Italian with a rock-drill; total distance north from Taylor's, 425 ft.; the end is hard and carries small strings of quartz; there is also a little water in the forebreast. Taylor's shaft: Sunk 16 ft., by one Italian with a rock-drill; total depth of shaft, 626 ft.; we have had a good deal of difficulty in carrying on the sinking of this shaft, owing to trouble with coolies on account of the cholera. The work done in the hand labour stopes is as follows:—The 520 north—No. 1 stope in back: Ground cut, 26 ft.; lode 2 ft., assay 1 oz. 11 dwts. 12 grs. The 520 south—No. 2 stope in back: Ground cut, 21 ft. 6 ins.; lode 2½ ft., assaying 3 ozs. 4 dwts. The 450 north—No. 1 stope in back north: Ground cut, 26 ft.; lode 3 ft.; assay, 13 dwts. The 450 north—No. 1 stope in back south: Ground cut, 24 ft.; lode 2 ft.; assay, 2 ozs. 1 dwt. 6 grs. The 450 north—No. 2—

stope in back north : Ground cut, 20 ft. ; lode $1\frac{1}{2}$ ft. ; assay, 16 dwts. 6 grs. The 370 south—stope in bottom : Ground cut, 23 ft. ; lode 2 ft. ; assay, 3 ozs. 12 dwts. 12 grs. The 370 north—Stope in bottom : Ground cut, 17 ft. ; lode 2 ft. ; assay, 2 ozs. 8 dwts. 18 grs. The 370 north—Stope in back : Ground cut, 12 ft. ; lode $1\frac{1}{2}$ ft. ; assay, 1 oz. 11 dwts. 12 grs. The 300 north—stope in back : Ground cut, 8 ft. ; lode 1 ft. ; assay, 15 dwts. 6 grs. Kennedy's shaft : Sunk 11 ft., by two Italians with a rock-drill ; total depth of shaft, 174 ft. ; the rock is very hard and jointy, and we have a great deal of water to contend with. The 160 north from Kennedy's : Distance driven, 5 ft. 9 ins., by 12 coolies ; the lode is about $1\frac{1}{2}$ ft. wide, but the quartz is rather mixed up with country rock. We shall commence driving south as soon as the cholera scare is over. Health : There are still a few cases of cholera on the field, but on the whole the general health is decidedly better. We have had some pretty heavy rain, and if it will only continue I hope it will clear away the sickness. The Europeans are all well, and at work.—F. W. GREY.

ORITA (Sept. 19).—The following are the details of the operations during the month of Aug. :—Operations : Very little has been done in the mine for want of water. Malpaso gave us the water for eight days, and during that time the supply was but enough to run a $5\frac{1}{2}$ nozzle. However, we managed to undermine the bank, and bring down pipeclay to clear out while water is in use at Malpaso, which will be till the 26th inst., when we must divide what the river then contains, and work with it if possible. Syphon : I am glad to say that the double line down to deepest valley has been tested, and not one single pipe gave way. At the outlet, where there is not 20 lbs. pressure on pipe, we have had it unjointed owing to having so little water and excess of air in pipe ; the break is not worth mentioning and is now repaired. Remarks : I repeat my hopes of again doing as well as ever in the mine, but there are many obstacles yet to be overcome.—H. J. PRENDER.

OSCAR (Oct. 23).—Hodgkinson's shaft has been deepened since last report nearly 7 ft. The quartz has increased in width from 7 to 9 ins., and is impregnated with iron pyrites, and traces of yellow copper ore to the extent of about 1 per cent. During the week we have broken about 3 tons, which assay 9 dwts. gold per ton. We appear to be on the eve of an important change, as the last 14 ft. sunk has shown quartz of varying width—sometimes richly impregnated with iron and copper pyrites, and giving by the fire assay a far higher value for gold than that obtained from the quartz in the upper levels. Too little work, however, has been done to say definitely what this change will lead to. The 300-ft. level north : In this level the lode is 4 ft. wide, whereof 1 ft. is quartz, assaying 3 dwts. Winze in 200-ft. level is being sunk in a very fine lode. The quartz is 2 ft. wide, richly impregnated with galena and iron pyrites. The assays have varied this week from $\frac{3}{4}$ oz. to nearly 3 ozs. to the ton. Other places show no alteration. Next week we shall crush a few tons of quartz, which has been sorted from the shaft and winze, which will enable us to report actual mill value for free gold. The new concentrating machinery is ready, and will be tried at the same time.—J. DAW, jun.

OURO PRETO (Sept. 24).—Passagem Mine : Incline shaft, No. 1, sunk 2.20 metres in good ore ground ; lode, though at times somewhat disturbed by wedges of quartzite towards floor and lines of schist towards roof, is large and well intersected with lines and bunches of pyrites and tourmaline. The 120-metre level north-east driven 6.80 metres in a quartz body carrying lines of tourmaline and pyrites. This point is a promising feature for the future supply of ore for the mills as from its appearances there is every reason to anticipate a large supply of good quality ore from this section of the mine. Security of the mine attended to by fitting timbers, building pillars and walls of masonry to support roof where required. Machinery kept in fair repair and reported in detail by mine captain. Pitwork : Changes made and pumping machinery kept in good order. Stopping : The principal portion of the ore treated has been derived from the south-west section, where the lode has maintained its usual appearances with but little changes to note. At the north-east section the lower part of stope, in No. 2 stope over 265 north-east of No. 2 shaft has improved, carrying much more tourmaline and pyrites. Reduction chlorination : Mr. Marriott's report has entered so fully in detail concerning results and trials made, that no further remark is necessary.

RUBY.—Report upon the mines for the week ending Oct. 10.—Dunderberg : We have seven men on day's pay and two tributers at work here. On the 800-ft. level, the main drift has been advanced 25 ft. We will run about 25 ft. more, and raise to the old stopes a distance of 40 ft. vertical. Below the 800 the small pipe of ore mentioned in my last shows a slight improvement. Two men have extracted about 6 tons of fair grade ore in the 400-ft. level. Lord Byron : We have four men on day's pay and six tributers at work here. The ore is now about 5 ft. in diameter, and I think of better grade as it is followed. Have now about 15 tons extracted. Bullwhacker : We have five men at work here. No change.—A. FRASER.

—Telegram from Eureka : "30 tons tribute ore shipped and

smelted, producing to company \$72 ; 46 tons ore on company's account shipped to Salt Lake."

RUBY (BURMA).—The rains at the Ruby mines are now nearly over, and work on an extended scale is commencing. The famine which has been reported as so severe in Upper Burma has not materially affected the mining community. Major Kimhardt, the director general of the mines, writes that the prospects of a successful working season and of profitable results are exceedingly good. A sale of rubies was held at the offices of the company by tender on Oct. 26 and 27, and the majority of the lots were disposed of. Sir John Morris and Mr. Gillam have retired from the board in consequence of a reduction in the number of directors.

SAN BERNARDO (Oct. 22).—During Sept. (the secretary says) we have only broken ore in the drift, as the mill was closed down (for alterations), and we had all of the men on development work, consequently no ore has been shipped during the month.

—A telegram received on Oct. 21 states : "Mill running all right ; have already shipped 100 tons of ore (this month)."

TOLIMA.—The directors have received advices by the mail of Oct. 26 from their mines, of which the following is an abstract :—Frias Aug. returns (estimated), 8,861*l.* 1*s.* ; Frias Aug. cost, 3,399*l.* 15*s.* 1*d.* ; Frias Aug. profit, 5,461*l.* 6*s.* The underground agent reports 56 fms. 2 ft. 3 ins. of ground expended, of which 44 fms. 1 ft. 5 ins. were productive, leaving 12 fms. 0 ft. 10 ins. of unproductive ground. The acting superintendent explains that the underground works had been impeded owing to the scarcity of surface water having reduced the available motive power, and that work in the 120-fm. level, yielding 15 cwt. of mineral per fm., had been stopped owing to water in the shaft. The mineral at the 110 east level from shaft he reports as worth 6 tons of mineral per fm., at which rate he also estimates the lode at the 110 east level west of Sankey's winze, whilst the 110 east level east of Sankey's winze he estimates at date of writing at $1\frac{1}{2}$ tons per fm. ; but he adds that the east and west ends of the 100-fm. level are poor, but the other stations remain without change.

WESTERN ANDES (Sept. 24).—Returns : I am glad to be able at last to report having made a profit of \$2,800 (560*l.*) for the month of Aug., although under great disadvantages, on account of the want of water, as it is now three months since there has been a drop of rain. For this reason, in Agnas Claras only four out of the six barrels have been worked, and in Echandia the cost of working has been greatly increased. As soon as we get rain very much better results may be expected. I hope in Oct. to have at least from 6,000 to 7,000 ozs. of silver, but not before, as I do not expect rain.—C. W. BRANDON.

REPORTS OF MEETING.

THE SOUTH-EAST MYSORE GOLD CO., LIMITED.

SHAREHOLDERS, AFTER FULL DISCUSSION, DECIDE TO ADOPT
THE RE-CONSTRUCTION PROPOSALS OF THE BOARD.

AN extraordinary general meeting was held at Winchester House, on Thursday, for the purpose of considering, and if thought fit, of passing the resolutions following, viz. :—

RESOLUTIONS.

"1. That it is desirable to re-construct the company, on the lines of the scheme submitted to this meeting, with or without modification as may seem expedient, and accordingly that the company be wound up voluntarily, and that Mr. John Garland, of No. 6, Queen Street Place, Loudon, E.C., be and he is hereby appointed liquidator for the purposes of such winding up." "2. That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named 'The South-East Mysore Gold Company, Limited,' or to bear some other name approved by the liquidator, with a memorandum and articles of association which have already been prepared with the privity and approval of the directors of this company." "3. That the draft re-construction agreement submitted to this meeting and expressed to be made between this company and its liquidator of the one part, and the new South-East Mysore Gold Company, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies' Act, 1862, to enter into an agreement with such new company (when incorporated) in the terms of the said draft and to carry the same into effect with such (if any) modifications as he thinks expedient."

Major-Genl. Beresford

(chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

The CHAIRMAN: Gentlemen, I now move the first resolution. Of course, you have had the circulars explaining the position of this company. In Feb. last, as our funds were running short, we found it necessary, in the interests of both debenture and shareholders, to absolutely shut down the mine. Shortly after, we were asked by a neighbouring company whether they might use the water from our mine during an exceptionally dry season in the Mysore country. We gave permission, to which the condition was attached that they should fork our mine and pump it dry, so we might proceed with further explorations. They did so and we proceeded, with the result that at a depth of

600 FT. FROM SURFACE WE HAVE A LODE CARRYING GOLD,

and giving us such hopes for the future, that our consulting engineers, Messrs. John Taylor and Sons, have advised us to provide the money, and go on with the development of the mine. With that view I have called you together to-day. The scheme for raising this money will be explained by the solicitor, and so far has been very well received. We have proxies in its favour representing 46,207 shares, and believe there are only one or two dissentients. The scheme will now be explained by the solicitor and can be fully discussed afterwards.

SOLICITOR EXPLAINS.

Mr. BLUNT (solicitor): I will first recapitulate shortly what the scheme is, and then read you the chief points of the agreement which is proposed to be sanctioned in draft by the third of these resolutions, and those explanations will place the whole case before you. The present company's capital is 130,000 ordinary shares of 1*l.* each, and 130,000 preference shares of 4*s.* each. Now the preference shares are entitled to nine-tenths of the profits, and therefore in this re-construction (which is not winding-up or distribution of assets, but a mere carrying on in another form) the effort of those who have formulated this scheme has been to preserve the nine-tenths interest in the new company to the preference shareholders. Of course, it depends upon them as well as upon the ordinary shareholders how far they agree to retain that interest, a necessary part of which is of course finding the further capital, which is essential to going on with the mine and bringing it, as hoped, to a profitable position. The scheme is that a company should be registered in the same name as this, which can be done with the consent of the liquidator of the old company on its going into liquidation, with a capital of 40,000*l.*, in 200,000 shares of 4*s.* each. It is only proposed at present to deal with 30,000*l.* worth of capital, in other words, 150,000 shares of 4*s.* each, and it is proposed that nine-tenths of that 150,000 shares shall be available to the preference shareholders,

leaving one-tenth to the ordinary, being the same proportion of the profits as they are now entitled to. Assuming these resolutions are passed and this company is put into liquidation, the new company will be registered, and the liquidator of the old company will receive from the new 150,000 shares of 4*s.* each. On each of these shares it is proposed that 1*s.* should be credited as having been paid. That is to represent the value of the assets taken over from the old company, and I believe the liquidator can explain to you, if necessary, that that amount will very properly cover the value of machinery, &c., now on the ground. Of course the greater part of the company's expenditure is in labour, which leaves nothing behind it afterwards; but so far as the machinery and other assets go, the 1*l.* a share to be credited will fairly represent them. That leaves 3*s.* per share to be called up, and it is proposed that the liquidators shall offer new shares to every preference holder, that is, one for each preference share he now holds. To the ordinary shareholders he will offer one-tenth of the total number (130,000), being 13,000 shares, being the same number or proportion held in the present company. That double offer of 130,000 and 13,000 will absorb 143,000 out of 150,000, and it is proposed that the odd 7,000 shares shall be offered at the same time to all shareholders who like to come in and take up their proportion of the capital in the new company. Of these 7,000 shares there will be 5,000 appropriated to the preference and 2,000 to the ordinary shareholders, and in that way the 150,000 shares of the new company will be distributed among the members of the old company, or such of them as care to retain their interest. The

FINANCIAL RESULT WILL BE THIS,

that the 1*s.* a share paid up represents 7,500*l.*, and as the 150,000 shares represent altogether 30,000*l.*, that leaves 22,500*l.* of the capital available for the new company. Of that amount 3,050*l.* will be reserved for paying off debentures, which are still outstanding and owing by the present company, but will leave about 19,000*l.* available, which the Messrs. Taylor and the board think will be sufficient to bring this company into a state of prosperity—assuming the lodes continue as good as they now appear to be. That, shortly, is the scheme to which the first resolution refers, and to which the third will give effect, and I will now briefly run over the heads of the agreement, which, in fact, have been embodied already in the foregoing remarks. (The speaker went on to read the agreement.)

Sir ROPER LETHBRIDGE, M.P. (director): I second the first resolution.

SCHEME CRITICISED.

Mr. MARTIN WOOD: After the lucid explanation that has been given I think the shareholders cannot complain of the way in which matters have been put before them. Mr. Blunt has explained them very clearly, and also the motives for the scheme that has been put before the meeting. No doubt it has been neatly and carefully compiled, but it will bring disappointment to many shareholders. If they do not subscribe their rights will be extinguished, and even their interests in the value of the machinery, which Mr. Blunt says is worth 7,500*l.* I venture to think that that is a position none of the shareholders will like. The mine was absolutely shut down until this agreement with the neighbouring company opened up the promise of better things, but now, when the company is, so to speak, within sight of land, the old shareholders, who brought it there, are to be

PUSHED OFF THE RAFT.

I do not think that is right. You must remember that the present shareholders originally paid 20*s.* and afterwards 4*s.*, thus providing the capital that has brought the property to its present position, and that they should be called upon to provide 4*s.* more is utterly inequitable. It is not for me to say whether any other steps can be taken, but I think they might be considered. I quite desire that the mine should be worked, even if others enter into our inheritance; but I think the directors have put before the meeting a scheme which it is for us to consider whether it is the best that can be devised. The chairman alluded to proxies, but we know the facility with which these are given, and I trust it is not intended to force the scheme through without further consideration. I think the old preference and ordinary shareholders have the utmost right to be considered, and there will be a feeling that they have been treated in a somewhat

STEPMOTHERLY SORT OF WAY.

I do not say that they have by our new managers or directors, but certainly that is the result. The limited liability principle is also set at nought, for here is a 1*l.* share, upon which 24*s.* has already been paid, and 4*s.* more is to be called. I think that time should be given to consider whether a more equitable scheme cannot be prepared—something on the lines, perhaps, of those of the South African companies, where the interests of the old shareholders have been preserved, and I think they ought to be in this case. I speak with deference to gentlemen who have more experience than I have, but if a company with 200,000 shares of 4*s.* each, making a capital of 40,000*l.*, and 250,000 shares of 4*s.* each, making 50,000*l.*, were formed, we might give the present shareholders 60,000 of these shares at 4*s.*, equal to 12,000*l.*, and issue the other 60,000 to the public, which will give you 12,000*l.* more, leaving a balance to be afterwards subscribe

as might be required. I quite think that 12,000*l.* would be sufficient to bring the property into a paying condition. If any other gentleman is of my way of thinking I shall be glad to move the adjournment of the meeting.

Mr. MARTIN, having asked certain questions as to the capital of the company, which the solicitor explained again as he had done before, proceeded to say: Since a former meeting we have spent on the mine nearly 23,000*l.* in getting no gold at all. Then we were asked to raise 26,000*l.*, and were told by Mr. Martin Wood (who was then a director) that there were very good prospects. Since then that money has been spent, and although it was stated at a former meeting that the whole of the debentures would be paid off, we now find that 3,050*l.* of the new capital is to be devoted to their liquidation. We were told that before the 23,000*l.* was spent we were likely to get results, and now, because of a report referring to a lode bearing 3 ozs. to the ton, we are asked to subscribe 40,000*l.* more. To do that we have simply to go on the report of Mr. Scantlebury.

I WAS ON THE MINE FOUR YEARS AGO,

and was shown gold bearing stone, worth much more than 3 ozs. to the ton, but since that time we have spent, probably, 60,000*l.* in trying to get more of it. Why should we raise this 40,000*l.*?

The CHAIRMAN: We are only asking for 19,000*l.*, because 3,000*l.* out of the 22,000*l.* will go to pay off the debentures, and 40,000*l.* cannot be raised by this scheme.

Mr. MARTIN: Then why speak of 40,000*l.*? I think it unnecessary to raise this money, and I will propose an amendment to this effect: "That the proposals to wind-up the company, to appoint a liquidator, and re-construct the company in the manner contemplated by the third resolution before the meeting, be negatived, and that the meeting resolves to raise the sum of 6,500*l.* by a further issue of preference shares, raising the value of the existing preference shares to 5*s.*, instead of 4*s.*, retaining the proportions of nine-tenths of the profits, as the amount to which the preference shares shall be entitled, and leaving the amount of one-tenth to the original shareholders, to which they are entitled." You might make the calls 1*s.*, 2*s.*, or 3*s.* When it was proposed to issue these preference shares originally, the reason given was that if there was a re-construction the property would fall into the hands of the debenture-holders. Therefore, the property will now do so, and we shall let it go for the sake of 3,050*l.*

Mr. MARTIN WOOD said he would second the amendment in a different form—that the meeting should be adjourned for a fortnight, and that three shareholders be appointed to consult with the board to see if a better scheme cannot be proposed. As to what he had said formerly, he quoted from a report by Capt. Roberts, which said: "It is all important to get down to a sufficient depth." That statement had been fully confirmed by the working of the last few months, and therefore it would be a pity to throw the shareholders' patrimony away.

Mr. RYLE seconded the first amendment.

Mr. D. D. WALLACE: I expected we should have had some information from the Messrs. Taylor with reference to the mine, the past history of which has been very unfortunate. I was on the field last February, and found the mine generally regarded as a laughing-stock. There was a reef, but nothing was ever got out of it, and the general impression was that the accounts sent home in the early days were not honest. I should like to know the opinion of the chairman as to that. I believe there was great suspicion generally about the mine, and now when we are asked to re-organise it, the Messrs. Taylor do not commit themselves in any way, or tell us the exact state of affairs. With regard to the assay of Johnson and Matthey, I think it not encouraging, as it seems to show our people at the mine do not know how to assay the quartz; or that the Johnson and Matthey assay must be wrong; or that the samples must have been picked for the purpose.

CHAIRMAN'S REPLY.

The CHAIRMAN: Gentlemen, we are accused of not giving information, but we have simply been waiting to hear from you the points upon which information was really desired. Mr. Taylor is quite prepared to tell you all he thinks of this mine, and I will withhold no information from you that it is in my power to give. (Cheers.) As to the assay of July 21, you have had the report which says, "The lode maintains its size and value. I have tried several samples, which have varied from 2 dwts. up to 1 oz. to the ton. The most promising feature is that the lode contains visible gold, samples of which I am sending home." That gold was sent home, and it is on the reports before you we think it advisable to re-construct. The quartz weighing 56 lbs. was assayed by Johnson and Matthey, and found to be worth 3 ozs. 10 dwts. The mining captain says, "My object in sending you the quartz is that when you have seen it you may think as I do that a lode presenting such a promising appearance should not be abandoned without further trials in depth." (Cheers.) That is why we ask you for money—otherwise we should not. It was good luck that enabled us to find this lode. The exceptionally dry season led a neighbouring mine to ask us for water, which, in obtaining, they pumped our mine dry, so that we were able to test our lode, and believe it to be worth our while to go on working it. Any gentleman of mining experience will know that assays vary from week to week, and even from day to day. There is a proposition to adjourn, but why should we do so when this scheme has been considered for weeks by the Messrs. Taylor, by the board, and by the solicitor, and has been considered by us all who have the best knowledge of the facts to be the most worthy we can present to your acceptance. The ordinary shareholders should remember that they gave away their rights previously, and their remaining rights we have protected overmuch. If this money be not found, the mine must be shut down, and as for going on with a working capital of 6,500*l.*, I am sure the Messrs. Taylor will not advise you to do it. We had in the early days a sanguine mining captain, but I believe he wrote what he thought to be true, and I am not going to say that a man is dishonest in his reports because he is sanguine. (Cheers.) He found good quartz, and crushed some of it, and a gentleman here, who has adversely criticised our scheme, has told you he was on the field and saw quartz that gave out 2 ozs. and 3 ozs. to the ton. That bears out the idea that there was truth in these early reports. (Cheers.)

VIEWS OF THE MESSRS. TAYLOR.

Mr. FRANK TAYLOR: Gentlemen, I am sorry the last speaker but one

suggested that we were in any way hanging back. Although I have not often spoken in London, you know that my brother has, and I do not think he can be accused of hanging back. (Cheers.) Certainly I have no desire to commence my career in this business by having that suggestion thrown out. (Cheers.) I thought that Mr. Blunt had explained the scheme, and that the desire of the meeting would be to discuss it, and that then I might have followed with a few words of explanation as to the position of the mine, which I now, with your permission, will be glad to offer. I cannot say very much as to the new workings of the mine, because the recent operations have been somewhat limited, and, moreover, the circular which you have all had very thoroughly deals with them. They have, however, been very important, and to us satisfactory, because from the time we took the management of the company (which does not date far back) we have always said to you, *go deeper*. My brother has spoken twice to you and that has been the text from which he has spoken. The result of the recent operations has more clearly shown how correct his views were, and how correct ours were, too, in consultation with him. At the date of the last meeting we were down to the 500-ft. level, and had driven a considerable distance northward on a very satisfactory lode indeed; to the southward it was not so satisfactory. We were also driving a cross-cut to the eastward which our late agent led us to hope might lay open a better portion of the lode. He had not gone far when he cut a branch of quartz which gave gold, when operations had to be stopped, as the chairman has explained. That was in Mar. Fortunately for the company, a neighbour required assistance in the way of water, and the result was that your mine was drained to the 500-ft. level, and we were able with the means left to pursue the later operations. The cross-cut was continued eastward at the 500-ft. level, and other branches of quartz were passed through, but though auriferous they were not very rich, until, finally, at 67 ft. we came into sterile rock, and Capt Scantlebury arrived at the conclusion that the main lode was where the 500-ft. level had been driven. He suggested (and we agreed) that that point should be tested in depth, for good quartz had been left there.

A PROMISING OPERATION.

120 ft. north of the main shaft a winze was commenced, and from the time it started to that of the latest report good quartz has been found, and not only that, but the lode has maintained its underlie, and has shown us there is a strong main lode, auriferous all the way—sufficiently auriferous, I think we are now justified in saying, to yield profits, provided it continue to make a good bunch of ore to the northwards. That winze at the present time we believe to be down to the level of 600 ft., and shall hope in the course of the next few mails (that is if funds be provided to go on) to hear that the level has been driven northwards under the good quartz which we quite anticipate is there. That information we look forward to with great interest. There are other points in the property which we would like, if we had the means, to pursue, especially to the northward, and it is to be hoped the day may come when we may be able to carry out other operations with success. As to the scheme, it is beyond me to say much, except this, that the one formulated by Mr. Martin would provide insufficient capital.

Mr. MARTIN: I said the calls might be 1*s.*, 2*s.*, or 3*s.*, as wanted.

Mr. F. TAYLOR: I understood your scheme to provide simply 6,500*l.*, with which we should not be prepared to recommend you to go on. Unless you had nearly 20,000*l.* available for pursuing operations I do not think it would be advisable to do so, but if that money be provided we have great hopes that we may run this company into a prosperous and paying concern. (Cheers.) One word about the assays. Assays are very uncertain, but those in this winze from top to bottom have been highly satisfactory. The sample of ore sent home turns out to be exceptionally rich, and, of course, that is exceptionally satisfactory.

A GOOD SIGN.

We cannot suggest that Messrs. Johnson and Matthey at home or our agent abroad have tampered with the samples, but the fact remains that the piece of rock sent home was excessively rich, and that is satisfactory to my mind, but it is particularly satisfactory that the quartz, though not nearly so rich, has continued persistently *auriferous and payable from the top to the bottom*. (Cheers.)

Mr. WOOD: I propose that this meeting be adjourned for one fortnight, at the same place and time, and that in the meantime three shareholders be nominated to confer with the board and the solicitor as to some method that will reserve the interests of the present shareholders." I agree with all that has been said with regard to the prospects of the mine.

The CHAIRMAN again pointed out that the scheme as now submitted had been very carefully considered, that the calls would be light, and that any delay would in all probability lead to a further suspension of the work. The amendment was then put to the meeting and lost by 14 votes to nine.

VIEWS OF ONE WHO KNOWS THE MINE.

Mr. RAYNER ST. STEPHENS: I reported originally on this property, and should not have addressed you had it not been for the observation of a gentleman, who asked me to state whether the early reports were *bona fide* and honest. That casts a reflection on someone. (Hear, hear.) As far as I am personally concerned, more truthful reports than those which I originally wrote, and those of the other mining engineers at the time, were never sent out to the public. I had been the consulting engineer to the Messrs. Arbuthnot, and originally reported to them upon this property. That report was in the main the report that was sent out along with the original prospectus. This property lies to the east of the Mysore, and is on a parallel lode, and considering the numerous old workings, considering the strong outcrops of quartz, considering the quality of that quartz, there is not, in my opinion, a better lode in the whole of that field, except the Champion lode, and until we had developed the Champion, we did not know it was even inferior to that. The works that were carried out I had the honour of initiating as the consulting engineer of this company, and my final report made to the board was favourable as to your prospects. The lode was going 2 ft. wide, but it had been only spasmodically rich. I have seen it as high as 50 and 100 ozs., and as low as 2 or 3 grs. We considered

DEPTH WAS THE ONLY THING REQUIRED.

Unfortunately, the manager had a difference of opinion with me,

which resulted in the board asking me not to visit the property—that was after Dec., 1887. I did not do so until I left the district, 12 or 18 months later. I then visited the mine again, and saw the works had been carried on, which I had recommended, and that quartz had been found at the 125, which was 9 ft. wide, giving $1\frac{1}{2}$ ozs. to the ton. You have a really *bona fide* lode, and, however changeable it may be, I consider that you have only to go down in order to tackle what I may call the strange circumstances of the surrounding country at the surface, and the dykes that come in to disarrange lodes. With that view (Mr. Martin Wood was one of the directors at the time) I recommended that the shallow levels should not be driven, and consider that in consequence of not following my advice in that respect,

QUITE 10,000% OF YOUR MONEY HAS BEEN THROWN AWAY.

The directors here had nothing to do with that. They were advised by their engineer, and possibly were quite right in taking his testimony in preference to mine. The reports were *bona fide*, and although now only a simple shareholder with 300 shares, I am quite willing to join with you in this sinking, because I consider it is the only thing that can at once save and prove the mine. I said "sink Beresford shaft, and you may neglect all the others." You are now only beginning to tap the lode. Beresford shaft is to the north, and opposite to what is called Rayner shaft—called so in honour of my Christian name—and there the lode is 6 ft. wide. When that shaft is sunk, or when you get north, I believe you will have two runs of auriferous ore going away north. That is the reason I say drive the 600-ft. level to the north. In the south also you have one of the finest workings on the field, but that, too, must be taken in depth. You have a lode which is rich and poor alternately above, but now see what you are going to get in depth. Eminent as the Messrs. Taylor are, and even if they were 50 times more eminent, they could not see 6 ft. below the ground, but they will tell you that from the reports they have received

NOTHING COULD BE MORE FAVOURABLE THAN THE POSITION OF YOUR MINE.

Capt. Scantlebury never wrote a line in his life that he did not write honestly. I have known him for a great number of years, and know how cautious he is. I have been consulted by many shareholders concerning these reports, and have told them that they are consistent throughout and bear the stamp of honesty. I will now go so far as to state it as a fact that my opinion is that Capt. Scantlebury did not send home this lump of quartz as a proof of the actual value of the lode, but rather to let you see the analogous character of this quartz to what is found in the neighbouring mine, and that, therefore, you might expect something like a run of the same lode. I should not have spoken had not the question been asked—were the reports originally sent out honest? (Cheers.)

The resolution was carried.

The CHAIRMAN said he would move and put the two next resolutions together.

Mr. WEIGHT seconded the motion.

POOR DIRECTORS!

A SHAREHOLDER: The fees of the directors are rather heavy.

The CHAIRMAN: The board are drawing no fees. (Laughter.) We drew half fees last year, and no fees at all this year. (Cheers.)

A SHAREHOLDER: How long will the money now to be raised last?

Mr. TAYLOR: I should think we might say two or three years, as we have all the machinery on the ground that is needed.

The resolution was carried unanimously, and the CHAIRMAN, replying to a vote of thanks, said that, being the largest shareholder, he would probably have the most to pay under the new arrangement.

THE MONTE DEL ORO MINING CO., LIMITED.

DIRECTORS DECIDE, AFTER A VIGOROUS ATTEMPT TO WORK THE MINE PROFITABLY, TO RECOMMEND ITS SUSPENSION—SHAREHOLDERS UNANIMOUSLY ENDORSE THE DECISION.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Wednesday, for the purpose of considering, and, if thought fit, of passing the following resolution, that is to say:—

RESOLUTION.

"That in the opinion of this meeting it is undesirable to continue operations at this mine, and that the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867."

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, the very unsatisfactory results reported fortnight by fortnight from the property for many months past must have been no doubt preparing you for the step which we have found it our duty to take in asking your attendance here to-day. Nothing, of course, is, or can be, certain in mining, which *ex necessitate rei* must always carry with it the element of adventure; but when we started this enterprise we did so on very fairly calculated prospects of success, for we had the evidence not only of a large auriferous quartz vein, and the evidence of enormous old Roman workings, but the authority and the recommendation that the enterprise offered fair chances of success given us by one of the foremost mining experts of the day—the authority and the recommendation of

MY LATE LAMENTED FRIEND, MR. BELL DAVIES,

whose opinions on mining matters have proved of such great value in India and in other quarters of the globe. Even when we met you last year we were still encouraged by the fact that in driving the 244-ft. levels north and south we had passed through two separate masses of payable ore, not indeed large masses, but still payable ore, and we were led to hope that further extensions on the 244-ft. levels would disclose fresh bodies of payable ore, and also that the two known pay shoots would not only continue, but would broaden out in depth. Well, the operations of the past few months, as you must have seen, have deprived us of those hopes. The further extensions of the

244-ft. levels did not disclose any fresh payable shoots. The two known pay shoots were found by rises not to extend any great difference in height, while the whole character of the quartz, as shown both in the shaft, and in the winze sinking below the 240-ft. level, and also the drivages in the 316 or bottom level, leave us with very little hope of finding those known shoots in continuance of depth. It is true that

MR. GIFFORD IN HIS VERY FAIR AND IMPARTIAL REPORT

mentions, as you may remember, in one part of it that the ends of the 316 or bottom level have not yet reached out under the block of ore met with in the 244 north and south, but then he is careful to add that, in his opinion, there is very little chance indeed of anything being found if the work were proceeded with to those points. We know how narrow those two pay shoots were on the 240 level. We know they did not continue in height, and we fear now that we must consider them as merely isolated lenticular masses of ore, existing in a quartz vein carrying gold throughout, but still not enough to pay for extraction. We also know that even if we did find these two pay shoots continue in depth, they would have to widen out very greatly before they could become of commercial value.

TO SUM UP THE SITUATION BROADLY,

we have now explored this vein for 1,200 ft. and over on its course at a depth of 200 ft. below the lowest of the old Roman workings, and we do not find that, in our opinion, there are now prospects which in any degree justify us in recommending you to expend any further portion of your capital. (Hear, hear.) We have to face the fact that if we did continue we should have to make another call upon the shares, and this, with the results of the past 10 or 12 months, and with Mr. Gifford's report before us, we really cannot find it in our judgment to recommend you to do. Of course, gentlemen, we must all feel the disappointment arising from want of success—none, I can assure you, more than your directors, not merely because they are among the largest of the shareholders, but chiefly because they are your directors. We feel that if we have failed, we have failed in a mining venture not only honestly conducted, for that goes without saying—(hear, hear)—but also conducted with all proper judgment and diligence, and also under all due professional skill and ability. Nothing has been in fault except that nature, when creating this auriferous vein, unfortunately did not make it sufficiently rich to pay. I must, therefore, now move the resolution as above.

Mr. HARVEY (director): I second the motion.

VENDOR MOVES AN AMENDMENT.

Mr. AITKEN: I am at all times very sorry to move a counter resolution to the board, because the natural inference is that they must know better the position of affairs than the shareholders. However, as it happens in the present instance, I am in a position to know fully as much as the board, as I have been several times on the mine, and have been down it frequently. I have come to the conclusion that we shall be doing wrong if, instead of calling up the last shilling, we suddenly stop working and wind up. In gold mining, and indeed in all mining, as the chairman has pointed out, uncertainty is the rule, and while the result from this mine has been very poor and vastly under what was expected, still there is no saying what might eventuate if we continued working in the spots favourably spoken of by Mr. Gifford, and if we also worked the mine in depth. As being the largest shareholder in the company, and naturally feeling very much interested in its success, I would wish to advise you as I would act myself if the concern belong wholly to me. Now, as I have a great interest in the company, I have this proposition to make, but before making it would call attention to this—that the plant we have on the ground has cost several thousand pounds, and there is a great deal of coal, both of which in a winding-up would go for a mere song. The shareholders would get almost nothing for it, so that that is an asset of value only if something be done to continue working. Now, in the neighbourhood of this concern

THERE IS ANOTHER MINE,

of which I have a very high opinion, although I do not profess to be skilled in gold mining. I do not pretend to be an expert, but I have considerable mining experience, and have inspected many properties. Now, my experience in examining this mine leads me to the belief that it should be prosecuted, and if I were asked what would be the best thing to do with the money remaining to be called up I would say—sink the shaft on this new venture. If it turned out well, then more money could be got to carry the matter further. Now,

I AM THE OWNER OF THAT MINE,

and will be glad to arrange, on terms which I have no doubt will be satisfactory to you and to the directors, for its working, if it is agreed to consider the proposal further. I would arrange terms with the directors, and thereafter they could inform you of the result of the negotiations, and you could then come to a determination on the matter. I would simply now move as an amendment—"That the company be not now liquidated, but that the shareholders be informed of any new proposal that may be made to them, and thereafter there be another meeting held to consider whether the liquidation or this new proposal should be proceeded with."

The CHAIRMAN: Perhaps if that resolution is formally seconded, which has been proposed with so much moderation and care by Mr. Aitken, we could then take the discussion upon it.

Mr. GARNETT: I second the amendment.

VIEWS OF THE BOARD.

The CHAIRMAN: Perhaps we may as well mention the views of the board plainly on this amendment. These are, that we are afraid that what could be done with 3,250*l.*, which we should get by calling up the remaining capital, would not make any such test as Mr. Aitken would desire, and all of us would wish to see before we determined to spend more money. We have also the gravest doubt whether the shareholders will submit to have that *l.* called up, and therefore should not be prepared on this side of the table to support the amendment.

A SHAREHOLDER: Was Mr. Aitken connected with the formation of the company in the first instance—in other words, was he vendor of the old property?

The CHAIRMAN: He was.

The SHAREHOLDER: I did not know that.

DIRECTORS HAVE DONE THEIR BEST.

Mr. ALFRED THOMAS : I am sure, Mr. Chairman, we all very much regret the unfortunate results of this enterprise, and no one more so than you. At the last meeting we were almost congratulating ourselves on having arrived at something indicative of richness in depth, but since that time the mine has been prosecuted lower down, and, unfortunately, our anticipations have not proved correct. I have been a shareholder in this company since its inception. I have attended the meetings and carefully read the reports, and the only conclusion I can arrive at is that everything has been done for the benefit of the shareholders, not only by you, as a board, but by the agents on the spot. I think the directors have acted very wisely in calling in an independent expert before asking us to abandon the operations of the mine. This report is very conclusive, and in the face of it I can hardly see how the directors could have arrived at any other conclusion. We know very well that the Scotch shareholders have always had great faith in this mine, and so have all of us. With regard to the suggestions just made by the honourable proprietor, I have no doubt that if he has a considerable section of shareholders with him to further develop the mine in the face of the unsatisfactory report issued, I am sure that if this company goes into voluntary liquidation, the liquidator will be very glad to treat with him and his section, or with anyone of responsibility, for the purchase of the mines and plant as a going concern. (Hear, hear.) If that be done, so much better for the shareholders. Everyone connected with the mine must know that a property sold as a going concern will fetch far more than if it goes as a break up. I trust this resolution to wind-up will be passed unanimously, for it is evident from the remarks just made that the directors will not fall in with the views of the honourable proprietor, and I hope the meeting will be carried out as quietly as possible, and the company killed and interred with the least noise and expense. I hope you will see your way to appoint one of the officials—I will name Mr. John Garland, our secretary—as liquidator, for that will be the most economical and efficient way of dealing with the remains of the company. (Hear, hear.)

A SHAREHOLDER : I took 100 shares in this ill-named mine, and cannot understand how it has come to this result after the large amount of capital expended upon it in useless labour. Then, also, there was a dispute about the surface rights, and I wish to know who was the cause of all the expense we were put to under that heading. That dispute ought never to have arisen, because the report of Mr. Bell Davies spoke of "the mining rights extending over an area of 800 metres." Surely that did not mean that after the company had been formed its works were to be stopped for 18 months over

A DISPUTE ABOUT SURFACE RIGHTS.

I suggest that if this company is to go into liquidation, that liquidators should be invited to tender for the work after the fashion recommended in one of the newspapers on Apl. 1. (The speaker here read a long paragraph from an evening paper.)

Mr. SNELL : I should like to ask whether Mr. Aitken is the holder of shares that would be liable to the call of 1s. a share, which would have to be made if his recommendation were adopted.

The CHAIRMAN : Yes ; these shares are on the same footing as all the rest.

The amendment was then put to the meeting, but lost, only the mover and seconder voting in its favour.

The original resolution was then put and declared to be carried unanimously, and, on the motion of Mr. THOMAS, the proceedings ended with a vote of thanks to the chairman.

VENEZUELAN AUSTIN GOLD MINING CO., LIMITED.

RESOLUTIONS UNANIMOUSLY AGREED TO — THE NEW CONCERN WILL BE AN EXPLORATION COMPANY.

AN extraordinary general meeting of the company was held at Winchester House, on Monday, "for the purpose of considering, and, if thought fit, adopting resolutions proposed, if passed, to be afterwards confirmed as special resolutions, for the purpose of winding up the company voluntarily, appointing a liquidator, and empowering him to enter into an arrangement under section 161 of the Companies' Act, 1862, for the sale and transfer of the company's property upon the terms indicated in the form of proposed resolutions subjoined."

The subjoined resolutions were submitted to the meeting :—

SPECIAL RESOLUTIONS.

"1. That the Venezuelan Austin Gold Mining Co., Limited, be wound up voluntarily, and that a liquidator be appointed for the purpose of such winding up." "2. That the liquidator be hereby authorised to enter into an arrangement under section 161 of the Companies' Act, 1862, with the Venezuelan Mines, Limited (hereinafter called 'the purchasing company') for the sale and transfer to such company of the business, assets, and rights of this company upon the terms of receiving or obtaining for the members of this company shares or rights and interests in the purchasing company in compensation or part compensation for such sale and transfer and on such terms in detail as he shall think fit, subject, nevertheless, to the following provisions, namely :—(1) The purchasing company shall take over the debts and liabilities, and pay the costs of the winding-up of this company, and indemnify the liquidator and contributories of this company in respect thereof. (2) Every member of this company shall be entitled (on condition that he apply to the purchasing company within one calendar month from the confirmation of this resolution for the issue to him of the shares hereinafter mentioned) to an allotment and issue by the purchasing company to him or his nominee of 10 shares of 1l. each, credited as fully paid-up, in the purchasing company in respect of every preference share of 10l. in this company held by him, and one share of 1l., credited with 18s. paid up thereon, and subject to a liability of 2s. in the purchasing company for every three ordinary shares of 1l. each in this company held by him, and (if necessary) the liquidator may arrange for the issue of certificates representing fractional parts of shares and entitling the holder of a sufficient number to the issue of a share. Each member of this company shall accept his proportion of the said shares or certificates as aforesaid in

full satisfaction and discharge of his or her interest in the assets of this company."

J. C. F. Lee, Esq.

(chairman of the company), presided.

Mr. F. O. SMITHERS (secretary) read the notice of meeting.

"THE BEST THAT CAN BE DONE."

The CHAIRMAN : I will formally move the adoption of these resolutions, and in doing so must tell you that they comprise the only business before the meeting to-day. Any amendment, or anything that the shareholders wish to have done we shall be very glad to hear about, but if you tax your memories you will know that it has taken us from July 31 until (nearly) Oct. 31 to reach this condition in which we are able to give effect to what was previously agreed to, and I think that, like wise men as I believe you all are, you will allow these resolutions to pass, taking it from the board, who are by far the largest holders, that it is about the best that can be done in the interests of all concerned.

Mr. WELBORES ELLIS (director) : I second the motion.

The CHAIRMAN : I hope you will not ask me to go over the old ground and arguments again by which we obtained a unanimous vote for these resolutions on July 31. I have nothing further to say except this, that I think at that time we told you we had no money, but we have still managed to keep the mine afloat without any capital, upon merely scratchings here and there to find out what there is and what the possibilities of the future may be.

MR. LEE WILL NOT BE A PROPHET.

I think I may tell you that, as far as I am concerned, I am going to give up prophesying about mining. I never was a prophet, but as regards mining I shall cease to prophesy henceforth and for ever. I believe it to be an impossibility to prophesy what is going to happen in mining. We have a lode in the Abbott shaft and in the Pinto Americana. To show you how it has yielded, we have recovered sufficient gold to clear off all our liabilities on that side, except such as may be running now, and they will in all probability be covered by the gold that is still being found. As to the liabilities on this side, the whole of them, including the expense of forming the new company, and everything connected with it, will be discharged for much under 1,000l., so that you now know the worst of everything. With regard to the future, we have told you what we shall do, namely, turn ourselves practically into an exploring company.

ENGINEERS AT FAULT.

We shall leave off carrying out the big plans of the great engineers. I do not want to say anything to reproach them, but they have not at any rate saved the situation. The large expense in machinery, for instance, has been in vain, so far, but let us hope that something will be found by which we can yet turn it to account. That is all that I can say, but if any member here wishes to put questions, let them be put and we will do our best to give satisfactory replies.

Mr. COOK : I should like, in the terms of my letter, that there should be added to the resolution after the word "him" at the bottom of the third page the words "and in extinguishment of any claim for interest or otherwise in respect thereof."

The CHAIRMAN : These resolutions have been drawn by very able counsel in full view of the latest decisions both in the Court of Appeal and the House of Lords. I, therefore, advise you not to press your amendment.

Mr. COOK said he must press it, but it ultimately fell to the ground for want of a seconder.

A SHAREHOLDER enquired who the directors of the new company would be.

The CHAIRMAN replied that practically they would be the directors of the old company.

In reply to further questions,

The CHAIRMAN stated that the amount to be raised under the present re-construction was 20,000l., and the expenditure would be confined to exploration purposes.

CONFIDENCE IN MR. LEE AND THE BOARD.

A SHAREHOLDER : We had better stick to the old directors, who have served us for nothing. (Hear, hear.)

Mr. COOK : Can you give us the recent milling returns ?

The CHAIRMAN : Since we left off having any money we have secured in gold the following amounts :—July, 1,651l. ; Aug., 896l. ; Sept., 266l. ; and Oct., about 400l. These are the receipts since the company ceased to have any capital. We told you in July we could do nothing in the way of mining, but were simply disclosing the presence of mines, working as cheaply and economically as possible.

The resolutions, as proposed and seconded, were then put to the meeting, and carried unanimously.

Mr. COOK : I appreciate the information you have given, and the way you have conducted the company.

Mr. ENTHOVEN : I have always looked upon this as

THE MOST HONESTLY MANAGED COMPANY

I have ever been connected with. (Cheers.) I propose a vote of thanks to the chairman and directors.

The motion was seconded, and carried unanimously.

PUBLICATIONS RECEIVED.—"Abstracts of Papers in Foreign Transactions and Periodicals;" "Barker on the Design of Locomotive Cylinders." (The foregoing are from the Institution of Civil Engineers.) "Catalogue of the Michigan Mining School."

HOLLOWAY'S PILLS AND OINTMENT exert a rapidly favourable effect in all those diseases which are induced by exposure to damp or by great changes in temperature. They will, therefore, be found eminently serviceable to those who work in iron foundries, copper mines, and collieries. These well-known remedies present manifest advantages in respect of use and effectiveness, being entirely compounded of vegetable drugs selected with the greatest care and regardless of price. When used in accordance with the ample printed directions which accompany them, they act surely but mildly, and do not interfere with the daily work. There are but few diseases which are not capable of cure—or, at all events, of great relief—if Holloway's remedies are perseveringly used.

ABRIDGED PROSPECTUS.

THIS Company has been formed for the purpose of acquiring certain gem-bearing lands, comprising an area of about 4,000 acres, with mining and water rights, in the State of Montana, U.S.A.

On the lands to be acquired by the Company, careful prospecting has demonstrated the existence of sapphires and rubies—chiefly the former—in quantities unprecedented in the history of gem discovery. These beautiful stones have an unusually wide range of colour and comprise a large variety of shades of green, light blue, yellow, violet, and red, including tints regarded as rare and valuable, and their brilliancy is remarkable.

The extent and value of these gem deposits have but recently been investigated. The precious stones are found on the bed-rock of an ancient river-channel (now a dry and elevated terrace skirted by the Missouri river) and covered by a deposit of gravel, from the lowest stratum of which they can be separated and collected at comparatively trifling cost.

Direct samples taken (vide report of Mr. D. A. Louis) from the upper terrace of the El Dorado Bar—sufficient in area for upwards of 25 years' work—indicate an average yield per square yard of bed-rock of 64 carats, equal, if maintained, to 399,760 carats of precious stones per acre, and it is further estimated (vide Mr. Edwin Streeter's report) that from a gross yield of 399,760 carats per acre, there will be obtained at least 27,104 carats of cut and polished gems suitable for jewellery. Valuations by experts of this finished product range from 5s. to £10 per carat, according to quality; but taking for purposes of calculation, the low average value of 20s. per carat (scarcely one-sixth the wholesale cost of small cut diamonds):

27,104 carats, at 20s. per carat, would yield per acre £27,104
 Deducting the cost of production (by the most expensive methods),
 say £1,500

Cost of cutting at 5s. per carat (much of it can be done at 2s. to 3s. 6,776—8,276
 The net return would be £18,828 per acre.

On the above basis, and assuming an annual sale of the product of only 10 acres the result would be a nett return of over £188,000 per annum, equal (after allowing £6,000 for depreciation, contingencies, expenses of management, and other charges) to more than 40 per cent. upon the capital of the Company.

Alluvial gold also exists in the same gravel deposit, and can be extracted simultaneously with the gems, with but small extra expenditure, and will probably be found in sufficient quantities to repay the whole cost of working.

By utilising the experimental machine separator recently set up at Ruby Bar, gem production can be commenced at once on a moderate scale, and carried on at all seasons of the year. Operations upon a large scale, both for gems and gold, can be carried on after the Trout Creek flumes and ditches to El Dorado Bar are completed and at work; by hydraulic mining on a large scale being practicable for about seven months in the year.

The statements as to the quantity of the gems and the cheapness of producing them have been verified by the English experts who visited and examined El Dorado and Ruby Bars, under instructions from the solicitors of this Company, prior to its formation.

No part of the purchase-money will be paid to the vendors until two or more of the directors of the Company shall have visited and approved the property.

The following reports may be seen at the Offices of the Company:—

As to quantity and cost of production:—
 Report by Mr. A. B. Wood, an American engineer.
 Report by Mr. D. A. Louis, M.E., F.I.C., F.C.S., &c., endorsed by Mr. G. Skelton Streeter, F.R.G.S., &c.

As to character, quality, market value, &c.:—

Report of Professor A. H. Church, M.A., F.R.S., F.I.C.
 Report and Certificate of Chemical Analysis by Professor Sylvanus P. Thompson.

Report by Professor F. W. Rudler, F.G.S.

Report by Mr. Edwin W. Streeter, F.R.G.S., M.A.I.

Report by Mr. Herbert Maxwell Stuart.

Report by Mr. J. D. Yerrington.

The terms upon which the Company is to acquire the property are embodied in the contracts Nos. 2 and 4 below mentioned, and the total amount payable thereunder is £400,000, which will be satisfied as to £200,000 in ordinary shares, fully paid up, and as to £200,000 in cash. The present issue provides for £25,000 cash working capital, which is considered ample, since gem production can be commenced at once without the erection of expensive machinery, and £25,000 of shares will be reserved for future issue for additional working capital if necessary.

The following contracts have been entered into:—As to Ruby Bar (1), dated March 18, 1890, between Frank C. Langdon, N. E. Langdon, E. C. Langdon, and L. J. Langdon of the one part, and Howard Oviatt and Frank Williams Jones of the other part; (2), dated October 24, 1891, between the said Howard Oviatt and Frank Williams Jones of the one part, and the Company of the other part; and as to El Dorado Bar and other property (3), dated September 6, 1890, between Augustus N. Spratt, Thomas G. Spratt, Frank C. Holmes, and Frank D. Spratt of the one part, and the said Howard Oviatt of the other part; (4), dated October 24, 1891, between the said Howard Oviatt of the one part, and the Company of the other part. The vendors will provide all preliminary expenses incidental to the formation of the Company and the issue of its capital, up to and including allotment, and they have reserved the right to enter into and have entered into arrangements with third parties for this purpose, and the directors are informed that there are also other arrangements between part owners and

parties interested in the property and in the purchase money, to none of which the Company is a party. As these arrangements may technically be contracts within the meaning of Section 38 of the Companies' Act, 1867, or contracts to the disclosure whereof applicants for shares may be held to be entitled, they shall be deemed to have notice thereof, and to have waived any further disclosure and any fuller compliance with the said section with reference thereto or otherwise.

The above-mentioned contracts and the memorandum and articles of association may be inspected at the offices of the solicitors of the Company.

Applications for shares should be made on the form accompanying the prospectus, and should be forwarded to the Company's bankers, accompanied by a remittance for the amount of the deposit.

Prospectuses and forms of application can be obtained from the bankers, brokers, solicitors, and auditors, and at the offices of the Company.
 October 28, 1891.

Among the subscribers of founders' shares are the following:—

The Right Hon. Lord Chelmsford, G.C.B., Chairman.
 The Marquis of Lorne, Kensington Palace.
 The Duke of Portland, Welbeck Abbey, Worksop.
 The Duke of Leinster, Carton, Maynooth, Ireland.
 Sir Francis Knollys, K.C.M.G., C.B., Marlborough House.
 His Excellency the Right Hon. Sir Robert Morier, G.C.B.
 The Marquis of Tweeddale, Yester, Haddington.

ROBEY & CO.,

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

Fig. 2.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

N.B.—ROBEY & CO. are also manufacturers of Portable Engines, Semi-Portable Engines, Robey Engines and Locomotive Boilers combined, both Compound and Simple; Vertical Engines, High Speed Engines, Horizontal Fixed Engines, Simple and Compound; Sugar Mills, Locomotive, Cornish and Vertical Boilers, Winding Engines, Head Gears, Mine Pumps, Centrifugal Pumps, and every description of machinery for Builders and Contractors.

GLOBE WORKS, LINCOLN.

Gates Rock and Ore Breaker

TO BE SEEN IN OPERATION AT LONDON OFFICE.

The Head
does not
Revolve
when
Breaking.

Capacity in Tons of 2,000 Pounds.

Size 0	2 to 4 tons per hour
" 1	4 to 8 "
" 2	6 to 12 "
" 3	10 to 20 "
" 4	15 to 30 "
" 5	25 to 40 "
" 6	30 to 60 "
" 7	40 to 75 "
" 8	100 to 150 "

Passing 2½-in. ring according to character and hardness of material.

GREAT SAVING IN POWER.

Adjustable to any degree of fineness.

The principle involved in this Breaker acknowledged to be the greatest success ever introduced into Stone Breaking Machinery.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BROKERS RETURN TO FIND THINGS FAIRLY LIVELY, PARTICULARLY IN THE INDIAN AND AFRICAN SECTIONS—PERSONALITIES AND PUGILISM AT THE MEETINGS—THE SLUMP IN GATES AND FEATHERS—GENERAL COURSE OF THE MARKETS—GOLDFIELDS SALES.

WHEN, after their short holiday, brokers returned on Tuesday to that mammon shrine called the Mining Market, they found the state of affairs by no means discouraging. There was a healthy, business-like tone in the Indian section, which stand, not upon the merits of "prices from America," or anywhere else, but upon merits of their own. "By their fruits ye shall know them," and it is by that standard the Colar Field wishes and expects to be judged. The Kaffir division also was not without signs of life. The returns were beginning to come in, and when that from Robinson of 10,019 ozs. was announced, there was excitement; but it is always a cooler when one thinks of the capital of this concern. The returns from South Africa have, however, toed the line of expectation, and reference to those from India will be found elsewhere.

The meetings of the week have been a little exciting. For personalities Yuruari takes the cake, but for pugilism Idaho wins in a canter. At the former meeting expressions were used with which we decline to soil our pages; and at the latter there was a shedding of blood before the meeting quite separated. At both meetings there were scenes which would have disgraced a Cork election. The position of British Broken Hill is shown to be distinctly better, and in regard to the meetings generally, comments on the principal of them will be found in our leader columns.

The feature of the week has unquestionably been the slump in Golden Gate and Golden Feather shares. This has been caused by Col. McLaughlin's failure to fulfil his reports many and his telegrams legion. We do not say the Colonel has not done his best, but no mining agent in our experience has on pen and paper committed

himself more injudiciously. That he has wilfully deceived the shareholders we do not for a moment believe, but the task to which he addressed himself has been beyond his means. Still he was able to impress all with whom he came in contact with his ability to accomplish the work he had in hand. We have interviewed several gentlemen of unquestionable integrity and ability, who, after inspection, have declared to us again and again their perfect faith in Col. McLaughlin, and their absolute satisfaction with what he was doing. Within the last few weeks one gentleman, supposed to be within the cabinet counsels of the directors, declared to us that if he were a betting man he would wager this—that Col. McLaughlin would justify his weekly, in fact, his almost daily, communications. It is sad now to read in regard to Golden Gate that elevators are necessary, and that he has been beaten by the *débris*. One paper has written, "And so exit Golden Gate." Not at all. It is, however, possible that the shareholders will be put to the trouble and expense of a re-construction in order to provide these elevators, and give the property a further chance. The news from Golden Feather is somewhat more favourable, but these two concerns in the eyes of the market rise and fall together, and this week without a doubt they have fallen, but with a fair prospect of rising again. At one time during the week Golden Gate shares were under 5s., which is terrible to think of, seeing that once upon a time no man considered himself happy unless he could buy them at 5l.

In the Indian section there has been a large amount of business, though the highest prices reached were those we quoted a week ago. It should be noted that the Mysore, Nundydroog and Balaghat returns for Oct. are in each case the highest announced for any one month previously. Balaghat were firmer on the meeting, the position of the company being considered strong when the directors could carry a debenture scheme in place of the old "stand and deliver" re-construction method. On a busy week the shares close 1s. 6d. firmer, and Goldfields of Mysore are also 2s. better, thanks to the sale it has made to the former company. The sales now made by Goldfields have been 268 acres to Mysore, 114 to Ooregum, 110 to Nundydroog, and 90 to Balaghat. The prices obtained were: Mysore, 25,000 fully - paid shares; Ooregum, 20,000 fully - paid shares; Nundydroog, 20,000 fully-paid shares; and Balaghat, 10,000l. in cash, and 10,000 fully-paid shares. The aggregate value of the first three sales at market value last July was 220,000l., which exactly represented the total capital of the Goldfields Co. That value, as estimated by the market, has considerably increased in the interval, and to it must now be added the proceeds of the Balaghat sale. The shareholders have already received 22,000 Mysore shares in the proportion of one Mysore for every 10 Goldfields shares held. On the week Nundydroog, Champion Reefs, and Ooregum have slightly declined. We understand that Mr. Crocker who for a long period has been connected with some of the leading mines in the office of Messrs. John Taylor and Son has been appointed secretary of Balaghat and Nine Reefs Co. in place of the late Mr. Rowse.

The Australian market has been quite uneventful, and that for copper calls for no special mention. On the month the price of copper has declined about 5l., and stocks have increased about 350 tons.

The General Foreign market has been somewhat uneventful except from its Golden Feather and Golden Gate side. We have already referred to the fall in these shares, which has been 8s. 9d. in the one case and 5s. in the other on the week. American shares, with scarcely an exception, are lower. There has been a revival in Gravel Gold and Elkhorn shares. The rig in Silver King shares continues. They have been rushed up to a big premium, though it is only a few weeks ago that they were offered freely on the market for underwriting at a large discount. Our readers should have nothing to do with this concern. Nor should they with St. George, another American mine, which has been spirited on to this market, and of which one's knowledge is of the negative, rather than of the positive kind. The latest news from Professor Vincent is, that he was offered 1,000l. for his Flagstaff ore, but expected to get more.

The feature of Colombian Mines this week has been a rise of 2s.

in Gravel Golds, upon an absurd rumour that some rich ground has been struck, the real fact being that "bears," of whom there are a good many, have been frightened by a *canard* which may, or may not, have been got up for their especial benefit. Gravel Gold is a good mine, and will, we think, prove some day—perhaps only a short time hence—exceedingly successful, but the most that can be expected at present is the announcement, which may come next week, that "washing" has been commenced, and after that, provided there be no breakages to the ditch, an announcement—say six weeks or two months hence—of a clean-up. Those who know think that, subject to the already mentioned provision, good results will be obtained at once; and it may be as well to state that for a long shot there appears every ground for believing that those now buying Gravels will reap a handsome return. The closing price is 10s. 9d. to 11s. 3d. Tolima has sent another splendid return—5,500% profit for October. The "A" shares close at 9½ to 10 xd. Colombian Hydraulic and Colons continue firm, both, like Gravels, being heavily "beared." Seeing that the mine is now at work, and good returns are expected shortly, Colons surely look worth buying, a few weeks being likely "to tell a tale" upon quotations. Colombian Hydraulics are, of course, an investment. The closing price is 23s. 6d. to 24s. 6d. Tesoros are better this week at 1s. 3d. to 1s. 6d., having been freely bought for the rise from "knowing" quarters. It is understood that some important information will be forthcoming in a few days, and that "washing" will be commenced in Dec. Lomas close at 1s. 9d. to 2s., call paid, and at this price they appear very cheap, and may be recommended to those who like a gamble, and are not afraid to wait for a big return. Big Creek announces for Oct. a return of 100 tons of antimony ore, which should yield a very satisfactory profit. Antimony has been steadily rising for some time past, and is now over 50% a ton, a fact worth noting in connection with Big Creek, whose ore contains from 50 to 55 per cent. of the pure metal. The capital is 50,000% in 17 shares, now quoted at 1½ to 1¾.

There has been no performance in the Kaffir circus so far as Diamond and Land shares are concerned, but it has been somewhat otherwise in respect to Gold shares. The magnificent return from Robinson of over 10,000 ozs. for the month caused a slight advance, but it should be remembered that the issued capital of this company is the stupendous sum of 2,718,750%, and whatever may be the returns big dividends seem out of the question. With the exception of Ferreira, City and Suburban, Crown Reef and Simmer and Jack, Kaffir Gold shares are down.

In the Home section the movements have been uneven. Wheal Agar advanced 10s. on it being known that the London Committee had rejected the stupid advice of their Cornish brethren to declare a dividend out of money borrowed from the bank! A satisfactory meeting was held to-day of East Blue Hills. The mine has been thoroughly reorganised, the expenses reduced and the underground prospects are favourable. The discovery in the bottom level of Prince of Wales still justifies the favourable reports that have been written upon it.

The outlook for next week is fairly good, though the early part will be taken up with our annual Civic function and the settlement.

KAFFIRS.

Remarks.—A considerable volume of business has been transacted in this department, and with the increased output just to hand the future is certainly more hopeful. In several cases good rises have taken place. Ferreras have led the upward movement, followed by City and Suburban, Crown Reef, Simmer and Jack, Wemmer, and others; while the principal declines have been in Geldenhuis and Johannesburg Waterworks.

Business.—A rise is shown in City and Suburban, ¼; Crown Reef, ¼; Durban Roodepoort, ¼; Ferreira, ½; Glencairn, 1s. 6d.; Langlaagte, ¼; Langlaagte Block B, 1s. 6d.; Main Reef, 6d.; Randfontein, 6d.; Robinson, ¼; Simmer and Jack, ¼; Stanhope and Wemmer, ½. The falls are—Piggs Peak Ordinary, 3d.; Sheba, 1s.; Croesus, 6d.; Geldenhuis, ¼; Johannesburg Waterworks, ½; Kimberley Roodepoort, ¼; Luipaards Vlei, 6d.; Moss Rose, 2s.; and Spes Bona, 3d.

AFRICAN LANDS.

Remarks.—There has been but very little doing in this class, the only rise being in Sutherland Reefs, which are not considered worth their present prices. Explorings are lower, also London and South African Exploration and Goldfields of South Africa. The market closes rather weak.

Business.—A rise is shown in Sutherland Reef of ½, whilst falls have taken place in Bechuanaland, ¼; British South African Chartered, ¼; Exploring, ½; Goldfields of South Africa, ¼; Goldfields of South Africa, New, ¼; Horo Concessions, ¼; London and South African, ¼; and Moodies, 1s.

DIAMONDS.

Remarks.—On the whole there has been a somewhat firmer market in these shares, although to-day De Beers and Griqualand West have fallen off slightly. An inquiry has set in for North-

Eastern Bultfonteins, which have improved in price, and appear likely to go much better.

Business.—A rise is shown in North-Eastern Bultfontein of $\frac{1}{4}$, whilst a fall has taken place in De Beers of $\frac{1}{8}$; Griqualand West, $\frac{1}{8}$; and Burma Ruby, $\frac{1}{8}$.

INDIANS.

Remarks.—A large amount of business has been transacted. The market reached top last Saturday, but early in the week prices gave way somewhat, and, notwithstanding the splendid returns for the month, quotations are lower, the only exceptions being Balaghat and Goldfields.

Business.—A rise is shown in Balaghat of 1s. 6d.; Goldfields of Mysore, 2s., whilst a fall has taken place in Champion Reefs of $\frac{1}{8}$; Mysore West, 3d.; Nundydroog, $\frac{1}{4}$; and Ooregum, Preference, $\frac{1}{8}$.

AUSTRALIANS.

Remarks.—Business has been fairly good in this department, but the alterations are not important. The chief rise has been in Wentworths, and the principal falls have occurred in British Broken Hill, Kangarilla, and Scottish Australian.

Business.—A rise is shown in Gympie Great Eastern, of 3d.; Mosman, 1s.; New Queen, 1s.; and Wentworth Proprietary, $\frac{1}{8}$; whilst the following are lower:—Australian Broken Hill, 1s.; British Broken Hill, $\frac{1}{8}$; Cumberland, 9d.; Kangarilla, $\frac{1}{8}$; and Scottish Australian, $\frac{1}{8}$.

COPPER.

Remarks.—Copper shares have been adversely affected by the fall in the price of the metal, though not to a very great extent. Mason, Quebrada, Tharsis and Panulcillo are all lower.

Business.—There is no rise to record, but a fall has taken place in Mason and Barry of $\frac{1}{8}$; Panulcillo, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$ and Tharsis, $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

Remarks.—Shares have been somewhat neglected, but with the exception of the falls in Golden Gates and Feathers there are no changes to call for special attention. The market closes somewhat weak, seeing that this evening is virtually the close of the account to-morrow, Saturday, being an off day, and Monday almost a holiday on account of the Lord Mayor's Show. The account commences Tuesday.

Business.—A rise is shown in Amador of 3d.; Colon, 3d.; Edwin Bray, 6d.; Elkhorn, 6d.; Gravel Gold, 1s. 6d.; Idaho, 3d.; Tesoro, 3d.; whilst a fall has taken place in American Belle, 6d.; Callao Bis, 3d.; Cantabrian, 6d.; Colorado, 3d.; Dickens Custer, 3d.; Elmore, 3d.; Flagstaff, 3d.; Golden Feather, 5s.; Golden Gates, $\frac{1}{8}$; Golden Leaf, 1s.; Montana, 1s.; New Gold Hill, 3d.; St. Augustine, 3d.; and Yankee Girl, 1s.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—A telegram, dated Nov. 4, gives last month's return of gold as follows:—"305 tons of quartz produced 620 ozs. of gold." The company sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Sept., which realised 1,974l. 7s. 3d.

INDIAN (GLASGOW).—The following information has been received from the mines viz.:—October. Total amount crushed is 960 tons, yielding 75 ozs.

MYSORE.—A telegram dated Nov. 5 gives last month's return of gold as follows:—"3,350 tons of quartz produced 5,106 ozs. of gold, also 806 ozs. obtained from tailings, making a total of 5,912 ozs. of gold." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Sept., which realised 21,019l. 3s. 11d.

NUNDYDROOG.—A telegram, dated Nov. 4, gives last month's return of gold as follows:—"1,050 tons of quartz produced 2,348 ozs. of gold, also 71 ozs. were obtained from the tailings, making a total of 2,419 ozs." The company has sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of Sept., which realised 9,046l. 6s.

OOREGUM.—A telegram from the mine, dated Nov. 4, gives last month's return of gold as follows:—"1,387 tons of quartz produced 3,146 ozs. of gold." The company has sold the gold produced in Sept. for 12,047l. 4s. 7d.

COLONIAL MINES.

CUMBERLAND.—Cablegram to-day from manager:—"Sinking the shaft will be completed towards the end of November. Ore cut out in at the present time. Will commence No. 8 level south, No. 8 level north, No. 1 winze south early in December. Crushed 32 tons from the shaft 2 ozs. per ton."—PIPER.

BRITISH BROKEN HILL.—For week ending 5th inst. 358 tons of ore were treated (including 50 tons of iron ore), yielding 93 tons of lead, containing 3,580 ozs. of silver.

BROKEN HILL PROPRIETARY.—Cable from Melbourne, dated 4th inst.:—"Output has not been affected by timber disturbances up to the present. Four additional furnaces will shortly be started. With this increased reducing power the directors are very hopeful of meeting extra outlay and maintaining present dividend. Every effort will be made to accomplish these results."

BROKEN HILL PROPRIETARY.—During the week ending 5th inst. 4,309 tons of ore were treated, yielding 517 tons of lead containing 180,978 ozs. silver.

KANGARILLA.—Aclare Mine.—Cablegram Nov. 2:—"Last fortnight's output of dressed ore, 49 tons first concentrates, containing 2,310 ozs. silver and 40 per cent. lead."

MOUNT MORGAN (QUEENSLAND).—Messrs. Laughland, Mackay and Baker have received the following telegram:—"We pay 25,000l. on Monday, being dividend of 6d. per share (free of dividend-tax) for the month of Oct."

NEW QUEEN.—A cablegram, dated Nov. 2, gives result of crushing for past fortnight:—"320 tons, yielding 800 ozs. gold."

SILVERTON (BROKEN HILL).—A cablegram from Mr. D. D. Rosewarne (formerly H.M. Inspector of Mines, and who was lately instructed to inspect and report on the chloride of silver lode recently discovered on the company's property) is as follows:—"Have carefully examined property; the metal bearing part of the lode lies against the footwall. The vein is likely to average 500 ozs. of silver per ton. Have formed a very high opinion of discovery. Report by letter."—ROSEWARNE.

TASMANIAN SILVER.—Telegram from the engine:—"Lode is 8 ft. thick in winze below the adit; second-class ore throughout. Resumed driving 60-ft. level."

FOREIGN MINES.

BIG CREEK ANTIMONY.—Cable from superintendent Bray:—"Production, month of Oct., 100 tons; ore-body wider; work is progressing steadily on level 4, also on tunnel 1,000 ft. below all other workings."

DON PEDRO.—Telegram:—"Gordon's shaft has been completed to the 50-fm. cross-cut."

ELKHORN.—Cable:—"Bullion produced for week ending Oct. 31, \$8,250. No change in 1,250-ft. level south, the ore body being developed, promises well."

EMBREVILLE FREEHOLD.—The interest coupons of the Seven per Cent. Mortgage Debentures of the Embreville Freehold Land, Iron and Railway Co., Limited, due on 11th inst., will be paid on and after that date, at the Commercial Bank of Scotland, 62, Lombard Street, E.C.

FLAGSTAFF.—Cablegram received from Prof. Vincent, Nov. 4:—"I am offered to-day 1,000% for 106 tons—will most probably sell for more. Output, 97 carloads in 12 days. Am very pleased with the look of the mine."

GLENROCK.—The directors have received cable advice from New Zealand intimating that the result of the crushing now proceeding may be looked for about the 16th inst.

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, manager at Oroville:—"Every indication six weeks ago warranted belief bedrock would be reached in sinking 10 ft.; but sunk near 25 before reaching it. Will erect sluicing elevator within 10 days, and should the weather continue fine will get returns this season. Work done at pit absolutely necessary to accomplish this year. Elevator a complete success, as shown by the work accomplished by the small elevator. The method not new but very successful for years in the mines of this State. I worked elevators successfully eight years ago. Full particulars by letter next week. Everything going well."

MACATE.—Copy of cable received Nov. 2 from manager at the mine:—"Expect to start crushing on arrival of millman. Rich bunch still continues in late important discovery, and is improving. It has given by small crushing and washing trials, from an average sample, 8 ozs. gold per ton." Note.—Millman is expected to arrive at the mine about the end of this month.

MAID OF ERIN.—Gross yield for the week ending Oct. 31, 1,850 tons; estimated value, \$35,000.

MAMMOTH.—Cable:—"Shipped bullion amounting to \$7,400; total amount for the month of October \$19,190. The mill has run 29½ days. Total amount crushed is 2,600 tons. Mine is improving. Expenses \$10,800."

MESQUITAL DEL ORO.—A cablegram gives the result of the Oct. mill-run:—"50 stamps ran 528 hours (22 days); quantity of ore crushed, 2,141 tons; bullion produced at clean-up, 1,075 ozs.; value about 3,725%."

OURO PRETO.—The company sold through Messrs. Johnson, Matthey & Co., the gold obtained in the month of Aug., which realised 4,007% 19s. 3d.

PESTARENA COMPANY.—This company produced in Oct. 583 ozs. of gold from 622 tons of ore, averaging 18 dwts. 18 grs. per ton.

PITTSBURGH CONSOLIDATED.—Cablegram:—"Total cost for Oct. at mine and mill, \$4,250. Bullion shipped, \$5,000."

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, Nov. 6:—"29 fms. sunk, 4 fms. driven during Oct."

TOLIMA.—Cablegram from superintendent as to Oct. returns:—"The nett profit is over 5,500%."

HOME MINES.

NEW MORGAN.—The gold from the last clean up has been sold, and produced 86% 7s.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 670 AND 671.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SALISBURY.—Crushing for last month yielded 1,539 ozs. of gold.

JUBILEE.—The result of last month's crushing is 672 ozs. of gold. Will not pay a dividend.

FERREIRA.—Crushings for last month (Oct.), 4,618 tons, yielding 4,001 ozs. of gold.

GLENCAIRN MAIN REEF.—Oct. crushing, 800 ozs. 1,891 tons ore. 25 stamps running 30 days."

FORBES REEF.—Result of crushing for Oct.: Crushed 1,250 tons obtained 212 ozs. of gold.

MAY CONSOLIDATED.—The yield of gold during Oct. was 2,600 ozs from 6,700 tons crushed; mill running 29 days.

WEMMER.—Result of the work done during Oct.: 1,332 tons crushed; 1,280 ozs. gold won; 20 working days; 25 stamps.

MAY DEEP LEVEL.—Twenty-three days milling, 529 tons crushed, yielding 405 ozs.; estimated value of concentrates 200%.

GELDENHUIS ESTATE.—Oct. crushing was 3,370 tons, which produced 3,340 ozs. of gold. The profit on the crushing last month was 6,500%.

ORIENTAL AND SHEBA VALLEY.—Applications have been received for over 74,500 preference shares of this company, and this number has been allotted.

SHEBA.—The telegram for Oct. states: "2,750 tons of ore crushed at the mill; yield 3,190 ozs. of gold. No. 15 winze down 230 ft.; rich quartz has been struck."

ROBINSON.—The London agents of this company have received the following telegram from Johannesburg:—"4,248 tons of ore crushed last month; total output, 10,019 ozs. of gold." Oct. has yielded 1,774 ozs. more than Sept.

HOOR CONCESSION EXPLORATION.—A cablegram from the office at Barberton gives the result of the crushing for Oct.:—"1,170 tons, 214 ozs. The mill ran 20 days from want of water. Mine is looking better generally."

TRANSVAAL MORTGAGE LOAN AND FINANCE.—The company has received the following cablegram from Johannesburg:—"May Deep Level Gold Mining Co., Limited, 23 days' milling. 529 tons crushed, yielding 405 ozs. Estimated value of concentrates, 200%."

SIMMER AND JACK.—The Transvaal Mortgage Loan and Finance Co. has received the following cablegram from the head office at Johannesburg: "Quartz crushed during month 7,451 tons; obtained 3,375 ozs. of gold during month."

DURBAN-ROODEPOORT MINING CO.—4,030 tons crushed. 26 working days. 2,303 ozs. retorted gold. The 4,118 tons crushed during Sept. were composed of 2,137 tons of South Leader reef, and 1,981 tons of Main reef, all taken from the 13 claims block.

NORTH-EASTERN BULTFOONTEIN.—Summary of telegraphic advices for five weeks ending Oct. 31:—Best blueground not ready. Washing (mainly rewashings) 21,600 loads, yielding 1,400 carats. Top blueground (barely ripe) 28,000 loads, yielding 6,400 carats. On floors Oct. 31, 220,000 loads. In sight Oct. 31, 24,000,000 loads.

STANDARD GOLD MINING CO., LIMITED.—The first meeting under the failure of this company was held yesterday at the offices of the Board of Trade. It appears that the company was incorporated in Dec. 1888, with a nominal capital of 175,000. The gross liabilities are returned at 61,503%, but of these 58,260% are not expected to rank, and an estimated surplus of 560% is disclosed.

JUMPERS.—Cable:—"Obtained 1,205 ozs. gold during Oct." Profit on month's operations, 1,544% 4s. 6d. During the month there was expended: Upon permanent works, &c., 2,292% 3s. 9d.; upon buildings, machinery, &c., 957% 18s. 8d. Driven and sunk during month, 588 ft. 50 stamps crushing for Jumpers Co.; 50 stamps crushing for Geldenhuis Co.

WASSAU (GOLD COAST).—During Aug. the mills crushed 236 tons of lode ore, yielding 148½ ozs. of gold, standard weight, being equal to 0.66 ozs. (or 13 dwts.) per ton. The manager arrived in England on the 28th of last month, and during his absence the mine has been put under the charge of Mr. W. E. Sam.

NEW PRIMROSE.—Developments during the month in cross-cuts, drives, and rises was 591 ft., developing 7,500 tons ore. The cost of working for the month, including 1,090% 12s. 1d. spent in development and sinking Milne shaft, has been 4,837% 11s. 2d., leaving a profit of 4,184% 0s. 10d. Five per cent. has been declared, payable to shareholders registered at Sept. 30, so soon as transfer list arrives from London office.

TRANSVAAL GOLD EXPLORATION (Oct. 5).—Mill: The battery and pans had been stopped for the monthly clean-up, and were again running. The new dry crushing mill was at work during the week 35 hours, and was ready for regular crushing. The total expenditure at the mines for the year ending Sept. 30, amounts in all to 19,605%. This is subject to some adjustment on property account, by which the amount will be decreased. Telegram yesterday: "Mined during Oct. 875 tons; battery working 23 days, double shifts; crushed 550 tons Mu ore, yielding 170 ozs. dry; crushing mill and pans, 750 ozs.; total for month, 920 ozs. Mines expenses for month, 1,760%."

PIGG'S PEAK ESTATE (Oct. 3).—Devil's reef: Prospecting drives: Drove for the week, 20 ft.; no change since last week. One white man and five boys making shoot for ore in tunnel, and timbering same; one white man and four boys ballasting road: remaining boys cutting wood. Battery: Started on framework for roof. We are still delayed by the foundry not turning out our work in time. However, we are doing the best we can, and will start as soon as possible. Dam: Have now filled in the bottom of excavation, having had over 20 boys on it this week. Some 100 tons of clay have been put in and well tramped down. Level of clay, 13 ft. 10 ins. from top of dam. 14 piles in place.—E. J. MURRAY.

EDWIN BRAY.—Manager's report for week ending Sept. 26.—No. 2 level: Underhand stoping east and west of winze has been proceeded with, and the quartz sent to the mill was worth between 8 and 10 dwts. No. 3 level: Our workings in this level extend now 51 ft. east of the winze, but as the quartz met with during the last few days was of a lower grade I have started driving west of the winze where we have some good ore. At the same time stoping will be carried on on the full length of the drive. The mine is keeping well ahead of the mill. The ropeway worked fairly well, but twice during the week we had to put new strands in the hauling wire. Mill: 20 stamps have been working, and everything got ready to fix the new cams and tappets on the Nos. 1 and 2 batteries as soon as they arrive here.

CERRO DE PASCO.—The directors have received the following advices, dated Barberton, Oct. 5:—Block F extension: Drive south on 10 ft. reef has been driven 14 ft., making total distance 142 ft.; ore extracted, 28 tons; the lode is improving in pinnings from near footwall. Drive north on 10 ft. reef has been driven 7 ft., making total distance 49 ft. Ore extracted, 14 tons. On account of a number of natives leaving, this drive has been stopped two days. Drive south on 4 ft. reef has been driven 9 ft., making total distance 19 ft.; ore extracted, 13½ tons; reef at this point is 4 ft. 6 ins. wide. Air shaft No. 1 south has been sunk 9 ft., making total distance 52 ft.; this shaft is still in sandstone. Block 12: North-east cross-cut has been driven 10 ft., making total distance 250 ft.; this drive still continues in mica schist.

LANGLAAGTE.—Report for Sept.: The total depth of sinking main and south shafts for the month, 52 ft.; drives and cross-cuts, 298 ft. The lodes are all looking well, improving, and showing good results

from pannings. The battery has been running from Sept. 1 to Oct. 2 (both inclusive), 35 stamps, and has crushed 2,704 tons of ore (1,528 tons of main reef, and 1,176 of south reef). Actual crushing time, 29 days 20 hours. The yield was 1,315½ ozs. of smelted gold. All machinery is working splendidly 3,045 tons of ore were mined and hauled during that period at a cost of 12s. 2d. per ton; 2,704 tons were milled at a cost of 5d. 3d. per ton. Total cost of mining and milling for the month, including all development, office expenses, salaries, and stores consumed, 17s. 5d. per ton. Total expenditure from Sept. 1 to Oct. 2, 2,560l. 15s. 1d. Smelted gold returned 1,315½ ozs., taken at 72s. 6d. per oz., 4,770l., showing a net profit of 2,209l. 4s. 11d.

COMMERCIAL NOTES.

METALS.

COPPER has again been easier. The price of G.M.B. warrants has varied between 45l. 17s. 6d. and 46l. 7s. 6d. cash, with a large business done each day. The close yesterday was 46l. cash and 46l. 15s. three months. To-day prices are 45l. 15s. cash, and 46l. 10s. three months. Supply in England and France for Oct., 9,754 tons, and delivery 9,389 tons. Visible supply on Oct. 31, 59,819 tons, against 59,450 tons on Sept. 30. We quote English tough, 50l. to 51l.; best selected, 51l. to 52l.; strong sheets, 60l. to 61l.; India sheets, 56l. 10s. to 57l. 10s.; yellow metal sheets, 5½d. to 5¾d.; sheathing, 5¾d. to 6d.; ore, &c., 8s. 6d. to 10s. per unit.

TIN has been rather firmer, with fair business doing. Straits has improved from 89l. 7s. 6d. to 90l. 10s. cash, which is to-day's price; three months improved to 91l. 12s. 6d. To-day's price is 91l. 7s. 6d. The Straits shipments for Oct. were 3,380 tons, viz., London, 1,800 tons; America, 1,150 tons; and Continent, 430 tons. Stock in London 2,595 tons, against 2,974 tons on Oct. 1. Arrived in Oct. 1,647 tons, and delivered 2,026 tons, of which 435 tons went to America. Visible supply in America about 4,000 tons, same as on Oct. 1. Visible supply to England and Holland 8,475 tons, against 7,898 tons on Oct. 1.

The Dutch market has been firm, and the spot stock is very small. Banca is quoted 55½fl.; Billiton, 55fl. The Dutch Trading Co. announce their Banca sale for 26th inst. to consist of 28,800 slabs. English ingots, 94l.

TINPLATES are easier and trade dull. We quote ordinary coke 13s. to 13s. 3d. Liverpool.

SPELTER has been easier, and is now quoted 23l. 5s. ex-ship here.

SHEET ZINC.—In public sale yesterday 140 tons sold at 25l. 15s. nett at works.

LEAD dull and lower. We quote Soft Spanish, 11l. 12s. 6d. to 11l. 15s.; soft English, 11l. 15s. to 12l.; L.B., 12l. 10s.; sheets, 12l. 15s. to 13l.

QUICKSILVER quiet. Rothschild's price is 8l.; second hands, 7l. 18s.

ANTIMONY firm. Hallett's price for America, 50l.; ordinary brands and delivery, 48l. to 49l.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING NOV. 7.

Bank of New South Wales	17½ per cent.
Berner's Hotel	8 per cent.
Brigg (Lincs.) Farmers...	6 per cent.
Commercial Bank of Manitoba	7 per cent.
Ceara Gas	5 per cent.
Liverpool and London and Globe	10s. per share.
National Bank of Australasia	15 per cent.
New Vancouver Coal	5 per cent.
Otago and Southland Investment	4 per cent.
St. John and Maine Railway	1 per cent.
Scottish Australian Investment	12½ per cent.
Sharpness New Docks	4 per cent.
Trust and Agency of Australasia	20 per cent.
Trust and Mortgage of Iowa	5 per cent.
Welsh Whiskey	6 per cent.
Westminster Trust	7 per cent.

A NEW MACHINE FOR SLATE CHANNELLING.

THE Ingersoll-Sergeant Drill Co. have lately introduced into the Slate Quarries of Pennsylvania an extremely ingenious machine for slate channelling thereby supplying a long-felt want, which will, we have no doubt, be equally appreciated both in this country and in the United States. Many machines have been invented in the past for this purpose, but none seem to have given entire satisfaction, or to have been permanently adopted. The Ingersoll-Sergeant Drill Co., however, after eight years careful study and many experiments, claim to have overcome the difficulties, and the machine that they now produce is being extensively used. The machine consists of a Standard Ingersoll-Sergeant Rock Drill of special construction for the purpose of adjustment, the shell piece or guide to the cylinder having an extended end which serves to guide the crosshead which carries the cutting tools. The cutting engine is mounted upon two parallel bars, which rest upon a cross piece, to which are attached four legs. A screw runs the entire length of the machine parallel with the bars. By means of a special 3-cylinder engine, designed by this company, the cutting tools are moved back and forth along the bars. The direction of movement is reversed automatically when the cutting engine reaches either one of the end pieces. The machine is used for drilling round holes when such are required, a special provision being made for throwing the rotation pawls in action. A round hole is usually drilled at either end, and the cutting is done up to and into this hole; thus the channel is completed the full length of the bars. The bars are usually made about 10 ft. long, but may be made shorter or longer within certain limits, and to suit the varied conditions in quarries. A pamphlet giving illustrations and full particulars of the invention has been issued by the London branch of the company.

WOODHOUSE AND RAWSON UNITED, LIMITED.

DIRECTORS' REPORT.

THE annual report to be presented at the general meeting to be held on Nov. 13 has been issued to the shareholders. The balance-sheet shows a net profit of 35,103l. 9s. 2d., which, with the sum of 16,335l. 15s. 3d., the amount brought forward from last year, makes a total of 51,439l. 4s. 5d. Out of this sum the directors paid in Feb. last an interim dividend at the rate of 8 per cent. upon the preference shares, and 15 per cent. upon the ordinary shares, and they now recommend a further dividend up to June 30 last at the same rates. These payments will absorb the sum of 30,507l. 16s., and leave the sum of 20,931l. 8s. 5d. Out of this balance the directors recommend the appropriation of 10,000l. to the reserve fund, which will then stand at 35,000l., 1,500l. to bad debt reserve, and the addition of 500l. to the Employees Pension Fund, bringing this up, with interest, to 1,565l., and leaving 8,931l. 8s. 5d. to be carried forward to the current year's account. The works at West Kensington Hall, Hammersmith, have been increased by the erection of a large new factory 133 ft. by 41 ft. and five storeys high, fitted with all the latest appliances. The cost of the new buildings has been put to capital account, whilst the cost of moving, 2,000l. has been written off revenue account. Although alterations have not been carried out without considerable interruption of the work in hand, the turnover has largely increased, and it is hoped that this extension will enable the company satisfactorily to keep pace with the work offered in this department. The works at Kidsgrove have been consolidated, a new boiler shop erected, and new plant put down. The mortgage which was existing on the property when it was taken over has been substantially reduced. An extension of this branch has been made by the acquisition of the business of Messrs. Anderson and Galloway, hydraulic engineers, for whom the company had been manufacturing, and who have a large number of specialties in hydraulic machinery now taken over by the company. The supply department has continued to increase rapidly, the turnover for the last year having considerably exceeded that of the previous year, and the net profit has doubled. In the installation department a large number of contracts have been carried out, and at the present time the amount of work in hand is larger than at any previous period. Amongst the contracts at present in hand is one for the erection of electric lighting plant for public lighting in the streets of Johannesburg. With regard to the department for testing and proving of new patents and inventions, a large amount of business has been offered and examined. Out of the four important electrical inventions undergoing process of testing, mentioned in the previous report, only one has turned out sufficiently well to justify this company in introducing it to the public, this being the Epstein accumulator, to acquire and develop which the Epstein Electric Accumulator Co., Limited, has been formed, with Mr. Epstein as managing director, and from which this company looks for important pecuniary results.

THE MIDAS GOLDFIELD CO., LIMITED.

THE ISSUE OF PREFERENCE SHARES ARRANGED.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Monday, at which the subjoined resolutions were submitted for consideration:—

RESOLUTIONS.

"A. That the 20,000 preference shares of 1l. each, created by the resolution passed at the general meeting on July 20, 1891, shall have attached to them the special rights and privileges following in place of those attached to them by such resolution, viz.:— (1) The holders of such preference shares shall be entitled to a cumulative preferential dividend at the rate of 10 per cent. per annum on the capital for the time being paid up in respect of such shares respectively; (2) Whenever the profits of the company in respect of any year shall be more than sufficient to pay the preferential dividend, as aforesaid, for such year, the surplus profits shall be divided as to one-half thereof amongst the holders of the preference shares, and as to the other half thereof amongst the holders of the ordinary shares; (3) That such preference shares shall rank as regards capital in priority to the ordinary shares, and in the event of the winding-up of the company, the surplus assets shall be applied, first in the repayment of the capital paid up in respect of the preference shares in priority to any return of capital in respect of the ordinary shares." "B. That Mr. Arthur Bryant be and is hereby elected a director of the company."

Mr. Warren William de la Rue

(chairman of the company) presided.

Mr. GUY ROBINS (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, the signal failure on the part of the shareholders to apply for the preference shares upon the terms of the resolutions passed at the last general meeting has necessitated the calling together in conference of the large shareholders to consider on what conditions they would be prepared to take up their proportion of the preference shares, and the result is that we have to submit to this general meeting the resolutions which the secretary has just read. I am prepared to answer any questions which may be put to me, and after doing so I shall submit the resolutions to the meeting. (After a pause.) Then I move the adoption of resolution A.

Mr. MACLEAY (director) seconded the motion, which was carried unanimously.

Mr. HUGH ASTLEY moved resolution B, which the chairman seconded, and the meeting carried unanimously.

This ended the business.

LATEST CABLE.

The secretary has received the following cable from the mine:—"Yield for week ending Oct. 31, 27 ozs."

NEW HOOVER HILL.—Report to Oct. 20.—Briol's shaft: There is no change to note in the drift going south at the 130; plenty of quartz showing in the end, but poor. The ore in the bottom south of the Provost shaft is looking well, but the vein is very small.

BRITISH MINING INTELLIGENCE.

CWMYSTWYTH (Nov. 4).—The new lode in the end of the 30 east has not yet been taken down, therefore there is no change to report. The men are now engaged tramming their dead stuff, which will be cleared to-morrow, when they will at once commence to take down the lode. There is no change in the ground in the end of the 15 cross-cut north. The ground in the same level driving west is a little easier for exploring, and more water in the forebreast. The stopes are all yielding their usual quantities of lead and blende ore. Saturday next being pay and setting day, a full report of the value of the different bargains will be given next week.

KINGSIDE (Nov. 4).—There is no change worthy of remark in the 44-fm. level driving east of cross-cut north of Taylor's shaft as the productive part of the lode has not been taken down since last report. Sufficient ground having been cut over the 44-fm. level east and west of cross-cut the men are now engaged clearing the stuff broken there. The counter lode in stope over the 22-fm. level north of rise is worth at present $\frac{1}{2}$ ton of lead ore per fm. The Pengueilan north lode in stope over the 22-fm. level east of rise will produce 10 cwt. to 12 cwt. of lead ore per fm. The masonry and other surface works requisite for fixing turbine and air-compressor are nearly complete, and as soon as they arrive no time shall be lost in getting them in their places and set to work.

LEADHILLS (Nov. 3).—Brown's vein: Five men are set to stope above the 145 north of Jeffrey's shaft, at 42s. 6d. per fm.; worth 15 cwt. of ore per fm. Four to stope above the 145 south of Wilson's shaft, at 35s. per fm.; worth 50 cwt. of ore per fm. Four to clear out broken ore, stope above the 145 north of Wilson's shaft, on shifts. Twelve to sink No. 5 winze, now 10 fms. below the 130 north of Jeffrey's shaft, at 130s. per fm.; vein 4 ft. wide, charged with quartz and ore; worth 35 cwt. per fm. Four to No. 1 stope above the 130 north of Jeffrey's shaft, at 45s. per fm.; worth 25 cwt. of ore per fm. Five to No. 2 stope, at 45s. per fm.; worth 35 cwt. of ore per fm. Five to rise above the 130 north of Jeffrey's shaft, at 95s. per fm.; vein 6 ft. wide, well mixed with kindly quartz, but only stones of ore not to value. Four to clean out broken ore, stope above the 130 south of Wilson's shaft, on shifts. Five to drive the 115-fm. level, now 58 fms. 2 ft. 8 in. north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide of a promising quartz and spar with ore, worth 45 cwt. per fm. Four to stope above the 115 north of Jeffrey's shaft, at 47s. 6d. per fm.; worth 20 cwt. of ore per fm. Two to drive the 115-fm. level, now 45 fms. 1 ft. south of Wilson's shaft, at 100s. per fm.; vein $3\frac{1}{2}$ ft. wide, charged with quartz and a stone of ore not to value. Seven to sink a winze below the 100 north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide, nicely mixed with quartz and spar and ore, worth 30 cwt. per fm. Two to stope below the 100 south of Wilson's shaft, at 40s. per fm.; worth 15 cwt. of ore per fm. A sudden change occurred in the 70 south of Wilson's shaft about last week, and presenting a kindly appearance, with good stones of ore, and indicating the certainty of cutting a heavy feeder of water, so that we at once suspended it. The water in Flat Rod above is already taxing us very much, and some at the 70 also would have resulted in our being sent out of the workings below in connection with Wilson's and Jeffrey's shafts. The water in the Flat Rod district is annoying us more than we anticipated, and we must, therefore, take good care to be thoroughly equipped in our pumping appliances before cutting more. We are pushing on with the preparations for a 30-ft. water-wheel at surface. Four to No. 1 stope above the 35 south of Flat Rod shaft, at 27s. 6d. per fm.; worth 40 cwt. of ore per fm. Ten to No. 2 stope, at 37s. 6d. per fm.; worth 30 cwt. of ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 34 fms. 2 ft. north of George's Roust vein, at 97s. 6d. per fm.; vein, 4 ft. wide, composed of rich quartz and spar, with stones of ore, just scarcely to value.—T. NEWBIGGING.

PRINCE OF WALES (Nov. 4).—The ground in the 180-fm. level west is very hard and spare for driving, which makes progress slow, but we have reason to believe the lode is improving. We purpose taking it down next week. There is a change taking place in this level east; the main lode appears to be forming itself, and the flucan going out, but this will be partly proved in a day or two. The ground in the cross-cut is changing and easier for driving. No other change.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Nov. 5).—The 125 south is going forward in a lode about 3 ft. wide, producing 1 ton to the fm. The new winze below this level is 6 fms. 2 ft. deep, but has not yet reached the foot-wall of main lode. The new winze in the 125 south-east on caunter vein is 7 ft. deep; lode producing 1 ton to the fm., and improving. We have not yet seen the hanging-wall part of the vein, and when we reach the junction we shall no doubt find very great improvement. The 140 on this lode is still producing $1\frac{1}{2}$ ton to the fm., and the two stopes which are directly underneath said winze are each worth $2\frac{1}{2}$ tons per fm. The 155 on this lode is producing about 1 ton to the fm., the vein in the forebreast being still of a very promising and strong character. These levels have now been driven 28 fms. 5 ft. and 31 fms. $4\frac{1}{2}$ ft. respectively, so that operations here will have to be suspended some time during next week. The 140 south on main lode is driven 26 fms. 5 ft. beyond No. 1 winze; lode in present forebreast very wide, showing a small quantity of ore. The winze in this level north of the cross-cut is 6 fms. 1 ft. deep, producing 1 ton of lead ore to the fm., and improving. The 155 north is driven 30 fms. 4 ft., the forebreast shows a slight improvement day by day, and the vein is increasing in width. The three stopes in back of 80 south are together worth $3\frac{1}{2}$ tons per fm., and the two stopes on east lode are each worth 1 ton per fm. The three stopes in back of the 110 south of Watkin's winze are together worth $4\frac{1}{2}$ tons per fm. The stope south of main shaft is worth 1 ton per fm. The stope in back of the 125 south is worth $1\frac{1}{4}$ ton per fm., and the two stopes in the 140 north are each worth $1\frac{1}{4}$ tons per fm. We have sampled 20 tons of blende to-day, and will sample 50 tons of lead ore next week.—A. WATERS.

SOUTH CONDURROW (Nov. 8).—In consequence of a breakage to the caps of the underlie rods at Marshall's, which occurred on Sunday, we were delayed at the bottom for two or three days, but the water is again drained, and the shaftmen are completing the cutting of the plat. The 138 cross-cut north has passed through the lode, which is about 30 ft. wide. We have holed the winze in the bottom of the 60 east of King's, and have put the men to stope. There is no particular change to notice in any of the other points in operation.—W. RICH, W. THOMAS.

SOUTH DARREN (Nov. 5).—The pumps from the 130 to the 142 have been taken out and fixed from the 142 to the 154, and a larger lift fixed from the 142 to the 130; both lifts are working well. The bearers for the skip-road are all fixed, the penthouse is being taken out, the skip-road will be finished, the shaft divided and the ladders fixed, in a day or so, when we intend to commence to drive east and west at the 154 by six men in each end. The stope in the 142 west is let to six men, at 47s. 6d. per fm.; worth 1 ton of silver-lead ore per fm. The winze in the 130 west is let to four men, at 127. per fm. There is a strong branch of copper here, with a little lead. The 15 tons of silver-lead ore sold on the 30th ult. realised 1727. 2s. 6d.—J. MITCHELL.

WEARDALE.—Report for week ending Oct. 21:—Ore raised for week, 45 tons; ore dressed for week, 95 tons; ore, fume and slag smelted for week, 125 tons, producing 63 tons of pig lead.

— Report for week ending Oct. 31:—Ore raised for week, 50 tons; ore dressed for week, 95 tons; ore, slag, and fume smelted for week, 137 tons, producing 70 tons of pig lead.

WHEAL CREBOR (Oct. 27).—The 156 cross-cut has reached the country rock, but nothing of importance has been found since my last report. We are now driving east on the course of the lode, which is worth 3 tons of good quality arsenical mundic per fm. The lode in the 156 end west of shaft is yielding 3 tons of arsenical mundic, and a little copper ore per fm. The lode in the end driving west at the 132, on the south part of the lode, is yielding 3 tons of mundic and copper ore per fm. The lode in the stope in the bottom of the 144 east of winze is worth 1 ton of copper ore and 5 tons of mundic per fm. The lode in the stope in the back of the 144 west of cross-cut is yielding 3 tons of ore and 4 tons of mundic per fm. Our tribute pitches are yielding their usual quantity of ore. By the end of this week we shall have two parcels, about 100 tons each, of good quality mundic ores ready for sampling.—P. D. HOLMAN.

WHEAL CREBOR (Nov. 3).—In the 156 end driving east of shaft we have met with a crossing, beyond which the lode has improved, and is now worth 5 tons of good quality arsenical mundic per fm. The 156 west of shaft is now being driven by four men; the lode in the end will yield 3 tons of mundic and copper ore per fm. All other points in the mine are the same as reported last week. The two parcels of mundic ores now ready for sale were sampled yesterday, and in a few days the buyers will send in their bids.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Nov. 4).—There is no change to notice since my last report.—S. P. CURTIS.

WHEAL UNY (Nov. 4).—Setting report, Oct. 31.—The 203 end to drive east by four men, at 77. per fm.; worth for tin, 127. per fm. A stope in back of 203 west by 12 men, at 6s. per ton; worth for tin 187. per fm. The men will go on in their bargains below this point in their last places as the water is drained. We are forking very fair; engine working splendidly. We hope to get the 203 level dry to-night. We expect to fork in depth faster under this point, as the workings are shorter. We set 27 tribute pitches at tributes varying from 12s. to 13s. 4d. in the £.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ALASKA TREADWELL.—In addition to the 20,000 tons of Treadwell ore, the mill crushed 450 tons of sample ore from an adjoining mine, yielding \$2,912.69, which is not included in the above. The company had on hand, Sept. 30, \$233,974.04 in cash, which has been diminished \$75,000 by payment of the regular quarterly dividend for Oct. The net profits for the first four months of the company's financial year, beginning June 1, 1891, have been (after deducting \$21,401.70 for new construction), \$166,276.26.

ALMADA AND TIRITO.—Report for month of Sept.:—Mining—Exploration: Driving north on 100 lode, 460 ft. above adit west of Mina Grande open cut, 28.1 ft.; the lode is narrow, only 3 to 4 ft. wide, but looks well for ore. Driving south on 100 lode, tunnel level, from long San José west cross-cut, 19.3 ft.; total from cross-cut, 85.4 ft.; the lode has lately shown occasional stones of rich ore. Cross-cutting east from north end of 12-fm. level, 100 lode, 3.4 ft.; on very hard and barren ground—suspended. Driving the north end 36-fm. level, 100 lode, 56.7 ft. (with machine-drill); total extension of the level beyond the short west cross-cut, 71.5 ft. The breast is in barren and disordered lode. The floor of this level is 17 ft. below the bottom of No. 12 winze, and the breast has to be driven about 38 ft. further north to get below the winze; total exploration, 108 ft. Development: Driving north on 100 lode, 12-fm. level, north of No. 11 winze, 24.4 ft., on a branch of good green ore, averaging about 12 ins. in width. Driving south on 100 lode, 12-fm. level, south of No. 11 winze, on a branch of black ore, varying from 10 to 12 ins. in width, 16.3 ft. At the end of the month the ore pinched out, and further driving was discontinued. The new tunnel west of Tirito and Providencia old workings was driven 18.7 ft.; it has to be driven 142 ft. further to connect with the west cross-cut under Providencia shaft. The course will be north $35\frac{1}{2}$ east, and consequently we have to leave the first lode, on which a part of the tunnel is driven. The No. 12 winze sinking from the 24 level, 100 lode, was sunk 10.5 ft., on ground worth from 8 to 16 tons ore per fm.; total depth of winze, 53.1 ft. Lack of ventilation compelled us to stop this winze, and it will be connected to the 36 by rising from the latter; total development, 69.9 ft. Mine plant: Some new machinery was put into use in the mine and charged under this head, consisting chiefly in two new air cylinders with pistons, valves, valve cages, brass bearings, &c., for our air compressor; one steel horse whim erected over the Dios Padre shaft, with galleys and hoisting sheave. Ore extraction: The work on the stopes was done on a reduced scale owing to the small quantity of ores crushed in the mill, scarcity of water having prevented us from running all the batteries steadily. The reduced supply of ore required by the mill permitted us of pushing the work of filling the chambers with waste, so as to raise the floors at the stopes to a convenient level for attacking the backs. The ores extracted during the month yielded 350.5 tons after cobbing, and came mainly from the back of the 24 level, 100 lode, over No. 12 winze, and from the south end of the stope over the 35 level, 100 lode, besides the ore obtained from the development work. The work of re-timbering and clearing the Dios Padre shaft was interrupted during the month owing to our timber contractors having failed to deliver the requisite timber and lumber. We shall proceed with this important work as soon as possible. Reduction: The cobbled ores sent to the mill during the month (four weeks) amounted to 398.9 tons.

with an average ley of 34.71 ozs. per ton, against 24.79 ozs. the previous month. The stamped ores chloridised were 1,187 furnace charges, estimated at 534.2 tons, the average assay value of which was—before roasting, 24.79 ozs. per ton; after roasting, 22.17 ozs. per ton, against 29.75 ozs. and 26.25 ozs. respectively for the previous month. The average chlorination in the roasted ores was 92.1 per cent., against 91.1 per cent. the previous month. The roasted ores served to the leaching vats amounted to 838.2 tons, with an average ley of 23.62 ozs. per ton, against 27.71 ozs. the previous month. The tailings thrown away were 883.2 tons, with an average assay value of 2.39 ozs. per ton, against 2.63 ozs. the previous month. The black precipitate obtained was 8,831 lbs., with an assay value of \$20,468.95. The refined silver obtained and sold at the Alamos Mint, through Mr. Oscar Ocháran, was—20 bars, weight, kilog. 552,550; pure silver, kilog. 541,987, at 39.109, equal to \$21,196.56. Financial result: The amount realised for silver was \$21,196.56, and for 1,503 lbs. of pig lead and 1,800 lbs. litharge sold we collected \$320.80; total receipts, \$21,517.36; the expenditure for the month was \$15,723.32, there being an excess of receipts over expenses amounting to \$5,794.04; but the estimated value of argentiferous stocks was decreased by \$5,746.00, which, deducted from the above, leaves only \$48.04 as the net profit for the month, but we spent \$1,367.88 on mine plant, \$1,506.10 on development, and \$1,421.80 on exploration; in all \$4,295.78, which by right should be debited to capital account, and was charged to revenue account. Remarks: Water is becoming very scarce again, and the outlook for a supply is uncertain, the period for the summer rains being about over. It is the first time in 13 years that I have been here that there is a scarcity of water at this time of the year. An extraordinary drought and famine both for people and mules is imminent in the near future. Fuel is still very scarce, the daily deliveries of firewood being barely sufficient to keep pace with consumption, but I expect more mules and donkeys to arrive shortly. I have had to offer better prices than usual for charcoal, and yet I have been unable to secure a supply. We have a large quantity of smelting ores and products, and we shall require 4,000 or 5,000 barrels of charcoal (200 or 250 tons) within two or three months.

ARGENTELLA (Oct. 29).—Weekly report:—No. 2 Marine—Driving east of south: The footwall continues as reported last week. The forebreast producing strong signs of mineral. Quartz reef—Cross-cutting south: Our progress the past week has been better, having cut through the band of hard killas. No. 3 Rowse's workings—Driving east of north: The lode has taken a turn north. If it continues its present course the north and south walls will form a junction about 20 metres east of the forebreast at the mouth of the cross-cut. The miners are following the lode, and finding some very good stones of mineral. The opinion I have always had since we cut the south wall is that between the two walls is one big lode. As we go into the hill I firmly believe they will close home and make a productive lode.—J. B. ROBERTS.

BALAGHAT MYSORE (Oct. 14).—North engine shaft: The 600-ft. level north has been driven 25 ft. 6 ins., or 324 ft. 6 ins. from the shaft; the quartz varies from 1 ft. to 1 ft. 6 ins. wide, and assays 3 ozs. 9 dwts. 2 grs. of gold per ton. The machine rise in the back of this level has been risen 5 ft. 8 ins., or 22 ft. 8 ins. above the back of the level; the quartz is about 16 ins. wide, and assays 7 ozs. 10 dwts. 6 grs. of gold per ton. The stopes in the back of this level produce quartz of about 16 ins. wide, and assay on an average 6 ozs. 8 dwts. 10 grs. of gold per ton. The 600-ft. level south has been cleared and the driving again resumed; the end is now 22 ft. 9 ins. from the shaft; the quartz is at present small, and assays only 14 dwts. 18 grs. of gold per ton. The No. 1 winze in the bottom of the 500-ft. level south has been sunk 2 ft., or 43 ft. 6 ins. below the level; the quartz is about 8 ins. wide, and assays 1 oz. 5 dwts. 20 grs. per ton. In consequence of the continued existence of cholera in our camp, a large number of our workpeople are afraid to come to the mines; we are, therefore, very badly off for labourers, and consequently have not yet been able to clear and secure the 500-ft. level north; we shall, however, do so as soon as possible. The stopes in the back of this level produce quartz of about 14 ins. wide, and assay on an average 3 ozs. 5 dwts. of gold per ton. The No. 1 midway winze in the bottom of the 410-ft. level north has been sunk 4 ft., or 58 ft. below the level; the quartz is 1 ft. wide, and assays 3 ozs. 2 dwts. 13 grs. of gold per ton. The stopes in the back of the 410-ft. level north yield quartz of about 1 ft. wide, and assay 1 oz. 16 dwts. 10 grs. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 1 ft. wide, and also assay 1 oz. 16 dwts. 10 grs. of gold per ton. The stopes in the back of the 270-ft. level north produce quartz of about 14 ins. wide, and assay, on an average, 1 oz. 9 dwts. 9 grs. of gold per ton. The machine rise in the back of the 270-ft. level north has been advanced 11 ft. 8 ins., or 19 ft. 8 ins. above the level; the quartz is 1 ft. wide, and assays 2 ozs. 17 dwts. 8 grs. of gold per ton. The stopes in the back of the 270-ft. level south yield quartz of about 9 ins. wide, and assay 18 dwts. 3 grs. of gold per ton. We have again resumed stoping in the back of the 165-ft. level north; here the quartz is over 2 ft. wide, and assays 13 dwts. 1 gr. of gold per ton. Haines' shaft: I am glad to say this shaft is now completed to the 410-ft. level, and that the men are now working below this level enlarging the shaft, and putting in the necessary timber, &c.; this is being urged on as fast as possible that we may be enabled to hoist the dirt from the 500-ft. level at as an early date as possible. Surface: The erecting, &c., of the additional 10 heads to our mill is in a very forward state, and will, I hope, be completed in the course of a few days; we are also progressing fairly satisfactorily with the new tram-road, &c., from Haines' shaft to the mills.—J. PRYOR.

BRATSBURG.—Report for week ending Oct. 24.—Hoffnung Mine: No. 2 adit level is still without ore to value, but is very much more promising in appearance than when last reported on, and we hope to have ore here by next week. No. 1 rise in the back is unchanged, but No. 2 has improved in value; now worth $\frac{3}{4}$ ton per fm. No. 3 adit level is now worth $\frac{1}{2}$ ton per fm., and good indications for a further improvement. The value of the rise here is unchanged. No. 4 level and the Trial level at Murchison's remain without change to notice. Johannes Mine: The western level on Howard lode has improved somewhat in value; now worth $\frac{1}{4}$ ton per fm.; and the rise in the back here maintains fully the same value as last week, viz., $1\frac{1}{2}$ tons per fm. The eastern level is looking well, and still yields 1 ton per fm.; and the rise in the back $\frac{3}{4}$ ton per fm. Surface work and remarks: The heavy floods reported last week causing the stoppage of the road between Ulefos and Strengen were followed by a heavy

fall of snow and a severe frost, and it is now very cold. The steam pipes in the dressing house, buddles, &c., were luckily so far advanced that we were able to get steam on, and so no hindrance has occurred, and we hope to be ready here in a short time. Miners are arriving in a satisfactory manner, several having come last week. All is going on as usual.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Oct. 24:—Smelting works: Nothing new to report here, as owing to the floods having washed away part of the road between Ulefos and Strengen, the converter wheels were not received before Saturday night, so that nothing could be done here last week. We made a start again this morning, and shall go on until our coke is exhausted, by which time we shall have a good stock of copper for the electro depositing works. Electro depositing has gone on regularly, and there is nothing to comment on here. We dispatched on Saturday for shipment to London 4 tons 2 cwt. 1 qr. 16 lbs. conductivity copper, which we hope will arrive safely and realise a good price.—T. F. SMITH.

CALLAO BIS (Oct. 12).—Advices from the mines:—Independiente: Since the 26th ult. the shaft has been advanced a further distance of 3 ft., or 11 ft. below the No. 4 cross-cut; total depth from surface, 201 ft. No change has taken place in the ground since last reported. At this point we are cutting ground to receive water tank, to fix the two plunger lifts to command the water at this level, when I shall be able to dispense with all steam pumps. The No. 4 cross-cut has been advanced 6 $\frac{1}{2}$ ft., or 18 ft. from shaft; ground still very hard. The No. 3 level south has been advanced 6 ft., or 100 ft. from cross-cut; lode 2 ft. wide, but at present of little value; still there is every hope of meeting soon the same shoot of good ore discovered in the levels above. Raise in the back of the level driven from the bottom of the No. 2 winze advanced 25 ft., or 47 ft. from back of level; lode showing 4 ft. wide, of good value. At this point we are driving north on its course to make communication to the No. 2 level driving south; lode showing 5 ft. wide, of good value. The No. 2 level south has been advanced 5 ft., or 194 ft. from shaft; lode showing 3 ft. wide, of good value. In the back of this level at this point we have put up a raise 37 ft.; lode showing 3 ft. wide, of good value. The No. 2 level north-east on new discovery: At this point we are advanced from winze 21 ft.; lode showing 3 ft. wide, of good value; the footwall is turning towards the east and west lode. Surface work: The carpenters are engaged making new tables and guides for the other 10 stamps, besides enclosing amalgam and retort house. Mill results are satisfactory.

—Telegram from the superintendent at the mines:—"405 tons, 505 ozs. gold; 21 days; quartz very hard. Mine is looking well."

CANTABRIAN (Oct. 24).—Manager's last report:—Hastings' engine shaft: In the 25-metre level driving east of shaft the lode continues much the same as when last taken down, yielding about 15 cwt. of good ore per fm. This end is being pushed forward with vigour so as to lengthen this section of ore ground, especially seeing that the reserves here are being rapidly taken away, and the stope in back of same is within 6 ft. of the present forebreast. The lode in the 25 drift west of shaft will produce 1 ton of rich ore per fm. This end is opening up some good available ground, but no stoping as yet has been commenced here. In the stopes in the roof of this level east of shaft the lode is not looking quite as well as when last taken down, and yielding less mineral; considering, however, that this part of the stope is in close proximity to the bottom of the old stope below the adit, we cannot expect but very little further improvement at this point. The stoping of the ground standing between this and the engine shaft is now being proceeded with. Owing to the continued heavy rains during the week the dressing of the copper ore has been much impeded. In order, however, to continue preparing the mineral for the market during the inclemency of the weather, a dressing house is most essential, and no time should be lost in erecting the same with a view to that important object.

CHAMPION REEF (Oct. 14).—Fortnightly report.—Mysore section—Carmichael's shaft: Sinking 1 ft. 3 ins.; total depth, 248 ft. 9 ins. This is the result of a few days work only, for the contractor has not been able to get a sufficient number of coolies to carry on the work full time. The drift south at the 225-ft. level has been advanced 9 ft. 6 ins.; total distance south of shaft, 136 ft.; the lode in the end has pinched to about 1 ft. in width, and only worth 2 dwts. per ton. No. 1 cross-cut at the 225-ft. level has been extended 11 ft. 3 ins.; total length from shaft, 81 ft. 3 ins. We have passed through several branches of quartz, which, no doubt, belong to the lode, but the cross-cut will be continued a few feet further before commencing to drive north on the lode. Ribblesdale's shaft: Sinking 2 ft.; total depth, 253 ft.; the rock in the shaft is very hard, and the water has retarded the sinking. At the 240-ft. level the north end has been advanced 9 ft.; total, 95 ft. 9 ins.; in the south end 17 ft.; total, 111 ft. 6 ins.; the quartz in the end is 15 ins. wide, and worth 1 oz. 15 dwts. per ton. The lode in the north drift is disordered, and only carries a few small branches of mineral. Garland's shaft: Sinking 4 ft.; total depth, 266 ft.; the lode is 2 ft. wide of quartz, which assays $1\frac{1}{2}$ ozs. per ton. At the 240-ft. level the south drift has been advanced 15 ft. 3 ins.; total length, 117 ft. 3 ins.; the lode at this point when last reported was small, but it has again opened out to 2 ft. wide of quartz. The north drift has been driven 11 ft.; total length, 128 ft. 11 ins.; one week's work only. There are small branches of mineral in the end, which look very promising. The cross-cut east from this level has been extended 5 ft. 6 ins.; there is a little water issuing from the end, and the ground is strongly mineralised, and dipping very flat. Dalryell's shaft: Sinking 7 ft.; total depth, 282 ft. Driving north at the 240-ft. level 14 ft.; total length, 149 ft. 4 ins. Trial shaft: Sinking 5 ft.; total depth, 127 ft. 6 ins. The old workings at the bottom are dipping out of the shaft in the north side; consequently, the shaft will be continued in that direction. The lode standing on the south side is 1 ft. 6 ins. wide of quartz, but of low quality. At Prospect shaft, Coromandel section, the 380 drift north has been driven 4 $\frac{1}{2}$ ft.; total, 49 ft. The lode is charged heavily with pyrites, which is a new feature in connection with the lode at this shaft. The assays from the pyrites only give a trace of gold. The winze below the 320-ft. level has been sunk 5 ft. 6 ins.; total depth, 43 ft. 9 ins.; the lode is 3 $\frac{1}{2}$ ft. wide, and carries 2 ft. of productive ore. The 290-ft. level driving 3 $\frac{1}{2}$ ft.; total, 193 ft. 6 ins. A small branch of quartz, 3 ins. wide, is all that can be traced of the lode. Driving cross-cut west at this level 3 $\frac{1}{2}$ ft.; total, 22 ft. Surface and general work: At Trial shaft the small pair of 6-in. engines that have been in use at Dalryell's shaft are now being erected at this place, which will

facilitate the hauling. Two new coolie lines are in course of erection, and the work in connection with building Italians' bungalow is progressing favourably. Machinery working satisfactorily throughout the mine, and the health of the camp good.—R. C. JONES.

GOLAR CENTRAL (Oct. 14).—The 200 north has been driven 3 ft., making a total of 56 ft. 9 ins.; the lode is 12 ins. wide, assaying 12 dwts. to the ton. The 200 south has been driven 5 ft., making a total of 50 ft. We are through the dyke. I hope soon to be able to report that we have got the lode again. Winze: Sunk 4 ft. 9 ins.; total depth, 37 ft. 9 ins.; the lode is 6 ins. wide, assaying 10 dwts. 8 grs. to the ton.

EMMA (Oct. 23).—In the level just above the old Illinois tunnel we have iron (oxidised) about 6 ft. in width, with streak of low-grade ore about 6 ins. wide through it and small pieces of ore scattered through the mass of iron. In the drift north-west from Bay City tunnel level on fissure No. 3 the vein has opened out to a width of 2 ft. of broken vein-stuff, with some pyrites of iron all through it. Yesterday a very thin seam of galena ore appeared in the face, and continues visible to-day. We have strong hopes that this will increase, and give us an ore body. We feel sanguine that in the Illinois drift, where the 6 ft. of iron is, we shall find ore in quantity. These two points are both north-west of the Bay City tunnel level, and between that and the Vallejo ground. The difference of level of these two points (elevation) is about 250 ft., so that if we have ore at or between these two points we have space enough for a great deal of it. The work at these points confirms, very significantly, Prof. Keyes's fissure theory. He strongly recommended vigorous work, as it is now being done, at these places.—C. W. BENNETT.

—(Oct. 23).—In handing you my report of work carried on at the mine for the week just passed, I am pleased to note a change for the better in the work from Bay City tunnel, as also in the work from Illinois tunnel, other portions of the mine showing no material change. On the Bay City tunnel the drift north-west on No. 3 fissure improves as we advance; we worked two men; advanced 14 ft.; total, 53 ft. The fissure is widening; now fully 2 ft.; much iron pyrites and decomposed vein matter in the vein. The last two or three eays a small seam of galena ore appeared in the vein, and is still plainly to be seen; the improvement the past few days in this drift indicates ore at no great distance. In the level No. 3 south-east we worked one man; advanced 8 ft.; total, 46 ft. The rock here is getting softer, more oxidised iron appearing, and the prospects much brighter. On the Illinois tunnel level we worked four men, drifting, cross-cutting, and prospecting the vein generally. The vein is running about 20 degs. east of south, and has widened to 6 ft.; we drifted 20 ft. on this vein the past week; total length of drift now 100 ft. If you will take into consideration the fact that upon starting to develop the vein at this point, we had nothing but a very narrow seam of iron to follow, that this seam has gradually widened until the present time, now showing fully 6 ft. wide of iron and ore intermixed. The improvement the past week being strongly marked, we now have about 4 ins. ore carrying 38 4-10th per cent. iron, 24 5-10th per cent. lead, and 15 16-100th ozs. silver per ton. Immediately upon this we have about 2 ft. of iron, assaying 49 per cent. iron, 1 88-100th ozs. silver; then lying upon this we have about 6 ins. of ore carrying 29 per cent. iron, 25 per cent. lead, 16 34 ozs. silver per ton; then comes in a magnesian sand and iron, intermixed to the casing on the wall. This casing is a brecciated limestone, the same as encased the old ore body, this being its first appearance in this part of the mine. I am very much pleased indeed with the outlook. The work the past week has to my mind demonstrated the fact that an ore body is in this vicinity, and that we will probably lead up to it in the near future. I enclose certificate of assay of the above-mentioned seams of ore. No. 1 is sample from north-west drift fissure No. 3 from Bay City tunnel level; this shows but a trace. No. 2 is from 4 in. seam of ore Illinois tunnel level, assaying 31 4-10th per cent. iron, 24 5-10th per cent. lead, 15 16 ozs. silver per ton, .044 ozs. gold per ton; value of gold at .88. No. 3 is from 6 in. seam of ore Illinois tunnel level, assaying 29 per cent. iron, 25 per cent. lead, 16.04 ozs. silver per ton, and a trace of gold. No. 4 is from 2 ft. seam of iron, Illinois tunnel level, assaying 49 per cent. iron and 1.88 ozs. silver per ton, with trace of gold. No. 5 is from magnesian lime, Illinois tunnel level, showing a trace only. The assay made to-day, showing 7 5-10th per cent. lead and 10 26-100th ozs. silver, is from sample taken from drift on fissure No. 3 north-west, in which the narrow seam of galena ore, mentioned in the beginning of this letter, appears, so that you will see we have every reason for expecting a good find here. On the Emma tunnel level we worked 9 men stoping ore and timbering, besides three carmen. We stoped some 50 tons low grade ore, run concentrating mill three days, producing about 4 tons concentrates, worth from \$80 to \$90 per ton. We also mined about 2 tons crude ore from Illinois tunnel level, worth from \$25 per ton, besides some 15 tons iron/silver ore. Ore now on hand estimated at 15 tons concentrates and 2 tons crude. In concluding my report I will say that the development work now in progress is certainly indicative of most favourable results, and I hope to write much better next week.—H. C. WALLACE.

ESMERALDA (Oct. 20).—The superintendent reports that the north drift on the Esmeralda ledge from the tunnel is now out 37 ft.; progress, 6 ft. There has not been very much change. The quartz continues to look favourable for ore. Have not been able to get the shaft cleared out yet; expect to reach the bottom to-day. We are now down over 130 ft.

—Cablegram received Nov. 4 reports that the shaft is cleared and cross-cuts east and west from the shaft have been commenced.

FLAGSTAFF (Oct. 24).—I have the pleasure of again reporting to you the progress made in and about the mine during the past week. The mine continues to look fine at all points, and there is in addition a great improvement in main 6th; we have just struck a fresh and showy seam of iron there, which looks like giving us good ore at any time. The mine has never looked so well since I have been foreman. The expansion joints have arrived, but as we are so busy building the house for the engineer, and to put our coal in, we have not got them in yet, but they are all right. Main 6th level: This is now in 342 ft. Main 7th level: This is in 204 ft.; the rock here is good-looking ground, and I would not be surprised to come upon ore at most any day. 7th level raise is now up 32 ft. above where connection was made; the ore in this raise is now 4 ft. wide, and very good ore. No. 2 cross-cut raise is now up 27 ft., and the ore is from 10 ins. up to 2 ft. wide, and most of it first-class. The raise above 6th is still turning out a fair quantity of first-class ore. Number of cars (tons)

taken out the past week 52, being 23 first-class, and 29 second-class. I am still busy shipping the 100 ton lot.—A. L. SWOPE.

GRAND CENTRAL (Oct. 20).—The manager reports as follows:—On the 17th inst. I left Kingston for the mines, accompanied by Mr. O'Neal, the surveyor, the mines foreman, and others. I took samples of ore (5 cwt.), which I will send off to you to-morrow. I rode over a good part of the Mimbres road, and walked nearly to the divide on the Lake Valley road. Mr. O'Neal stayed with the foreman to take him over all the claims and show him the boundaries, &c., and to do some work on the Central Claim, and to generally prepare for the miners following in as soon as possible.

—Cablegram from the manager received Nov. 4:—"The opinion I have formed of the property is very good."

GYMPIE GOLDEN CROWN.—Report for fortnight ending Sept. 10:—I have to report that at lease 777 (two mile) driving and stoping on the Peter and Paul reef at the 100-ft. level has been carried on as usual at the eastern shaft. The north drive is advanced a total distance of 66 ft., with back stoppe following on the slate break. The reef is 20 ins. in thickness of good quartz, and is now showing good coarse gold well through the stone on the break. The south stoppe is carried in a total distance of 70 ft.; the reef is 2 ft. in thickness, and in breaking down the reef on Aug. 28 and 29 good stone was met with on the break, showing coarse gold well through the stone, and every indication of a good patch being met with. The stone being raised at present in both the north and south workings is more than payable. We have commenced crushing, and will put through about 100 tons before washing up. The price for carting the stone is 3s. per ton. As we have just commenced crushing, I am unable to estimate what the yield per ton will be, but, from the present appearance, it will be much better than I expected.—T. RAMAGE.

GYMPIE GREAT EASTERN (Sept. 17).—Fortnightly report.—On the 13th inst. we had the mine clear from the flood water. I am pleased to inform you it did no damage to any of the underground workings. Since then there have been four men putting new batteries in the shaft. I expect to finish on Friday, when all the men will be put on again. There are a few men stoping over the levels at the 730 ft. on the Orient reef. A new ashpan has been made for the winding engine, the old one being full of holes, and not safe. There are 10 head of stampers crushing for No. 2 South Great Eastern since the 8th inst. Crushing will be started from the mine the latter part of next week. The winding engine and battery are in good working order. There are 27 men employed—21 on the mine and six at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Oct. 14).—Colar section:—No. 1 new shaft: The loose ground referred to in my last report has been secured, and the men have been sinking seven days, during which time 5 ft. were sunk, making a total of 263 ft. 9 ins. from surface. No. 2 new shaft has been sunk for the past fortnight 13 ft. 6 ins., making a total on the underlie of 154 ft. 3 ins. The 240 main shaft west cross-cut has been put out 20 ft., making a total of 563 ft. 6 ins. from shaft. No. 5 shaft, 425 north: This drive has been extended 22 ft. 6 ins. north on the part of the lode mentioned in last report. The lode here is 2 ft. 6 ins. wide, composed of patches of quartz and schist. A sample of quartz taken from the face gave 4 dwts. of gold to the ton of stuff. We hope to obtain better results as we get further north.—M. STEPHENS.

JAY HAWK AND LONE PINE CONSOLIDATED (Oct. 20).—Since taking possession of the Lone Pine Mine we have removed one large engine and boiler to the Lone Pine main shaft, and have fixed guides in the shaft for a cage, which was shipped from Butte yesterday, to commence hoisting the ore from out the mine; 300 tons have been broken, and is ready to bring to surface. Tunnel No. 1 is carried through an open cutting into the vein under the hill; the vein is from 4 to 6 and 8 ft. thick, and from which we are taking out ore for the mills. I intend to drive this tunnel some distance into the hill, through which I can work all ore above very cheaply, no hoisting being required. We are opening an incline shaft from near the mouth of this tunnel, and have an engine and boiler ready to place on same. The ore from Nos. 1 and 2 levels will be raised through this shaft. The stopes at those levels where we are at present at work show a vein of good ore, from 4 to 6 ft. thick. We are also stoping the backs at the No. 4 level; here the vein is from 6 to 10 ft. thick, of good ore. The No. 5 level has been extended 7 ft., making a distance of 71 ft. from the shaft; the vein is 6 ft. thick, having increased in size 1 ft. during the last 7 ft. driving; the ore also has increased in value; this is our bottom level. I am not stoping out the backs here, having no occasion to extract the ore. The bottom of the main shaft is at the No. 5 level from this point. I have commenced to sink on the vein to open up new ground; this is the deepest part of the mine. The vein here is 8 ft. thick and in very good ore. To sink this shaft I have erected a second engine on the main shaft so as not to interfere with the hoisting of the ore through the main shaft. The mine altogether is looking well. The mills: I am erecting six frue vanners on the Lone Pine mill to effect a better saving of the silver. I intend to treat the richer ore in this mill and the poorer in the Jay Hawk mill, and very little other alteration will be required. The frue vanners will be ready in about two weeks. No time is being or will be lost in getting the mills to work. My object is to start right, and then there will be no stoppage afterwards. We have several tons of low grade ore at the Jay Hawk and Lone Pine mines; some 60 tons of which I have hauled to the mills to commence with; this will fill up any crevices before the richer ore comes into the mills. When we start up, I have no doubt we shall make a continuous run.—H. PRIDEAUX.

LA LUZ (Oct. 2).—Last evening I received returns for silver deposited in the mint in this city, and have given the company credit for the amount of the same. Saturday last, when I left La Yeska, the cross-cut was still in the vein, with no indication of nearing the footwall. We were then working a fine streak of dark ore, which is undoubtedly of a good grade. The air in the mine is very much improved since I got the blower at work, and I think we will have no further trouble on that score.—H. A. HILTON.

—Since receipt of the above report the following cable has been received from Mr. Hilton:—"The quantity and quality of the ore are all that can be desired; mill tests show for low grade ore 28 ozs. of silver per ton."

MOUNT ZEEHAN.—The manager writes for week ending Sept. 18:—Argent section, No. 1 shaft: North drive, 72-ft. level, No. 4 lode, has been extended 13 ft.; total from cross-cut, 101 ft. Remarks: Lode

formation, 4 ft. wide, composed of siderite, graphite slate, with more galena showing than we had last week; 3 tons second-class ore raised. South drive, 72-ft. level, extended 14 ft.; total from cross-cut, 72 ft. Remarks: Lode formation, 2 ft. wide, composed of siderite and galena, and is more compact than last week; 7 tons second-class ore raised. Air shaft north has been sunk 4 ft. more; total from surface brace, 45 ft. Remarks: Lode formation, 1 ft. 6 ins. wide, composed of second-class ore, mixed with siderite and graphite slate; 4 tons second-class ore raised. Air shaft south: Two men have been working on this three days clearing away timber, and have put in three log sets. Remarks: Lode formation, 3 ft. wide, and we have taken 2 tons of second-class ore from the cap of same already. Hope to have something good from here next week. Queen Extended section, No. 5: Main engine shaft has been sunk 7 ft. more, making total from plat, 32 ft. 6 ins., or from surface brace, 142½ ft. Remarks: No change in the country rock since last report. Lift lowered and machinery working well. Have bagged 32 bags first-class ore that was lying about from No. 1 lode, and 20 bags left to-day for Trial Harbour. Montana section, No. 9—No. 2 lode: The winze 15 ft. north of main cross-cut has been sunk further 8 ft., total depth from bottom of level, 12 ft. Remarks: Lode formation, 2 ft. 4 ins. wide, 1½ ft. of which is solid galena; other part of the lode good second-class ore. This lode is looking very well in the bottom. In the event of our not getting much water, I think we shall be able to raise a great many tons from here; 4 tons 8 cwt. of first-class ore raised and bagged, and 8 tons of second-class ore raised. Total for week, 6 tons 7 cwt. first-class and 24 tons second-class.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Oct. 8:—The 186-ft. level, drive west: Driven 6 ft.; total, 87 ft. The 186-ft. level, drive east: Driven 3 ft.; total, 31 ft. The 116-ft. level, No. 4 winze, sunk 3½ ft.; total, 50 ft.

NEW VISO (Oct. 31).—Manager's report.—The winze below the California adit is going down in a very well-defined and kindly-looking lode in which there is a branch of quartz containing large patches of tin, from which we occasionally get some very rich stones, and by samples taken from the stuff, generally, we find it contains sufficient tin to pay for washing. In the California adit north at present the lode is composed of quartz and slate rock, unproductive for tin, and stiff for driving. As this is different from its original character I am expecting a favourable change soon. The rise above this level is up 10 metres in a soft and promising lode, in places yielding nice tinstuff, and as it is cheap for working, I am hoping we shall find sufficient tin in this section of ground to pay for stoping. Our alluvial washing at Mi Amor, and other surface operations, have recently been much hindered by unfavourable weather; consequently, we have not got out as much tin as we otherwise would have done. The deposit of alluvion referred to fully maintains its tin-bearing quality. I expect in a few days to get the concession of the Peizais water on the Escuderos side, and resume our tin dressing operations in the California part of our property, where we have an accumulation of tinstuff, and thus soon be able to send home a parcel of tin for sale.

OOREGUM.—Mine report for fortnight ending Oct. 13:—Wallroth's shaft has been sunk 3 ft.; total depth from surface, 431 ft.; lode 3 ft. wide, assaying 5 ozs. 3 dwts. 7 grs. per ton. The 360-ft. level south has been advanced 9 ft.; total length, 112 ft. 9 ins.; lode 1 ft. 9 ins. wide; assay value, 5 ozs. 18 dwts. 21 grs. per ton. The 360-ft. level north has been driven 2 ft. 6 ins.; total, 41 ft. 9 ins.; lode 1 ft. 3 ins.; worth 4 ozs. 1 dwt. 15 grs. per ton. Winze 360-ft. level south has been sunk 1 ft. 11 ins.; total depth, 4 ft. 11 ins.; lode 3 ft. 6 ins. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. The 280-ft. level south advanced 24 ft. 4 ins.; total length, 841 ft. 1 in.; width of lode, 6 ft. 6 ins., assaying 3 ozs. 12 dwts. 22 grs. per ton. The 215-ft. level north has been advanced 9 ins.; total length, 91 ft. 3 ins.; lode 2 ft. wide; worth 1 oz. 12 dwts. 16 grs. per ton. The 215-ft. level south has been advanced 2 ft.; total length, 280 ft. 11 ins. The lode in the shaft has opened out again, and is looking well. We have put three of the Italians who arrived this week to push on the 360-ft. level south. The 280-ft. level south is being driven by two rock-drills. Low's shaft: The 350-ft. level north has been advanced 4 ft.; total length, 98 ft. The 350-ft. level south has been advanced 4 ft. 8 ins.; total, 196 ft. 10 ins.; lode 6 ins. wide; assay value, 8 dwts. 17 grs. per ton. Winze 350-ft. level north has been sunk 1 ft. 3 ins.; total, 21 ft. 9 ins.; width of lode, 2 ft. 6 ins., assaying 7 ozs. 16 dwts. 16 grs. per ton. Winze 270-ft. level north has been sunk 2 ft. 4 ins.; total depth, 64 ft. 4 ins. Probyn's shaft has been sunk 10 ft.; total, 592 ft. 1 in.; width of lode, 5 ft. 6 ins., assaying 2 ozs. 10 dwts. 21 grs. per ton. The 550-ft. level south advanced 25 ft. 3 ins.; total length, 118 ft. 3 ins.; lode 4 ft. 6 ins. wide; worth 2 ozs. 15 dwts. 12 grs. per ton. Rise back 550-ft. level south, 8 ft. 10 ins. risen; lode, 7 ft. wide; assay value, 2 ozs. 1 dwt. 9 grs. per ton. The 450-ft. level south has been driven 8 ins.; total length, 330 ft. 9 ins.; width of lode, 1 ft.; worth 15 dwts. 6 grs. per ton. Rise back 450-ft. level south, 7 ft. have been risen; lode, 1 ft. 6 ins. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. No. 2 winze 450-ft. level south, sunk 3 ft.; total depth, 35 ft. 6 ins.; lode, 3 ft. 9 ins. wide; worth 7 ozs. 17 dwts. 18 grs. per ton. No. 3 winze 450-ft. level south has been sunk 1 ft. 6 ins.; total depth, 8 ft. 6 ins.; lode, 4 ft. wide, assaying 1 oz. 17 grs. per ton. Winze 450-ft. level north has been sunk 3 ft. 5 ins.; total, 22 ft. 2 ins.; width of lode, 2 ft. 6 ins.; assay value, 3 ozs. 8 dwts. 14 grs. per ton. No. 3 winze 366-ft. level south, sunk 2 ft. 3 ins.; total, 37 ft. 3 ins.; lode, 2 ft. wide; worth 1 oz. 6 dwts. 2 grs. per ton. No. 2 winze 200-ft. level south, sunk 3 ft.; total depth, 22 ft.; lode, 1 ft. wide, assaying 1 oz. 7 dwts. 5 grs. per ton. The 300-ft. level south has been advanced 9 ft. 3 ins.; total, 329 ft. 3 ins.; lode, 1 ft. 9 ins., worth 1 oz. 14 dwts. 20 grs. per ton. Stopes—Wallroth's shaft: During the month of Sept. 4 fms. of ground have been stoped at back of 280-ft. level south; width of lode, 3 ft., assaying 3 ozs. 16 dwts. 5 grs. per ton. At back of 215-ft. level south 2½ fms. have been cut; lode, 1 ft. 4 ins.; assay value, 2 ozs. 5 dwts. 19 grs. per ton. No. 2 stope bottom 215-ft. level south, 4½ fms. stoped; lode, 1 ft. 6 ins. wide, worth 2 ozs. 3 dwts. 13 grs. per ton. No. 1 stope back 215-ft. level north, 1 fm. has been cut; lode, 1 ft. 6 ins. wide; value, 1 oz. 1 dwt. 19 grs. per ton. Bottom 215-ft. level north, 6½ fms. have been stoped; lode, 1 ft. 4 ins., assaying 3 ozs. 9 dwts. 4 grs. per ton. Low's shaft: Stope bottom 270-ft. level south, 13½ fms. cut; width of lode, 1 ft. 9 ins., worth 2 ozs. 11 dwts. 4 grs. per ton. Bottom 200-ft. level south, 8½ fms. have been stoped; lode, 1 ft. 9 ins. wide; assay value, 1 oz. 13 dwts. 2 grs. per ton. Probyn's shaft: Stopes back 450-ft. level south, 20½ fms. have been cut, 17 fms. of which were done by rock-drill;

lode, 3 ft. 6 ins.; worth 2 ozs. 19 dwts. 12 grs. per ton. Back 366-ft. level south, 2½ fms. have been cut; lode, 1 ft. 6 ins., assaying 1 oz. 12 dwts. 16 grs. per ton. Back 300-ft. level north, 6½ fms. cut; lode, 6 ft. wide, worth 2 ozs. 2 dwts. 11 grs. per ton. Bottom 300-ft. level south, 10½ fms. stoped; lode, 3 ft. 6 ins. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. Back 230-ft. level south, 5½ fms. cut; lode, 3 ft., assaying 3 ozs. 10 dwts. 18 grs. per ton. Bottom 230-ft. level south, 3½ fms. have been stoped; width of lode, 2 ft.; assay value, 1 oz. 15 dwts. 14 grs. per ton. No. 3 stope bottom 166-ft. level south, 6½ fms. cut; lode, 4 ft. wide, assaying 1 oz. 14 dwts. 4 grs. per ton. A little rain has fallen, and the state of affairs is more hopeful than it has been for the past 10 weeks. Health of the camp is now fairly good. Machine coolies are, however, scarce.

PINOS ALTOS (Oct. 10).—The company's manager writes:—The following work was done in the mine during the week ended 3rd inst.:—The cross-cut to the hanging wall on the 11½ level was driven 7½ ft.; assay, \$7.59. The 13th level, east drift, was run 8 ft.; assay, \$5.86. The face is in quartz, very much mixed with wall matter. The 13th west drift was advanced 4 ft.; assay, \$21.57. The 14th level, west drift, was run 6½ ft.; assay, \$34.92. The 17th level, east drift, was advanced 6½ ft.; assay, \$6.80. The 17½ level, west winze, was sunk 3½ ft.; assay, \$7.91. I have been sinking this winze on the dip of the ledge, now it is being sunk vertically so as to cut the ore found in the tunnel. This week, ore has been cut, but I do not know the assay value yet. There were hoisted during the week 901 skips of ore and 91 skips of waste. The average number of stopers (pairs of drillers) was 28. Only three pairs of these were employed in the 16th east stope, the others being in the 14th west stope, in the east and west ends. The following is the statement from the mill for the week:—Lost time on batteries: Clean up, 4 hours; general repairs, 3½ hours; total, 7½ hours. Ore worked in mill, 547 tons, at \$19.65, \$10,748.55; 23 tons overflow slimes, at \$9.39, equal to \$215.97; 524 tons tailings, at \$6.38, equal to \$3,313.12—\$3,559.09; week's result, \$7,189.46.

TASMANIAN LAND AND EXPLORATION.—Report for fortnight ending Sept. 12:—The lode in the tunnel has dipped under foot, and is gone below the present face of the tunnel. I have, therefore, sunk a small shaft on the lode to communicate with the tunnel. The lode in this shaft is looking splendid; it varies in width from 8 ins. to 2 ft., and is mostly first-class ore. A bulk sample just taken from a pile of 35 tons, which I have ready to put in the bags, showed on assay 106 ozs. 3 dwts. 8 grs. silver per ton, and 62.5 per cent. lead. I am now making arrangements for shipping this ore direct to England. Shall commence sending it to Trial Harbour in a few days.

—A telegram received since, dated 3rd inst., says:—"Lamb's section: Output was 7 tons last week."

NEW VANCOUVER COAL MINING AND LAND CO.

THE report of the directors and statement of accounts for the half-year ended June 30 reveal a very satisfactory state of affairs. The output and sales were the largest in the company's experience, being 253,296 tons, and 254,025 tons respectively. The directors have declared an *interim* dividend of 5 per cent. per annum free of income-tax, payable on Dec. 5. The various parts of the company's property are all in a satisfactory condition. The fault met with in the No. 3 North level of the East Field Mine, referred to in the previous report, was pierced through in June last, and good hard coal, about 5 ft. thick, was found. This mine is now being installed by the Edison Electric Co. for haulage purposes, and the current will also, doubtless, be used for lighting and other purposes. The net output from the No. 2 South Field Mine during the half-year was 100,180 tons. The coal continues good but is somewhat thinner. The new shaft at South Field, known as the No. 5 shaft (which is intended to extend the operations of this mine), reached the seam of coal in Aug. last at a depth of 505 ft., when the coal was found 6 ft. thick and of South Field average quality. The net output from the No. 3 South Field Mine during the half-year was 35,006 tons, principally obtained from the pillars. The reserve of pillar coal here is estimated to yield an output for some months further. The quantity of New Wellington coal extracted from the North Field Mine during the half-year was 42,257 tons. The quality of the coal continues good and hard.

THE OPHIR STEAMSHIP.—The new Orient liner Ophir realised all that was expected of her on her sea trials. She steamed the 700 miles from the Clyde to the Thames in 48 hours, and breasted a strong easterly gale in the Channel with unusual steadiness. The trials on the measured mile on the Clyde gave a speed of 18½ knots, which is about 21½ land miles per hour. She will thus be able to make the journey to Australia in 28 days, and have a tenth of her speed to spare. Besides possessing this reserve of power, no boat afloat can be pronounced her superior for safety. She has been constructed on a plan that makes it almost impossible she can founder, or be materially delayed even by serious collision. Fresh air can be turned on in any part of the ship in the same way as gas or water is supplied, and by this arrangement, supplemented by the electric light, the whole of the cabins in the ship are maintained in a state as fresh and airy as promenade deck cabins. Among other novelties in the ship's arrangements is the adoption of the hydraulic engine in place of steam for steering and haulage purposes. The result of this is an entire absence of noise in the working of the ship, no small matter in a long voyage. The first-class saloon, drawing room, and smoking room are sumptuously decorated, and the second-class surpass anything provided in the first-class of 20 years ago. The third-class accommodation is also unusually ample; separate apartments are provided for families, and the special ventilation arrangements are extended to the emigrants as well as to the first-class passengers.

UNITED STATES GOLD PLACERS (NEW) CO., LIMITED.

COMMITTEE ISSUE THEIR REPORT.

Nov. 2.—The committee have at last issued their report, in which they say the shareholders will doubtless remember that in Dec. last Mr. Justice Kekewich made an order that the United States Gold Placers (New) Company should be wound up, and appointed Mr. Henry Naidley, chairman of the committee, liquidator of the company. Mr. Naidley made sufficient investigation to satisfy himself that the whole of the company's property in America had been sold to meet the claims of creditors in America, and was hopelessly lost to the shareholders for whom the only satisfaction possible was a rigorous investigation into the formation and management of the company's affairs. Unfortunately before he had been able to ascertain more than that the company's affairs were in a hopeless muddle, Mr. Naidley fell ill, and died on Mar. 19 last, after a few days illness. The committee cannot but fear that the strain put upon him by his efforts in unravelling the history of the company hastened his death, and wish to acknowledge to the full his services on their behalf, and that of the shareholders generally. Meanwhile the liquidation of the United States Gold Placers (Old) Company, which the committee had sought to re-open came before Mr. Justice Kekewich, and his Lordship directed on June 13 that the then liquidator, Mr. William Scott, should be removed, and that the company should be wound up under the Companies Winding-up Act 1890, whereby the Official Receiver, who was armed with the special powers of investigation conferred by that Act, became *ipso facto* liquidator of the company. This order is now being worked out by the Official Receiver, but owing to the involved state of the accounts and books, the official statement of affairs has not yet been issued. The committee, however, feel justified in saying positively that there will be no available assets of the company for distribution to the shareholders unless the Official Receiver should find it possible to insist upon those who had the management of the company and its supervision refunding any portion of the money supplied. The liquidation of the United States Gold Placers (New) Company meanwhile stands still in order that the Official Receiver may take it up, which he has expressed his willingness to do should he be left as liquidator of the old company after the necessary statutory meeting of creditors of the old company shall have been held. Under these circumstances there seems to be nothing to be done but to allow matters to work themselves out. Meanwhile at the instigation of the committee, certain of the shareholders of the Goulding Placers, and the Gold Queen, Limited, have been taking similar steps to secure an independent investigation into

the formation and management of the respective companies, and in consequence the Official Receiver was appointed liquidator of both companies, and on July 9 and Oct. 22 last held a public examination of some of the directors connected with the respective companies. As the case is still pending, the committee feel it would not be proper for them to express any opinion as to the result. The committee therefore feel that they have now almost carried out the work for which they were appointed, and on which they expended much time and trouble. It only remains, therefore, for them to render an account of the moneys they have received and expended. The committee have spent in printing, issue of circulars, postages and petty expenses, 156*l.* 5*s.* 2*d.*; in getting information from America, 36*l.* 0*s.* 6*d.*; they have also incurred an expenditure in counsel's fees and legal advertisements of 168*l.* 19*s.* 7*d.*; and incurred legal expenses amounting to 235*l.*; making a total of 596*l.* 5*s.* 3*d.*, to which must, it is feared, be added, to meet further expenses connected with the issue of this circular and contingencies, 30*l.*, making a total of 626*l.* 5*s.* 3*d.*. Towards this they have received in response to their circular of Dec., 1890, the sum of 492*l.* 8*s.* 5*d.*, leaving a deficiency of 134*l.* 16*s.* 10*d.*. The committee confidently appeal to the body of shareholders to relieve them of this liability, which they have incurred in carrying out the trust committed to them by the shareholders to investigate the company's affairs. Any contributions, however small, will be gratefully received by Reginald Merivale, Esq., 3, Stone Buildings, Lincoln's Inn, London, W.C. Wm. Lakeman, Reginald Merivale, Z. Paul, B. Rennie, Members of the Committee of Investigation.

AUSTRALIAN BROKEN HILL CONSOLS.

A STRONG FINANCIAL POSITION.

Nov. 3.—Numerous inquiries having been made by shareholders as to this company's financial position, I am directed by the board to inform you that they have at the present date:—Invested in 30,000*l.* of 2¹/₄ per cent Consols, say at 95¹/₄ per cent., 28,537*l.* 10*s.*; cash at the company's bankers in London, 2,765*l.* 19*s.* 10*d.*; ore in transit of the estimated value of 5,163*l.*; total, 36,466*l.* 9*s.* 10*d.*, while the total liabilities are considerably under 5,000*l.*. The company has, besides other assets, 440,000 fully-paid shares of the nominal value of 1*l.* each in the East Broken Hill Consols, Limited.—L. J. WOODMAN, Secretary.

ZAMBESI CONCESSIONS.—Mr. Fenn Smith, the leader of these companies' expeditions, writes from Manica, Sept. 10: I have much pleasure in informing you that I shall peg out some claims this week on very fair prospects and good body of ore.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Paddy.—There may be a move in them soon. It would be a pity to sacrifice your holding now.

R. A. D. (Loughton).—Mysore West, Reefs, and New Queen are all good to hold.

A. Crow (Carlisle).—They are dull just now. The price of the shares will improve no doubt in the near future. The property is a good one and well managed.

Mount Pleasant (W. R.).—Practically nothing being done. The shares are almost unsaleable.

Watchful.—Take profit on 4, 5 and 6, but hold others for a little while.

Dubious.—Would probably result in a serious loss. In any case there is very little chance of a good profit.

Seagull.—It would be wise to sell part.

Occasional Reader.—Yes; sell, and secure profit.

Quartz.—The company is doing well, and everything points to success.

Leeds Sub.—No harm can be done, we think, by purchasing a few.

Doctor B.—Sell them for what they will fetch.

Investor (Paris).—The market is a very limited one for the shares you name; possibly you would have to give the top quoted price, or even a little over.

Purser.—Ought to go better. The reports are favourable, and there is a shortness of the shares on the market.

Rule (K. K.).—Will probably go lower. Do nothing at present.

Journalist.—Both are good to buy. Their prospects are very bright.

S. W. (Holbeck).—You could not find a buyer for so many shares. In fact there is little or no market.

Frosty.—For a lock up only. If you are prepared to let your money rest for at least a twelvemonth, these are the shares to hold.

P. L. S. (Handsworth).—Hold them, even now. It certainly does not look rosy, but from what we can gather a better price will soon be obtainable.

No Prophet.—For a small rise we consider all named worth a spec.

Buenos.—Sell now.

R. N.—No. 1: Most certainly, but lose not a moment. *No. 2:* Most assuredly. You are entitled to the return of your money in full.

Rhydol.—The purchase of 1, 2 and 3 is desirable. The shares have unduly fallen, and in our opinion are likely to recover. The present seems an opportune time to buy. Will write fully in a day or two.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING

COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

The Mining World.

LONDON: SATURDAY, Nov. 7, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

TIN-PLATES AND TIN MINING.

BRITISH tin mining interests in Cornwall, Australia, and Malaysia, are, of course, intimately concerned in the question whether the tin-plate manufacture is to migrate from South Wales to the United States. Tin mining is not the only interest which would suffer from the threatened change, for tin-plates are the mainstay of the coal, iron, and steel trades of the Principality. So far, in spite of President Harrison's grandiloquent references to American "inventive skill and business sagacity," the tin-plate clauses of the McKinley Act have failed to justify their enactment. The passage of the Act as a whole was certainly largely helped by the assertions on which the advocates of a prohibitive duty on tin-plates rested their movement. The measure has so far signally failed to produce the flourishing native industry which was expected to be its immediate result. The established metallurgical concerns of the United States have steadfastly held aloof from the erection of tin-plate plants, and the prevailing providence in a good many of such concerns as have arisen takes the "questionable shape" of ex-Welsh manufacturers with the record of failure in the Principality. Nearly all the evidence shows the American tin-plate industry to be gathering strength very slowly indeed. True the American Consul at Singapore assures his Government that the Malay tin miners are now forwarding their tin to America, instead of to Wales, for conversion into tin-plates. This Protectionist testimony, however, proves too much, for the object of the McKinley Act was as much to stimulate tin mining in Dakota as to create a tin-plate manufacture in Pittsburg or Chicago. There is no reason to believe that the results hitherto achieved are at all commensurate with the injury inflicted upon consumers by the tin-plate clauses of the McKinley Act, and it is difficult to see how they can escape repeal at the end of the limited period for which they are enacted, unless the British tin-plate industry plays into the hands of the Protectionists.

The Welsh tin-plate makers are accused by the American shippers and the leaders of labour alike of too much conservatism in their view of the trade position. Production has enormously increased—even faster than consumption—and many of the existing plants are hopelessly behind in respect of equipment for cheap and rapid output. The inference is that a certain number must go to the wall, and that any artificial attempts to bolster up an extinct monopoly will result in

disaster. The most potent auxiliaries of the Welsh manufacturers are clearly the American consumers, and any action likely to alienate the sympathies of that class can only be regarded as suicidal short-sightedness. The tinning industry of the United States will certainly not support the demand for a repeal of the present duties unless they are convinced that South Wales can provide them with a cheaper article than the native works. The obvious policy of the Welsh firms is, therefore, to use every available means for the reduction of prices, and in all other ways to suit the convenience of their customers. Yet their action as an organised body, since the passage of the McKinley Act, has been solely in the direction of keeping up prices. They have carried out a scheme of restricting output, and have actually succeeded in inducing an upward tendency in quotations. They have, as yet, taken no steps to meet the movement which has arisen in the States to substitute more modern and accurate standards of measurement and of weight than at present prevail. They certainly seem inspired by the conviction that the American market is inevitably lost, and that they may as well get as much out of it as possible before it is entirely closed to them. Such action is exactly that best suited to provide the stimulant which seems at present wanting to the establishment of a tin-plate manufacture in America. Whether it is due to the initiative of the makers themselves, or to the "middlemen" in whose hands they mostly are, its unwisdom is obvious.

The tin-plate manufacturers should set themselves to work to improve the processes of manufacture, and to open up new outlets for the product. In the course of such reforms many concerns would inevitably suffer, but this is a better thing than that industry, as a whole, should be deprived of its best market. It would be a fatal mistake for the Welsh firms to lull themselves into security on the assumption that the tin-plate clauses will be rescinded within the next few years. The concerns which are now taking up the manufacture in the United States, will undoubtedly use the best machinery, and will utilise every possible means to cheapen production. In many of the South Wales mills there is a serious waste of labour, and the methods of production are tedious and costly. The installation of modern plant will pay better than "stoppages" of output. Moreover, a vigorous attempt should be made to cultivate new markets for tin-plate. India and Australia offer themselves as capable of vastly developing in importance in this respect. The prospects of the industry in America must not be underrated, because of its slow progress hitherto. It is exceedingly doubtful whether the Welsh makers will be able to repeat without injury the experiment which they have successfully tried this year.

BALAGHAT.

As we said last week the position of a mining company in these days is particularly strong when it can without misgiving ask its shareholders for more capital on a basis of debentures instead of by the cumbrous and expensive plan of re-construction. The former is the method adopted when the shareholders are persuaded they have "a good thing"; the latter is resorted to when it is a case of pay a little more or lose all. The former is much to be preferred; but the latter is sometimes like a surgical operation—a stern necessity. The object of Balaghat meeting was described in our last issue. Briefly, it was to acquire by purchase from the Goldfields Company about 90 acres on its western boundary at a price of 10,000*l.* in cash and 10,000 fully paid shares. The bargain seems to be a good one for Balaghat, having regard to the prices paid by other companies purchasing land under similar circumstances. The total cost may be regarded at the moment as considerably under what it seems, for Balaghat shares are not yet at par. Goldfields Co. will, however, according to all human reasoning, get more, for it will hold the shares, at all events, until they get to par—a contingency that may be looked for with almost the certainty of fate. Shareholders will act wisely if they follow the example of Goldfields, and hold too. To provide for the cash and share payments, as well as to furnish the working capital with which, as Lord Ribblesdale said in his extremely able and business-like speech, to utilise the purchase, the directors sought and obtained, by the unanimous consent of the meeting, power to issue debentures to the amount of 35,000*l.* under terms which cannot fail to prove highly advantageous to those who take them up. They bear a 10 per cent. rate of interest; they are redeemable within five years, or earlier, at 25 per cent. bonus; but the greatest advantage of all is that they confer the right of exchange for an equivalent amount in fully-paid shares after December, 1893, and at any time before redemption. The capital of the company had also to be increased to 200,000*l.* by the creation of 50,000 new shares of 1*l.* each. This was the business of the meeting, and as we have said it was carried through with perfect unanimity. There is no doubt the shareholders will take up the debentures. They will act most unwisely in their own interests if they do not.

The necessity of coming to terms quickly with Goldfields Co. was shown both by Lord Ribblesdale and Mr. John Taylor. In 60 ft. deeper, at its present dip, the lode will have passed out of Balaghat property into Goldfields ground that has now been acquired, and as Lord Ribblesdale said "It is much better to buy before you are obliged to than when you are obliged to, as it is a question of price." It was the strong opinion of the late-lamented Mr. W. H. Rowse, to whose

memory both the chairman and Mr. John Taylor paid a graceful tribute, that this purchase should be made, and his far-sighted observations at a recent meeting largely influenced the shareholders on that occasion to the decision to authorise the board to enter into negotiations with this object. The reef, from which the returns are at present being made, is thought by some to be merely a branch of the Champion reef that is believed to pass through the property Balaghat has just bought. It has been extremely thin but exceptionally rich. Fortunately, it is getting wider as it descends. The prospects of Balaghat from the dividend point of view are excellent. All the circumstances seem to be favourable to its taking rank a little later on amongst the best of the Indian gold mines. Even as it is, in spite of the drawback referred to by the chairman, the returns are increasing. It is noteworthy that in no single month of their history have Mysore, Nundydroog and Balaghat produced so much gold as during Oct. last. Equally from the speculative point of view, that is, from the point of view of those who simply buy mining shares for the market rise, it would be difficult to indicate a better purchase than that now presented by Balaghat shares at current quotations.

THE FALL IN SILVER.

DURING the past week the price of bar silver has fallen to a lower point than it has touched since the period preceding the passing of the last Silver Act in the United States, namely, to 43½*d.* per oz. This price is fully 4*d.* per oz. below the quotation at the corresponding date last year, and is even lower than the minimum figure reached in 1890. With the view of showing what have been the extreme fluctuations in the market value of the "white metal" in recent years, we append the following short table:—

Year.	Highest.		Lowest.		Average.	
	Per oz.		Per oz.		Per oz.	
	d.		d.		d.	
1886	46½	...	42	...	45½
1887	47½	...	43½	...	44½
1888	44½	...	41½	...	42½
1889	44½	...	41½	...	42½
1890	51½	...	43½	...	47½

The decline this week has been caused mainly by the defeat of the free-coinage party at the "Fall" elections in the United States, and the receipt of lower quotations from New York which have been sent in consequence; but it is also in part due to the continued depression in the Indian exchanges. It would be affectation to describe the future of the silver market as anything like brilliant, for the production of the metal has increased at such an enormous rate that it has, for the time being, outstripped the demand, and fears are entertained in some quarters that stocks will rapidly accumulate. Still, we are indisposed to believe that the outlook is sufficiently unsatisfactory to justify such a price as that which is now ruling.

In the first place, it has never been seriously imagined that even if the free-coinage men were in a majority at the elections that, therefore, their policy would be adopted by Congress and approved by the President. Under the existing Act, the Comptroller of the Treasury is obliged to purchase 4,500,000 ozs. of silver each month, which is more than double the amount that was actually purchased under the Bland Act. We are aware that the New York Chamber of Commerce is disposed to agitate for a repeal of last year's enactment; but little importance is to be attached to the movement, and it is scarcely conceivable that the United States Government would stultify itself by suspending the operation of the Act while the country is well able to absorb its own silver production. In the second place, it is to be noted that the stock of free silver in the States has run down to a very low point—less than the Treasury has to purchase each month. Moreover, it is to be expected that the demand for the East will now steadily increase. As the shipments of corn from India have been very heavy, and the imports of textile manufactures have been unusually light, Indian producers will have to be paid in silver for the trade balance in their favour. The Balkan States, too, are anxious to purchase silver for coinage purposes, and it is highly probable that Spain and Portugal will absorb larger quantities of the metal, as they both find it too costly a luxury to have a gold standard. Although, therefore, the outlook for the "white metal" is less satisfactory than it was a year ago, we are disposed to look for a more or less considerable recovery from the present depreciated quotation.

CORNISH FINANCE.

WHEAL AGAR is looking better than it has done for a long time past, but this fact, agreeable though it be, does not seem to London shareholders to warrant the committee in borrowing money from the bank to pay a dividend. It appears that there is a committee of this mine in Cornwall and another in London. A week ago the Cornish sages met, and passed a resolution "recommending a dividend of 3*s.* per share, which would absorb 900*l.*" On the committee in London there happens to be a hard-headed Scotchman, Hamilton by name, who seemed "struck all of a heap" at this proposal. Have you (he asked) the 900*l.* at the bank? No, said Mr. Cornelius Bawden, the bearer of the Cornish committee's message. "And you owe 1,200*l.* to the bank. Surely the Cornish people must have overlooked that." Not at all, for Mr.

Cornelius Bawden had called their attention to it. This was Mr. Hamilton's opportunity to put into the form of a speech the views that we have so often in ink dropped from the point of our pen:—"The great misfortune of Cornish mines is that they keep no money in hand, and if they have a debt they make a call sufficient to meet only part of it." This is the common-sense view of Mr. Hamilton, who does not believe in bogus finance, and who prefers a balance at the bank to an overdrawn account. Had the London committee fallen into the financial snare prepared for them by their Cornish colleagues, they would actually have been paying interest on the money borrowed to pay the dividend, which one shareholder said "it would be madness to declare." These, forsooth, are the Cornish wiseacres who loftily condemn the limited liability system, and chant in chorus the praises of the cost-book method! They require to sit at the feet of some financial Gamaliel for instruction, and their preliminary course in understanding the difference between an overdrawn account and a balance-sheet on which a dividend can properly be paid might with advantage be taken from Mr. Hamilton.

POORMAN MINES.

THE pleasing impressions conveyed to a large number of our readers by the satisfactory reports which have lately been received from these mines were still further emphasised by the information given by Mr. H. I. Fischell at the meeting of the company on Thursday last. From the speech of this gentleman it would appear that the company is now in the happy position of making profits, and will shortly be in the still happier position of paying dividends. The operations at the mines since the meeting in May last have been most satisfactory, and reflect great credit on the manager. The mill commenced running the beginning of September, and for the first six weeks showed a result of \$23,600 from 380 tons of ore, or an average of 10½ tons a day, yielding \$62 per ton. The mill which, it appears, is owned by another company, is only capable of treating from 10 to 12 tons a day, while the mines can supply three or four times that amount. Arrangements are, however, being made to increase the capacity of the mill to 30 tons, which will be of great benefit to the company. There are about 4,000 tons of ore mined and ready for the mill, and the gross value of the supplies is stated to be \$6,000, irrespective of recent discoveries now in process of development. Under these circumstances the success of the company would appear to be assured, and we heartily congratulate directors and shareholders alike on the satisfactory position into which the company has been brought.

MYSORE REEFS.

THE successful re-construction of this company was chronicled at Thursday's meeting. The shares were over-applied for, and the certificates are now ready. The principal speech of the meeting, as indeed it is at all those he attends, was that which fell from Mr. John Taylor, who stated that the recommendations of Capt. Gilbert, the manager of the Mysore Mine, as made in his special report, are being carried out. The vein has preserved its characteristic of great width, but Mr. Taylor said, "There are reasonable and proper grounds for hoping that before long richer quartz will be opened out in the bottom of the mine." With a comparatively small return of gold per ton a big lode like this should prove profitable. The directors were unanimously re-elected, and the shareholders left the meeting with increased faith in their property, which is justified by all the circumstances of the surrounding mines.

NEW DEVALA-MOYAR.

WHATEVER doubts as to the ultimate success of the Devala-Moyar undertaking may exist in the minds of certain pessimistic shareholders, who are not slow to publish their gloomy forebodings in the Press, there can be but one opinion regarding the present management—namely, that no effort is being spared to achieve successful results, and bring the shareholders a happy issue out of all their troubles. At the meeting on Wednesday last an opportunity was given the proprietors of hearing from the lips of one of their directors, Mr. W. H. Long, who has just returned from a visit to the mine, a plain, unvarnished statement of facts respecting the present condition of the property. Mr. Long, after spending some six weeks out there, has returned home with the firm conviction that the mine is well worthy of being prospected in depth, and he recommends that all the company's resources should now be devoted to that end instead of being dissipated in dealing with refractory quartz, which does not pay for treatment. The upper portion of the mine, he says, is practically exhausted, such ore as exists there being of low-grade and non-payable. Between the 78-ft. level and the 116-ft. level, however, some very rich nuggety quartz has been found, resembling in character that taken from the famous Callao Mine in Venezuela, which, as Mr. Long truly reminded the meeting, yielded 18,000 ozs. of bar gold from a crushing of 2,000 tons of ore. Mr. Long is neither a prophet nor the son of a prophet, and being well acquainted with the vagaries of mining, he was particularly careful not to say too much about this discovery; but, inasmuch as it is found that this pay-shoot occurs

again in the bottom winze, and the assay value of a specimen of the quartz taken from this part ran as high as 5 ozs. to the ton, it is not improbable that the New Devala-Moyar shareholders may yet reap a rich reward for their patient labours. It is satisfactory to learn that the funds in hand are sufficient to carry on the concern for two years. Nearly 5,000 tons of ore were crushed during the past year, the value of the bullion realised being 3,300%. It has been decided to discontinue the cultivation of coffee and cinchona, which has hitherto only resulted in a loss, but there is a probability of the company's land becoming of considerable value for tea-growing purposes in the near future. We shall, however, watch with interest the progress of mining developments on this property, for there seems every reason to anticipate that the mine, with good management, will come to the front at no distant date.

YURUARI—A PROTRACTED WRANGLE.

EXIT Mr. Hugh Watt. Enter—Aye, there's the rub—Who? At the meeting on Wednesday Mr. Watt, in the presence of some 400 shareholders, washed his hands of Yuruari affairs. He announced his intention to retire and to leave Yuruari in future to shift for itself, and thus to terminate his connection with a company of which, for good or evil, he has been the guiding spirit for several years. "For good," his friends will say; and in justice to that gentleman it must be stated that they still constitute the majority of the shareholders. "For evil," say his opponents, who have pursued him with great determination, and who mustered in stronger force than ever, in person and by proxy, on Wednesday last. Mr. Watt with a simple majority could, and did, carry the resolutions of the ordinary meeting, but Mr. Watt without a three-fourths majority could not carry the special meeting, which was called for the dual purpose of liquidation and re-construction. He stated so to the meeting. He told the shareholders he had a considerable majority with him in person and by proxy, but that the majority was insufficient under the Section to carry a re-construction scheme, which requires one of three-fourths. The position of the company, therefore, is rather difficult to define. The ordinary business has been carried—that is, the adoption of the report and accounts; but the business of the special meeting has not been carried, so that the company under ordinary circumstances would go on as before.

The circumstances, however, are not ordinary, for the company cannot, by reason of its liabilities, continue its business. This fact has been emphasised by the receipt of a telegram yesterday from the manager, Mr. Rochfort, who states that if the company's drafts are to be honoured, and if the property is to be protected from the attacks of creditors, 1,500% must be at once remitted. Where this money is to come from it would puzzle anyone who has not studied in the school of Yuruari finance to tell. Hitherto the loans of the chairman and the personal acceptances of the directors have tided over crises of this kind, but will Mr. Watt and his colleagues come to the front at the present time? We cannot say. At all events, the position as it terminated on Wednesday left them still directors of the company, and naturally responsible in their measure until their successors are appointed. Even if immediate action were taken to do this, it is difficult to see how the requirements of the manager are to be met. It will be said by the enemies of Mr. Watt that this is a card he has thrown down to influence the game, and that the telegram comes at an exceedingly opportune time, that is opportune to put the shareholders into a corner and force the position; but in the face of Mr. Watt's expressed wish to resign, and his desire to have nothing further to do with the company, an explanation of this kind is difficult to accept, and moreover it would be imputing to the present board a sort of pistol-at-your-head policy, of which we do not for a moment believe they would be guilty. We do not remember any similar case of a company being thrown into a state of greater chaos by a meeting than Yuruari was on Wednesday last. If the committee, or the gentlemen who signed the circular by which they obtained so large a proportion of proxies, are the real friends of the shareholders they will at once put themselves into communication with Mr. Watt and the directors, so that a scheme may be devised whereby the existence of the company may not be imperilled until further arrangements are made for its prolongation. In the names of the shareholders who have supported them, and for the sake of the large interests that are at stake, we call upon them to act, and to act promptly.

ETHERIDGE SHAREHOLDERS DECIDE TO GO ON.

THE Etheridge meeting on Wednesday took precisely the course we foreshadowed in our last issue. The shareholders listened with the greatest respect to the views of Mr. Lane, but in the face of the attitude taken by the two other members of the board, by Messrs. John Taylor and Sons, and by their expert, who has specially examined the property, they could scarcely have been expected to do otherwise than decide to prosecute the adventure still further. Of course it is understood that the capital available may not, and in all probability will not, be sufficient to bring matters to the point of dividends, but it is expected that it will be ample definitely to prove the value of the mine. We sincerely trust that the difference of opinion between Mr. Lane and his colleagues will not lead to the resignation of the former gentleman. If it did so we

should regret it for two reasons—first, because Mr. Lane is one of the most highly respected members of the Stock Exchange, and next, because he has had experience in the direction of other successful mines which cannot fail to be of service to his colleagues.

AFFAIRS IN SOUTH AFRICA.

(From our Own Correspondent).

Kimberley, Oct. 12, 1891.

THE SEPT. OUTPUT.

As you are already aware, the Randt Sept. output of over 65,000 ozs. has beaten the record, but I am bound to say that neither here nor at Johannesburg has it fluttered the market one little bit. It may indeed be taken for granted now that nothing within the bounds of human reason will ever bring about another boom, such as we had three years ago. Work is settling down, and even the most audacious speculators admit that the time has arrived for the true and proper and legitimate development that will yet astonish the world. Not only is every month increasing the number of stamps, but the directors of several companies are setting earnestly to work to discover which of the many processes for obtaining the gold from the tailings is the best calculated to make the largest return.

KLEIN LATABA.

A telegram from Pietersburg, in the Transvaal, informs us that Mr. M. Clark, the managing director of the Birthday Co., Klein Lataba, has arrived in that town, bringing with him two large ingots of gold, the result of eight days crushing of 175 tons, yielding 772 ozs. No wonder Birthday shares are in demand, and that a rush has set in for this wonderful reef. The big output of the Randt naturally attracts continued attention to that quarter, but I venture to predict that before the beginning of next year the Zoutpansberg and Barberton Goldfields will tell tales that will put Johannesburg altogether in the shade.

A BEAUTIFUL STONE.

In our diamond market on Saturday morning a stone was handed about which created considerable attention; indeed some experts go so far as to say that it has eclipsed anything that has yet been seen in Kimberley. It was found one day last week in the Koffyfontein Mine; it weighs $13\frac{1}{2}$ carats; it is without a flaw; its shape absolutely perfect, and its colour a delicate tint of pink, mauve, or heliotrope, according to the fancy of the expert. A speculator offered 500*l.* for this lovely gem, but the offer was refused. Several parties were sweet upon Koffyfontein shares on Saturday.

THE GRAB-ALL POLICY.

In several of my recent letters I have informed you that prospecting parties have been scattering themselves all over a vast area of country both in Griqualand West and the Free State in the hope of coming across another diamond mine. The directors of the De Beers Co. have been pleased wholly to guise this fact for a long time past, but I am now in a position to state authoritatively that, having been convinced that it is a fact, they have, within the last two or three weeks, dispatched trustworthy people into the district between here and Boshof, in the Free State, giving them instructions to negotiate for the purchase of all farms in that district on which there is a reasonable belief that a diamondiferous deposit exists. So much secrecy has been observed in this movement, that it is only since these officials have visited some of these farms that it has leaked out. I suppose they have come to the conclusion that it is better to give 1,000*l.* or 1,500*l.* for an undeveloped farm than to be compelled to pay half a million for half a share in the Wesselton Mine, which they could have bought a year ago for a tenth of the money.

THE NORTH-EAST BULTFONTEIN MINE.

Quite a consternation has been created in the adjoining township of Beaconsfield owing to a cable order having been received from London during the past week to stop all hauling operations in this mine, one of the consequences of the cessation of this work being the immediate throwing out of employment of upwards of 500 natives, a severe blow to a township which has been in the throes of destitution and distress for the past 12 months. Washing operations, however, are still proceeding, but the stoppage of mining is found to have an extremely damaging effect on the shares of this company, which has always occupied rather a sensitive position in the market, both here and in London. There is absolutely no necessity for this stoppage, and I understand that the officials engaged in the works are both surprised and disgusted at the order which has been cabled from London. It is shrewdly suspected that this policy has been dictated with the view of bearing the shares in London, and it is unfortunate that it should have been indulged in at a time when a large amount of prejudice exists here against Mr. Griffin, the managing director. That gentleman gave evidence before the Upington Select Committee of a somewhat peculiar nature, especially in reference to the wages necessary for artisans to live upon. He seemed inclined to pooh-pooh the idea of distress, and to treat with scorn the claims of Kimberley workmen to a higher rate of pay than that obtainable in other colonial centres. Many people, therefore, think that Mr. Griffin is at least partially responsible for the stoppage, so ready is the public mind to be prejudiced against anyone who has made statements

hostile to local interests, but I have good authority for stating that Mr. Griffin was quite taken aback by the ukase, and that he is extremely eager for the resumption of work, more particularly as all the departments, in the open, underground, and on the floors, are in excellent order. The effect of this sudden order may be estimated when I inform you that the North-Eastern employs over 100 white men, and from 1,000 to 1,200 natives.

THE SOUTH AFRICAN EXHIBITION, KIMBERLEY, 1892.

Your readers may be interested to learn that preparations have been commenced here to hold an exhibition in Sept., 1892, and that the guarantee fund is rapidly amounting to 20,000*l.* I need hardly say that the chief feature in this proposed exhibition will be the mining industry of South Africa, and as these include diamonds, gold, silver, coal, and a vast number of other minerals, the exhibition is likely to attract the attention of all parts of the civilised world. Not only have the Johannesburg gold mining companies promised every assistance by sending down machinery for the extraction of gold, but the De Beers Co. have taken the matter up very warmly, and have undertaken to erect the building which is to be set apart for the exhibition of machinery. It will be seen that 11 months will have to pass over our heads before the exhibition will be opened, but judging from all that is going on all over the whole of South Africa, of the many enterprises that are now developing the country openly, and others that are kept exceedingly quiet, I venture to predict that by the time the exhibition is open so much will have been done that we may safely rely upon having many hundreds—nay, thousands—of visitors from all parts of Europe.

RECENT COMPANIES.

THE Abaris Mining Corporation has not, on the face of it, the look of an engaging prospectus, and a deeper exploration into the recesses of that document does not make it more inviting. As between the British investor who will pay, and the vendor who will receive 125,000*l.* for this property near the unknown centre of Zacatecas, we would bet the new hat we have just bought that the latter will be the more fortunate. The directors are not deficient in arithmetical profits, and the vendor is equal to the occasion with estimated ore reserves of 730,000*l.* It is surprising he did not erect the machinery with which to treat them instead of selling the property with all these reserves for 125,000*l.* He might as well have said what he has made out of the mine in the past, but possibly his immediate horizon is bounded by what he may make out of the English investor in the present. Mr. J. H. Clarke writes: "The management is very reticent as to past profits." Why so, if the profits were large?

Then there is the Spanish Antimony Co., which is not likely to be overburdened with responses to its appeal made this week. The British investor will stand a good deal, but he will not stand the Spanish Antimony Co. He will want to know why the only independent report is five years old, and he will be loth to receive as wholly disinterested a modern one by the vendors. Here again, though we are told the properties have been "worked for years," there is absolute dumbness on the crucial point of profits. If there has been work for years, there must have been profit or loss. If profit, why not strengthen the prospectus by stating it? If loss—we can understand why the prospectus is silent, as it would not help subscriptions. What is the purchase price? We have searched diligently for it in the prospectus without success. In the absence of information of this kind, space is wasted in criticising such a prospectus further.

A HOME MINE OF PROMISE.

HEXWORTHY TIN MINING CO., LIMITED.

HEXWORTHY TIN is a home mine of considerable promise, the second report of which has just been issued. The nominal capital is 25,000*l.* in 1*l.* shares, which are fully paid, and of which 8,000 were issued to the vendors, 10,335 were subscribed for and provided the working capital, so that 6,665 shares remain unissued. Owing to the situation of the mine (Dartmoor), the preliminary work has been rather heavier than is usually the case with a home mine, but it has been done, which, after all, is the main point. At present two promising lodes are being operated upon—Taylor's (called after the managers, Messrs. John Taylor and Sons) and Low's, which has received its baptismal appellation from the chairman, Mr. Malcolm Low. In Taylor's section, at a depth of 23 fms., the main part of the lode appears to have been recently discovered 18 ft. wide, and containing at the point of intersection payable tin throughout. A level has been commenced at a point deeper than the former workers could have touched the lode. At Low's shaft, at a similar depth, results have been even more encouraging. The adit level has been driven over 70 fms., and for the whole distance the lode has contained tin, and in some places has been very rich indeed. At times it has produced one-half tin—a statement which will much surprise those who are acquainted with the average quality of Cornish mines. The quality is of the purest. In the parcel sent to the market it realised the best prices. The directors speak of the position of this concern in moderate terms when they say "the prospects are most encouraging." Hexworthy Tin shares have not been much inquired for on the market, but they bid fair to be so.

MEXICAN EXPLORATIONS—THE CHAIRMAN RETIRES.

MANY of the shareholders of Mexican Explorations, Limited, will be surprised to learn that the chairman, Mr. Seward Brice, Q.C., has resigned. They ought, however, to be told that no company that has been formed ever had a more devoted worker than he. He has laboured with a perseverance worthy of a greater success than he was able to achieve. The tribute paid to him by Mr. Charles Pond was graceful, and in the best taste. Facts, however, are stubborn things, and must be faced. It has been for some time obvious, to those who have closely watched the inner working of the company, that an important section of the shareholders, whilst thoroughly convinced of the honesty and hardworking characteristics of what, for brevity, we may term the Seward Brice board, has been by no means equally persuaded that its zeal has been according to knowledge. Whilst acknowledging its abilities in certain directions shareholders have not been satisfied as to its capacity for conducting a business such as that the Mexican Explorations, Limited, was formed to do. The general feeling was expressed truly, if somewhat bluntly, by Mr. Browne when he said, "There is a difference between a knowledge of law and of commerce." The position of affairs as left at the Aug. meeting was this, that the directors pledged themselves to accept a director at the nomination of Messrs. Mocatta, Son and Browne, who through themselves and their clients are largely interested in the company. Mr. Browne was elected, and shortly afterwards stated his belief that the position of the company was not as represented at the Aug. meeting. This statement met with a direct contradiction from the board. In the result the firm we have named called the meeting of last Tuesday, and of this our readers will find a full report in our present impression. At this gathering there was at one time threatened the usual laundry operations on a somewhat formidable scale, but thanks to the well-timed, business-like and temperate speech of Mr. Charles Pond, such a spectacle was avoided. To Mr. Brice also the acknowledgments of the shareholders are due for the course he took upon this occasion, in retiring from a position which he himself candidly admitted he had not time, with his professional engagements, adequately to fill. In the result, a resolution was passed practically leaving the affairs of the company in the hands of Messrs. Mocatta, Son and Browne—a compliment which, of its kind, we never remember to have been paid to any firm in the City of London before. Mr. M. Mocatta speaking on behalf of his firm, truly said that the acceptance of the resolution involved the greatest responsibility, but we shall be greatly surprised if they are not found fully equal to it. We understand that arrangements are already being made by which the expenses of management will be greatly reduced, and the business of the company placed upon a sounder and more profitable basis.

FISTICUFFS AT IDAHO.

It is greatly to be regretted that when some gentlemen lose their money they also lose their temper, and when they lose their temper unpleasant consequences are apt to happen. They did so on Thursday at Idaho meeting. Dr. Watts has told us that "we should not let our angry passions rise," but certain Idaho shareholders appear to have forgotten the precepts taught them in the Sunday-school. At the close of the proceedings certain gentlemen who had shown themselves bellicose in speech, translated speech into action, and a free fight ensued, for the early termination of which they are indebted to a member of the Press. This is another illustration of the pen being mightier than the sword. Names were taken, threats of proceedings were indulged in, but happily for the persons concerned as well as for the company, none of these have come to legal fruition.

Fortunately, this disgraceful squabble occurred at the end of the meeting. Had it come earlier it might have interrupted the extremely temperate and business-like statement which Mr. Perks addressed to the shareholders. He was not able to talk of success, but he could certainly indicate circumstances which point in that direction during the coming year. It seems that a mining company can only get into a dividend condition as the early Christians got into Paradise—that is by coming out of great tribulation. Shareholders may reasonably be expected to pass through a far better year in 1892 than a hard fate has hitherto vouchsafed them; but, at all events they have the satisfaction of knowing that, without any further call upon their pockets, the company's operations can be continued for two years. This is a long period in mining, and much may happen for their benefit before its expiration.

ROMAN GRAVELS.

MR. THOMAS NEWBIDDING, the manager of Leadhills mines, has inspected and favourably reported upon Roman Gravels Mine. He says "the main shaft having been sunk to the depth it now is, you are in splendid form for the acquisition of East Romans, &c., &c., which may in twelve months hence be one of the most coveted properties of lead and blende in the United Kingdom." In a circular to the shareholders, Mr. Peter Watson, the chairman, states that "the production ere long will be 300 tons a month, or more," and if the shareholders knew as much of the property as he does they would probably be of the same opinion. Mr. Watson says:—"I only wish

each shareholder could realise the present actual position and prospects of these properties as I and the management do, for they would, I feel sure, be as anxious to increase their holding as a shareholder is holding over 300 shares, who recently visited the mine, and who is now desirous of increasing his holding to 1,000 shares."

THE MONEY MARKET.

CITY, FRIDAY EVENING.

UNDER foreign competition discount rates have fallen away, in spite of attempts by the market to support their quotations, which have consequently become quite nominal, for while brokers have been willing to take three months' bills at $3\frac{1}{2}$, foreign agents have been taking all the best of paper at 3 per cent. and under. Shorter dates, however, maturing within the year, have not been negotiable below $3\frac{3}{8}$ per cent., as the prospect still is that money must be dearer as the end of the year approaches. After being $2\frac{1}{2}$, 3 per cent., money is now easier at 2 to $2\frac{1}{2}$ per cent. The export of gold, with an advance in the exchanges since the rise in the rate to 4 per cent., has fallen off, but on balance the Bank has lost about 200,000*l.* for the River Plate. The Brazilian gold, however, to the amount of about a million, is expected, half at once and the balance early next week. The discount houses, in view of the greater scarcity of money through the borrowing of the Bank, have further raised their terms for deposits to $2\frac{1}{2}$ and $2\frac{3}{4}$ per cent. for call and notice. The Bank return, through an increased circulation of coin and notes, coupled with the export referred to above, shows a decrease of 647,000*l.* in the reserve, to 12,600,000*l.*, against 11,200,000*l.* last year, and the proportion is $1\frac{1}{2}$ worse, at $36\frac{3}{4}$ per cent. The liabilities under deposits being unchanged. The Government securities are the same but the private securities have augmented 568,000*l.*

As the Stock Exchange last week closed very dull, Monday was a holiday, and since then the markets have been depressed by Continental advices regarding the course of the settlement at Paris, which, after considerable difficulty, is believed now likely to pass over better than expected, and the banking failure at Berlin, where Russian stocks have been heavily sold, while Portuguese and Brazilian securities have fallen seriously through the news from Rio of the proclamation of martial law, the dissolution of Congress, and the re-establishment of the dictatorship. The Funds have been heavy, falling at one time $\frac{3}{4}$, but have regained $\frac{1}{2}$ of the loss. The Two-and-a-half per Cent. and India and Colonial Government stocks have also been flat. In the Foreign Market all "Internationals" were offered, and at their worst Portuguese fell to 32 and Brazil Four per Cent. to 58, but with some rally show a fall of 4 and 7 per cent. respectively, and others still show a reduction of $\frac{1}{4}$ to $\frac{1}{2}$, with 1 per cent. more in the case of Russian, Greek, Peruvian and Argentine Funds, the latter, although the gold premium has fallen to 288 per cent. Home rails for a time were supported, but at length gave way, and generally exhibit lower prices than last week; but Great Northern, Sheffield, South Western, Lancashire and Yorkshire, and Great Eastern have risen 1 to 2 per cent., and the Scotch lines are also better. The American market shows a fall throughout of $\frac{1}{2}$ to $\$1$, business at Wall Street being neglected owing to the elections, and Grand Trunk and Mexican Issues have followed suit, the latter as much as 1 to $2\frac{1}{2}$.

The discount market has shown a very unsettled feeling to-day, and the rates quoted displayed a pronounced divergence. Some houses were satisfied with 3 or $3\frac{1}{8}$ per cent. for three months' bills, while others required $3\frac{1}{4}$, $\frac{3}{8}$, but it is tolerably certain that the Continent secured most of the endorsed paper offering at about 3 or even $2\frac{3}{4}$. Call money remained about 2, and loans over the next settlement were nearer 3 per cent.

The Bank of England received 552,000*l.* from Lisbon and Brazil, practically all in sovereigns. Bar silver remained at $43\frac{1}{2}$, and Rupee Paper slightly recovered to $73\frac{1}{2}$, 74.

The Funds to-day have remained steady, but other markets have been depressed in the absence of business brought about by the collapse at Paris and Berlin. Consols closed at $94\frac{3}{4}$, $\frac{3}{8}$ for money, and 95, middle, for account. Foreign Securities have lost $\frac{1}{4}$ to $\frac{1}{2}$ in the International list, but Portuguese show no change, while Brazilian have fluctuated widely, the Four per cent. rising to $61\frac{1}{2}$ in the morning, and losing $1\frac{1}{2}$ in the afternoon, although the news is rather more reassuring, closing 59 $\frac{1}{2}$, 60, and the 1888 Bond $63\frac{1}{4}$, $\frac{1}{4}$. Argentine securities were heavy, but with little doing in them, the Gold Premium having risen to 293 per cent. Home Rails have been dull at a fall of $\frac{1}{4}$ to $\frac{1}{2}$, with nearly 1 per cent. in Brighton "A." Great Western, Midland and North Eastern, South Western, preferred and deferred, have been exceptionally, $\frac{1}{2}$ and 1 per cent. higher, and the Scotch stocks were steady. The American market opened weak, and was quiet towards mid-day, but more activity followed a firmer tone, which proved, however temporary, renewed selling producing a further decline at the close, when prices were mostly $\frac{1}{4}$ to $\frac{3}{8}$ lower, with as much as $\$1\frac{1}{2}$ in Union Pacific and Illinois. Trunks were also flatter in sympathy by $\frac{1}{4}$ to $\frac{1}{2}$, and Lombards, Nitrates and Argentine lines were lower, but Mexican recovered their weakness. Banks and Breweries were steady and Cables easier, but Electric shares firmer.

Annexed are the final quotations to-day:—Consols Account, $94\frac{3}{4}$, $95\frac{1}{8}$; Egyptian Preference, $86\frac{3}{4}$, $86\frac{3}{4}$; Egyptian Unified, $93\frac{1}{2}$, $93\frac{3}{4}$ *sd.*; French Four-and-a-half per Cents., 104, 105; Hungarian, $88\frac{3}{4}$, $88\frac{3}{4}$; Italian, $87\frac{3}{4}$, $87\frac{3}{4}$; Mexican, $83\frac{1}{4}$, $83\frac{3}{4}$; Peru Five per Cents., $8\frac{3}{4}$, $9\frac{1}{4}$; Peru Six per Cents., $25\frac{3}{4}$, $26\frac{1}{4}$; Russian 1880, 92, $92\frac{1}{4}$; Portuguese, $33\frac{1}{4}$, $38\frac{3}{4}$; Spanish, $66\frac{1}{2}$, $66\frac{1}{2}$; Turkish 1871, $90\frac{1}{4}$, $90\frac{3}{4}$; Turkish Defence, $86\frac{1}{4}$, $86\frac{3}{4}$; Caledonian, 119 $\frac{3}{4}$, 119 $\frac{3}{4}$; Great Eastern, $88\frac{1}{2}$, $88\frac{3}{4}$; Great Western, $157\frac{3}{4}$, $158\frac{3}{4}$; Brighton "A," $146\frac{3}{4}$, $146\frac{3}{4}$; North Western, $170\frac{3}{4}$, $171\frac{3}{4}$; Metropolitan, $86\frac{1}{4}$, $86\frac{3}{4}$; Metropolitan District, $30\frac{1}{4}$, $30\frac{3}{4}$; Midland, $161\frac{3}{4}$, 162 ; North British 44, $44\frac{1}{4}$; North Eastern, $156\frac{1}{4}$, $156\frac{3}{4}$; South Eastern "A," $83\frac{3}{4}$, 84 ; Mexican, $30\frac{3}{4}$, $31\frac{1}{4}$; Grand Trunk, $10\frac{3}{4}$, $10\frac{3}{4}$; Grand Trunk First Preference, $68\frac{1}{4}$, $68\frac{3}{4}$; Grand Trunk Second, $48\frac{1}{4}$, $48\frac{1}{4}$; Grand Trunk Third, $26\frac{3}{4}$, $26\frac{3}{4}$; Canadian Pacific, $90\frac{3}{4}$, 91 ; Denver, Pref. $47\frac{3}{4}$, $47\frac{3}{4}$; Erie, 30 , $30\frac{1}{4}$; Milwaukee $77\frac{3}{4}$, 78 ; Lake Shore, $126\frac{3}{4}$, $127\frac{1}{4}$; Louisville, $80\frac{3}{4}$, $80\frac{3}{4}$; Atlantic First, $37\frac{3}{4}$, $37\frac{3}{4}$; Ontario, $19\frac{1}{4}$, $19\frac{3}{4}$; Ohio, $21\frac{3}{4}$, $21\frac{3}{4}$;

REPORTS OF MEETING.

EAST BLUE HILLS MINE.

MINE LOOKING CONSIDERABLY BETTER—EXPENSES GREATLY REDUCED—TOTAL OUTPUT FROM THE COMMENCEMENT NEARLY £17,000.

A GENERAL MEETING of the adventurers in this company was held yesterday at the Offices, Gracechurch Buildings, Gracechurch Street, London, E.C. The accounts showed a balance of liabilities over assets of 957½, but this should be read in the light of Mr. Hodgkinson's speech.

Mr. G. J. Wagstaff

presided.

Mr. C. B. PARRY (secretary) read the notice convening the meeting.

AGENTS' REPORT.

Nov. 4.—The 30 end west on south section is set to drive by four men at 3½ per fm., and 10s. in the £ for tin they raise. The lode here is looking better, and, when ventilated, we have several fathoms of stoping ground which will pay for working. In the 30-fm. level west on north section we are driving a cross-cut by six men to communicate with the south level to improve the air. This we expect to do in about two weeks from now. We shall then resume the driving of the end on the lode, which was turning out good stones of tin when last worked. The 35 end east by four men at 3½ 5s. per fm., and 13s. 4d. in the £. Here we expect in a few fathoms' driving to meet with a better lode, judging from the ground taken away in the levels above. A rise in back of the 20 west of shaft by four men at 4½ per fm., and 12s. 6d. in the £. This is to communicate with the 10 end west. We are opening out fair stoping ground here. The 10 end west by four men, at 3½ per fm., and 12s. 6d. in the £. This end is getting near a good run of tin ground seen in the levels above and in the levels below. Here we look for a good payable lode. We are also putting a cross-cut south in the 30-fm. level east of the shaft by two men, expecting to meet with good tin ground by the past workings above this place. We set five tribute pitches, at 13s. 4d. in the £ to 21 men. Since June last a great part of our expenses have been incurred in renovating the machinery underground and at surface. In the underground department we have put in several fathoms of new skiproad and repaired the old road throughout, cleared and secured several levels, &c., driven in ends, sunk and risen 50 fms.; several fathoms of this has been for ventilation; these repairs have cost us about 100%. At surface we put in a new air pump, bucket and rod, new piston rod and cylinder cover, with sundry small fixing to our pumping engine, which cost over 50%. At the stamps we put in nearly new boiler with fittings complete, and repaired several parts of the engine; this cost over 80%. On the floors we put in new buddles and repaired the old, built one new water-wheel, with sundry repairs to the other two, and other work on the floors equal to about 40%. We are pleased to say the three water stamps are now at work; we shall save nearly 40% per month in coal by stamping by water power instead of steam. We have about 300 tons of tin stuff on the floors, equal to about 3 tons 15 cwt. of black tin, or about 200% worth. The tributers have been paid their part of it. We anticipate greater amount of returns and less cost in the coming quarter.—J. WHITE, F. WILLOUGHBY.

BETTER POSITION.

The CHAIRMAN: Gentlemen, I am sorry to say the report is not better than the one I hold in my hand, but still there are grounds which justify us in looking at it from a brighter point of view. I have personally visited the mine, and believe that our agent on the spot is doing all he can to promote its success. During the regime of the last agency the mine was allowed to fall into a deplorable state, but it is now being brought into one in which, if the concern is really valuable (as we believe it to be) it will prove itself to be so. Our labour cost is enormous this time, but it has been necessitated by the condition in which the mine was left. We have put up a great deal of fresh machinery, a new water-wheel, and repaired the machinery in all directions. We have sufficient water power now, and hope to do without the engine, with its enormous expenditure of coal. This alone will be a saving of quite 40% a month. We have laid out money on the dressing-floors, and as to the new boiler and pumping engine there will be a further saving, as well as economies in other directions. The tin sold has realised 436% for 7 tons 19 cwt., but we have at least 200% worth of tin, which should be added to this, for it has been paid for, and which would reduce the balance from 957½ to 757½. Our agent is very sanguine about the mine—so much so that he has bought 100 shares himself. The mine is in a very different state, as far as the outside of it goes, from what it was before, and the underground workings are going on in a very prosperous manner, and are looking better than they have hitherto done.

Mr. ROBERTS: Did you see any stones brought out of the mine when you were there?

The CHAIRMAN: Certainly, but the quality varies very much. Some of them will run very high, but, so far as I could judge from the heap of 300 tons already broken, which we had no means of stamping previously, though we have now all our appliances at work, and, judging from the values of the different assays, it is all over ¼ cwt. stuff, and some of it is very rich. I should add we have been to enormous expense these last four months, which will not occur again.

Mr. ROBERTS: I gather that the saving in coal will most materially reduce expenses in future.

The CHAIRMAN: Yes; and with regard to the new boiler, the consumption of coal for this month will not exceed 16 tons as compared with considerably more than double.

IMPORTANT POINTS.

Mr. HODGKINSON: It would be as well to state that the arrears of calls are not as they would seem to be by this account. The accounts had to be made up before to-day, and about 300% has come in, reducing the arrears and consequently the overdraft to the bankers. This will be 945% instead of 1,243%, and the arrears of call 884% are nearly an offset to the overdraft, so that this printed statement looks worse than it really is. The arrears in fact are within 60% of the overdraft. It might be as well to state that since East Blue Hills was commenced we began to sell tin in 1883, and the mine has since produced 301 tons 16 cwt. 2 qrs. 27 lbs., which has realised 16,517½ 16s. 1d. Now that is a great deal of tin to produce from a small mine like this, but our late manager got things into a very bad state, and we have had hard work to put them right again. We have now a first class captain and a good underground agent. We have also an extension of territory 50 fms. in the direction of where the richest of our lodes run; altogether we think the next three or four months will show an improved state of things, and I believe I am fully justified in saying so. (Hear, hear.)

The CHAIRMAN: You certainly are, both as regards expenditure and returns. We have had a great deal of negotiation about the land, but it is now finally settled. I move the adoption of the report.

Mr. ROBERTS seconded the motion, which was carried unanimously.

A call of 1s. per share was made, payable on Dec. 7, and a resolution was passed confirming the agreement made by this company with Blue Hills Co. So also was another resolution, which thanked the chairman for presiding and for visiting the mine.

CARN BREA.

DIVIDEND OF 30s. PER SHARE—MR. STRAUSS ON THE PRICE OF TIN.

A SIXTEEN-WEEKLY MEETING of the shareholders in Carn Brea was held on the mine on Tuesday.

Mr. Frank Harvey

presided.

The accounts showed that the labour costs had amounted to 11,721½; merchants' bills, 4,758½; doctors' pence, 148½; dues, 921½; rents, 112½; vicewarden's assessment, 24½; dialling, 9½; banking, 2½; total debits, 17,699½. On the other side 531 tons 15 cwt. 1 qr. 13 lb. of black tin had been sold, realising 26,535½; slime tin sold, 18 tons 3 cwt. 2 qrs. 6 lbs. for 524½; tin halvans, carriage, and rates, 20%; Employers' Liability Co., Limited, 51½; discount off merchants' bills, 108½; total credits, 27,241½; leaving a profit on the 16 weeks' working of 9,541½.

Capt. WHITE remarked, in the course of observations supplementary to his report, that they had had a somewhat exciting quarter. As it was well known during the past 16 weeks in sinking their No. 1 winze below the 298 west of Highburrow West shaft they had a lode for 3½ fms., worth at least 1 ton to the fm. Suddenly the lode disappeared, but where was it gone? They believed to the south, and in order for it to correspond with the drive west from Highburrow East in the 310, it must be in that direction. After sinking some feet in disordered ground they found flat beds dipping south within 6 ins., and in his opinion these flat beds had acted as a slide upon which this lode had been carried south. The lode they now had in the 310 west had every appearance of being the lode that was lost, and he was firmly convinced that in driving west of this lode they would see a gradual improvement in the end. (Applause.)

The CHAIRMAN proposed the adoption of the reports and accounts, and said the excitement referred to by Capt. White had probably more to do with the share market than with the mine itself.

Mr. HEARD seconded, and Capt. BISHOP, in supporting, said he believed they had equally as good a lode in the 310 as they had in the 228. Those parties who had sold their shares had looked through the wrong end of the telescope. (Laughter and applause.)

The motion was carried.

Mr. J. JOSE proposed that a dividend of 30s. per share be declared.

TIN PROSPECTS.

Mr. STRAUSS, in seconding, said it was his conviction that within a very short time the steady price which had prevailed up to now would not continue, but, on the contrary, that they would have vast fluctuations, and it was, of course, for them to study which way those fluctuations would tend—whether upwards or the reverse—and he was sure that they could form as good an opinion on that point as he could himself. The stocks were now as low as ever they were relatively to the consumption. They had now a ridiculously low stock of foreign tin everywhere. They had a stock of no more than 500 tons in Holland; they had the most moderate stock of 2,000 tons in London; they had a very small stock in one or two other places, whilst in the remainder of the Continent they had almost no stock whatever. Therefore the question of whether there were weak holders need not be calculated. There could not be any weak holders, because there was no stock to be held. (Applause.)

The proposition was agreed to, and on the motion of the CHAIRMAN, a vote of thanks was accorded Capt. White and his staff for the manner in which they have worked the mine during the past 16 weeks.

NEW VIOLA.—Report from the manager of the mine, under date of Oct. 23:—The drift from shaft west passed through some good looking limestone. I will do some drifting on this stratum as soon as the winze is finished. The drift from shaft L is being driven on a 2 ft. streak of yellow talc.

VISHNU (Oct. 23).—Yesterday we finished milling all ore taken out by the leasers during the past two and a half months. There was employed on the lease five miners. Ore extracted during the lease, 70 tons, which yielded \$3,500. They pay one quarter royalty to the company, clear of milling expenses. The Elmore Co. have everything now, and we have 12 miners employed on the Elmore Vishnu lease. We are putting in the mill about 15 tons of ore per day. It is our intention to start 30 stamps on Monday, and will add more as the output of ore increases, and we get more ground opened up. The chances for both companies, in my opinion, are looking up—work is being pushed all round.—G. A. MCCORNICK.

REPORTS OF MEETINGS.

MEXICAN EXPLORATIONS, LIMITED.

A CROWDED MEETING OF SHAREHOLDERS HEARS MR. SEWARD BRICE, Q.C., THE LATE CHAIRMAN, RESIGN, AND INSTRUCTS MESSRS. MOCATTA, SON AND BROWNE TO MAKE THE BEST ARRANGEMENTS THEY CAN FOR THE BENEFIT OF THE COMPANY—IMPORTANT STATEMENTS BY MR. CHARLES POND AND MR. BROWNE—MR. BRICE THANKED FOR HIS SERVICES.

IN pursuance of a circular issued and signed by the firm of Messrs. M. Mocatta, Son and Browne, of 24, Copthall Avenue, London, and dated Oct. 24, a special meeting of the shareholders was called for Tuesday last at the City Terminus Hotel.

The circular stated that: "At an extraordinary general meeting of the shareholders in the Mexican Explorations, Limited, held on Aug. 10 last, the board agreed, as an alternative to the appointment of a committee of enquiry, that our firm should nominate a director. It was also agreed that if Senor G. Raigosa, who, it was then stated, had already been asked to join the board, declined to do so, our second nominee should be elected in his stead. In accordance with the expressed wishes of many influential shareholders, we named Mr. Martin Innes Browne, a member of our firm, for appointment as a director, and ultimately, after considerable delay caused by the obstructive attitude assumed by the board, he was elected. In answer to enquiries we were informed that Senor G. Raigosa had consented to act. Mr. M. I. Browne, since his appointment as director, has investigated the affairs of the company, with the result that he finds the position of affairs to be at utter variance with the statements made by the chairman at the meeting above referred to. Some of the facts discovered by Mr. M. I. Browne were embodied in a letter which he placed in our hands, and which we transmitted to the board. A communication has since reached us from the secretary to the effect that he has been instructed to deny Mr. M. I. Browne's allegations. This communication is couched in terms which we can only regard as unsatisfactory and offensive to the shareholders. Acting under a sense of the serious responsibility which attaches to us in this matter, we invite the shareholders, and strongly urge them, to attend a public meeting to be held at the Cannon Street Hotel, on Tuesday, Nov. 3 next, at 2 p.m., to hear a statement of fact which Mr. M. I. Browne will then make, and any denial or explanation which may be offered by the board, whose attendance is also invited, and further, that you may decide as to whether any, and if so, what steps should be taken in relation thereto."

Mr. R. CALDWELL MOORE: I propose that Mr. M. Mocatta, one of the gentlemen who signed the circular, be requested to preside.

Carried amidst cheers.

The CHAIRMAN: Before I offer any observations, Mr. Brice will kindly say a few words to you.

CHAIRMAN RESIGNS.

Mr. SEWARD BRICE, Q.C. (chairman of the company): Gentlemen, the circular that has brought this meeting together has, of course, come before me and the board, and, as far as I am personally concerned, it has given me a great deal of pain to find such a circular has been issued. It is only at extreme inconvenience I have been able to be here. I ought to be elsewhere, but have felt that I should strain every nerve to be present even at this informal meeting of the shareholders of the Mexican Explorations Co. The amount of work the company has entailed upon its directors, and particularly upon myself, has been enormous—far and away beyond what one anticipated. The anxiety has been extreme, and I have been desirous for a long time past to resign my position as a director, if I could do so with satisfaction to the company, and in such a way that its business and the interests of the shareholders might not suffer. The difficulties in connection with the company have of course added enormously to my work, and I have often felt that these, coupled with my own professional pursuits, have been too much for me; but I would much rather not go into the matter fully. I have had the advantage of a few words only with Mr. Mocatta here, but wish I could have spoken to him longer. I am satisfied of this, that it is essential for the company we should all pull together. It is best for everyone interested in it—and I certainly am so, with many of my friends, to a considerable extent. There should be no disunion on the board, and no disunion between the board and the shareholders, or between the board and any section of the shareholders. Personally, I shall be very glad indeed if arrangements can be made whereby another chairman, or another director, can be appointed in my place.

Mr. WEIR: Why did not you say so before?

Mr. BRICE: I may say that I have said so to those who are chiefly interested in carrying on the business of the company. It has been known, for example, to the solicitor of the company and to the directors for six months past, that if I felt the business would go on in such a way as would be satisfactory to the shareholders I should be glad if others would take the responsibility from my shoulders. I have felt for some time that I could not long continue in my present position, and that if unanimity could be restored to the company, which is essential to its welfare, I, for one, would not stand in its way for a moment. I therefore intend to tender to my board my resignation as chairman, and as a director of this company. At the same time I intend also to render, if possible, such assistance as I can to the company in other ways. There are matters of business in connection with it in which that assistance will be of service. There are other ways well known to the solicitor in which my services and knowledge of the company can be utilised thoroughly and fully. In so far as they can be utilised they are at the services of the shareholders. With regard to this circular, I think it would be better in the interests of all concerned that I should not deal with it. Those

who wrote it did so in such a way that its language seems to bear roughly (unnecessarily so) in every way upon me. I distinctly object to what is stated in the circular, but, on the other hand, I very much doubt whether, having regard to the position as it faces us to-day, advantage would be gained by going into the details—though, if necessary, I am prepared to do so. There is only one matter with regard to which I was told indirectly I might deal if necessary, though I doubt whether it is advisable even to go into that. Speaking for myself, I shall be glad to be out of my present position, though I do not think a person should shirk office because of the heavy work it entails. At the same time, if other arrangements can be made I shall be glad to resign my position as chairman. I repeat that as far as I can be of use to the company, and my knowledge can be utilised, it will be a pleasure to me to do all I can, whatever be the new conditions under which the company may find itself.

RESOLUTION.

Mr. BOXALL: Mr. Chairman and Gentlemen, I am here to-day representing shareholders, clients and friends, holding over 100,000 shares, or two-fifths of the capital of the company. A resolution has been placed in my hands within the last few moments, and as it entirely accords with my views I beg to propose it:—"That Messrs. Mocatta, Son and Browne be empowered to make any arrangements they think best in the interests of the company so as to carry out the objects of the requisition." In proposing that I think we are very much obliged to Mr. Brice for the way in which he has met this matter in all our interests. We are here not for the amusement of being here, but to protect our interests, and the way in which Mr. Brice has acted is highly calculated to do so, because it puts an end to questions, disputes, and contests which can only injure shareholders. In proposing this resolution, I think it ought to be coupled with a vote of thanks to Mr. Brice, for the manner in which he has dealt with this company. Mr. Brice is a man of great talent.

A SHAREHOLDER: Then why get rid of him? What is the cause of complaint? We are here to judge.

Mr. BOXALL: We are here for the benefit of the company, and to make such arrangements as will be to the advantage of all concerned, and not to pass judgment.

A SHAREHOLDER: Personally, I am quite content with Mr. Brice, and understood we were here to get information from Mr. Browne.

Mr. BOXALL: I propose the resolution, which is very simple in its terms.

A SHAREHOLDER: So are the allegations of the circular, but for all that we have a right to a full explanation. Let us hear the allegation first. I want to know why Mr. Brice should be deposed?

Mr. BOXALL: He is not deposed—you have heard his remarks—he simply resigns.

Mr. BRICE: Perhaps you will allow me to continue the few remarks I was making. I was going to add something further, that I think, in the interests of the company, the course I have taken is the best. Gentlemen must really understand that I could not give to this company the amount of attention I have bestowed upon it for the last two years. When I was asked to take the position of chairman, I was told that one meeting a fortnight would be all that would be required. But we have had three meetings per fortnight, and probably four as a rule. We have had also informal meetings four and five days in the week, and, personally, with one or two of the other directors, I have been at the offices at least four or five times a week. Last year I had no holiday, and this year a very short one, and then letters and telegrams followed me wherever I went. I had hoped to have left the service, when I could say positively, and without any qualification, it was in the position I had originally anticipated. I will not venture to say that now, although I hope that with the skilful management which it will get from those who follow me (if persons of the kind I anticipate are elected) that a career of prosperity will be before it. I have made up my mind—I have only made it up at the last moment—though I have turned it over carefully before, that the course I have taken is the best for the company, and I have come to the determination that, having regard to the recognised position of Messrs. Mocatta, Son and Browne, it is best for me to leave the matter in their hands. I differ from Mr. Browne on many points, but do not differ from you in opinion as to his ability and activity.

A SHAREHOLDER: I wish to call the speaker to order. Have we not all heard this before?

The CHAIRMAN: I understood Mr. Brice had risen for the purpose of seconding the resolution as proposed by Mr. Boxall.

A VOICE: Let us have the charges first.

The CHAIRMAN: All that can be gone into afterwards. I understand Mr. Brice is going to second the resolution.

Mr. BRICE: Without going into further details I will second the resolution proposed by Mr. Boxall.

The CHAIRMAN: I think it would be well that some gentleman, who takes the view that the interests of all require a quiet settlement of this question, should explain the position, but I think we should keep strictly to the resolution. If we depart from it, and introduce subjects of an irritating kind, which might create much difference of opinion, I am afraid the desire to carry out this plan of proceeding will be frustrated, and that a great mistake will be made in regard to the company. I am now speaking as your chairman and not in my capacity as a member of the firm to whom you are asked to entrust this work of re-organisation, because the responsibilities that will apply to that firm will be enormous. It will be requisite for them to be very careful indeed what course they pursue, so that the shareholders may not come down upon them instead of the existing board. I, for one, am willing to accept that responsibility, and do my best, as I have already done in bringing the proceedings of the company to the present point. We will endeavour to pursue the matter in such a manner as that no one will have an opportunity of finding fault with the course we shall recommend. But if you do not pursue that course, and if matters are entered into of an irritating character, I am sure our desire to carry out this meeting quietly will be frustrated, and the result will be very disappointing and damaging to you. I tell you this from my knowledge of everything connected with the proceedings of this company up to the present moment, and if you place the slightest confidence in the efforts we have made I strongly recommend you to accept the proposal; and in casting the responsibility upon my firm, which I, for one, hesitate to

accept, you may depend upon it that our services will be rendered to you in all honesty, frankness and straightforwardness, and with the utmost desire to make this company the success we believe it ought to be.

IMPORTANT SPEECH.

Mr. CHARLES POND: Undoubtedly you wish to hear some statement made as to the reasons which have led up to the present point. Great attention has been given to this company since it has been formed, and the large shareholders have looked closely into its affairs. I, personally, am a very large shareholder and represent other large holders, though Mr. Boxall is the representative of the largest body of them individually. There were matters in connection with the business of the company which we thought might be better conducted than they were. Of course, it was a question of opinion, but when Mr. Browne joined the board he came to the conclusion that the management should be altered. Naturally, a circular of this kind would not go out unless there was something in it. Some explanation is wanted. You may as well have it, and it is better that you should. There were businesses taken up by the company in British Honduras and Yucatan—businesses in wood. Now, although I have opposed Mr. Brice on this question, I will say he has given an extraordinary amount of time and energy to this company. He has worked very hard for it, but then it has been in our opinion from the wrong light or standpoint. He has placed reliance upon the reports and accounts received from his agent there. He stood by him as he knew him. Well, we have proved to Mr. Brice's satisfaction that he should not have done so, and he sees it now. However, I think he has done all he can in resigning his position, for that is the crux of the whole question, and that is the point we have been going for. We have opposed his management upon this one question notably.

Mr. BRICE: The board's management you mean.

Mr. POND: I apologise for individualising the chairman, but we have so closely identified him with the management—perhaps wrongly—that I could scarcely help doing so. Now, the shareholders want to know the be-all and end-all of the whole thing. Messrs. Mocatta, Son and Browne have gone into this question very carefully, and as the chairman has resigned, the question is—what is the position now? We have here a company with very good prospects, but it all depends upon the management whether those prospects are realised or not. We, at the present moment, are approaching the culminating point of some very good business, but even at the risk of spoiling or retarding it, we have felt that we must go on, for the Messrs. Mocatta, having put their names to this paper, were bound to proceed. The main point of variance between us and the board is focussed in the management of the wood business, in respect to which Mr. Bryce has undoubtedly been deceived, and with him the board also. Men cannot help being deceived, but having been deceived and placed confidence in a direction to which it should not have been extended, Mr. Brice has acted as an honourable man would, and has resigned his position. I quite agree that very few men would have done it under the circumstances, because all sorts of reasons may be ascribed for it. As the largest shareholder in this company, and representing considerably over 100,000 shares, having many friends closely interested in this work—I say, I have given my word that I will stick to this business, and see it carried through, even as I have done in the case of the Mexican Association. I will work as hard as I can for this company as I have for that, and I should be sorry if I lost the valuable assistance which Mr. Brice has so kindly offered, and which he is so well able to give. I do intend to concern myself in it as much as I possibly can. We came here expecting to see mud thrown in various directions, but instead of that an amicable arrangement, honourable to all concerned, has been come to. Mr. Brice, having shown too much confidence in Mr. Hunter, has resigned. Another director will have to be appointed, and the proposal is that Messrs. Mocatta, Son and Browne, who represented you on a former occasion, and, I believe, elected a director who met with your approval, will do so again. I can only say that, powerful as I felt myself to be before, owing to the number of shareholders who have supported me, I felt I was absolutely of no use until I got that well-known firm to lend their great influence to this cause in which they have worked so zealously and to such good purpose. Although opposed to the management of the company, I wish, personally, to testify to the extraordinary amount of time, attention and work Mr. Brice has given to it. He has been at the office morning, noon, and night. He has worked as hard as any man could to make it a success, but, as I said before, from the wrong light, or standpoint. You cannot wish me to say more than that. If people interest themselves in a company like this, and are willing to give their time and attention to it, and will take the trouble to circularise the shareholders so that the management may be improved, they should be supported, and to pass the foregoing resolution is all that we are met for to-day. We are giving you the essence of a lot of talk and thereby saving your time. We might have had a long and stormy discussion, but at the conclusion you would have been satisfied that the step we now wish you to take is the one you should adopt in your own interests. You now have exactly the information you want. (Loud applause.)

DISCUSSION.

A SHAREHOLDER: Will the other directors resign?

Mr. POND: Messrs. Mocatta, Son and Browne will make any arrangements they think best in the interests of the company, and the names will be communicated to the shareholders in the ordinary way.

A SHAREHOLDER: There are other directors besides Mr. Brice.

Mr. POND: Yes, of course.

The SHAREHOLDER: I am glad to hear that. They are so silent or so ignored that I did not know whether there were any.

Mr. TREHERNE: Does Mr. Browne endorse the views expressed and the allegations in paragraph 3 of the circular, and will he tell us whether he has anything more to say. If he does I think you will carry the meeting, but otherwise I do not think you will.

Mr. BROWNE: I came with the full intention of making a statement to the meeting, but I am speaking in the same way, and with the same reserve as Mr. Brice, who has shown you that he has the interests of the company at heart. You will have your balance-sheet made up to Dec. 31, and the ordinary meeting will be held within a month later. Now, when that balance-sheet is issued, and when the report of the directors is made up, you will have a complete and concise statement of the actual position of your company to that date. I suggest that it would be very much more desirable for you to see the statements I have to make in black and white than that you should have them by word of mouth now.

A SHAREHOLDER: What are we to do in the meanwhile? What is our present position? It appears to me that we are a ship without a helm. Are we solvent?

Mr. BROWNE: I can trace the broad position. There was a misunderstanding with regard to the wood business. The board were utterly deceived by their agent out there.

A SHAREHOLDER: Is that the only point of difference?

Mr. BROWNE: That was the main point. The other point is a very simple one—the question of the valuation of the assets of the company, which was given on Aug. 10, at cost price, at which I do not think they should have been given. The assets taken out roughly are about 64,000%, but many of them (and the board are perfectly right in their statement) are assets that are increasing in value after the depreciation they suffered about the time of the Baring crisis. These will undoubtedly improve, as well as those which are held in conjunction with the Mexican Association in the joint business being done. As the business of the Mexican Association increases, naturally the securities the one holds of the other will increase in value. You must not forget that the Mexican Association has a large interest in the deferred shares of this company which it brought out. Naturally any business the Mexican Exploration Co. does successfully is to the interest of the association, and *vice versa*. The Mexican Association holds deferred shares of the Explorations Co., besides deferred shares of the French Co., and the success and prosperity of the one will be the success and prosperity of the other. I think the feeling we have is that in the future business of this company, considering the large joint business that is done with the other company, arrangements should be made of various kinds with a view to cutting down expenses, and benefitting all the Mexican companies together, by a stronger bond of commercial and friendly union. Our object will be to produce at the end a clear and concise statement, not only of the present position of the company, but as to its future management, which will be of immense advantage to the shareholders, as well as to those of other kindred associations in which many of you are pecuniarily interested.

Mr. DOUGLAS: I know a good deal of the affairs of this company, and want to say that I am satisfied with the resolution that has been proposed, and with the explanation Mr. Browne has now made. Having known you, Mr. Chairman, for a long time (longer than I care to put into years), and having great confidence in your ability, I feel the most perfect satisfaction in leaving the matter in your hands. Mr. Browne and I have discussed it a good deal before, and I believe it is quite possible to put these three companies under one roof and under one management. They are really one concern, and do not require to be split into three small separate establishments. They would be stronger and far more fit for business if they were united. I think we are very much indebted to Mr. Brice for the way he has acted on this occasion.

A SHAREHOLDER: This meeting is out of order and so is the resolution. It is called for the purpose of hearing a statement from Mr. Browne. I should like to know what is the capital of the company, what are the assets and how much money has been lost?

LATE CHAIRMAN'S SERVICES.

Mr. BROWNE: It is a curious thing that a gentleman who is an investor does not know the capital of the company into which he has put his money. The nominal capital is 250,000%, of which 67,000% has been paid up. Part of that has been paid up in full—6,000 or 7,000 shares, but the shares were of 1% each, on which 5s. a share has been called, and your assets roughly are 60,000% to 66,000%, but are improving. In that amount I have not taken into account your interest in a valuable concern called the Western Development Syndicate. That is a property of great promise, which this company holds in shares, and in the future development of which I believe you will see a large return made. That asset is put down as par—no credit being taken even for the premium that attaches to it. Taking the premium with the discount on all your assets, I think at the end of the year you will find at the very lowest computation the figures will show 60,000%, and you have a revenue of 3,000% a year from your Palmarejo debentures, which, of course, being revenue, is not regarded as an asset. How the result may turn out I cannot say, but I believe the work now going on in the Western Development Syndicate may give you a better result than the present figures show. At half-a-crown a share your money is sure. I am now speaking only as to the figures to the end of Aug., and not dealing with anything since. There is nothing to fear in the position of this company, with proper management, or with regard to the development property, with ordinary business capacity, and dealt with on commercial lines. I confirm what Mr. Pond has said with regard to the hard work of the chairman on behalf of the company. He has given an immense amount of labour, but there is a difference between law and commerce. The motion was carried unanimously.

The CHAIRMAN: I have placed this resolution before you for confirmation in the capacity of your chairman to-day. I have now to say a word to you as the senior partner of Mocatta, Son and Browne, in whom you have placed such confidence. I do trust that not only my years, but the time I have been engaged in business in the City, will be a sufficient assurance to you that my utmost efforts will be exercised to do what I, in my best judgment, believe to be for the truest interests of the company. I shall not hesitate with them to carry out those opinions, and if we succeed we shall communicate the knowledge of that success to you, and if we do not, we shall not fail to let you know the result.

Mr. R. C. MOORE: I beg to propose a vote of thanks to Mr. Mocatta for his able management in the chair.

Mr. TREHERNE: I second the motion.

Carried unanimously.

The CHAIRMAN: I beg to thank you very much indeed.

MYSORE REEFS CO., LIMITED.

CHARACTERISTICS OF THE MINE DESCRIBED BY MR. JOHN TAYLOR—CIRCUMSTANCES UNDER WHICH IMMEDIATE RETURNS CAN BE MADE—RE-CONSTRUCTION A COMPLETE SUCCESS—SHARES OVER-APPLIED FOR.

THE statutory meeting of this re-constructed company took place on Thursday, at the City Terminus Hotel.

Mr. John Harvey, J.P., D.L.

(chairman of the company), presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

PROGRESS AT THE MINE.

The CHAIRMAN: Gentlemen, I suppose you are all aware that in the ordinary course this meeting would not have been called had the company not been re-constructed a few months ago, but, in accordance with the Act of Parliament, a statutory meeting must be held within four months of the incorporation of the company. As a matter of fact, this meeting is purely a formal one, and unless any shareholder has questions to ask I have very little to say. Mr. Taylor will give you a short *résumé* of the latest reports in the mine. They have been sent regularly each fortnight to the papers, and no doubt you have seen them. For some time our work has been a great deal impeded by the presence of cholera in the field, and we have suffered to some extent, but I am glad to say it now seems to have disappeared and the work is progressing satisfactorily. I ought to say, as regards the re-construction, it was a complete success. The shares which were at the disposal of the board through the liquidators were over-applied for. I dare say many of you are disappointed at not getting your

ALLOTMENT LETTERS

sooner, but owing to the season of the year it was difficult to get supplies from all the shareholders, and we did not wish to incur unnecessary expense in the filing of the necessary agreements providing for the 15s. paid up. As I said, the shares have all been applied for and allotted, with the exception of 200 or 300, which are held in hand for some people who are abroad, and to whom applications cannot now be sent. Certificates in exchange for bankers' receipts and allotment letters in the old company were ready last Friday, and can be had on application. With these few remarks I have now to ask Mr. Taylor to be good enough to give you a short statement.

MR. TAYLOR DESCRIBES THE CHARACTERISTICS OF, AND THE WORK AT, THE MINE.

Mr. JOHN TAYLOR: Gentlemen, it is very little over four months since the last general meeting, at which I went very fully into all the mining details, and, therefore, you will not expect me to have very much now to tell you. The rock in our mine is hard, and we have been interfered with by other causes, so that some of the work has not been carried on as rapidly as we could wish, but, at the same time, a great deal of very satisfactory work has been done. Since the meeting of June 25 we have been actively pursuing the policy placed before you clearly at that time—that is, carrying out the recommendations made by Mr. John Gilbert, the manager of the Mysore Mine, who was called in to inspect your property, and to bring to bear upon it a fresh eye and an unbiased judgment. The result of that inspection was placed before you in his report at the time. Since that date the 400-fm. level, which is one of our principal levels, and the bottom but one, has been driven rather over 150 ft., and for a good part of the distance the lode has assayed from 2 to 8 dwts. In the level below, the bottom of all (520 ft.), there are two levels being driven, because the vein is very wide. That is ancient history to you, because you have known from the commencement of the company's operations that

THE VEIN IN THE MYSORE REEFS MINE IS VERY WIDE.

We have had it as wide as 40 ft. and upwards. Now, two levels are being driven at the 520, and in each case have been extended about 70 ft. Here, again, we have quartz assaying from 2 dwts. or less, up to 16 dwts., and in a cross-cut which has been driven recently (you see it named in some of the later reports), to test the whole width of the vein at the 520-ft. level, the report of Sept. 23 tells you that the quartz assayed 13 dwts. By the last report we have to hand dated Oct. 7, the assay was 11 dwts. 17 grs., or nearly 12 dwts., showing that we have throughout gold in the quartz wherever we have developed this large vein, and in many places we have it in sufficient quantities to give us a nice profit. With a view to attacking the quartz, the most important work we have at present in hand is the further sinking of the main shaft, or Harvey's, below the bottom level (the 520), and it is satisfactory to know from the last letter received (the reports come fortnightly)—the intermediate letter dated Oct. 14—that preparations are almost complete, and I think we may assume at the present time that re-sinking of the shaft has actually commenced. You are doubtless aware, and I need not enlarge upon it, what capital results have been obtained, and are being attained by the deeper workings of other mines in this field, and I think, without being extravagant in our expectations,

WE HAVE MOST REASONABLE AND PROPER GROUNDS FOR HOPING that before long we shall open up richer quartz in the bottom of our mine. You will recollect, especially in regard to this point, that Capt. Gilbert in his report drew attention to the fact that the country rock in the bottom of Harvey's shaft at the time he saw it (it was not then 520, but 510 ft.) was changing in appearance, and that the indications were becoming more favourable for the production of gold. Therefore, you will see the great importance of this further sinking being carried out as rapidly as possible. I have said before, and I repeat it now, that in Capt. Scantlebury we have undoubtedly a most active and energetic manager, and I think we may rest assured that no effort will be spared by him to push on this work as rapidly as possible. I do not think there are any other details as to the underground workings in the mine, but we must bear in mind that our position at the Mysore Reefs property is extremely favourable, and that immediately quartz

containing a sufficient amount of gold to pay is opened up we may commence operations upon a very considerable scale, and that

GOOD RETURNS OUGHT TO BE MADE WITHOUT DELAY.

We have an excellent arrangement for getting the quartz from underground—a skip road down Harvey's shaft to the bottom of the mine, by which the rock can be brought up in the most economical manner, and we have a first-class battery and stamp mill with 20 heads in full working order ready to go to work upon the quartz as soon as we get it. The lode, as you are aware, is unusually large, and very different in its character from the lodes in some parts of this Colar Goldfield, and there is no doubt that for that reason the quartz can be broken and brought to surface at an extremely low rate.

A POINT TO REMEMBER.

I mentioned at the last meeting that many of the most prosperous goldfields in the world are those in which the quartz is of low grade—extraordinarily low grade in some cases—so that one could hardly believe they could be worked at a profit, but by reason of the great wideness of the lodes that result is obtained, because the produce can be dealt with at an exceptionally low cost per ton. I think we may look forward before long to having developed sufficient quartz of a grade that will give us a profit in the milling. (Cheers.)

Mr. GRAY: At what depth is this mine, as compared with the Mysore?

Mr. TAYLOR: The Mysore is nearly double the depth—about 900 ft.

DIRECTORS RE-ELECTED UNANIMOUSLY.

The CHAIRMAN: I shall be happy to answer any questions you would like to put. The only other business is the retirement of the directors. According to the articles, the present board all retire at this meeting so as to give you the opportunity, if you desire it, of either re-electing them or others whom you prefer. I speak not for myself, but for my fellow directors, when saying that this is a matter which we leave entirely in your hands. If you wish us to serve you we will do so to the best of our ability, but if not, we are quite prepared to give way to others whom you may select. It is not our wish to retain office in opposition to the desire of any shareholder, and we shall only do so if we feel that we have the confidence of them all.

A SHAREHOLDER: Will the chairman tell us what has become of the rich lode as to which he read to us a telegram just before the re-construction. He was almost diffident in reading it lest we should discredit its accuracy. A lode had been struck in a certain point earlier than the managers were led to anticipate, and the telegram was to the effect that it was very rich. I was astounded to find that we had really found as many as 7 dwts., and should like a further explanation.

The CHAIRMAN: The lode did not hold, and, in fact, was only a small shoot. It did not hold to any extent, at all events, but disappeared, and we struck into the other large lode, which varies from 7 to 13 dwts. As Mr. Taylor says, if we can get enough of that it will pay very well to work. I explained at the last meeting how surprised I was. I told you it was against my will that I read the telegram at all, but had it proved to be the actual turning point with the company I should have been very much blamed if I had not read it. (Hear, hear.)

I HAVE NEVER HAD ANY SECRET FROM YOU,

and never will have. Very often the shareholders know the news before the board. The telegrams are sent to the Stock Exchange, and I see them sometimes in print a considerable time after.

Mr. GRAY: I beg to propose "That Mr. John Harvey, Mr. Lewis Henry Evans, Mr. Charles Barclay Harvey, and Mr. John Taylor be re-elected directors of the company."

Mr. MORGAN seconded the motion, which was carried by acclamation.

The CHAIRMAN: We are very much flattered by this mark of your appreciation. We are all interested in the success of the undertaking, and no one will be more pleased when it turns out a real success than myself. I have been a large shareholder from the beginning, and remain so to the present time. (Cheers.)

RUBY MINING CO., LIMITED.

PERSEVERING WITH DEVELOPMENT, BUT THE BONANZA NOT YET SIGHTED—MR. HAMILTON RETIRES FROM THE SECRETARYSHIP IN CONSEQUENCE OF ILL-HEALTH.

THE half-yearly ordinary general meeting of the shareholders, of the above-named company was held at the Offices of the company, No. 22, St. Mary Axe, E.C., on Tuesday.

Mr. Thomas Dickson

presided.

Mr. LEGAI W. ROBINSON (secretary) read the notice convening the meeting, and also the minutes of the previous meeting, which were duly confirmed.

REPORTING PROGRESS.

The CHAIRMAN: Gentlemen, this is our usual six-monthly meeting, at which we report the progress of the company, and draw the shareholders' attention to any particular item of news that we think may interest them. There are no accounts to present to you to-day, and as regards the progress of the company—from week to week the reports from the mines are placed in the Stock Exchange, where a large number of our shares are held, and anyone who chooses can read them. We also publish in the mining papers our manager's reports, so that really beyond the correspondence that takes place between ourselves and our representatives on the other side, the shareholders are as well posted up in what is taking place at the mine as we are. We have nothing to conceal; it is our utmost endeavour to give everyone the opportunity of judging for himself how the mine is going on. I cannot say that I have anything of a very encouraging nature to communicate to you as regards the past six months' working, nor have I anything specially discouraging to tell you. This mine, as I have often told you, is

ONE OF THE MOST PECULIAR MINES

that anyone could have to deal with. If in our development of the

property we found no ore we would say "We have had enough of this; let us stop." But this is not the case. Every mail that arrives tells us that we are amongst "pipes" and "streaks" of ore, and yet, despite our patient efforts, we never come upon the bonanza that everyone says must be there. These pipes undoubtedly lead to something, but we cannot find it. I have been on this board for many years—I had nothing, however, to do with the original organisation of the concern—I paid \$1.10s. for my shares, and have done my best, assisted by my colleagues, to let the shareholders see their money back again. When we re-constructed we were assured by our managers, and the people who had charge of the mines, that it would be very unwise indeed to give up, in face of the ore they saw before them, without making another trial. Well, we are having that other trial; and we are finding ore all round about us, but not in sufficient quantities to put us upon the dividend-paying list as yet. We are, however, in hopes that they may soon come. We are not peculiar in that respect in Eureka, because the big mining people around us have not been more successful than ourselves of late. Meanwhile, we are getting a considerable quantity of ore, and although the furnaces, where we used to have all our ores smelted, have shut down from want of sufficient stuff to keep them going, yet we are close to Salt Lake City—or at least within easy communication with it by rail—and we are sending all the ore we get in our mines now to Salt Lake City, and getting a good price for it. In fact, the difference in price between what we used to get at the mines and what we get at Salt Lake will pay the cost of sending it there. I have nothing more to say to you just now, but I hope that by the time of the usual annual meeting, when the accounts are made up and submitted, that we will have a better story to lay before you. We have

THOROUGH CONFIDENCE IN MR. FRASER,

our lately appointed manager, who, with the officials and staff out there, does his very utmost to bring about success. We, in London, have certainly no reason to complain of not being backed up properly. We have received some drawings of the mine, which are open to the inspection of any shareholder who wishes. We are striking here, there, and everywhere down to the 800-ft. level, where we are now working with the tributaries and our own few miners with the air-compressor, which is doing good work. We can, therefore, only hope for better times. We cannot make ore, or we should have it immediately.

ILL-HEALTH OF THE LATE SECRETARY.

Before I conclude, I wish to say a word regarding our late secretary, Mr. Hamilton, who, on account of ill-health, has yielded to the urgent pressure of his medical advisers, and has resigned the position of secretary, which he held for many years. A more efficient secretary, and one more faithful in the discharge of his duties, I have never met with, and we regret very much that Mr. Hamilton was compelled to give up his appointment. We have made Mr. Robinson his successor, and have every reason to be satisfied with our selection. He was for a long time in the service of Mr. Hamilton, and thoroughly understands the duties. We have in this appointment effected a saving to the company, and this, with several other economies that have been effected at the mine, will tend to give us a little more blood to continue the circulation until the bonanza is found, which we hope will be very shortly.

Mr. FROST: How long has Mr. Fraser been upon the property?

The CHAIRMAN: For six or seven years.

Mr. FROST: You referred to him just now as "our new manager."

The CHAIRMAN: He was formerly our sub-manager, but is now in charge. He is thoroughly competent, and knows the mine better than those who were employed there as his superiors before.

LATEST FROM THE MINE.

The SECRETARY here read the following report and telegram just received from the property:—

"Report upon the mines for the week ending Oct. 17:—Dunderberg: We have six men on day's pay and three tributaries at work here. The 800-ft. drift has been advanced 28 ft. during the week, making 53 ft. in the last two weeks. I would start a raise to the old ore chamber, but the ground looks so favourable that I will probably continue ahead for another week. Nothing has been done in the other parts of the mine, as the men have been sacking ore, and running the waste from the drill. Lord Byron: We have four men on day's pay and six tributaries at work here. The pipe of ore we are now following is making back over the old works, and in about 30 ft. more. I think we shall connect with a small pipe of ore near our windlass. Of course, it may branch into other pipes, as there has been no work done between this and the surface."

—Telegram received Nov. 3 from Eureka:—"No ore transactions during the week. We shall ship about 45 tons this week. There is an improvement in the 800-ft. level of the Dunderberg."

The CHAIRMAN then formally moved the adoption of the report.

Mr. HUTTON seconded the motion.

Mr. FROST: How much have we in hand, and what is the cost per month?

AVAILABLE FUNDS.

The CHAIRMAN: We have in hand about 1,500*l.*; there is 700*l.* still to come in on account of the last call; and we have 3*d.* a share uncalled, which makes another 1,500*l.* We are spending at the present time from 250*l.* to 300*l.* per month.

Mr. FROST: Do you think it is worth while carrying on the property on the basis on which it is being carried on at the present time?

The CHAIRMAN: Not only do I think it is worth while carrying on the property, but we must do it.

IMPORTANT STATEMENT.

Mr. CHAS. W. C. HUTTON (director): I have been three times down the mine, and I may say it is the most fickle formation that exists. It is a limestone formation. I had several interviews with Prof. Emeus, who is head of the geological survey of the United States. He told me that the stuff was certainly there scientifically—it ought to be there according to the rules of geology—but how we were to find it he was quite at a loss to say. That, of course, gives us some sort of encouragement; and I may tell you that the balance for the 10 months comes out at about \$4,000 against us—800*l.* That will give you some knowledge of how we are working, and those figures embrace the period from Jan. to Oct. Mr. Fraser is a man

whose integrity is unimpeachable. What we have somehow or other suffered from in former managers has been what is known as "covering up tributes." Mr. Fraser is a man who cannot be "got at"—

A VERY RARE CHARACTER

to find in the States. He is in the prime of life—about 45 or 50—a very energetic man, and one who has the character of making everything pleasant for everybody in the neighbourhood. I think we were very fortunate in getting him. I was recommended to interview him in consequence of our solicitor over there—Mr. Baker—knowing all about his antecedents. His subsequent conduct has justified us in making the appointment. He cannot, however, make ore; he can only trace it, and if there is the slightest chance he will do it.

Mr. FROST: I thank you very much for your explanation; because if you go to the Stock Exchange people tell you, "Do not touch the shares; there is next to nothing doing." It is just as well, therefore, that the Stock Exchange people should know the kind of man you have on the property.

TEN MONTHS' WORK.

Mr. HUTTON: In the last 10 months we have mined 1,180 tons of ore, which have produced in the aggregate \$22,580. That, of course, has been tributed, and we have only got a portion of it. The ore that we have mined on our own account comes to about \$5,000 nett.

The report was unanimously adopted.

A vote of thanks to the chairman and directors terminated the proceedings.

WHEAL AGAR.

A PROFIT OF £967—A BETTER OUTLOOK FOR THE MINE—SPECIMEN OF CORNISH FINANCE.

A MEETING of this company was held at the Offices of Mr. Edward Ashmead, in Drapers' Gardens, on Tuesday.

Mr. Cornelius Bawden

(purser of the mine) presided.

ACCOUNTS.

The CHAIRMAN: The accounts briefly epitomised are as follows:—The labour costs are 4,377*l.*; the three months merchants' bills, 869*l.*; coal bills, 1,200*l.*; and the balance of profit on 16 weeks' working is 921*l.*, which, with smaller items, make the total of 7,409*l.* On the other side, we have sold 125 tons odd of tin, which realised 6,344*l.*, and, adding other receipts, the total is 7,409*l.* The bills are charged to the end of Sept., and all paid, with the exception of 232*l.*, and there is a club credit of 125*l.*, whilst we owe sundry amounts—notably, one to the bankers 1,204*l.*, and there are bills not matured, which would make it 2,700*l.*, but the accounts actually show a balance in favour of adventurers of 967*l.* We have bills receivable 1,742*l.*, and coal paid for 729*l.*

Mr. LENNOX: When are the bills payable?

The CHAIRMAN: The pass book is here, showing 2,700*l.*, but we have unpaid tin bills to the extent of 1,654*l.* The bank charges 5 per cent. interest on the overdraft. The Consolidated Co. pays cash, but the other people will not depart from the old credit system. I should be glad if all the mines made it a rule never to sell tin but for cash, but Wheal Agar cannot do that alone. The agents' report is here, and can be taken as read.

Mr. LENNOX: I congratulate Capt. Daniel on his appointment, and would like him to supplement his report.

BY WAY OF SUPPLEMENT.

Capt. DANIEL: We have gone through a good piece of ground at the 255-fm. level, which is still looking well, worth 25*l.* per fm. At the 270 we are also in a very good piece of ground east of the shaft, about 6 fms. long, also in the 255, and it is about 20 fms. long in the 270.

Mr. DARLINGTON: What height of ground have you above?

Capt. DANIEL: The tin-ground will hardly run to the 235, but is dipping east.

PRACTICAL QUESTIONS.

Mr. DARLINGTON: What have you in advance of you?

Capt. DANIEL: Whole ground in advance and under entirely for quite three-quarters of a mile. There are shallow workings to the 100, but not on the same lode. There are no workings in advance of us in the 245.

Mr. LENNOX: Are the returns likely to increase?

Capt. DANIEL: Not for the next quarter, but I do not think there is any doubt that they will be maintained.

The CHAIRMAN: If we meet with a lode in the 255, which is coming under the tin-ground we have gone through, we shall have help from that. It is the best piece of ground we have opened for many years.

Capt. DANIEL: We have put the cross-cut out 15 fms., and have driven 2 or 3 fms. east. We have come back a little from the end of the cross-cut, and have taken up the branches we have.

Mr. DARLINGTON: As to the 270 in relation to the 245—how far will that be behind?

Capt. DANIEL: 100 fms. The 270 is on the north part, and the 245 on the south—the distance between the two being 14 or 15 fms. The tin is east of the cross-course at present.

Mr. DARLINGTON: How do you propose to reach it from the 270?

Capt. DANIEL: Drive on the main lode, and then cross-cut until we get in a line with the tin.

Mr. HAMILTON: I suppose your compressors are working all right?

Capt. DANIEL: Yes, we have plenty of air, and can run seven or eight drills, though only six at present are working. We are doing better work with them this month than last. As to the bargains, they are set from month to month, because the men prefer it. In some of the ends we have driven 6 or 7 fms. We have a very good staff.

Mr. LENNOX moved the adoption of the report.

Mr. YOUNG: I second the motion, and have pleasure in doing so, because

IT IS THE MOST SATISFACTORY STATEMENT

we have had for a long time. If we go on as we are doing we shall

be earning a profit of about 6,000% a year. We have been going backwards for some time past and have made calls; but now it seems as if we are getting into a very satisfactory condition.

The motion was carried.

CORNISH FINANCE.

The CHAIRMAN: At the last meeting certain gentlemen were appointed a committee, and they met last Friday and passed a resolution recommending a dividend of 3s. per share to be paid to-day, which would absorb 900%.

Mr. HAMILTON: Have you that 900% in the bank? (No.) You owe 1,200% to the bank, and surely the people in Cornwall must have overlooked that.

The CHAIRMAN: That could not be, as their attention was called to it. They say they made a call last time to cover the loss, and they expect a dividend this time to absorb the profit.

LONDON v. CORNISH FINANCE.

Mr. HAMILTON: My opinion is that they are too quick. The great misfortune of Cornish mines is that they keep no money in hand, and if they have a debt they make a call sufficient to meet only part of it. I object to borrowing money from the bank to pay a dividend if, at the same time, I have to pay interest for it. I prefer to have a balance at the bank than to have an overdrawn account. (Hear, hear.)

Mr. LENNOX: Let the motion of the Cornish committee be ignored, and let me move: "That the balance of 967l. 19s. 4d. standing to the credit of the adventurers be carried forward to the next account." There are reasons for that which, perhaps, I had better not go into.

Mr. DARLINGTON: They are self-evident from the balance-sheet. (Cheers.) I second the motion.

SO HAVE OTHERS.

Mr. YOUNG: I support it. I have been attacked pretty warmly in Cornwall before, because I have criticised similar proceedings, but I do not care how much I am attacked if I feel that I am doing right. Anyone looking at the balance-sheet must come to the conclusion that it would be a short-sighted policy to declare dividends at present. We have turned the corner; the prospects are brighter than ever they were, but in the face of this balance owing to the bank of 1,204l. it would be madness to declare a dividend. (Hear, hear.)

Mr. LENNOX: The 1,204l. results from immature bills. It is better for us to have a strong balance at the bank than to go in for paying bank charges, and then paying dues.

The CHAIRMAN: I have a letter from a gentleman to-day, stating it would be a great mistake if we did not pay a dividend. On the other hand,

I HAVE A LETTER FROM MR. WADDINGTON,

who writes to say that it would be most unwise to declare one. (Hear, hear.) We have proxies, independent of the gentlemen in the room, for 3,086 shares, and I am quite sure they would all support the no-dividend policy in the case.

Mr. DARLINGTON: I think the accounts support that. (Hear, hear.)

On the motion of Mr. HAMILTON, seconded by Mr. WADDINGTON, jun., it was unanimously and cordially agreed to raise the salary of Capt. Daniel from 12l. to 13l. per month.

Capt. DANIEL returned thanks, and, in reply to a question, said that more men at present could not be employed to advantage. He would do his best to bring the mine to a profitable state, so that it might pay large dividends. Prospectively it was much better than it had been, and the lodes looked as if they would be continuous. He did not see any cross-course within 60 fms. to the east, and that would be a long piece of ground.

Mr. YOUNG complained that he could not buy shares; but was informed that there was practically no market for them in London, and very little market in Redruth.

THE POORMAN MINES, LIMITED.

"A POLICY OF PERSISTENT AND WELL-ORGANISED DEVELOPMENT"—SATISFACTORY RESULT OF THE FIRST RUN.

AN extraordinary general meeting of the shareholders of the above-named company was held at Winchester House, Old Broad Street, in the City of London, on Thursday, Nov. 5, for the purpose of considering and, if deemed advisable, of passing resolutions for the amendment of the articles of association as follows:—

To amend Article 3 by substituting "75,000%," divided into 300,000 shares of 5s. each," for the words, "50,000%," divided into 50,000 shares of 1l. each." To amend Article 61 by substituting "400" for "100" wherever the same occurs in such article; and for the general business of the company. A meeting, the notice added, would be held to confirm any resolutions passed at this meeting.

Mr. H. J. Fischell

presided.

Mr. D. OVENSTONE (secretary) read the notice calling the meeting.

The CHAIRMAN: The secretary having read the notice declaring the objects of this meeting, I would venture, before putting the resolutions to the meeting proposing the alteration of the two articles named, to take advantage of the present opportunity to briefly review our operations as a company, since the meetings held last April and May sanctioning the increase of capital to 75,000% and the sub-division of the shares into shares of 5s. each. To begin with, we have taken over by conveyance the additional property purchased, and carried out the amalgamation of the same with this company, compounded the stamp duty at Somerset House for the increase of capital, and distributed the sub-divided shares amongst the various holders in exchange for the 1l. shares. So far as operations at the mines are concerned, as stated at our meeting in April last,

OUR POLICY THERE HAS BEEN ONE OF PERSISTENT AND I BELIEVE WELL ORGANISED DEVELOPMENT,

carried out with a view to open up in depth generally each of the veins in the three different mines, and more particularly to reach the two bonanza ore shoots which, to a comparatively shallow depth from the surface, yielded so many millions of dollars prior to the forcible closing down of the mines in consequence of

litigation arising out of the death of the then previous owner. How far our policy has justified itself, and to what extent success has attended these operations, may best be judged by the results obtained, which, in the light of the written and cable reports from the manager published from time to time, and the more recent production of bullion since milling operations were commenced on Sept. 1, I venture to submit with every confidence to your verdict. Some of you, no doubt, have followed the reports carefully as they have been published from time to time, which is our only method of communicating news to the shareholders, whilst others who may have become more recently interested in the affairs of the company may not have noticed the gradual and continuous success of these underground operations. It may not be out of place for me to give you a few brief extracts from some of the reports, giving their respective dates, showing the steady improvements from time to time in the lower workings since we last met, as I feel it would be far more satisfactory to convey the facts to you as they have reached us, and as they were written on the spot by one who is responsible for the success of the operations there, and whose reputation must of necessity benefit by such successes as have attended the work he has taken in hand. As you are aware, we possess four mines altogether, but our operations are being chiefly confined to three, viz., The Poorman, North Empire, and Illinois Central, the veins of which converge to one point, and from this point can be driven upon and opened up separately. I mention this so that when reference is made to these mines in the reports, you may know that they are distinct discoveries on distinct veins. On June 16 last, or about a month after the last meeting, the manager reported as follows:—

"Since last report the Illinois Central ore body is increasing in width; ore is very rich. Poorman ore is improving in quality as it is further developed."

This refers to the ore encountered whilst driving on the veins to reach the two ore shoots. On July 19 the report says:—

"We are on the east fork of the Poorman vein; the shaft we wish to connect with is on the west fork of the vein about 40 ft. apart."

WE ARE ON THE FORK OF THE POORMAN VEIN

that produced the great bonanza, and at this date are less than 100 ft. of being directly under that point. When we get there we have nearly 125 ft. of virgin ground above the tunnel. We have abundance of good ore to work out from this tunnel. We find pieces of solid silver on the hanging-wall near the face of the drift. This proves that we shall find the continuation of the old bonanza when we go ahead with this tunnel."

About a week or so after writing this report the developments disclosed the first ore shoot, and on Aug. 6 we received the following cable report:—

"Have met northern edge old bonanza; ore struck assays big; 4 ft. wide."

And on Aug. 18 a second cable, saying:—

"We have proved without question that we have the old bonanza ore chimney; drift is in ore 70 ft.; ore is very rich."

Writing on Aug. 15, the manager says, regarding the finding of the first ore shoot:—

"We finally reached the point where the continuance of the old bonanza shoot of ore should be, as predicted some months ago. We reached the point three weeks ago, and since then have followed on the shoot 75 ft., all in rich ore. I think this shoot of ore is fully 400 ft. in length; along the vein the surface working shows this length of ore. If our drift holds out for this distance in ore as rich as it is at present, we shall have several millions of dollars worth of ore above the drift. For several days past the drift has produced \$1,000 worth of ore per day without any stoping. Each day the ore is improving in value as we go south."

Considering that the operations in these lower levels have been planned for over two years, and that it has taken considerably over a year to carry them out to reach the first ore shoot, the calculations made have not been far out. Bringing events down nearer to date, on Aug. 31 we received a cable to say that the mill would start running on Sept. 1,

THE RESULT OF THE FIRST RUN

was as follows:—130 tons produced \$7,800 in 18 days, with a five-stamp mill, while, as announced on Oct. 26, the production for the following month was \$15,800 from 250 tons, or a total of \$23,600 in six weeks from 380 tons of ore, being an average of 10½ tons per day, yielding \$62 per ton. Our ore is treated by another company, whose present plant is equal to between 10 and 12 tons per day only. In the manager's report published yesterday reference is made to this fact, and he expresses his regret at the limited capacity of the plant, and states that the mines can easily supply from 30 to 40 tons per day, or about four times the present capacity of the mill. Respecting immediate ore supplies for the mill the manager says:—

"We have on hand, mined, and ready for the mill, about 4,000 tons of fair grade milling ore; our stopes show about a like quantity, my estimate of grade being about \$60 per ton."

The gross value, therefore, of these immediate ore supplies, irrespective of recent discoveries now in process of development, is, according to the manager's estimate, 96,000%, with a tonnage equal to over two years with the present milling capacity. The company which operates the mill have, however, already entered into an agreement to have its capacity increased to 30 tons per day during the coming spring. By that time other stopes will be put in the mine, and the recent discoveries opened up and developed. Amongst the latter is the recent striking of the North Empire vein, which at first assayed \$66 per ton, but which has opened up richer, as will be seen by the following report received Oct. 15:— "Struck very rich ore in North Empire 300-ft. level in cross-cut from shaft; ore assays \$200 per ton." In which report the following also appears:—"The bonanza in Poorman ore is continuous and very rich." Having briefly summarised the results of our operations since May last, I can only say that

SUCCESS HAS ATTENDED

the same to date, and there is every indication that it will continue to do so, for nothing could be more encouraging than the written report received by the last mail (a printed copy of which is lying on the table here for each member to take away), except it be the announcement received by cablegram on 3rd inst., saying:—

"Have now reached the second ore body (or shoot), 130 ft. south of Hope shaft. Ore is rich in gold. Mill working day and night."

The manager has clearly demonstrated his ability to conduct the company's affairs at the mines, and it is due to him, in a very great measure, that the work in hand has prospered so signally. I shall now be pleased to answer, so far as I am able, any questions which may be asked, or may occur to any of you, and afterwards propose the two resolutions set out in the notice read by the secretary. I may add that some samples of ore from the recent discoveries have been received by us for assay here. These samples have been assayed by Mr. F. Claudet.

MR. MORELEY FLETCHER: Does the recent report refer to the 475-ft. level?

The CHAIRMAN: The 4,000 tons was from there.

MR. MORELEY FLETCHER: How much have we in the upper level stoped?

MR. BROTHERTON said that the latest estimate in the upper levels was valued at 100,000%. They had run a tunnel for 1,400 ft., and exposed the vein 700 ft. of this distance. The tunnel had had up to the present time only been drilled, and it had yet to be made broad enough to work. It was only 75 ft. from the surface, but the recent discoveries all went to prove that the finds below would be continuations of the 75-ft. level, and the manager wrote that the ground was intact from the lower to the upper level. That being the case, he hoped that when the lower developments were opened the production would be as good as it had been in the past.

A SHAREHOLDER: How long will the ore in sight last?

MR. BROTHERTON: According to the manager's statement, there is enough ore for the mill to last for two years. There are 4,000 tons of ore ready for the mill, and 4,000 tons standing now in the upper stopes, which have been already opened up. The manager is now opening up other stopes, and I should think that

THE 8,000 TONS WOULD LAST FOR ABOUT TWO YEARS.

The CHAIRMAN: If there are no further questions to ask, I will move the first resolution. The Chairman then moved the resolutions as above, which were seconded by Mr. LEVESLEY, and carried unanimously.

A SHAREHOLDER: When may we expect a dividend?

MR. BROTHERTON: I should think, as we have a large quantity of ore ready for the mill, which is now in operation, we may expect a dividend at the end of the quarter.

A SHAREHOLDER: Is that the first or the end of Dec.?

MR. BROTHERTON: We started the mill on Sept. 1, and we calculate from the date on which we started.

The CHAIRMAN: If there are no further questions, that terminates the business.

The proceedings closed with a vote of thanks to the chairman and directors.

THE LIBERIAN GOVERNMENT CONCESSIONS AND EXPLORATION CO., LIMITED.

A DIFFERENCE OF VIEW ON THE BOARD—THE INDIA-RUBBER CONCESSION—MR. PARR'S POLICY—LIVELY DISCUSSION.

IN accordance with a requisition dated Oct. 6, 1891, presented by shareholders holding the requisite number of shares, an extraordinary general meeting of this company was held at Winchester House, Room 174, Old Broad Street, yesterday, to consider, and, if thought necessary, to pass the following resolutions:—

"1. That article 42 of the existing articles of association be annulled, and the following article inserted in lieu thereof:—'Upon the receipt of such requisition the directors shall forthwith proceed to convene an extraordinary general meeting, and if they do not proceed to convene the same within 21 days from the receipt of the requisition, the requisitionists, or any other members amounting to the required number, may themselves convene an extraordinary general meeting for the purposes set forth in such requisition.'"

"2. That the following clause be added to the articles of association of the company:—'72A. The members may at any ordinary or extraordinary general meeting, if they deem it advisable in the interest of the company so to do—(a) Remove any director from his office and (b) Appoint any number of directors in addition to the then existing directors, so that the total number of directors does not exceed nine, and any director or directors so appointed shall hold office until the next ordinary general meeting of the company as provided in article 74 of the articles of association, but subject to the power of removal aforesaid.'"

"3. That article 74 of the existing articles of association be altered in manner following:—That after the word 'shall' in the third line thereof shall be inserted the words 'subject to the provisions of article 72A as to removal.'"

"4. That the capital of the company be increased to 130,000%. by the creation of 20,000 new ordinary shares of 1% each."

The notice added should the foregoing resolutions, or either of them be passed by the requisite majority, such resolution or resolutions will be submitted for confirmation as special resolutions to a second extraordinary meeting to be subsequently called.

"5. That no arrangement or agreement for a settlement or compromise of the matters in dispute between the company and the India-rubber Estates Co., Limited, be entered into or concluded without the sanction of a resolution of the members of the Company, passed at a meeting of the members duly convened, at which the terms of the proposed arrangement or agreement shall have been submitted to the meeting and confirmed."

Mr. Whitehead

presided.

Mr. JOHN KUCHLER (the secretary) read the notice calling the meeting.

The CHAIRMAN said that, as the meeting was an extraordinary one, there were no minutes to be read, and he would at once proceed to make a few remarks. He would begin at the bottom of the notice calling the meeting, which had reference to the matter in connection with the India-rubber Co. The signing of the agreement had been postponed from time to time until yesterday, when he was pleased to say it had been properly signed, and he believed that that ratification would be of advantage to the shareholders. In conclusion he expressed great dissatisfaction at the course which had been taken by Mr. Parr, and called upon that gentleman to speak.

Mr. ELLIS PARR in a lengthy speech stated that the reason why he

had called the meeting was that in his opinion the other members of the board, Messrs. Whitehead, Watson and Waterfield were not acting in the interests of this company, but in the interests of the India-rubber Co. He stated that the chairman was put upon the board by the votes of himself (Mr. Parr) and his friends, and having been in correspondence with Mrs. Thomson, the widow of the Mr. Thomson who sold him (Mr. Parr) the concession, with the idea of taking an action against Mr. Parr in regard to the India-rubber concession. He (Mr. Parr) stated that so soon as Mrs. Thomson put herself legally right he (Mr. Parr) would pay her anything he might owe her. (Applause.) He maintained that the majority of the board were able to carry everything they liked, and he wanted the shareholders to have the right of electing their own directors. If they passed the resolutions that day they would have the power of calling special meetings at any time, and of turning out anyone they were not satisfied with. He (Mr. Parr) approved of the resolution in regard to the agreement with the India-rubber Co., but not to its being passed and signed and sealed under the company's seal without allowing the meeting to have a voice in the matter. (Hear, hear.) He (Mr. Parr) said that the action of the other members of the board was not what they were entitled to expect, and he maintained that they favoured the India-Rubber Co. against this company.

MR. PARR'S POLICY.

Continuing, Mr. PARR said these dissentient directors say they do not agree with my policy; what that policy is they do not say, neither do they give you any idea of their own, that is, if they have any; but I will ask you—the shareholders—to decide whether my policy if carried out is likely to benefit the company or not. My policy is as follows: 1st. That a board meeting be held every two weeks, and that the working details be left in the hands of a committee, but that someone should always be in the office during business hours. 2nd. To have the terms of the various concessions we hope to obtain, and which has been promised to us, printed and placed in the hands of an agent in Liberia for distribution among the members of the Congress and the Cabinet as soon as possible, and before their meeting in Jan., 1892. 3rd. I would arrange to grant licenses to either individuals or companies to work those parts of our concession we cannot work ourselves. 4th. I would arrange for the immediate working of the Berriby Concession, which is one of the most valuable ever acquired by our company, and including timber, minerals, right to trade in the interior, and practical control of 70 miles of coast line and two rivers navigable for 100 miles into the interior. 5th. I would see the Rubber Concession was pushed forward and worked by men used to the collection of, and thoroughly conversant with, the best methods of preparing rubber for the market. 6th. I should acquaint the shareholders from time to time, either by circular or advertisement, of the progress of the affairs of the company, and not leave them in ignorance from one year's end to the other of the prospects of the company. 7th. I also suggest that every European servant engaged by the company should be directly responsible in the last instance to the board, and be engaged by them. 8th. That no resolution by the board of directors be allowed to over-ride the articles of association provided for the calling of board meetings. 9th. And that no resolution passed at any meeting of directors not duly convened by the secretary, and a notice of which has not been communicated to every member of the board, be acknowledged. I would continue the services of Mr. Barker as solicitor to the company, he being the only man thoroughly acquainted with its affairs. This is my policy, and if loyally supported by you, and in spite of the difficulties I know are in my way, and created by those who ought to be the first to assist in making your company prosperous,

I FEEL CERTAIN OF MAKING YOU, WITHIN A VERY SHORT PERIOD, A DIVIDEND-PAYING CONCERN,

and have your shares, instead of being at a discount, at a high premium. You have heard my statements and my promises. Give me the opportunity I ask, and if I do not succeed then I will retire and make room for a more capable man. Your property is one of the best ever acquired by any English company, possessing all the elements of a phenomenal success, if only judiciously and economically managed; but it is my opinion if you leave your interests in the hands of the men who are now controlling your affairs you will very soon follow the India-rubber Estates Co. I must thank you for the patience with which you have listened to me, and I must now leave the decision in the hands of the shareholders. He concluded by moving the above resolutions (the first four of them), and remarked that they possessed one of the grandest properties ever owned by any company in the world. (Cheers.)

Mr. CLYDE seconded the motion.

The CHAIRMAN read a lengthy reply, in which he denied the statements made by Mr. Parr, and various letters and extracts from the minutes were also read, amidst much noise, confusion and interruption.

A most uproarious discussion followed, and a constant cross-fire of accusations and denials between Mr. Parr, the chairman, and various shareholders, took place.

The point was raised by a shareholder that many people were in the room who were not shareholders, and it was suggested that the meeting should be adjourned, and only proper and duly qualified shareholders admitted at the next meeting.

The CHAIRMAN called the meeting to order, and proceeded with his denials of Mr. Parr's statements, and said that the desire of the directors was to work the concession of the company in a legitimate manner, and not to have other companies palmed off on to them.

A SHAREHOLDER: All soft soap.

A ROW.

The CHAIRMAN: A very useful thing. Continuing, the chairman said that they objected to be under the control of the company. He stated that the idea of Mr. Parr was to have the entire management and manipulation of the company's affairs and funds. (Cries of "Shame, shame," "Withdraw," "Libel," "Be honest," "Withdraw that statement," "Vote, vote.")

After a scene of undescribable confusion, silence was in part restored, and

The CHAIRMAN said: I have nothing more to say.

A VOICE: Withdraw.

The CHAIRMAN: I will not. (Uproar.)

A SHAREHOLDER asked for an explanation from the chairman as to the letters he (the chairman) wrote to Mrs. Thomson, and which Mr. Parr had read to the meeting.

The chairman did not answer.

A VOICE: It is an awkward question, a very awkward question. (Uproar.)

The CHAIRMAN said it had nothing to do with the company, and ought not to have been brought forward that day. (Shame, shame, oh, oh, and uproar.)

Mr. PARR: I rise to answer a base insinuation.

The CHAIRMAN ruled that Mr. Watson, who had risen first, was in possession of the meeting, and Mr. Parr gave way.

Mr. WATSON then proceeded to deal with the past history of the company and its financial position.

Mr. PARR denied the accuracy of the statements that Mr. Watson was making.

Mr. WATSON stigmatised the policy of Mr. Parr, and alluded to information given him by the late chairman of the company, Mr. Ponsonby, when he (the speaker) came on the board. He stated in detail the steps taken with regard to the development of the India-rubber Concession by the present board. None of the funds of the company, he assured the shareholders, had gone in the wrong direction. The new board came into office on May 31, and it was now Nov. 6, and they had in this six months spent only 21% in office expenses. They had had to spend money on furniture for their new office.

At this point a great uproar arose, and several shareholders maintained that they did not come there to discuss furniture, and one gentleman said he was ashamed at the board keeping them there to discuss such "twaddle."

Mr. WATSON persisted in addressing the meeting, but was met with yells of "Sit down." "Sit down for goodness sake!"

Several shareholders called upon Mr. Watson to withdraw certain inaccurate statements he had made. (Cries of "Vote, vote.")

A SHAREHOLDER: Put the resolution. We don't want to be here till 10 o'clock to-night.

Several other shareholders tried to speak, but were met with cries of "Vote," and "Shut up."

A SHAREHOLDER: We have been here two hours now. We want to get away.

Mr. METER proceeded to deal with the matter of Mr. and Mrs. Thomson's relations with Mr. Parr, but

Mr. PARR stated that his assertions were inaccurate. (Cries of "Vote, vote.")

The CHAIRMAN at this point put the resolution to the meeting. He asked those in favour to hold up their hands.

A VOICE: There are no shareholders voting.

A goodly number of hands were held up in favour of the resolution.

SEVERAL VOICES: The Ayes have it.

A SHAREHOLDER: "On the contrary" has not been put yet.

Cries of "Order," and "Chair, chair."

The CHAIRMAN then put "On the contrary."

The majority of votes seemed to be in favour of the resolution, but the Chairman made no announcement, and

The SECRETARY said: It is utterly impossible, in this meeting, to tell by a show of hands.

VOICES: Who are you?

The SECRETARY: The company's servant.

After some further noise and confusion,

The SECRETARY read a demand for a poll.

The CHAIRMAN said the last resolution (No. 5) would not be put to the meeting, as it was too late.

Mr. PARR said it was not too late, and he would put it. He then read resolution No. 5, as given above.

A SHAREHOLDER: What is the date of the poll?

The CHAIRMAN said the poll would be taken at once, and all non-shareholders must leave the room.

RESULT OF THE POLL.

The poll was then proceeded with, and at a later hour of the day (5 p.m.) the result was announced.

The CHAIRMAN stated that 44,803 votes had been given for Mr. Parr's resolution, and 21,014 against, being a majority in favour of 23,789, but inasmuch as it was necessary that three-fourths of the capital of the company should vote in favour of the resolution he must declare it lost.

Mr. PARR said he was only about 1,500 votes short of the requisite number, and he would be able to carry the resolutions next time, as he could, he believed, command 1,600 more shares from friends of his.

The proceedings then terminated.

TINCROFT.

DIVIDEND OF 12s. 6d. PER SHARE.

A SIXTEEN-WEEKLY MEETING of the adventurers in Tincroft was held on the mine, on Tuesday.

Mr. Frank Harvey

presided.

The accounts showed that the labour costs had been 8,266% ; merchants' bills, 3,145% ; minimum rents, 30% ; vice-warden's court, 15% ; diallers, 9% ; doctors, 232% ; air-compressor engine and boiler, 1,130% ; dues, 419% ; total debits, 13,250% . On the other side the accounts showed a profit on 16 weeks' working of 3,881% .

STATE OF THE MINE.

Capt. TEAGUE, in supplementing the report, said the most important point in the mine was the intersecting of the lode that was gone down in the bottom of the 300 by the 320, coming up from the engine shaft. They had resumed the driving of the 234 cross-cut, and he thought they were very near the lode, if they had not got it in the end at the present time. At North Tincroft their operations had not been as expeditious as they had hoped they would have been, and they had some troublesome ground to contend with in the old Tincroft shaft. The lode, however, was 20 ft. wide, and they were making the necessary preparations to sink the shaft below the 140 to the 150. The tin they got from that part of the mine

would just about pay for the breaking of the stuff, so that they were not losing much on it. (Applause.)

The CHAIRMAN, in proposing the adoption of the report and accounts, said that on the whole he thought they might congratulate themselves on their position. If they were receiving now the same price for tin as was paid 12 months ago there would have been a difference on the profit of over 1,200% .

Mr. J. JOSE seconded, and the motion was carried.

Mr. HEARD moved that a dividend of 12s. 6d. a share be declared, Mr. STRAUSS seconding, and the motion was agreed to.

THE KANGARILLA PROPRIETARY SILVER MINES (SOUTH AUSTRALIA), LIMITED.

CONFIRMATORY MEETING.

AN extraordinary general meeting of the above company was held at Winchester House, Old Broad Street, London, E.C., on Wednesday, for the purpose of confirming the resolutions which were passed at the extraordinary general meeting of the company, held on Oct. 19 last, making sundry alterations in the articles of association.

Mr. S. S. Hasluck

presided.

Mr. J. ROBERTSON (secretary) read the notice of meeting.

The proceedings being purely formal, the CHAIRMAN merely put the resolutions to the meeting, which were carried unanimously.

The CHAIRMAN: That closes the business of the meeting, but I desire to take this opportunity of telling you that since the last meeting we have received information of sales amounting to over 900%. These sales will be continued monthly, and we hope each month they will be larger and larger.

The proceedings then closed.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that by cablegram from the manager at the mine, the directors are informed that the total output for Oct. was \$50,500, and the working expenses for the month \$49,000. In explanation of the above return Mr. Robinson cables to the following effect: "The very poor run for Oct. was owing to his inability to draw ore from one of the main stopes, the enclosing walls of which showed signs of movement and necessitated very heavy timbering to prevent accidents, which materially increased the month's expenses."

SATURDAY, NOVEMBER 7, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE BALAGHAT MYSORE GOLD MINES, LIMITED.

TRIBUTE TO THE LATE MR. ROWSE—SHAREHOLDERS UNANIMOUSLY CARRY THE RESOLUTIONS—COGENT REASONS SHOWN FOR DOING SO.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Wednesday, when the subjoined resolutions were proposed:—

RESOLUTIONS.

"1. That this meeting hereby approves the purchase by this company from the Goldfields of Mysore, Limited, of the exclusive mining and other rights possessed by the selling company in and over a certain block of land, comprising about 90 acres on the western boundary of this company's property, extending for the entire length of the sett and for 2,000 ft. wide, at the price of 10,000*l.* in cash and 10,000 fully-paid shares of this company, and that the directors be and they are hereby authorised and empowered to carry out and complete the said purchase accordingly." "2. That the directors be and are hereby authorised to borrow in the name of the company to an amount not exceeding in the aggregate 35,000*l.*, by the issue of first mortgage debentures, repayable in five years (or earlier on the company giving three months' notice) with a bonus of 25 per cent., and with an option to each debenture-holder to exchange his debentures for fully paid-up shares to an equivalent amount, after Dec. 31, 1893, and at any time before redemption. Such debentures to bear interest at the rate of 10 per cent. per annum, payable half-yearly, and to be in the form of a draft, a print whereof has been produced to this meeting and identified by the signature of the secretary; and that the re-payment of the moneys payable according to the tenor of the said debentures be secured by a trust deed (in addition to such debentures) in a form to be approved by the directors, and that the directors be and are hereby authorised to execute such trust deed and debentures under the seal of the company." "3. That the capital of the company be increased to two hundred thousand pounds by the creation of fifty thousand new shares of one pound each."

The Right Hon. Lord Ribblesdale

(chairman of the company) presided.

Mr. CROCKER read the notice of meeting.

RECAPITULATION.

The CHAIRMAN: Gentlemen, you will remember that at the general meeting held at this hotel on Apl. 28 last the board were instructed by a majority—a considerable majority (17 to 4)—to enter into negotiations for the purchase of this block of land from the Goldfields Co., which was shown to be essential to the company going on as a mining concern. We undertook then to make the very best possible terms we could with the Goldfields Co., and we also undertook to submit any arrangement arrived at to our shareholders for confirmation before we committed ourselves actually to anything.

THE DEATH OF MR. ROWSE.

Whilst I am on the subject of this meeting of Apl. 28 I should like to remind you that a most important speech, the most able, and the most full to which you listened on that occasion—the speech which put you most fully into the knowledge of your affairs, was one delivered to you by the late Mr. Rowse, whose sudden death we all deplore very much. (Hear, hear.) As you remember he had come back from a visit to the mines, where he had gone very fully into your prospects, and the present condition of the mine, and you will remember he gave you every hope and encouragement for the future. (Hear, hear.) He was fully of opinion that if we were able to acquire this block of land the Balaghat Mine had every prospect of a good future before it. Speaking for the board, I assure you that

WE FEEL THE LOSS OF MR. ROWSE VERY MUCH INDEED.

As a secretary, he was a most competent and a most industrious official. I have had a good many relations with him in other ways, and can hardly say how much I esteemed him, or how much, personally, I regret his loss. This regret I know is shared by the Messrs. Taylor as well as by my colleagues who are here to-day. I do not want to go once more fully into the reasons for acquiring this block of land. These were gone into exhaustively by Mr. Rowse, by Mr. Taylor, and myself at that meeting of Apl. 28, but as the facts may not be quite fresh in your minds I will briefly recapitulate them. In the first place the future of your mine depends upon it. My strong impression, which is shared by my colleagues, is that if you do not acquire this block of land you will practically have, as I said last time, to put the shutters up. I do not know I would go so far as that, but you would have to limit your operations to a ridiculously low scale, which could not leave anything either for the present or the future. The second was that at the depth of 700 ft. the western boundary of our property will be reached; that is to say, you will be in Goldfields property. I think this will happen in only 60 to 70 ft.

Mr. TAYLOR: 60 ft.

The CHAIRMAN: You will be stopped there, and will not be able to follow anything you may have. The third reason is that if the purchase is postponed until the 700 ft. is reached it will put the Goldfields Co. in the very strong position of knowing that you must buy. It is much better to buy *before* you are obliged to than *when* you are obliged to, as it is a question of price. Another reason is that it takes some time to carry out a conveyance of this kind, and probably, if you assent to these resolutions, we shall have it only just in time to go on with this bottom level. Then the most important reason of all is that we believe

THE MAIN CHAMPION LODE,

which is being worked with daily increasing success at Nundydroog, Ooregum and Mysore, lies in this block of land on your western boundary, which we strongly advise you to acquire. Rich as the stuff we are now working is, there are indications that it is only a split of the Champion lode. I do not believe we are on the Champion lode. I believe we should have a much wider vein than we have now if we were. Our last letter states we have stuff 7 ozs. to the ton, 16 ins. wide, but the whole history of the Champion lode, and a very satisfactory feature of it, is that it contains depth—and it also contains width. The deepest part of the Mysore Mine just now is the widest, and I may say the same of Ooregum and Nundydroog. Therefore, rich as this stuff is, and though you may say this is Champion lode stuff, I do believe that the main body of the lode is in that western block which we have advised you to acquire. Those, briefly, are the reasons. We entered into negotiations with the Goldfields Co. Now, I am here in the tiresome position of both buyer and seller. I did my best for the Balaghat to get this bit of property at as low a price as possible, and, after a great deal of hard fighting, the lowest offer we could induce Goldfields to accept was that embodied in the terms of this resolution—10,000*l.* in cash and 10,000 fully paid shares in this company, for a block of land of about 90 acres, extending through the entire length of the western boundary, and 2,000 ft. in width. That is the position—you can have the land at that price. But in order to carry out this purchase, assuming that you assent, of course it is necessary for us to provide capital, not only to effect the purchase, but also capital to work the land we are acquiring, and, as I said, I think, on the occasion of our last meeting, the very worst introduction to successful mining in Colar or elsewhere is undercapitalising an undertaking. If you have not enough capital you have very little hope of doing much, and, valuable as I believe this block we are acquiring to be, I would not advise you to accept it, or buy it at that price unless you really saw your way to starting it with sufficient working capital to make it a success. The figures have been very carefully gone into. The board have met several times, when we had the advantage of Mr. Rowse's red hot information from the field, and no pains were spared to get at the actual estimate of what money would be required to prosecute this new venture successfully, and we came to the conclusion that the very least possible sum would be 35,000*l.*, which would provide 10,000*l.* in cash for the Goldfields, and leave 20,000*l.* working capital; and taken as a wide margin for casualties a surplus of 5,000*l.*, because I do not think it is advisable to exactly calculate a thing of this kind, as you must have a balance of some kind, because there would be the interest on the debenture stock to meet. To bring about this we propose to invite subscriptions for

FIRST MORTGAGE DEBENTURES TO THE AMOUNT OF 35,000*l.*

in debentures of 10*l.*, or multiples thereof, bearing interest at the rate of 10 per cent. per annum, which would form a first charge on the property of the company, and be repayable in five years or earlier, with a bonus of 25 per cent. This 35,000*l.* would be apportioned in this way:—10,000*l.* would be handed to the Goldfields, and the balance would be devoted to exploring, developing, and equipping this new property. As you see, the debenture-holders are to have

THE OPTION OF EXCHANGING THESE DEBENTURES FOR SHARES

of the company after Dec. 31, 1893—that is in two years hence, and in order to provide for this contingency, and for the 10,000 shares to be handed to the Goldfields as part consideration in money, 45,000 fresh shares will be required. The directors have therefore decided to advise you to increase the capital to 200,000*l.*, by the creation and issue of 50,000 new shares. I think if the thing turns out well, 200,000*l.* is not an excess of capital, and if what we believe is the case, and the results carry out our—I will not say prophecies, but hopes—the mine is quite capable of paying a very handsome revenue upon that capital. The balance of 5,000 shares, after providing for the Goldfields Co. and for the debenture-holders, the directors propose should be left with them to deal with in the best way for the interests of the company. Of course, this is a matter as to which I feel we can only indicate the best course to be adopted, but which is more or less in your hands. Setting aside altogether what I have been talking about just now—the state of the mine by the last advices is very satisfactory. I have had the report of Oct. 14th drawn out to show the actual width of the lodes and stopes, because I thought it might be of interest:—

"Report of Oct. 14:—The 600-ft. level north: Width of lode, 1 ft.

to 1 ft. 6 ins.; assay, 3 ozs. 9 dwts. 2 grs. Machine rise over 600: Width of lode, 16 ins.; assay, 7 ozs. 10 dwts. 6 grs. The 600 south: Width of lode, small; assay, 14 dwts. 18 grs. No. 1 winze under 500: Width of lode, 8 ins.; assay, 1 oz. 5 dwts. 20 grs. Winze under 410: Width of lode, 1 ft.; assay, 3 ozs. 2 dwts. 13 grs. Machine rise over 270: Width of lode, 1 ft.; assay, 2 ozs. 17 dwts. 8 grs. Stopes: Over 600: Width of lode, 16 ins.; assay, 6 ozs. 8 dwts. 10 dwts. Over 500: Width of lode, 14 ins.; assay, 3 ozs. 5 dwts. Over 410: Width of lode, 1 ft.; assay, 1 oz. 16 dwts. 10 grs. Over 330: Width of lode, 1 ft.; assay, 1 oz. 16 dwts. 10 grs. Over 270 north: Width of lode, 14 ins.; assay, 1 oz. 9 dwts. 9 grs. Over 270 south: Width of lode, 9 ins.; assay, 18 dwts. 3 grs. Over 165: Width of lode, 2 ft.; assay, 13 dwts. 1 gr. Last two crushings: Aug.: 207 tons, yielded 505 ozs., equal to 2 ozs. 8 dwts. Sept.: 270 tons, yielded 505 ozs., equal to 1 oz. 19 dwts. Oct.: 305 tons, yielded 620 ozs., equal to 2 ozs."

Although these lodes are narrow, they are extraordinarily rich. Your Aug. crushing was 207 tons, which yielded 505 ozs., or an average of 2 ozs. 8 dwts. Your Sept. crushing was 270 tons, yielding 505 ozs., or an average of 1 oz. 19 dwts., and your Oct. crushing, which arrived to-day, not because we were holding a special meeting, but because it is the day for this telegraphic communication to come—shows 305 tons for a result of 620 ozs. Capt. Pryor has had immense difficulties to contend with, and Mr. Oakley has had to come home owing to a severe attack of fever, and, I am sorry to say, acting upon the advice of his physician, he

HAS BEEN OBLIGED TO RESIGN

his managership of the mine, and his resignation we have received with great regret. The whole of the field has been dislocated by the most severe visitation of cholera we have ever had. It has been most manfully dealt with by all the officials out there, as to whose conduct I cannot speak in terms of too high praise. At Haines' shaft we have had bad ground to deal with, and under the circumstances I think you will say this crushing is very good indeed. (Cheers.) It is considerably over 2 ozs. to the ton. (Renewed cheers.)

WHAT IS CRUSHED?

Mr. GILBERT ELLIOTT: May I ask as regards this tonnage—is it the actual tonnage which has gone through the mill?

The CHAIRMAN: It is the quartz.

Mr. ELLIOTT: Is it not the other way—that the tonnage only shows the stuff estimated from which the gold is actually produced?

The CHAIRMAN: This tonnage is 305 tons of quartz.

Mr. ELLIOTT: There is a lot of mullock as well.

The CHAIRMAN: The telegram reads: "Mullock, 635 tons; quartz, 305 tons; 620 ozs."

Mr. ELLIOTT: Would it not be better to let us know exactly the quantity of stuff crushed, because the present is only an estimate.

The CHAIRMAN: We only give the quartz.

Mr. ELLIOTT: It would be interesting to know the other, from the miners' point of view.

The CHAIRMAN: We will consider that and meanwhile thank you for the suggestion.

Mr. STEVENSON: Does that remark apply to the other mines?

The CHAIRMAN: They never send a cable in that way. Mr. John Taylor will have to say a word about that, and it will give you much greater satisfaction to hear it from him than from me. I now propose the first resolution. (Cheers.)

Mr. JOHN OGLE (director): I second it.

EXPLANATION OF THE CRUSHINGS.

Mr. JOHN TAYLOR: I should like to endeavour to clear up that question with regard to the stamping of certain material which is not actually gold quartz, because it is one which has arisen only in the case of this company. Mr. Stevenson has asked whether the same thing occurred in other companies. It does not, because with the other companies on this field, so far as I am connected with them, the veins happen to be wider. You will understand, even without being miners, that if there is a vein only 15 or 18 ins. wide, it is impossible for a man to work in it. He must have a level which is 3 ft. or more wide. But whatever the width of the working is, the outside rock must of necessity be taken down with the gold quartz. You may be quite sure that they take as little as possible, but it must go to the mill, and not only but it goes there with good result, because outside the actual walls of the vein there is a certain amount of gold disseminated in the country rock. They put as little as possible through the mill, but they cannot reject it all. In giving us the idea of what our quartz may be—16, 18 or 20 ins. wide, as it happens—they give us the assay value of what is actually gold quartz, and those are the figures which you have heard. The extra stuff, the other rock which has to be crushed, is in addition to that.

Mr. ELLIOTT: Are these formations underlying west?

Mr. JOHN TAYLOR: Yes.

Mr. ELLIOTT: And that is why you want to buy this block of land?

Mr. JOHN TAYLOR: Yes, for the reef is dipping that way. I have a picture on the wall showing the exact position of things in the most important shaft we have to consider—the north engine shaft. This map shows, by a pink line, the shaft as sunk to the 600-ft. level, and the black dotted line will show you how near we are to the western boundary, beyond which belongs to the Goldfields Co. The 600-ft. level has been driven 324 ft., and I believe you have had

A VEIN WHICH HAS AVERAGED 3½ OZS. TO THE TON.

You have 60 ft. to sink to reach the boundary, and your workings are very quickly underlying west.

The CHAIRMAN: I always feel that what Mr. Taylor has to say goes a great deal further than anything that comes from the chair, and I should like him, if possible, to supplement his remarks.

Mr. TAYLOR: I really do not think I have anything more to say, as in this incidental conversation I have placed before you practically all that we have to-day to consider. The other shaft upon the property is Haines' further to the north, and the distance there is greater from the boundary, but not very much greater. It is a question there of sinking 200 ft. We have heard a good deal about Haines' shaft. No doubt there has been a very rich vein there, and I think we have every reason to believe it will continue in depth. We are only down 600 ft., which is comparatively shallow. It is not a deep mine at all. We must look forward to this as a business which is to go on for a much greater time, and to a much greater depth. In the case of the north engine shaft, it is clear that six or eight months, or

less, if we choose to sink the shaft rapidly, would see us beyond our boundary. In addition to the 324 ft. spoken of in the 600-ft. level your chairman has alluded to the Champion reef. Now, we are very fond of the Champion reef. I certainly am, and am sure your chairman is, because he is interested in companies which are working upon it with very satisfactory results. (Hear, hear.) There is a consensus of opinion, and I take it there can be very little doubt about it, that

THE CHAMPION REEF RUNS THROUGH THIS PROPERTY

that we have offered to us, somewhere west of the present mine. There is a difference of opinion about it, and, therefore, I am not going to say anything about it that can be taken as a definite conclusion, but whether it is that the Champion reef has divided and a part of it is to the west—people who have inquired into the matter will tell you that the best part of it certainly is to the west, and in this property that we are talking of acquiring. That remains both to be seen and proved. It can be attacked with comparative cheapness in your property by driving cross-cuts west from the bottom of your mine, or any point thereof that may be thought desirable. The sinking of Haines' shaft has been a disappointment to me. The delay has been brought about by the cholera, which has been a sad business on the Colar field. It has now happily almost disappeared, although there are isolated cases still, but not bad ones. It has been a difficult, not to say a dangerous business. The shaft is in treacherous ground, which is very apt to slip, and, in fact, there has been one fatal accident in it. I think they have overcome the difficulty now, and the shaft is down to 500 ft., and as soon as we get it through to the bottom of the mine the returns will very considerably increase, and there will certainly be much larger profits.

FURTHER TRIBUTE TO THE MEMORY OF MR. ROWSE.

I should like before closing to make mention of the death of Mr. Rowse. Your chairman has alluded to it in feeling terms. The company loses a most able and energetic secretary. Mr. Rowse was with my firm for a great number of years, and we lose in him a most able assistant in our business, and I know he is one whose death will be very widely and deeply lamented. (Hear, hear and cheers.)

A SHAREHOLDER: We are making a purchase of the value of 20,000%, but I do not see the utility of so large a share issue as you propose.

Mr. PROBYN: How far is the north engine shaft at surface from the western boundary?

Mr. TAYLOR: 240 ft.

The CHAIRMAN: What we are raising is 35,000% to equip and work the property we are acquiring. As to the 50,000 shares, the debentures and shares will never be out at the same time. The one will be exchanged for the other.

Mr. JOHN OGLE (director): From the remarks made by one of the shareholders I gather that there is a misconception as to the amount we are asking the shareholders to sanction. Out of the proposed issue of 50,000% shares, 10,000% is in part payment for the new property, 35,000% to be exchanged for cancelled debentures, and the remaining 5,000% is left to be dealt with. Owing to the improved credit of Indian mines, we are enabled to raise our additional capital on much more advantageous terms than our neighbours, who are now so successful.

The CHAIRMAN: We cannot issue the shares for five years—only the 10,000. The purchase is not really for 20,000%, because your shares are not worth 1% each. (Hear, hear.)

A SHAREHOLDER: Shall we be able to increase the returns?

The CHAIRMAN: We have not the width of lode at present to enable us to do so, and Haines' shaft is not complete. We have plenty of stamping machinery. The prospects of this mine depend on your getting more land to work.

Mr. WILLIAMS: This matter was thrashed out at the last meeting, and the case was then very fairly stated. The late Mr. Rowsesaid that

WE SHOULD WORK OURSELVES OUT

if we did not adopt the proposition then before the meeting, and the chairman was authorised to negotiate, and I take it it is only those who were absent from the last meeting who have raised discussion on this point. I remember Mr. Rowse informing the meeting that when he was in India inspecting this mine, that if the veins did not enlarge he should look despondently upon the future of the company. The veins have enlarged considerably since then, and I think there is much hope. As regards crushing to a larger extent, I do not think the veins large enough to pay the expenses of the company or, if I admit that they are, anything beyond. Therefore, we shall be a dividend-less company unless we go in for this purchase, and if we do we shall have nothing to regret. The terms have been considered. The chairman is interested in both companies, and I am sure, as a man of high honour, he has studied the interest of the buying company more than the selling company. I think the meeting should not hesitate as to the terms, and that we are bound, after the *carte blanche* we gave the chairman, to accept the resolution. (Cheers.)

A SHAREHOLDER: We were told in the original prospectus that Balaghat was one of the best of the Colar mines.

The CHAIRMAN: We had nothing to do with the original prospectus, and I cannot answer for it.

A SHAREHOLDER: We are now told we are within 60 ft. of our boundary, and that if we do not buy the adjacent land we may as well shut up; whereas, if we do buy it, there is a prospect of our cutting the Champion lode. Now, people do not sell what they know is a bonanza. Why do they sell? (Laughter.)

A VOICE: Because Goldfields is a land company, and not a mining company at all.

The CHAIRMAN: The original prospectus had nothing to do with me or with the Messrs. Taylor. The present management only took over this mine in Mar., 1890, in the *status quo* it was then in, and they advise you as to the *status quo* now. Goldfields is a land company, and that was understood at its inception. We were formed as landowners only, and not as miners.

The resolution was carried with one dissentient.

The CHAIRMAN moved, and Col. TENNANT seconded, the second resolution, which was carried unanimously.

The CHAIRMAN proposed the third resolution, which Mr. OGLE seconded, and it was carried unanimously.

Replying to a question put by a SHAREHOLDER,

The CHAIRMAN stated that in the applications for debentures the shareholders would have priority of allotment.

The meeting closed in the usual way.

THE BRITISH BROKEN HILL PROPRIETARY CO., LIMITED.

IMPROVED POSITION OF THE COMPANY—SHAREHOLDERS REASSURED BY FACTS AS TO THE SATISFACTORY OUTLOOK OF THE MINE.

THE seventh ordinary general meeting of the shareholders took place at Winchester House, on Monday.

Mr. James MacAndrew

(chairman of the company) presided.

Mr. DOUGLAS PETRIE (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I have, in the first place, to offer an apology to those members of the Stock Exchange who are interested in the fortunes of this company for having fixed the general meeting for to-day. At the time the resolution to do so was come to we were not aware that Nov. 2 was a Stock Exchange holiday, and nobody in the office became aware of it until it was much too late to make any alteration in the arrangement. The report which is in your hand, together with the appendices, is as usual given in very full detail, and I think contains pretty nearly all the information that the shareholders can desire to have. My task, therefore, in supplementing it is comparatively easy, as I shall merely have to give you the latest information that is in our possession, and to endeavour to convey to you the impression which the present state of affairs has made on the board, and which I hope I may succeed in inducing you to participate in. Now, I have no hesitation in saying (and I think that it will commend itself to anyone who has studied the report) that

THE POSITION OF THE COMPANY AT PRESENT IS MUCH BETTER than it was six months ago. At that time we were struggling with the enormous obstruction which had been caused to our business and mining operations by the collapse of the mine and in remedying which only very partial progress had been made. This disaster we may now consider as practically subdued, and though some work remains to be done in order to make the restored portion of the mine a complete success, yet that is proceeding in a satisfactory manner. We are not hindered as we were in the actual work of the mine, and we are in a position to extract from the stopes all the ore we require not only for carrying on the work of the furnace, which is in operation, but also to provide a supply for the second furnace when it is finished in Dec. next. Then the amount which the accounts show of actual profit we realised during the half-year, although very trifling as compared with the large capital of the company, is in itself an item by no means to be despised, and I think it does great credit to the late general manager of the company that he has been able to extract such profitable results from the working of a single furnace, and from ore which is unquestionably of a low and poor character. (Hear, hear.) I sincerely hope, as we all do, that the results obtained during the last year may be only an earnest of better things to come.

LATEST LETTER.

We have a later letter from Mr. Howell than anything that is contained in the report, and its contents I will proceed to communicate. He writes on Sept. 14 "that on 4th he expected to make 7,500 ozs. silver from clean up of the drosses, &c., being the quantity short in smelting. He not only got this quantity, but 9,529 ozs. in addition, besides 65 tons lead and 43½ tons clean copper matte containing 16½ tons of metallic copper." (This may be calculated to yield about 2,800% of additional profit, and including the 7,500 ozs. recovered, 4,150%.) "The concentrating is improving, and is now the best that had ever been done here on this character of ore. We have made a fair start in opening the crushed portion of the mine from Block 14 line, and are already extracting considerable quantities of ore from that quarter. In former reports I have given it as my opinion that a western body of ore existed in this section that had not been discovered. To test this I started a cross-cut from the south end to the west, which two days ago struck into a mixed body of sulphide and carbonate ore, which is, no doubt, the western lode I expected to find. We also commenced cross-cutting in the same direction from the floor above the 200-ft. level, and this cross-cut has already penetrated the western lode, which at that point is all carbonate ore, and looks very promising." (Detailed particulars are sent of the results of the cleaning-up as passed through the concentrating plant, which seems to show exceedingly good work from that plant.) He says: "We are now running the mill with two shifts, and he hopes to make a beginning of running three shifts very shortly." Then he gives details of the vigorous work that had been done in the concentrating plant in this clean-up of the drosses, which would be unintelligible if quoted, but they certainly seem to show very good results from the ore. He says we are now running the mills with two shifts, and I hope to make a beginning by running three shifts very shortly.

LATEST TELEGRAM.

Then we have our usual telegram giving the last information from the mine up to Oct. 31:—

"Concentration plant, 2,421 tons milled up to the present time, estimated to produce 1,000 tons concentrates, assaying 52 per cent. of lead and 11 ozs. of silver. Mill running well. Ore sold for the half-year, Australian Smelting and Refining Co., 2,662 tons; Standard White Lead Co., 111 tons; South Broken Hill Co., 113 tons; ore reserves intact. Amount of bullion on water is 502 tons lead, and 80,547 ozs. silver, per steamer Mogul. Total amount of ore smelted, 8,267 tons; producing on our account, 1,383 tons lead, 83,510 ozs. silver; estimated profit, 7,543%. Good progress is being made erection second furnace; anticipate will be started early in Dec. Marsh vigorously pushing ahead with re-timbering and works." By the ore reserved intact I understand he means that the ore which has been stacked on the mine during the progress of recovery from the crush has not been drawn upon, and that these results are

irrespective of that and there are also of course the immense reserves of carbonate ore in sight at different places elsewhere. You will see from this telegram that everything seems to be going on well, both in the smelting and concentrating departments.

VIEWS OF THE COLONIAL PRESS.

Now, we sometimes learn a good deal about our mine from the Australian papers, which take a great interest in mining matters, as bearing upon a staple industry in the colony; and you will be interested if I read to you an extract from the *Melbourne Age*, which summarises some of these facts:—

"It having been understood that a change was about to be made in the management of the British mine, and that a gentleman named Marsh, of the New England district, was to succeed the present general manager, representatives of the metropolitan papers arranged with Mr. Howell for an interview, and a complete inspection of the mine took place on Saturday. The result showed the position of the company to be really much better than was commonly supposed. With regard to the appearance of the mine, it may be said that the work of timbering the ruined portion of the 200-ft. level is nearing completion, and that the work done is very substantial. Great pressure on the new timbers still continues, but they do not show the slightest signs of giving to the pressure. The re-establishment of the level has lately been begun at the south end near the boundary of Block 14, and is now being worked north to meet what already has been done. Rather more than 200 ft. of crush has yet to be re-timbered, but of this about 90 ft. is not badly broken, and will not present many difficulties to be overcome. At the present moment the bins in the stopes contain over 3,000 tons of carbonate ore, the concentrating and smelting grade being about equally divided, and taking the whole of the crushed portions of the level it is estimated that there still remains to be taken out from 70,000 to 80,000 tons of carbonate ore of a grade that can be now profitably treated. In addition to this there is a fine body of carbonate ore east and west of this level, and known as east and west veins. The former have now been opened for a length of 300 ft., and the latter has been so far proved for almost the same distance, and is generally of better quality than any yet found in the mine. A fine stope of ore heavy in lead but low in silver value is being worked west of the No. 2 shaft, which since Feb. has yielded over 6,000 tons of ore. Much of this is sold to other mines and smelting works, and brings 30s. a ton on trucks at mine for anything up to 43 per cent. lead and 3 ozs. silver, and additional price if the quality exceeds this standard. At a point 133 ft. north of No. 2 shaft a cross-cut has been driven west of the 200-ft. level, and passed through the apex of several lodes of carbonate, which pitch sharply under foot to the north, leading to the belief that good bodies of this ore will be found in Block 16 of this property. One of the greatest successes achieved by Mr. Howell during his management has been the erection and conduct of the smelting furnace, whereby the low-grade ore which, previously condemned as valueless, has been treated with a profit to shareholders. This furnace started work on April 5 last, and during the five months ending Sept. 3 treated 13,089 tons of ore, of which 11,757 tons belonged to the British, the balance being treated on behalf of other companies. The product of this ore was 2,670 tons of lead and 311,457 ozs. of silver. The cash value to the British of this smelting was 42,357%, and the company also sold ore to the value of 9,997%, in addition to which during the same period ore was broken and stacked for future treatment to the value of 4,000%, so that the total value of the company's operations during the five months was 56,348%. Against this the actual expenditure on the mine for the same period, including all accounts excepting the extraordinary expenditure incurred in re-constructing the ore-dressing plant, was 46,000% sterling. Thus, had it not been for the expenditure necessitated by the ore-dressing mill, there would have been 10,348% accrued during the five months for distribution amongst shareholders. To the above figures may be added the value of the ore sold during Feb. and Mar. prior to the starting of furnace and amounting to 4,000%. This would show that the company has earned in seven months 14,438% over and above the ordinary current expenses."

Now, this will show you that we have not been idle, and that the work done has produced really satisfactory and encouraging results.

REFRACTORY ORE SPECIALLY PROVIDED FOR.

You are already aware that many of the ores upon the Barrier Range, and in particular those ores which occur in the British company's mine, are very refractory and difficult to treat, and that the concentrating plant has been specially devised for dealing with those refractory ores. I may mention that a German professor, who in his own country is considered one of the first authorities upon metallurgy and mining, is now at Broken Hill making a thorough examination of the ores which are met with in that district, and studying the best methods of dealing profitably with them. We hope to share in the benefit of the report which he will make, and to obtain from it some useful ideas as to the most advisable method of dealing with the ores which we possess, but I personally am more inclined to think that the professor will learn quite as much at Broken Hill as he is likely to teach to the people there. (Laughter.) The accounts appended to the report are given fully, and I shall only be too happy to give further explanation that may appear necessary. The money that we raised by the issue of the 2% shares in the previous half-year has been found sufficient for the re-constructing of the crushed portion of the mine, and for the expenditure upon the concentrating plant; and I think I may fairly say now that, so far as can be foreseen, the directors feel quite easy about the financial position of the company. From what has been stated to you, it will be apparent that both our past and our present work show manifest improvement, and that our future work will show even more. (Cheers.) Unless we are singularly unfortunate we ought, now that we have got rid of a quantity of the low-grade ore which we have been treating, again to find ore that yields a higher silver assay than what has been lately the case, and without expecting anything especially rich. It is clear that a comparatively slight difference in the silver assay of the ore we are giving would make a material difference in the results to the company. Then we are hopeful also of what may be found in the

FURTHER DEVELOPMENT OF BLOCK 16

both from the shafts which have been sunk by the Junction Co. and

the North Junction Co. on our border, and also from our own No. 6 shaft, which has been specially fitted to commence active work. If any success should attend us in this direction, it must be remembered that this only touches one corner of Block 16, and that there is abundant space left for further discoveries when the work of exploration has been systematically taken in hand.

A USEFUL SERVANT LEAVES THE COMPANY.

With regard to Mr. Howell, the board would have been glad if it had been in their power to have retained his services, but the accumulation of work in a former instance, which told so much upon Mr. Patton, has in this case begun to tell upon Mr. Howell, so that an alteration of his duties was found to be indispensable. He was accordingly "annexed," if I may so term it, by the richer and more powerful company, and we parted from him with great regret. His functions there I hope will cause less strain and anxiety to him than those which he has had to undergo with us. Shareholders will know that during his time of office

MR. HOWELL HAS DONE A REALLY GREAT WORK FOR THE COMPANY

—(cheers)—and I think our best prospect of future success lies in following on the lines which he has laid down. We shall all wish Mr. Marsh, his successor, much success in the difficult task he has undertaken, and he will have the advantage of having Mr. Howell's advice and co-operation during the first six months of his time of office. It only remains now for me to move: "That the directors' report and balance-sheet and the accounts for the half-year ending June 30 be received and adopted." (Cheers.)

Mr. SAMUEL JOSHUA (director): I second the motion.

A CRITIC WHO HAS SEEN THE PROPERTY.

Mr. WEST ERSKINE: Perhaps you will allow me as a shareholder from the commencement to say before this meeting, that we ought to be in a very different position from what we are. I do not say that the directors are to blame or who is to blame, but this has been an unfortunately managed thing from beginning to end. I had the pleasure to meet Mr. F. Walters Bond, one of your directors, in Australia, who I now see at the table. I know the steps he took on your behalf—steps that in my opinion saved the mine from being wound up. I cannot say too much in praise of the energy shown and the wise steps taken by that gentleman on behalf of the company during his visit to Australia. Now the adjoining mine, Block 14, which has only 40 acres as compared with your (I think) 101, was in a very unsettled state at one time, and it was just a question whether it should be wound up or not. I went and examined the mine, though very ill at the time, and attended a meeting of the shareholders in Adelaide, at which it was determined that certain definite action should be taken with regard to the directorate, &c. I daresay there are Australians in this room who will recollect what took place on that occasion and at subsequent meetings. The result of our action was that we put the mine into a thoroughly good state. I was not a director, for I have always declined to be a director of mines, but I assisted in every way in my power in putting things right. The result is that Block 14 is now in a very good position, and is paying regularly on its capital of 100,000 shares at 5s. each, 18d. per month. It was proposed at one time, as it has been here, to water it by an issue of 20,000 shares, or 20,000% in money, but I most strenuously opposed it, and got a sufficient majority of shareholders to vote against the proposal. It is astonishing how the directors then found they could go on without this additional capital, and they have paid their way without it, and the mine is now in a highly prosperous state.

I FEEL VERY WARMLY ON THIS MATTER,

for, knowing the mine as I do and its value, I have never sold a share, but think it would be a great pity if steps were not taken to put it into proper order. Anyone who knows the mine as I do can see the mistake that has been made. First of all, there was too much ground, and it was thought necessary to begin to develop the whole of it at once. If the directors had seen fit to develop only that portion containing rich carbonates of lead the position to-day would be better than it is. It is not very rich for silver, but it is very easily smelted, as it does not require expensive fluxes. Instead of trying to deal with the whole 101 acres at once, the board endeavoured to deal with Block 15, and left the other alone, allowing the produce of Block 15 to pay for the gradual development, and if they had not gone into the extravagant, the foolish, the wild, and I must say the wicked outlay that has been carried on at Port Pirie we should now have been in the receipt of a handsome dividend. There is nothing in the world to prevent it. The ore in Block 14 is not of a high rate, though it is yielding better ore now, but the former quality was payable simply because it had been thoroughly well dealt with. It was under the same management that, unfortunately, the British company was at the commencement, and I then had to point out (Mr. Bond will support the statement) that things were done in the management which ought not to have been done. I have recently come round Vancouver and British Columbia, and thought it my duty, as a shareholder, in this and adjoining mines to make some enquiries for my own use and for the benefit of shareholders, who may like to speak to me afterwards, as to the price of timber. I consider we have been paying altogether outrageous prices merely to put the money into the hands of middlemen in San Francisco. I say it straight—that is my opinion. It may be incorrect, possibly, but having inquired on the spot I give it to you now for what it is worth. Broken Hill Proprietary, Block 14, the British, and all those other mines along the Barrier Range, owing to the great width of their lodes, will

REQUIRE PERFECT FORESTS OF TIMBER.

Now I say it would be worth while considering whether the directors should not see if it would not be more to our advantage to contract for our own timber from Vancouver or British Columbia, in which case I venture to think it would be cheaper and of better quality. I believe these mines are going to last for generations. There is enough ore in sight, if they did not find another ounce, for a generation to work—ore actually opened up and proved by cross-cuts. Very often you hear of a mine being admirably conducted, but, unfortunately, it was not in the power of directors to extract ore, because nature had not put it there. That is not the case here, for the ore is there. I have seen it, and many gentlemen in this room perhaps have seen it—we know it is there, but the question is how to deal with it. I

know all about the labour difficulties as well as the trouble of getting good men, and "keeping them good" when you get them, for they are apt to deteriorate. You have an excellent property, but this is the twelfth report—(A VOICE: "No, the seventh")—and it does seem unfortunate that the shares are now lower than they have ever been, when the property is more valuable. There is

NO REASON THE MINE SHOULD NOT BE MADE TO PAY

with its developments of not high class, but yet payable ore, but what it requires is that it shall be managed at a point much nearer than London, and that point would probably be Adelaide. The Adelaide people are conversant with the merits of the mine, and have opportunities of obtaining information which could only be got here at immense expense and inconvenience. I suggest that the board should increase the number of directors in Adelaide, though I know Mr. Wigg has recently joined it. The cost would be little, and the savings might run into thousands of pounds. When a strike comes on it is of no use dealing with it from here, and then the cable may break down, for I remember a case in which communication was interrupted for two or three weeks. Serious issues are involved, and there ought to be more direct power given to the people in Adelaide through representatives of the board there. I do not think a person ought to be unduly critical without pointing out remedies, and, therefore, I make this suggestion, whilst at the same time supporting the adoption of the report. I am very sorry Mr. Howell is leaving, for I believe him to be a thoroughly good man. I have had the pleasure of meeting him. Mr. Patton was a pupil of Mr. Howell's, but both seem to have been over-worked. All the directors of the companies out there, I am glad to say, try to assist each other and pull well together.

ACCOUNTS CRITICISED.

Mr. RUSSELL ROBERTS: I am much obliged to the last gentleman for the interesting information he has given, and am sure the board will carefully weigh everything he has said that they have not already considered. The difficulties of the situation out there seem to be pretty well surmounted, and from the telegram read, I should say our position has very much improved, and is really stronger than the account shows. With regard to the latter I desire to say one or two words. We seem to be writing off the profit made during the past half-year against the loss sustained in the previous half-year, whereas after the Neuchatel case there ought not to be any doubt about that being wrong. Lord Justice Lindley, commenting upon a plan of making a company debtor to capital, said it was wholly fallacious in the case of a mine. In the case of a bank it was necessary capital should be preserved, and that no dividends should be paid until it was intact, but in the case of a mine, the company was formed for working out the mine and, as far as possible, making out a shell during the period of its lease when, of course, the capital was gone. Therefore it was a mistake, and there was no necessity in a mining enterprise, as Lord Justice Lindley pointed out, to take to the profits of an existing year to recoup the losses of the past year, but that was the way the directors proposed to do here. It seemed from the accounts they had made a profit for the half-year of 5,803%.

The CHAIRMAN: That is after the 8,700% had been transferred.

Mr. ROBERTS: You are putting the profits of this half-year against the losses of the last half-year, but what we want to do is to divide everything we get out of the mine, irrespective of the capital account. All you have to look at is this—have you sufficient working capital? Keep that in hand, and if you make a profit during the half-year divide it. If you look at those items, stocks at the mine and Port Pirie—six different items, making 91,417%, that is all really working capital, against which you have only sundry creditors 9,000% on the other side, so that we have working capital in hand, 82,397%. As long as you have that you ought to appropriate every profit you make to dividend purposes, irrespective of past loss. I gather we are 7,000% or 11,000% better than this report actually shows.

The CHAIRMAN: The figures are not applicable to the last but to the present half-year.

Mr. ROBERTS: You said that a certain quantity of ore had been lost and since been found, and I understood you as if that were attributable to the half-year ending June 30.

The CHAIRMAN: I cannot have said so.

Mr. ROBERTS: Instead of showing 2,700% to the bad we ought to show 5,800% to the good, which would put the shares in a better position on the market. If we are making 20,000% a year

THERE OUGHT TO BE A DIVIDEND OF 2 PER CENT.

I wanted to ask the chairman whether anything has been done with regard to the renewal of the lease. We have a lease for 15 years, of which four or five have expired, and your secretary showed me the mining law, which says that "the Government shall renew the lease upon such terms as shall be agreed upon," which means nothing at all.

The SECRETARY: The original lease was for 21 years, of which about six have expired.

A SHAREHOLDER: This is new to me. Is it really the fact that our lease has only 16 years to run?

THE LEASE.

The CHAIRMAN: The mine is held upon the same terms and conditions as all mines in the Australian colonies, that is, on a renewable lease. It is of no use 14 or 15 years ahead to approach the Government. They would not undertake to deal with the matter so far forward, but the Government have a lively sense of what is due to the industrial operations carried on, and we have not found them in any way exacting or harsh, so that we have no reason to suppose that when the time comes for renewing the lease it will not be renewed upon such terms as are reasonable, and under which we can continue to make a profit. The

MINES ON THE BARRIER RANGE ALL ACT TOGETHER

in that matter. There is a Mining Association whose united efforts are brought to bear upon the Government in any question affecting the common interest. I think the question should be left until the proper time arrives. With regard to the remark of Mr. Roberts as to our writing off the profit made during the past half-year against the loss sustained in the previous half-year, I will not venture to dispute his legal dictum. He may be quite right, fortified as he is by the opinion of an eminent judge, but what I do say is

that if that principle is to be brought into operation, you will have to alter the accounts of nearly all the mining companies of London. I feel quite certain that our auditors would not have allowed us to divide that 5,803%. while there was the previous debit existing against profit and loss. If we were to tamper with the integrity of our capital account, it would produce not a favourable but an unfavourable impression upon Stock Exchange quotations. (Cheers.)

AS TO MR. ERSKINE'S REMARKS,

there are no lines of comparison between Block 14 and our mine, and the fact of them being adjacent does not prove that they are working under similar conditions. I wish they were, for Block 14 has been more fortunate than we. When we were smelting at Port Pirie our ore averaged from 15 to 18 ozs., whereas theirs, I understand, averaged 22 ozs., which makes all the difference between profit and loss. He says there has been great mismanagement, but we have had the most eminent men in the business in the colony at the head of our affairs—Mr. Patton first and Mr. Howell afterwards, and it is an indictment of Mr. Howell to talk like this—the very gentleman whose services in another part of his speech he extolled. (Laughter.) If anyone will tell us how to manage better than we do we shall be glad, and as for the transference of the business to Adelaide, unless I make a great mistake the London shareholders would very much object to it. (Cheers.) We have endeavoured to meet the wishes of the colonial shareholders who are the dominant body, but it is one of the disadvantages to which they are subject that they brought out this company in London, and therefore

THE MANAGEMENT MUST REMAIN HERE

and cannot be altered. (Cheers.) If this gentleman will use his influence with the local directors, who may be called "our spending department," to enforce economy, and bring to their notice such a matter as the direct import of timber from Oregon or Vancouver, no doubt he will do a great service. It is difficult to please everybody. He said we are trying to develop too much, and why not leave Block 16, and confine ourselves to Block 15. Now, if there is one thing on which colonial shareholders have more insisted than another it is that we should go on developing and exploring Block 16, but that, of course, is a costly business. Our chief operations are confined to Block 15. It is there the crush took place, and it is from there that the ore is being extracted, but, at the same time, we see no reason to neglect the large property we hold in Block 16, which we mean to develop to the best of our resources. (Cheers.)

The report was unanimously adopted, and the meeting ended.

LATEST CABLE.

"During the week ending Oct. 29, 482 tons of ore were treated (including 77 tons of iron ore), yielding 77 tons lead, containing 3,856 ozs. silver."

IDAHO MINING COMPANY, LIMITED.

A YEAR OF UNSUCCESSFUL WORK, BUT BRIGHTER PROSPECTS AT THE PRESENT TIME—CONFIDENCE EXPRESSED IN THE CHAIRMAN—RECRIMINATIONS WHICH RESULT IN A FIGHT AMONGST THE CHAIRS.

THE ordinary general meeting was held at Winchester House, on Thursday, to receive the accounts of the company to Dec. 31 last, to elect a director or directors, and auditors, and to transact any other business which, under the articles, may be transacted at an ordinary meeting.

Mr. George H. Perks

(chairman of the company presided).

Mr. N. P. RYLEY (secretary) read the notice of meeting.

FULL STATEMENT OF THE COMPANY'S AFFAIRS.

THE CHAIRMAN: Gentlemen, this is the first annual meeting of the company, and I am sorry that the balance-sheet and report I have to present are not at all bright. The report of the board is very brief—advisedly so—because we found once we began it was difficult to know where to stop if we were to convey to you all the information you should have, and so it was left for me to give, by word of mouth, a full report of the work done last year, and, I may say, up to the present time. I will deal in my verbal report first with the work done during 1890; then I will go into the figures of the balance-sheet, and explain them, and afterwards will give you a further report of what has been done during this year, thus bringing matters up to date. Then will follow the ordinary business of the company. In the first place, when I last had the honour of meeting you I told you that Capt. Hambley and the staff had proceeded to Idaho to carry out their work. His duties were to liquidate the debts of the old company over there, and then to proceed to work on certain lines which we gave him. He arrived early in May, and proceeded at once, in consultation with a lawyer from Salt Lake City, to enter into all the claims which had been sprung upon the company. Some went into the law courts, some were compromised, and some were repudiated. He then

WENT TO THE MINE AND STARTED WORK.

The old workings were followed in the Overland tunnel, and while doing that he made a close inspection of the whole property, as to which he sent a very full report, which gave us a better idea of what we possessed than ever we had before. It would be too long to read it, but it is at the office for inspection. In June and July he still continued work on the Overland tunnel, and at the same time began to open up work on the Overland shaft. Then, in the inspection he had made of the different claims, he thought it advisable to try Crown Point lode, where originally a cross-cut had been made. He did certain work upon that and also upon the Independence claim, which was merely assessment work, in order to keep the claim good. I am trying to give you events chronologically, so that if I leave Capt. Hambley's work now to deal with another subject, you will understand it is for that reason. Just about this time (June or July)

WE WERE APPROACHED BY SEVERAL SHAREHOLDERS

with the request to allow an engineer, resident in America, to inspect

the mines for them. They had been told they were good, and wished to become interested in them. We considered the position, and concluded it would be rather unfair to the shareholders to allow this inspection, because if the property turned out to be very good, these gentlemen would know it; they would pick up the shares quietly, and then the holders would regret that they had parted with them. We refused such a proposition, but said if they took up shares first, and came to us in the character of important shareholders, we could not prevent them from doing as they wished in the matter of sending an engineer to inspect the property, and we named about 10,000 as the number. They took these up, with the result that we came to an arrangement with them that Mr. Begbie should be our consulting engineer to assist Capt. Hambley, the latter being manager, and conducting operations, and the former to visit the mine from time to time, give his advice, and in case of dispute refer the matter to London. Work was proceeded with on the Overland tunnel and shaft, and at Crown Point the old cross-cut was driven 30 ft. north, and a new cross-cut made at the back of the hill, of which 15 ft. were driven. The Julia north-east drive was, at the same time, continued towards the Crown Point lode where it was supposed to exist, and a new cut was opened on the Independence claim. We now come to Sept., during which more work was done on all these points. About this time Capt. Hambley reported that several miners were on the hill seeking to make locations, and he thought if they were not prevented they might set out pegs on certain spots uncovered by the company's claims, which might be in between two or three of them. He, therefore, recommended that fresh plots should be pegged out and registered so as to consolidate the company's property and prevent any man pegging out the ground without trespassing. Thus three new claims were pegged out and registered, and assessment work was done. Further work was done in Sept. on the Julia north-east drive (65 ft.), and on the Independence cross-cut, and provision was made for winter working, and houses were put up for the men at the mouth of the Overland tunnel. A report from Capt. Hambley came about that time as to discoveries he had made on Crown Point lode. Briefly he stated he had found in the workings on Crown Point a certain amount of gold. He made tests and took samples from so many tons, the average yield being about 9 dwts. per ton. If a lasting vein of this character had been found, then we should have had a profitable mine. He said he would like to cut the Crown Point lode at about 200 ft. below the present workings, in which case he would have had an immense amount of backs to work upon, but we had a different report from Mr. Begbie, whose views differed entirely from those of Mr. Hambley. We cabled out. You can easily imagine our difficulty in such a case to get a true grip of the property in the midst of these conflicting ideas. Our cable

ASKED AN EXPLANATION AS TO THE DIVERGENCE OF OPINION,

and the reply was a reiteration from Capt. Hambley, that his statements and estimates were correct. We felt bound, in the face of what he said, to support him, and we cabled money for the winter stores to allow him to pursue his work of tapping the Crown Point lode at the 200-ft. level, and we also knew that samples were coming over. We hesitated as to sending out the report, but decided, rightly or wrongly, to do so, and you have had it. Almost immediately after that circular went out we received the samples and had them assayed by Johnson and Matthey, and also by Claudet, and they were, I regret to say, perfectly barren. We had them assayed at two places so as to make sure of a right test. We cabled for an explanation as to the discrepancy between the report, and the results of the samples sent, but could not get it. I was disposed to look upon this as a mark of honesty on Capt. Hambley's part, because, if he had wished to deceive us he would not have sent such samples as these. We could not succeed in getting an explanation. Meanwhile, more work was done in Oct. on Overland, and at Crown Point shallow adit (70 ft.), and on Julia drive (44 ft.). We made a cross-cut also 23 ft. from the north-east to find the vein, and in Nov. work was continued at the shallow adit of Crown Point. Our letters and telegrams to the manager for explanations were so pressing, that very likely he may have felt annoyed, disappointed, or discouraged, but, at any rate,

HE RESIGNED,

and his services terminated on Dec. 31. I now turn to the balance-sheet, after which I shall revert to the mining work of 1891. Taking the debit side, you have the capital 250,000%, but all the shares have not been issued. Of the 224,500%, paid, we have received 215,760%, and the calls in arrear are 3,166%, plus a small amount called a "suspense account," which gives a total of 215,775%, which is purely a nominal figure—the nominal value of the shares in the old company. Premium on shares yielded 243%, and there are sundry creditors 378%, which have been liquidated. On the other side we have 189,161%, the value of the mines, land, buildings, plant, &c., taken over from the old company—another nominal sum. From that you have to deduct cash at mine, and in London transferred 89%, which leaves 189,072%, as the sum represented as paid by this company to the old company. We have to add to that liabilities of the former company, 11,847%. I am glad to see the property is now quite free, and without outstanding claims to my knowledge. Some of the claims made against us were absurd, and were dropped when they saw we meant to fight them. We come to preliminary and formation expenses, 5,925%—a sum largely in excess of what it should be in reality, as a portion of it is merely nominal. For instance, 2,000 shares were credited 18s. 6d. paid, or 1,850%, but it was not that amount to be paid, but 2,000 shares at 1s. 6d., so that you must wipe from the 5,925% at least 1,700%, that being really paper valuation. Expenditure in Idaho on materials and stores, salaries, wages, and travelling expenses, with office charges, &c., have amounted altogether to 4,736%, whilst those in London have been 2,466%.

THIS EXPENDITURE REPRESENTS NOT 12 BUT 14 MONTHS.

The directors' fees are 1,226%, but at that time the board numbered five, whereas this year they number three, as two of the directors retired early in the present year. The other items do not call for comment, but we have stores and materials in Idaho, 1,336%, sundry debtors, 89%, and cash in London and Idaho, 903%, making a total of 216,397%. I am prepared to give further information on the accounts should it be desired, and I now revert to the mining work of 1891.

Towards the end of last year Mr. Begbie, finding Crown Point lode had been unsuccessful, suggested, rather in a pressing manner, that we should

ACQUIRE THE BUCKHORN MINE,

and we were also pressed by the gentleman whom Mr. Begbie originally represented, and also by a number of shareholders. That meant risking some of the company's money in a property distinct from Idaho. The first thing we considered was whether we had power to do this, and finding we had we called together a private meeting of the shareholders who represented 100,000 shares out of the 220,000 shares, which forms the capital. I can only say I wish now we had called all the shareholders together, as it was our intention originally to do. Still the request that we should work the Buckhorn Mine seemed a sufficient warranty to consider the matter seriously, and we did so most carefully. Figures and statements by letter and cable from Mr. Begbie were forthcoming, and up to that time his opinions had been sound, and we felt confidence in him, and especially the people who had introduced him to us felt confidence in his judgment. It was, therefore, resolved to

ENTERTAIN THE PROPOSITION,

which was fair, provided the property was sound, for it was to be taken over by payments spread over two years. We have a statement from Mr. Begbie stating he could produce out of the property sufficient to put aside 50 per cent. of what he had to pay for the working expenses, and the other 50 per cent. might go to pay off the instalments as they occurred. We used all precautions, and decided, in conjunction with the shareholders' committee, appointed by the private meeting, to enter into this business. We took possession on Jan. 1, and work was commenced by Mr. Begbie with great goodwill. He worked up till May at the property, which is 8 miles from the railway and about 12 miles from Salt Lake. Large quantities of ore had undoubtedly been obtained formerly. Regular shipments had been made, yielding so many thousand dollars, which had been credited to the owners of the mine, proving there had been a large amount of good stuff got out of it, and Mr. Begbie felt sure that the pipes or shoots of ore which had nearly cleared out above at the time he took possession continued in equal value at the lower depth, and his object was to tap them there. He did find some ore in small quantities, but not the shoots he expected, and, in short, he found he had been deceived. What he got there afterwards was afterwards sold for a matter of 200¢, or 300¢. In May he said, "The property is not worth what it was originally bonded to us for, and

I ADVISE YOU NOT TO GO ON WITH IT,

unless these people reduce their price." They refused, and we abandoned the property. Meanwhile we were doing a certain amount of work at Overland south-west level. We were hoping that if the Buckhorn property turned out successfully it would have enabled us to work the Idaho in a different manner. Later in the year we had the advice of a gentleman who is manager of the Washington Mine close by, which is paying well. He examined our mine in a friendly way without a fee. He went through nearly the whole of the workings, and particularly those upon which Mr. Hambley had been engaged. He found that the drive Capt. Hambley had been making of nearly 200 ft. on the Overland in order to tap the Crown Point lode was

ON A SIDE VEIN,

and that therefore it was useless to continue it. He recommended driving in another direction 200 ft. to tap that lode. Before deserting the old workings he pointed out a spot which looked likely to pay, but which had been overlooked. He recommended them to sink a few feet, but before proceeding far they found small pockets of silver. They sank 12 ft., and found the ground still good, but went lower down the hill 30 ft., and drove a short tunnel to tap it at a lower level. I will read you the letters on the subject. (These were to the effect that the ground was steadily improving; that miners were of opinion the ore would carry \$60 to the ton, and closed thus—"We certainly think there has never been a better showing on this hill before for a permanent paying lode.")

A SHAREHOLDER: What is the date of that report?

The CHAIRMAN: Aug. 26. I have a letter (Sept. 2) stating, "Since our last we have sunk 3 ft. deeper, and concluded to drive on the course of the ledge. We accordingly have gone down the hill further and put in a tunnel 30 ft. in length, and commenced driving under the hanging-wall. Therefore, there is no change in the rock since ours of last week. The present width of the ledge is 8 ft." On Sept. 23 he writes, "The ground in the Crown Point lode has been very hard, but the men have worked well and good progress has been made, mineral exists throughout the rock, but not sufficient to value, assaying 2½ ozs. to the ton. It is improving as depth is attained." The letter concludes: "This is the best-looking strike made on this mountain." Now we have had favourable reports such as these before, but I think

THIS LOOKS MORE LIKE BUSINESS

than anything we have ever yet seen. Hitherto the property has deceived everyone who has visited it. The outcrop is so bold and striking that a man is impressed with the idea that there must be a huge quantity of mineral below. When one comes to try the different outcrops, in nearly every spot metal can be found, and, therefore, everyone who has looked over the property has given a hopeful report, but we have not succeeded as yet in finding anything that will pay to work. Now and again we have had pay ore 2 ft. or 3 ft. wide, and next week it has pinched out to nothing. The pockets are small and the veins are thin. From present appearances, it seems as if the ore has departed from its character of poorness, and the veins from their thinness, and that the one is becoming more rich and the other wider—in other words, the precious metal is now becoming more diffused throughout the ledge. If that continues it gives a prospect of a very good and lasting mine. I sincerely hope it will improve. I now move the adoption of the report and balance-sheets. (Cheers.)

Col. MOFFATT (director): I second it.

DISCUSSION.

Mr. COWPER (Middlesborough): The chairman has not told us the position of the company to-day, which would be far more interesting in a balance-sheet like this, which we ought to have had in our hands

nine months ago. The balance-sheet is certified on June 22 by an accountant, and why have the shareholders been kept in the dark? Shareholders should have met a little earlier than Nov., 1891, to consider accounts made up to the end of Dec., 1890. There must be some reason why the board have not taken the shareholders into their confidence earlier. Has any gold or silver even been extracted from these mines except from the samples? If so, what quantity, and how has it been dealt with? The balance-sheet does not give what we have spent to get the ore, and what the return has been. I became a shareholder

BECAUSE OF MY CONFIDENCE IN THE CHAIRMAN.

He comes from the North, as I do. He had many friends there, and has them still. I do not wish to say a word against his integrity, honesty and fair dealing, or even his ability in certain directions, but I do stand here as a disappointed shareholder, and my disappointment is traceable greatly to the want of ability shown by the board, who have left our capital in the hands of people on whose reports they could not rely. We started in the old company by erecting gigantic machinery, such as is not to be seen on the whole continent of America, before we found the quartz. That is what our directors did. In the new company we have dropped the words from our title "gold and silver" (quite wisely), and we have gone in for mining. (Laughter.) It looks to me as if we should have to re-construct again—in which case I suggest that the name of the company should be

"THE IDAHO SINKING AND DRIFTING CO."

(Laughter). In the North we are not accustomed to get rid of our capital in this way, and I shall be glad of an explanation from the chairman.

COL. BRYCE: I should like to echo the last speaker's remarks. I think it is to be regretted you did not publish the balance-sheet as soon as certified, instead of waiting to the end almost of another financial year. (Cheers.) There can be no excuse for this delay, in respect to a balance-sheet involving an expenditure of under 5,000¢; and, moreover, for every 20s. we have spent in Idaho we have spent 10s. in London in the shape of salaries—a sort of thing that cannot go on. We have only 6d. more to call, which will bring about 6,000¢, and as it costs 7,000¢ to work this concern, we must really be insolvent to-day; therefore, why should we go on? The directors' own report condemns themselves, and also the shareholders for allowing such a state of things to exist. I blame the directors for proceeding to work the Buckhorn Mine without calling all the shareholders together. My small interest (assuming I am only a shareholder for the sake of argument) may be of more consequence to me than the thousands of shares held by richer men.

"LOGIC."

We might have passed the matter over if successful, but as it is unsuccessful we say that the directors should have called us all together. (Laughter.) Unless we have some better information, the sooner we bring this company to a close the better. In any case we ought to have a balance-sheet to the present date.

CHAIRMAN HAS DONE HIS BEST.

The CHAIRMAN: My position is that of a man who has done his best, but whose best has resulted in failure from circumstances over which he has had no control. If we had only been a little more fortunate, and had the dollars over here instead of sending them there we should have been met with smiling faces. I may remind you that it was at the earnest wish of a number of original shareholders that I accepted this position, but they must have known I could not make the property yield what it does not, or may not, possess; for I still believe the ore is there, and that by diligence we shall find it. Mr. Cowper comes from a mining district, and knows that however carefully you make your calculations, once you begin to estimate what is below, you may be wholly at fault for a property like this is totally different from a coal mine, and also from the Cleveland ironstone, of which he knows so much. Mining is a pure lottery, and shareholders must understand it. I have been asked what are the prospects, but I have stated all I know and believe. I am trying to keep down expenses, and hope, with present funds,

WE CAN GO ON FOR ANOTHER TWO YEARS.

If we do not find everything in that time I shall begin to despair. If any wish is expressed that I should retire, it will be a welcome intimation to me. (Loud cries of "No.")

Mr. LOTT: The 20s. subscribed by the old shareholders, so far as we can see, is gone, and the new capital was subscribed for further exploration, and that was the point at which I joined you. Nothing has been found. Some persons have asked for full information, but we have had it. (Cheers.) There are small pockets, and these may develop into something better.

I HAVE CONFIDENCE IN THE CHAIRMAN,

and we all know he has done his best. (Cheers.) He tells us we can go on with our present money for two years, and the statement is true as made to me the other day, "In mining you cannot see beyond the point of the pick." But let us be practical:—Can we not effect economy by limiting the fees of the directors to 300¢, instead of 1,226¢, which is far too much. I believe no fees were paid at all until last Oct. I put that as a proposal, and ask some one to second it.

A SHAREHOLDER: What sum have you at the credit of the company to-day?

The CHAIRMAN: I made a careful calculation last night. We are remitting regularly \$600 or \$700 per month, which pays all expenses of the work being done. I quite coincide with Mr. Lott's resolution. (Cheers.) If we have no accidents (which I do not anticipate) I think we can go on for close upon two years.

Mr. MARDEN made an attempt to reduce the fees to 50¢ a year but failed, the whole meeting being in favour of 300¢.

ASSERTIONS

Mr. MARDEN said that Col. Moffatt and the other directors were appointed by Mr. Tarn, the acting solicitor, at a time they did not hold a share in this company—their only interest being in their fees; but afterwards they bought 100 shares each at 1s., and so were interested in the company to the extent of 15¢ each. It is time this was stopped. He was one of the largest and oldest shareholders.

DENIALS.

Mr. TARN : I absolutely deny the statements made by Mr. Marden. In the formation of this company not a single restriction was put by me upon anything that was done, and all that was done was with the consent of every person who could be consulted. The new directors were brought in to supply new blood, because influential shareholders would not serve.

The CHAIRMAN said he hoped that personalities would be avoided. He need not put Mr. Lott's resolution, as the directors would accept it. The mill was run for two or three days, and silver was obtained, which was bought by a man who boasts that it is the first silver extracted from Idaho. We have also had a small return of gold. My calculations of two years are based on not receiving a single dollar from the mine.

10 O'CLOCK AND 11 O'CLOCK.

Mr. WOLLASTON : I only hold 100 shares, but I have paid my calls. Now, Mr. Marden, who holds 1,562 shares, up to 10 o'clock this morning had not paid his calls. (Cheers and laughter.)

Col. MOFFATT : It is mainly through Mr. Marden that we have made our Buckhorn mistake. You would not have been the losers by that if it had not been for that gentleman. I hold 100 shares, on which I have paid my calls to date, but up to 11 o'clock to-day, Mr. Marden had not paid his calls. I have a bit of advice to give to that gentleman—as long as he lives in a glass house let him not throw stones. (Cheers and laughter.)

The auditors, Messrs. Monkhouse, Goddard and Co., were re-elected at a fee of 25 guineas, and a cordial vote of thanks was passed to the chairman.

A SCENE.

A moment or two later a loud altercation was heard between two of the shareholders, which resulted in a personal fight, in the course of which one of them seemed to have been somewhat seriously injured.

THE YURUARI CO., LIMITED.

A STORMY THREE HOURS MEETING IS FOLLOWED BY A POLL—THE RESULT.

THE third ordinary general meeting of this company was held at the Cannon Street Hotel, on Wednesday, for the following purposes :—To receive the directors' report and accounts ; to elect directors and auditors, in the place of those who are retiring ; to fix the directors' remuneration, including their remuneration since June 30, 1890 ; and to transact the ordinary business of the company.

Mr. Hugh Watt, M.P.

(chairman of the company), presided.

Mr. SLADE (secretary) read the notice of meeting.

The CHAIRMAN, who was received with cheers, said : Upon the present occasion I intend confining my remarks within as narrow a compass as possible, for several reasons, but would first venture to make one observation as to what has appeared in the Press about the call. At the time the call was made (Feb.), it was stated at the meeting which took place in Mar. that 15,000*l.* of it had been forestalled—that is to say, the directors had granted their personal acceptance for 5,000*l.*, and that 10,000*l.* was due to me. For the 10 months since we have been going on with 15,000*l.*, but have had great difficulties to contend with, because a section of shareholders advised the proprietors not to pay up. The result has been that collection was difficult, and upon 15,000*l.* the mines have been since subsisting. As to the work done, I find, not only from Mr. Pryor's statement, but also from that of his successor, that about 12,000 tons have been raised from developments in Water shaft. That, however, I regret to say,

DID NOT PROVE TO BE REMUNERATIVE QUARTZ.

Assays were made every month and fortnight, or whenever the quartz appeared to carry gold, with the result that Mr. Pryor reported there was no quartz in the mine which would pay to crush. We have, therefore, a heap on surface of 12,000 tons of unremunerative quartz. That was a very great disappointment. (Hear, hear.) I am not going to trouble you with ancient history, but so far back as 1886 we were told that the future of the property depended upon Water shaft, for the reason that the lodes ran east and west, and, consequently, as you approached Water shaft it was expected, being to the dip of the property, that the quartz would increase in gold. With regard to the balance-sheet, you will see that on June 30 we had, in round figures, in London 2,200*l.* We had also calls unpaid, but very little of that has been received. We have tried every means, by circular and letter, to get in these calls, but they have been refused, or the persons cannot pay. Consequently, we had little more than the amount named in the balance-sheet in London. The Venezuelan amount represented the wages for Mar. and Apl. On July 2 we remitted to the mines 1,000*l.* I find on looking at the bill book that the bills drawn upon London to date amounted to 2,000*l.* Besides that we have had to send our regular supplies of stores and stocks to the mine. You can easily understand, therefore, what I am now going to state, that we are now without funds. By last mail something like 500*l.* of bills were drawn by the manager. As to expenses—when the present board agreed to act as a committee, in no sense hostile to the original board of the Chile Co., but because the directors did not see their way to finance the property, we were so deeply in debt that they considered the only alternative to be to allow the property to fall into the hands of the debenture-holders, and then the question arose, and was solved by the present board, as to whether we should allow this or finance the company. We did the latter and saved it. (Cheers.) There were difficulties in the former company which are not to be found now. We had revolutions, droughts, and causes external to ordinary mining, such as I venture to say it required great financial strength and otherwise to overcome. We overcame

them, but subsequently found it desirable to found the Yuruari Co. I need hardly say it would have been

VERY MUCH IN THE INTERESTS OF THIS BOARD

never to have formed that company, because three months before, when the shares were selling at 10*s.*, they might have cleared out, and washed their hands of the whole affair. The proof that we believed in the property is that we re-formed the company. (Cheers.) At the time of re-construction there was not 6*d.* in the coffers, and the chairman stated that they had done everything conceivable, whilst a well-known gentleman in the City made the observation that "he would as soon be in hell as be a director of this company." (Laughter.) The task of my colleagues and myself has been no ordinary one, but though we have kept the company going, we have not been able to pay dividends. The appearance of things at the time the Chile was in difficulties was all that could be desired. The three succeeding returns from the mine amounted to 10,000 or 11,000 ozs., and notwithstanding the fact that the expenses abroad were nearly 10,000*l.* a month, that left a profit of about 10,000*l.* I think, therefore, the present directors were justified in considering the mine had a future and in re-constructing the company. We know the result. We know the mines are rich in parts and poor in parts. For the first year of New Chile we obtained little short of 100,000*l.* value in gold, which barely paid expenses. Conditions are now entirely changed. At that time I remember the armed conveyance to the port used to take down 30,000 ozs. of gold per month, but last month that had fallen to one-tenth of the amount. Of course El Callao was the foundation, so to speak, and centre piece of the whole territory. Everything was *coulour de rose*. The amount paid to the miners was a matter of indifference. I remember well when we were doing our best to cut down expenses, saying 10,000*l.* per month was preposterous for a mine like this, and we got them down to 8,000*l.* and 6,000*l.*, and now we have gone on for 10 months, at a little more than the rate of 1,500*l.* a month—a sum simply incredible at that time. The position now seems to be this, that you have everything focussed near Water shaft. You have the work carried out, which would have cost 50,000*l.*, with the exception of further work, which has still to be done. I sent you a map so that you might know and judge of the position as to the future of the enterprise. I think I am right in saying that No. 161 and downwards on the map shows how the lode runs. We are told by the last report, confirmed by Dr. Martinez Mayz, that

THERE IS A LOT OF VALUABLE QUARTZ

which is not available, except by Cenicero shaft. The distance is about 1,000 ft., so that to win and raise that quartz would be most expensive ; but an expense of 2,000*l.* would be sufficient. A winze could be sunk to No. 9 level, now available from Water shaft, and in my opinion there is a great future for the company. I am not going to enter into the matter of the extraordinary meeting now, but will say that that scheme has been proposed because the directors still earnestly desire the company shall be successful. They respectively suggest that at great outlay and with considerable loss to themselves they have

BROUGHT THIS ENTERPRISE TO THE POINT OF SUCCESS.

I have been asked by quite a hundred shareholders whether we think the concern has still a chance, and my answer is this scheme of re-construction, which would not have been proposed unless we believed in the mine. I have presented this scheme at my own suggestion. There is not the shadow of a desire on my part to be liquidator. Appoint whomsoever you will. (Cheers.) I desire nothing except the company's success, but to achieve it

WE MUST HAVE UNITY.

(Cheers.) If we do not have unity, then the matter is over. (Renewed cheers.) A house divided against itself cannot stand. I am leaving your company, but I have nothing to be ashamed of. (Cheers and hisses.) I will go further and say, I have nothing to be ashamed of in my whole career. (A VOICE : "Maxim-Weston and Port Darwin.") I will discuss these concerns with anyone. (Cheers.) If gentlemen are going to aim insinuations at my head I am willing to fight. (Loud cheers.) We have the proxies, and Dr. Aldridge has not got what we have. We have obtained proxies for over 360,000 shares, and we have also obtained promises from friends to attend the meeting, who represent (with the proxies) very little short of half a million of the stock. The proxies sent in by the opposite side number 200,000 or 190,000, and some of those sending them have actually sold their shares ! If we have not a three to one,

WE HAVE AN OVERWHELMING MAJORITY,

as far as the ordinary meeting is concerned. I want to see the company carried on under a consolidated board. I am willing that three of the gentlemen representing the 190,000 shares should constitute a board, with, say, four of the majority. What I have been told is this : if you all support the scheme it can go through—if not, the company will go into liquidation. This is not with me a personal matter, and I hope, if it be legally possible, this meeting will close my connection with the company. (Hear, hear.) I do not object to "hear, hear," and I do not deny that if shareholders lose money they must feel sore about it. I deeply regret I ever went into the Yuruari re-construction, for I have lost severely. I hope we shall have unity, but I shall not with impunity allow insinuations to be hurled at my head. If you want to fight, I am here ; but from a letter I have received it is not the wish of one gentleman, at least, who signed the circular, that there should be fighting ; and I agree with the substance of his letter. One honourable proprietor, who has been for nine months my consistent opponent, Mr. Robert Walker, desires in his letter that this meeting should be conducted in a gentlemanly and business fashion. (Loud cheers.) I will, therefore, not be the first to throw a stone, but if stones are thrown at me I will endeavour to protect myself. I am perfectly prepared, and I say so now, because I will not attempt to take a poll at the next meeting if the opposition persist. We can carry the present meeting, but it is upon the extraordinary meeting that I now venture to make, as I am desired by Mr. Walker and others, an appeal. I am told I have been headstrong, but now I am prepared to yield, and would suggest that Dr. Aldridge, Mr. Walker, and Mr. Newman, shall be three directors as representing the minority, and that the other directors, excluding myself, should represent the majority. The whole company will be then represented on the board, and it will remain what, without exception, it is—the most powerful mining

company in the City of London, notwithstanding its misfortunes. If the opposition will tell me what they think of this *modus vivendi*, I think the meeting can end in peace and for the benefit of all concerned. If they do not wish to accept this, for my own part I think it is useless prolonging the company, and so let it go into liquidation. It is for you to say.

PERSONALLY I AM INDIFFERENT.

I am not open to be abused and vilified at any price. At the meeting in Mar. I was told I had conducted it in a gentlemanly way, and that whatever was said against me I had said nothing in return. (Cheers.) All I want is to know whether the opposition assents to this proposal, for I have a wish, if possible, amicably to terminate this matter, and I have arrived at this conclusion on my own responsibility. (Cheers.)

Dr. ALDRIDGE: May I ask clearly whether the chairman means to resign, and the old directors also are to resign, and that others are to take their place?

The CHAIRMAN: The proposal at the extraordinary meeting will be that the company be wound up, and transferred to a new one, so that it will cease to exist.

Dr. ALDRIDGE: Will you resign here?

The CHAIRMAN: I am afraid Dr. Aldridge has not had great experience of public companies.

Dr. ALDRIDGE: I have had a great deal, so don't you make that remark.

The CHAIRMAN: I understood the objection was to my being liquidator. I do not wish to be so. The company must go into liquidation because it cannot pay its debts. I have had to give an undertaking to the bankers to meet various requirements. There are 500% bills from the manager, and a few indents here, and 1,500% or 2,000% of debt at the mine. The company, therefore, cannot, by reason of its liabilities (comparatively trifling it is true), carrying on its business.

Mr. NEWTON: The question is whether the company shall go into voluntary or compulsory liquidation, for there is a difference between the two. In the case of the latter there will be a full investigation, which the registrar said lately was as searching and as thorough as an examination in bankruptcy.

The CHAIRMAN: If you desire compulsory liquidation, I have no objection.

Mr. NEWTON: I do not put it in that way. I think the chairman should let the new directors be nominated.

The CHAIRMAN: They have not given 14 days' notice, according to the terms of the articles.

Mr. NEWTON: Your articles allow directors to elect their successors.

The CHAIRMAN: We will not do that.

Mr. NEWTON: You can elect those gentlemen if you please.

The CHAIRMAN: You hold only 10 shares. Any questions with regard to the balance-sheet I shall be pleased to answer, and I now move "That the directors' report and accounts be received and adopted."

Genl. BARWELL: I second the motion.

AN AMENDMENT TO THE REPORT.

Mr. PROFFIT: I move an amendment: "That a committee, consisting of Messrs. John Henry Aldridge, Walter Newman and James H. Stewart, with power to add to their number, be and are hereby appointed a committee to examine into the affairs of the company, with authority to engage professional assistance, and to report thereon to the shareholders, and that this meeting be adjourned to Dec. 4 next, at 12 o'clock noon, at the Cannon Street Hotel, to receive such report." The chairman has endeavoured to meet the difficulties with which he is surrounded in this case, but my amendment, I think, will solve them. He can scarcely expect after what has passed that the shareholders are going blindfolded to wind-up this company without examination of the past. We want to know whether it is worth while to re-construct at all. If the company is exploded, what use is there of wasting any more money. If otherwise, the shareholders will doubtless be prepared to find money to carry it to success. If it is to go through, we must act as a united body, but it is scarcely fair to expect the dissentient shareholders, whom the chairman calls a "minority," but whom I call a "majority," are going to place themselves in his hands. The shareholders in this company are over 5,000 in number, and we have at least 300 here. They live in all parts of the kingdom, and many of them regard this concern as so hopeless that they do not take the trouble to read the circulars that are sent to them. The committee have operated upon a list 12 months old, and have received the support of 200 shareholders, more or less, representing 200,000 shares, or an average of 1,000 shares per head. That is a very substantial support when you consider the difficulty strangers have, as compared with directors, in getting proxies. This company is practically coming to an end, and I have no doubt the board are anxious to have

THE SLATE WIPED CLEAN.

It may be that the slate is clean, but, at any rate, we are entitled to preliminary inquiry to see if it is. What I suggest is that the chairman has taken during the last 12 months 1,000% for himself without the slightest authority. His answer is that his co-directors have voted the amount. A more preposterous suggestion could scarcely be made, that one director should receive from the others the benefit of a vote like this. We are told it is done under the articles, but in a re-construction the chief re-constructor can frame the articles as he pleases. At present no shareholder holding less than 100 shares can vote, and an extraordinary meeting cannot be called unless those convening it hold 25,000% of fully-paid up capital. As these are half-crown shares, that means 25,000% multiplied by eight. Just consider the proportion necessary to call a meeting. You could not get the signatories, but you are not going to be led into a new company under such circumstances. Under the articles the board had a right to appoint a managing director to June 30, 1890, at a salary of 1,000%. The chairman received it, and in Dec., 1890, meeting you passed the accounts, and that is done with. There was no power of this kind after June 30, 1890. What is the excuse of the chairman? Under another article the directors have the power to appoint a manager, and the chairman says, "I act as manager, and as such am entitled to receive 1,000% a year, which the directors have voted." I ask you, as men of sense, do you think that will hold water for a minute? Now, this company did not take over all the assets of its predecessor—a certain portion of them were left out.

THE EUREKA PROPERTY.

Why was it left out? There was no reason that I can see, for if this company can hand over its assets to a new company, why could the former New Chile Co. not hand over its assets to Yuruarí? It is admitted the liquidator of the old company was anxious to part with it, and that a gentleman named Allingham, who is the clerk to Mr. Watt's private solicitor, was put forward as the purchaser of Eureka for 600%. It is admitted, before the purchase, that the liquidator wrote to Mr. Watt and told him that if no other offer were made he would accept this one of 600%. A sale was made to Allingham, and within the next day, week, or month, Allingham re-sold it to the company for 100,000 shares of 2s. each, at the market price (10,000%), a property for which he had given 600%. It is admitted that Allingham was representing a syndicate, of which the chairman was a member, and I suggest that from first to last Allingham was simply Mr. Watt, your chairman. The latter says, that before the bargain was carried out he went to the board meeting to his colleagues and

TOLD THEM FRANKLY THE WHOLE POSITION,

and said he could not vote; but let him have a record put on the minutes that he was interested, and the three gentlemen sat down and voted that the property should be purchased for 100,000 shares, without communicating it to you. Within a few weeks the bargain was carried out and the shares were transferred. Mr. Allingham attended by his proxy at the last meeting, and voted in favour of the directors, but not a single word was put in the report or in the accounts that that transaction had been carried through. Why not, if it had been a perfectly clear one? The shareholders have a right to ask the chairman to restore the 1,000%, which appears in the accounts, submitted to-day, and also to account to this company for the part value of the 100,000 shares taken from Eureka. (Cheers and laughter.) If I am right in my contention—(laughter and cheers)—I submit there is no reason for re-construction. You have money in hand, because it cannot be suggested that the chairman cannot pay. (Laughter.) The chairman contends that he did all this for the good of the company, and I do not deny it, as events have turned out, for if he still holds the 100,000 shares he has not made much out of it, because they are practically valueless. He has paid his 600% and other expenses in connection with the transfer, and 2,500% of calls on his 100,000 shares; but the fact that he has lost money in the transaction has nothing whatever to do with the question, that being—what was the state of matters at the date he took the shares? It is no answer to say that he went in for a good thing, which has turned out bad; and the statement made at the last meeting, that by taking these shares he had found 2,500% for the company, is simply childish, because he could have made a call. When he made the call in Sept. or Oct. he had 10,000% due to him for money alleged to be lent to the company. There is no reason why a chairman or director should find money for the shareholders, and he should have applied to them. I instituted actions against Mr. Watt for the purpose of stopping the proceedings, and he will tell you presently that

THOSE ACTIONS WERE ABANDONED.

(Laughter.)

The CHAIRMAN: They were abandoned, and you know why. (Laughter.)

Mr. PROFFIT: In making that statement he is perfectly correct, because I found that, as a shareholder, I had no right, and that the action should be taken in the name of the company. As the law stands that is a good answer. When the directors admitted that the calls were irregular the whole object of the action had gone, and I took the earliest opportunity of making a settlement. I asked that Mr. Watt should pay the costs personally, but that gentleman appearing first by his private solicitors, and afterwards by the solicitors of the company, the inference is that the costs of the proceedings were paid by you, so that the longer I went on the more costs there would be. (Hear, hear.) The sum paid me was 120%, although the circular of the secretary says that "hundreds of pounds" were paid, but that money ought to be paid by Mr. Watt. I determined to stop the proceedings, and did so. I wanted to have a poll at the last meeting, but being on the eve of Easter everyone wanted to get away, and when I looked around, after getting my demand signed, the chairman had disappeared. (Laughter.) This time I have the requisition already signed for the poll. If the voting is against me I will ask for a poll. I will not waste your time further. (Hear, hear, and cheers.)

Mr. BRUNKER: I second the amendment.

OMISSIONS IN THE PREVIOUS SPEECH.

The CHAIRMAN: I will not waste your time with a long reply, because the learned gentleman has answered his own case. He has told you he brought proceedings against the company and myself, but he has omitted to tell you that I became an assenting party to those proceedings, and was ready on the return of the money I had spent for the company to return the shares. (Loud cheers.) He has omitted to tell you that cardinal fact, and therefore, solicitor-like, with his *ex parte* case, he has entirely deceived you. He has omitted another matter (at this point Dr. Aldridge created great uproar by rising to a point of order, and a good deal of time was lost).

The CHAIRMAN: It is useless to speak further in this uproar, and I will now put the resolution. Before I interfered in the Eureka matter, the liquidator went to the Court to ask if he could accept 100,000 fully-paid shares for the property, and was told he could not. Then an adjoining property near the Eureka, knowing the Eureka took the water higher up stream, were negotiating to get it, and would you think I was justified in letting them have it if I could help it? I came forward and said to the directors, "To save the property from falling into other people's hands, I will put the matter through a mutual channel to see what can be done." 1,500% was asked, and ultimately it came down to 600%. The property had been advertised, but there was no other offer. On being paid the expense I incurred on account of that property, I said I would hand to Messrs. Badden, Proffit and Co. the 100,000 shares. They know what the expense was. Would they accept the offer? No. Why? because the company had no money to pay me. Even if the company had had money, it would have had to be taken from where it ought to be put, that is, into Water shaft. I took those shares, and this gentleman knows (he has admitted it) that I have lost over 3,000% by that transaction. (Cheers.) (A VOICE: What has that to do with it?) Everything. Mr. Proffit says he is going to

demand a poll, and we will take one, but it will take a long time. I will now put Mr. Proffit's amendment to the meeting, and in voting, you are voting as to whether the company is to go on or to be wiped out.

SCHEME CRITICISED.

Mr. NEWTON: I represent 200*l.* lost in this company, and hold 10 shares in order to represent a big holder in Lancashire. I have no connection with the opposition, but simply came here representing an innocent holder in the country, who wants to know what has become of his money. At present a holder of 1,000 shares has a capital value in this concern of 125*l.* You are now asked to take for that 1,000 shares 250 shares with 18*s.* paid, a capital value of 225*l.* I have heard a judge in the Court of Appeal say that taking shares under such circumstances is to render oneself liable for the calls up to the difference. The amendment is moved in a wrong direction. It should have been for the adjournment of the meeting, and then there could have been no question as to use of these proxies. You have proxies against you which will carry anything Mr. Watt likes. He and I have had lots of tussles, and I do not want to say anything nasty or disagreeable. He can use his hundreds and thousands of shares against your amendment. But is it fair that 600*l.* should command 100,000 votes? I am dissatisfied with the scheme as it is presented, and think it to be legally wrong.

Dr. ALDRIDGE: As one of the largest shareholders and connected with other companies, I am exceedingly sorry to have to say a single word against this company, but when confidence is lost no honest man can keep his mouth shut. Why have I lost confidence in these directors? I wrote a letter to a paper stating that the

NEXT MOVE OF THE BOARD WOULD BE TO WIND UP.

Mr. Watt does not wish me to read the letters, but I will give you the pith of them. These gentlemen must have made up their minds within the last four or five days, or they are telling unmitigated falsehoods. (Cries of "Order.") That is a strong statement. ("It is.") The secretary writes at the dictation of Mr. Watt (Sept. 28): "I have not come across any statement to the effect that the company is on the verge of construction, and am not aware that the directors have for the moment discussed anything of the kind. We have still funds in hand, and Mr. Rochfort starts crushing the good quartz he has now discovered. There is no doubt nothing more will be heard of these groundless rumours." Mr. Watt writes (Oct. 13): "I am told you recently wrote to a paper that I was going to wind up the company. You are aware that this is a serious and libellous charge, and I must trouble you, per return, to intimate your authority for the statement or immediately withdraw it." I did not withdraw it. ("Time.") I have other letters in which he calls my statements "false and libellous insinuations, and on Oct. 28 he says 'simultaneously with your letter I received a circular with your name appended full of falsehoods as usual.' Is that the sort of man you will trust? (Uproar.) That is the reason I cannot support Mr. Watt and his friends. (Cheers and counter cheers.)

The CHAIRMAN: I shall first put the amendment—those in favour, 83—those against—it is lost by a large majority. (Cheers and counter cheers.)

Mr. PROFFIT: I demand a poll (handing up a paper.)

The CHAIRMAN: I shall put the substantive motion.

A SHAREHOLDER: I sent you my proxy for 3,500 shares, but I think you ought not to object to a committee of investigation.

The CHAIRMAN: My reason is this, that if matters are postponed for a month the company will pass into liquidation. Those in favour—those against—the motion is carried by a large majority.

Mr. STEWART: I challenge your ruling as unfair.

The CHAIRMAN: I have a request in for a poll, and I declare that poll now to be opened, and it will be closed at three o'clock. Every gentleman with 100 shares and upwards is entitled to vote.

A SHAREHOLDER: I suggest that you should go on with the business, and that the poll be decisive on all points submitted to both this meeting and the next. (Hear, hear.)

The CHAIRMAN: The

RETIRING DIRECTORS DO NOT OFFER THEMSELVES

again because we propose to go into liquidation, though, under ordinary circumstances, by the articles, they would remain in office another year. As to the remuneration of the directors, these gentlemen were original directors in the old Chile Co., and have paid 20*s.*, 5*s.*, and 2*s.* 6*d.* respectively for their shares—about 15,000*l.* in all. New directors will certainly expect something.

THOSE WHO WILL AND WHO WILL NOT WORK FOR NOTHING.

Dr. ALDRIDGE: I am willing to work for nothing.

The CHAIRMAN: You said in your March circular you would expect reasonable remuneration.

Mr. PROFFIT: I cannot work for nothing. (Laughter.)

The CHAIRMAN: I think that these directors should receive 5*l.* a month each for their travelling expenses from July last.

Mr. FRY: I think that most reasonable, and will propose it.

Mr. THORN: I second it.

The motion was carried in spite of an amendment by Dr. Aldridge to reduce it to 1*l.*

THE POLL TO DECIDE EVERYTHING.

Mr. PROFFIT: It is understood that the poll will be decisive of all questions. (Hear, hear.) That will save the trouble of three polls. It is also understood that I act as scrutineer for the opposition and Mr. Pulbrook for the board.

THE EXTRAORDINARY MEETING.

An extraordinary general meeting was then held, when the following resolutions were submitted as special resolutions:—

RESOLUTIONS.

1. "That the Yuruari Co., Limited, be re-constructed under section 161 of the Companies Act, 1862, by the sale and transfer of its business, property, assets and liabilities to a new company upon the terms of the scheme of re-construction now submitted to the meeting, and identified by the signature of the chairman." 2. "That with a view to such re-construction the company be wound up voluntarily, and that Mr. Hugh Watt, M.P., of 107, St. George's Square, London, S.W., be, and he is hereby, appointed liquidator, at a re-

muneration to be fixed hereafter, for the purpose of such winding-up, with power to enter into an agreement with such new company (when incorporated) in the terms of the draft agreement submitted to, and approved by, the meeting, and with power to concur in all such modifications thereof, or to enter into all such other agreements, and take all such proceedings, as may be necessary or expedient for carrying out the said scheme."

Mr. FRANCIS E. ROBIN (secretary) read the notice of meeting.

The scheme of re-construction referred to in the above resolutions has already been published.

The CHAIRMAN: We must win here by a three-fourths majority, or if not the re-construction scheme will be lost.

Mr. FRY moved the first resolution.

Col. GASSIER seconded it.

Mr. NEWTON contended that the meeting was irregular and that the whole of the re-construction scheme as submitted was not in accordance with law.

This led to a warm altercation between various legal gentlemen, a great number of whom were in the room. Some declaring that the scheme was perfectly in order, and others that it was wholly illegal.

Mr. PROFFIT recalled the meeting to the real business stating that it was no use discussing legal points here. He would like to move the adjournment of the meeting for a month.

Genl. BARWELL: Who is to pay expenses in the meantime?

A SHAREHOLDER: I come a long distance—from the North, and wish the business to be decided definitely to-day. I cannot be coming here week by week. I hold 4,000 shares, and we should like to be represented in the North.

The motion for adjournment was defeated on a show of hands.

Mr. PROFFIT: Do not let us commit ourselves to this scheme. The first and most important thing is to wind-up; and before you go into a re-construction scheme you ought to know whether it is worth while doing so. The committee, I have proposed, will decide that question and report to you. I move "That the question of the re-construction be referred to a committee to be nominated by this meeting, who shall settle the terms upon which such re-construction shall have effect."

Mr. STEWART: I second it. You are the judge of your own affairs and not Mr. Watt. We shall be in a better position when we know what is behind the veil. The mine has caved in in parts, and the accounts have caved in. You must have a committee to investigate and report. I confess I do not understand the accounts or what has become of the gold we have raised.

Mr. PULBROOK: It is generally conceded that the meeting must come to a determination one way or the other. If we do not pass a resolution, we shall lose the property. I propose that the company be wound up voluntarily, which is the first step to re-construction, under section 161. If Mr. Proffit has a better scheme of re-construction, it can be fully considered at the confirmatory meeting. The cry used to be, "No case, abuse the lawyers," but now it is, "No gold, abuse the directors." All the other mines in Venezuela have had to re-construct.

AN EPISODE IN AN EPISODICAL MEETING.

Dr. ALDRIDGE: If Mr. Watt is made liquidator you will never see the books. (Uproar.) We want to send somebody out to the mine. I tell you plainly I have lost such confidence in him that I would not believe his word if.—(Uproar.) My only object is to save my money and yours. If all is right, what has Mr. Watt to fear; and as to Genl. Barwell—I do not know whether he is a general in the Salvation Army or not.

Genl. BARWELL (with great indignation): None of your abominable insults. I demand an apology for that. I demand an apology from you, sir. (Great applause; during which Genl. Barwell walked round the table and faced Dr. Aldridge.) You have no right to speak of me like that, a man who has served Her Majesty for so many years. I consider it the grossest of insults.

Dr. ALDRIDGE: I will apologise to the meeting.

Genl. BARWELL (fiercely): Apologise to me, sir.

APOLOGY TO THE SALVATIONISTS.

Dr. ALDRIDGE: I beg to apologise to the Salvation Army for having said that Genl. Barwell belonged to it. (Great uproar and laughter.) I am sorry I have hurt your feelings. I do not know whether the general has scars on him, but I have, for I served in the Crimea.

Genl. BARWELL: All the more shame for you to have said what you have.

The CHAIRMAN: I know the last speaker is excitable, but it was not necessary for him to insult everyone as he has done, but when he tells me he has been in the Crimea, a great excuse is to be urged for him. (Laughter.) I listened with respect to what Mr. Proffit says, but what

AN EXCITABLE OLD MAN LIKE DR. ALDRIDGE

says I do not care *that* for. (The chairman here snapped his finger.) I am not going into the new company. I am not going to be a director or liquidator. We have put forward this scheme—reject it or accept it as you like. It has been approved by able solicitors and also by counsel. If you do not want to re-construct it is a matter of indifference to me. The Official Receiver will take charge of everybody's interest, and I have no objection to placing everything in his hands. I do not see the use of putting a resolution to wind-up, because it depends on the result of the poll, and if you are not going into the scheme it is useless.

A SUGGESTION APPROVED BY THE MEETING.

Mr. PROFFIT: What do you say to passing a resolution to wind up voluntarily, and that Mr. Sneath, of the firm of Price, Waterhouse and Co., be appointed liquidator? None of us can have any objection to him, and you will have an independent investigation.

The CHAIRMAN: I will accept Mr. Sneath at once. (Cheers.)

Mr. PROFFIT: I think the chairman has met us very fairly. (Cheers.)

The CHAIRMAN: Mr. Sneath has had neither his expenses nor his legal costs for the last liquidation; but he can give you a direct title from New Chile Co., as a great saving has been affected by not registering Yuruari in Venezuela.

Mr. PROFFIT: I propose that this company be wound up voluntarily, and that Mr. Sneath be appointed liquidator.

Mr. SNELL: Is it competent for this meeting to do anything outside the notice?

Mr. ABRAHAM (the solicitor): Quite competent to do this.

After some further discussion,

Mr. PROFFIT proposed a resolution that the company be wound-up voluntarily.

A SHAREHOLDER seconded the motion, which was carried unanimously.

Mr. PROFFIT then moved that Mr. Sneath, of Price, Waterhouse and Co., should be appointed liquidator for the purpose of such winding-up, at a remuneration to be subsequently fixed.

The motion was seconded and carried.

This terminated the proceedings of the meeting, and

THE POLL

was then proceeded with, and subsequently, after a considerable lapse of time, the

RESULT

was announced as follows:—In favour of the board, 2,540; against the board, 2,427; a majority of 113 in favour.

It was further stated that in addition to the 2,540 votes, 1,446 had been recorded for the board, which were objected to by Mr. Proffit on technical grounds. The board therefore waived those votes.

The CHAIRMAN accordingly declared the resolutions carried.

A vote of thanks terminated the proceedings.

LATEST TELEGRAM.

The secretary advises receipt of the following telegram from the mines:—"Cannot negotiate drafts on London. Send by telegraph 1,500*l.* to protect ourselves against actions.—ROCHFORD."

NEW DEVALA-MOYAR GOLD MINING CO.

A DIRECTOR VISITS THE PROPERTY—THE MINE BEING PROSPECTED IN DEPTH—CULTIVATION OF CINCHONA ABANDONED

THE second ordinary general meeting of the shareholders in the New Devala-Moyar Gold Mining Co., Limited, was held at Cannon Street Hotel, E.C., on Wednesday.

Major-Genl. Alfred Light

(chairman of the company) presided.

The SECRETARY read the notice convening the meeting, and the directors' report was taken as read.

WORK DONE SINCE THE RE-CONSTRUCTION.

The CHAIRMAN: Gentlemen, as mentioned in the report, this meeting has been called in order that the shareholders might meet Mr. Long on his return from the mines as early as possible. A personal explanation at length, with an opportunity of discussion, is always more satisfactory than a written statement only, but a printed report of to-day's proceedings will, however, be sent to each shareholder. We present our accounts to-day, and make this our annual meeting instead of in Dec. to save expense, the cost of a general meeting, owing to the large number of shareholders on our register, being a consideration. The only drawback is that we can only show you audited accounts from the mine up to the end of July; those in London are made up to the end of Sept. as usual. But I must tell you, gentlemen, that by the mail on Monday we got the accounts from the mine for Aug. and Sept., which, though not audited, we believe to be perfectly correct. To the mine charges you must add in round figures 860*l.*, and to the cultivation on account of the year ending Mar. 31, 1892, 101*l.*; the total of which reduces the cash balance by 961*l.* The total mine charges for the 13 months, since this company took over the property from the old company, may now be stated at 9,985*l.*, less bullion actually realised, 2,799*l.*, leaving a net amount to the debit of mine charges of 7,186*l.* I hope and believe that the next accounts will continue to show the material reduction which these last accounts exhibit; for, as is mentioned in the report, we thought the expenses at the mine were very excessive considering the work done.

CHANGES ON THE BOARD.

I regret to say that Mr. Bramall has retired from the board in consequence of his having found it impossible to attend our meetings, owing to pressure of work in his own business, and he was not willing to render merely nominal services. We have, however, happily obtained the services of Mr. D. C. Griffith, a gentleman I have great pleasure in introducing to the shareholders, and his scientific knowledge and general business experience and capacity I am sure we shall find most useful. I should like to read you the following letter from a large shareholder respecting him. He says:—

"I am pleased to hear that Mr. Griffith has consented to join the board of the New Devala-Moyar. From what I know of Mr. Griffith I am convinced that with his knowledge of metals and sound business views he will be an important addition to the board, and will give you valuable and practical advice and assistance."

A DEBT OF GRATITUDE.

As regards Mr. Long—I cannot express how much the board are indebted to him, and I am sure the shareholders will join in that feeling. Our expenses at the mine were increasing almost alarmingly and it was therefore positively necessary that a director should proceed to the property. Mr. Long volunteered to go, and his knowledge and experience in India and of the natives was most valuable. He went out to the mine in the height of the hot weather, and arrived there in the midst of the rainy season; and he did so without any remuneration beyond his expenses and ordinary fees as a director. For this we are additionally indebted to him. Before moving the adoption of the report, I have to make a correction on page 2, paragraph four, of the report. The gold not sent home should be stated as 160 ozs., and not 243 ozs., with a corresponding reduction in the value of the gold about to be received of 340*l.*, which will make the total bullion during the 13 months, 3,300*l.* I will now ask Mr. Long to give you his views as the result of his recent visit to the mines, and in the meantime I beg to move

"That the directors' report and statement of accounts now presented be and they are hereby received and adopted."

VIEWS OF MR. LONG.

Mr. W. H. LONG seconded the motion and said: Gentlemen, as the report states, and as the gallant chairman has just told you, I have just returned from visiting your property in India, and I propose to give you as full and exhaustive a description of your mine and its prospects as I am able. But before I proceed, I would remark that an anonymous writer in the *Financial News* recently traversed the management of this mine. Now, it is very difficult to reply to an anonymous writer through the Press, but I hope to-day to deal with most of his objections, and at any rate put myself and the board right with you gentlemen who have come here to-day to assist at this meeting. This diagram or cartoon (pointing to a plan) shows the workings of the mine up to date. There were old workings above this point, but whatever they were, they have long ago fallen in, and now give us no clue as to where the old men got their gold. And as regards modern mining, my task practically begins with the pyrites lode.

THE PYRITES LODGE.

Now, there appears to be an impression abroad among the shareholders, and certainly in the mind of our anonymous critic, that there is a large body of ore of great value at this point of the mine, and that it only requires proper treatment to produce great results. I am afraid it is my painful duty to disabuse your minds of this idea. There is, in point of fact, not more than 300 tons of ore stoped in this part of the mine, and probably 600 tons or 700 tons more *in situ*. It is a large grained iron pyrites, said to contain an ounce to an ounce and a half of gold per ton *by assay*. If this ore could be treated by the ordinary process it would be of value, but unfortunately it is so refractory that it costs more to get the gold out, than the gold sells for when obtained, and consequently it is useless to regard this portion of the lode as of commercial value. The lode continues downwards from this point to the 78-ft. level, and is poor pyritic ore, refractory, and difficult to treat. However, in the stope between the 78-ft. level and the 116-ft. level, some very

RICH NUGGETY QUARTZ

was found at a point between the two winzes, and some ore crushed from this stope, gave nuggets in the mill boxes at the clean up June 30 last. Specimens of this quartz and the nuggets are on view in a case in front of the chairman. They are very fine quartz, resembling that taken from the Callao Mine in Venezuela, which yielded 18,000 ozs. bar gold to 2,000 tons of ore crushed, and if there were any large quantity would make the mine of great value, but at this point there was only a comparatively small quantity of this rich ore. This pay shoot again occurs in the bottom winze, and where intersected, a specimen sent to London, assayed 5 ozs. to the ton. Now, it is not in my province to say what the future may disclose in the development of the mine. Were I to attempt it I should be merely prophesying, and my prophesy would be of no value, but I may say that so far the lode has proved less refractory, and gives more free gold as we descend.

THE MILL.

With regard to the mill, we have, as you perhaps know, two mills, one at Strathearn and one at Rhodes Reef, both consisting of 20 heads of stamps. The mill we use is that of Rhodes Reef as being nearest to the Harewood Mine. But when I say nearest, you must not understand that it is near, for it is really about 2 miles distant from Harewood, and is very awkwardly placed, being reached by a tramway of a very circuitous and clumsy character, which entails much labour and expense in the transport of the ore from the tunnel mouth to the mill, and if this mine is to continue to be worked on any large scale, it will be imperatively necessary to move the mill to a rational site, as not only the ore is transported at great inconvenience, but also all firewood and stores. The mill itself is in good order, and a fairly good mill but as our anonymous friend states, the work done by the stamps is but a poor amount, viz., 14 cwt. per diem per stamp; the day, however, was a day of only 16 hours.

CONCENTRATES.

Now I come to the concentrates which our anonymous friend says we ought to treat. Well, firstly, we do treat the blanket sand in the two Wheeler's pans which we possess, and they give us a return of some 8 ozs. a month. And as regards the Buddle concentrates, which is no doubt what he intends to express by concentrates; my individual opinion is that it is a misnomer to call them concentrates, as they are really tailings, containing, in pyritic ore, about 3 dwts. of gold, which undoubtedly could be treated by chlorination, but to put a chlorination plant down on the Rhodes Reef site would be utterly absurd, and merely aggravate all the evils arising from the mill being in the wrong place.

CULTIVATION.

With regard to coffee and cinchona cultivation, it has been decided to discontinue it, as of late years it has only resulted in a loss. We shall save the land tax by abandoning cultivation. The district will probably in course of time become a tea-growing district, and land may rise in value for the cultivation of tea. The Imperial Government have taken over the road from Calicut to Wellington, which passes through this district, and are forming a broad military road, which will give increased facilities of access to the district, and consequently cheapen transport, and the Mysore Government, I believe, propose making a railway to Godalur, which is 10 miles from Devala, and will also improve the position of our estate. To sum up, in my humble opinion the

SALVATION OF OUR ENTERPRISE

lies in our finding free milling quartz in depth of sufficient value and in sufficient quantity to pay the cost of getting and treating and leave a profit. We should concentrate all our efforts on developing the Harewood Mine in depth, and not dissipate our limited resource on attempting to treat refractory ores. The funds in hand if judiciously managed are sufficient to carry us on for two years, even should we receive no help in the form of gold won during that period. During the past year we actually obtained about 3,000*l.* in cash for gold.

NOT MINER-LIKE.

Mr. COTTERILL: I must say I am not very much impressed with

the prospects that Mr. Long has foreshadowed as to this mine. We have already spent a very large sum of money, and have never got a single farthing in return for it; and now as we happen to have half of the last issue of shares uncalled—namely, 10,000%—I would propose not to spend any more money in the development of the mine, but if possible to buy some land in the neighbourhood with better prospects.

Mr. LONG: You should come and look at the specimens of gold which are on the table.

The resolution was then put and carried unanimously.

Mr. LEPPARD: I beg to move "That Mr. H. W. Bailey be and he is hereby re-elected auditor of the company for the current year at a remuneration of 15 guineas."

Mr. DON: I beg to second that.

The motion was carried.

The CHAIRMAN: That, gentlemen, finishes the business, but I hope you will spare a moment to look at these specimens of quartz which Mr. Long has brought home, because they are so very different from any class of ore that we have found hitherto that it gives us hope to go on. They contain very much more free gold.

The proceedings then terminated.

ETHERIDGE GOLD MINING CO., LIMITED.

SHAREHOLDERS DECIDE TO CONTINUE OPERATIONS, AND AUTHORISE THE DIRECTORS TO MAKE THE FURTHER CALLS UPON THE SHARES.

AN extraordinary general meeting of the shareholders of this company was held at the Cannon Street Hotel, London, E.C., on Wednesday, Nov. 4, for the purpose of deciding whether they would authorise the directors to make the further calls upon the shares, or wind the company up.

Mr. Frederick Thorn

presided.

Mr. JOHN GARLAND (secretary) read the notice convening the meeting.

THE CONFIDENCE SHOWN IN THE COMPANY.

The CHAIRMAN: Gentlemen, you have heard the notice of the meeting read, and you have each had the report from the special expert who was introduced to us by Messrs. John Taylor and Sons, which I hope you have carefully read. You will remember that some three months since we were appointed to look into the affairs of the company, and it was on the entire understanding that we should not go to allotment unless we had at least 150,000 shares applied for. I am pleased to say that the number reached about 320,000. (Applause.) There were some 20,000 to 25,000 shares subscribed for by outsiders, and some shareholders have taken up more than their allotted number. That is very satisfactory to us, as showing the amount of confidence you have in those whom you have placed on this side of the table. Upon that we looked through all the accounts and reports that we had received, and this, I need hardly say, took up a great deal of time. The next step was to get a fair report from some mining engineer upon whom we could place dependence. We had intended to send out some gentleman from this side, but, very fortunately, Messrs. Taylor and Sons, having connection with another company some three or four days' distance from our property, were able to avail themselves of the services of the engineer on that mine (Mr. James), a man of very high position, and I need hardly point out to you that his report is very carefully drawn. He does not rush in and advise us to spend a lot of money. He does not say one word about getting pockets or any wonderful number of ounces per ton, but he says in effect: "You are here, you have spent a great deal of money, you have all your machinery, you have your managers, you have everything before you, and I think it is worth while going a little deeper." I think that is about the pith of it.

THE REPORT IS MOST CAREFULLY DRAWN

and worded, and I think you will say we are perfectly right in paying great attention to and supporting it. We have, in addition, reports from our own manager. We did not pay so much attention to them, because you might say that he had an interest in continuing his engagement at a large salary; but we have had another report, received only the day before yesterday, which goes entirely upon the lines of Mr. James's. He says—and, of course, we know—that two or three years ago several mines were worked at a loss. He also says that the strike, which extended over almost the whole world, also affected the miners there. That, however, is over and past, and is much in our favour. He says that if we work the Nelson and the Canadian West Mines, and if we pay attention and be economical with the funds that we have in hand, he does not see any reason why we should not come upon some payable ore. Up to the present the board have been entirely unanimous in every step that has been taken. We have worked shoulder to shoulder, and done our best at, I may say, some considerable sacrifice of time to bring matters to their present state. Unfortunately, one of our board now differs in opinion from us. I will tell you why. We, in going carefully through these reports, entirely ignore the past. We know we had had heavy losses, but we were not put here to go into that. That was the reason of the whole thing collapsing; but we have to look forward, and more especially to pay attention to the report of the mining engineer, who has no interest whatever in the company. He gets his fee for going, and there is an end of it. I say, in the interest of those who placed us here, that I think it is our duty to go on with this mine—(hear, hear)—but it will be entirely for you to decide. We have thought it fair and proper to send out proxies, so that every shareholder might have an opportunity of voting or giving his opinion. We know that so many live in the country, that it is inconvenient for them to attend, and that fact is also shown by the small attendance to-day in comparison with the large number of registered shareholders.

PROXIES.

I will not detain you, but I will give you in round figures the reply to the proxies. For continuing the mine we have 40,435 shares, and our friend, Mr. Lane, has received 32,151 shares. Beyond that, proxies came in later, which, of course, do not tell except as showing the

feeling of the body of shareholders. I think it right you should know the numbers. The number of late proxies for my brother director and myself was 8,212, making 48,647, and for Mr. Lane 4,035, or a total of 36,186. There is, therefore, an excess of 12,461 in favour of going on, and I think the result shows that the step taken by the board was the right one, and, I hope, satisfactory to everybody. (Hear, hear.) I am not going to ask Messrs. Taylor to prop us up, for we are not in need of propping up. We want you to judge for yourselves. I hold some 4,000 shares myself, and am quite prepared to go on, and pay my money towards it. Messrs. Taylor are entirely in favour of myself and Mr. Tredgold. The chairman concluded by moving the following resolution: "That the directors be and they are hereby authorised and empowered to make further calls upon the shares of the company."

REASONS WHY THE SHAREHOLDERS SHOULD NOT ABANDON THE MINES.

Mr. R. S. TREDGOLD (director): Gentlemen, in rising to second this resolution, I think it is our duty, as there is a difference between the board, to give you some of the reasons which brought the majority of us to the conclusion that we should go on. We are very sorry Mr. Lane differs from us, because he is a man of vast experience and mining ability, but it must be remembered he has not been out to Queensland, and has not himself personally inspected these mines. Therefore, we are all obliged to be guided very much by Capt. James's report, and also by the report of Mr. Ferguson. You will notice Capt. James, in his report, calculates that if we were only to take $\frac{1}{2}$ oz. per ton from working the Lord Nelson reef it ought, if properly worked, to pay.

A SHAREHOLDER: Excuse me, it does not say that.

Mr. TREDGOLD: Well, then, I will leave the report to the shareholders. They are as well able as myself or anyone to draw their own conclusions, and there are some men in the room who I know are thoroughly acquainted with mining, and therefore it is unnecessary for me to say anything more about Capt. James's report, except to call your attention to one point. He says, "The machinery is in good working order and the battery is well appointed and the water supply appears to be permanent." Old shareholders of the company like myself will remember the time and delay in getting the machinery up to the mines, and now we have the machinery there it would be a great pity not to try, for a short time, to see if the mine is not worth working. Mr. Ferguson, in his letter dated Sept. 9, 1890, said:—

"The reef I should like to see prospected from the Lord Nelson shaft is a very large one, running north and south. It must be from 30 to 40 ft. in thickness on the surface, and from what I can see the north and south reefs have turned out the most gold."

Writing again on Feb. 11 of this year Mr. Ferguson says:—

"I should advise you to drive on the 100-ft. level east 180 ft. to intersect a large reef north and south, which shows on the surface 30 ft. wide."

You will see from those letters that we are only 180 ft. from this north and south reef. I have been informed by old shareholders in the company, and one of the directors, too, that the north and south reefs on this field are almost always the richest. Now, we have only, as I say, 180 ft. to drive. We have got our machinery in good working order, we have a permanent supply of water, and the machinery and everything in good working order, and in a letter, which we have just received from Mr. Ferguson, he still further urges upon us one

FURTHER TRIAL ON THIS LORD NELSON MINE.

This is the mine which has lately raised our hopes.

A SHAREHOLDER: What about the Etheridge Reef?

Mr. TREDGOLD: The Lord Nelson is the old Etheridge Reef, which was always considered to be the richest reef in these mines. Those of you who were shareholders at the time of the amalgamation of these mines will remember we gave two shares for one in the Etheridge Reef, and therefore, if the price given be any indication of the value, that ought to be the most valuable part of the property. Besides that, when we took over the Etheridge Reef they were 5,000% in debt, and had no machinery, so that you see the directors have always put a high value on that reef.

A SHAREHOLDER: It is 35 miles away from the other property.

Mr. TREDGOLD: Well, it is 30 miles, but if we came to the conclusion to work the Lord Nelson Mine, or the old Etheridge Reef, it is very possible we might give all our attention to that, and either let the other mines out on tribute or dispose of them. Although we have a large working capital the actual expenses would be very small. That is a matter to which the board will give very careful attention, guided by the most valuable assistance of Messrs. John Taylor and Sons, to whom we are already indebted for having introduced to us such a valuable man as Capt. James. (Time.) Gentlemen, I will not detain you any longer, but will simply conclude by seconding the resolution proposed by our chairman.

THE OTHER SIDE OF THE QUESTION.

Mr. LANE: Gentlemen, I think our chairman has very fairly put the matter of the re-construction of this company before you, and it was, as you all know, a promise made by me that on the re-construction I would give you my opinion of the report that was to be obtained from some expert or other who would visit the mines on your behalf. You have that report, and I trust that you have properly considered the same. When this report was brought before our notice I carefully examined the whole of the details and took particular care to examine, as far as I could, the past workings of this company. My object is to give you as nearly as I possibly can my opinion as to whether these mines are worth going on with or not. My interest is a large one. I have

WORKED WITH GREAT UNANIMITY

with my co-directors, but I felt if I could instil into them my feeling it was my duty to do so. The majority of the shareholders I believe are against me, but that is no reason why I should restrain from putting my opinion before you. (Hear, hear.) You have, no doubt, read the report. The first mine brought to your notice is the North Star Mine. That mine was worked, and gold was obtained from it, but as they attained depth the reefs went out and gold disappeared. I do not think I need go through the whole of the mines referred to, as only two of them are particularly

brought to your notice. The Lord Nelson was worked for a considerable time to a great depth (172 ft.)—what was the result? Gold was obtained there, but in such small quantities that I tell you candidly the gold never even paid the expenses of milling, to say nothing of the other expenses. The result was the mine was abandoned. The same was the case with the Canadian West. Now, gentlemen, these two mines are put forward by this expert as mines well worthy of a trial by you, but it is quite contrary to my mining experience that abandoned mines are worth working. They will be

EXPENSIVE TO WORK.

They are 30 miles apart; wages are very high; and the expenditure on your part very great. Your capital is small, amounting to about 12,000£, which in 18 months or two years you will have expended in working either one of these mines, and the returns, as reported by Capt. James, will not pay the cost of working. Capt. James says in further development he hopes you will get better results, but a little further on he says, "In deciding on the prospects of a mine it is necessary to see the lodes at the deepest levels, from which we are guided as to the permanency of the reefs. In many instances where new fields are opened up I find the reefs do not live at a depth. The country is granite and sandstone. The gold is of a poor quality, judging from the assays of previous crushings, which show a large portion of copper alloy." There is the report, and these are the mines which are recommended by Capt. James for an investment of your capital. Mr. Ferguson, our manager, says they are well worth working. If they are well worth working now, why were they not worth working years ago? I am willing to go on with you if this resolution is passed, because I must go on, but I do think it is folly in the extreme to do so. I should not have made the statement I have unless I had promised you I would do so. I think you are, gentlemen, of understanding and ability, and are capable of forming your own opinions.

A SHAREHOLDER: Are there any successful mines in the neighbourhood?

MR. LANE: I must refer you to Messrs. Taylor for an answer to that. I know of no mines in the neighbourhood that are working at a profit. All I can say is, we have worked very hard indeed and with the greatest unanimity. You could not have a better chairman than you have in Mr. Thorn. He has attended our meetings when he has been extremely unwell, and Mr. Tredgold has also worked very well. Hence, whether I remain on the board or not, which is a question for me to decide hereafter, you have two excellent men in those gentlemen. (Cheers.)

MR. JOHN TAYLOR'S OPINION.

MR. JOHN TAYLOR: I feel, gentlemen, that my position on this occasion is an extremely difficult one, which you will readily understand from the fact you have before you, that the directors, with all the evidence to which they have access, are divided in the opinion as to what is the best course to pursue. This position is rendered more difficult from the respect I must attach to the opinion of Mr. Lane. Now, notwithstanding this, I am bound to say, under all the circumstances of the case we have before us, I cannot but feel it would be ill-advised on the part of the shareholders to abandon these properties which they possess, and which they have equipped with machinery, without giving effect to the advice contained in this report of Mr. James. Our knowledge of Mr. James is this. He has managed for us Gympie Great Eastern Mine, and has done it most ably for some years past. He has a very large experience of mining in Australia, and he puts, it appears to me, the facts of this case clearly before us. The report, as your chairman has pointed out, is most moderate in its character, and he distinctly tells you in his opinion two of the leases appear to be of value, and from the characteristics of the reefs rich shoots of gold will probably be obtained. He points out, in the Lord Nelson Mine, there is

A GOOD REEF,

averaging 3 ft. wide, worthy of further trial. Returns show a yield of over $\frac{1}{2}$ oz., and there is a large body of crushing stuff to be taken out. There is a little misunderstanding with regard to this $\frac{1}{2}$ oz. Mr. James does not say that it will pay us, but he expects you will get richer shoots of ore in this large body of crushing stuff which he mentions. Another remark has been made with regard to the Lord Nelson Mine—that this mine had been worked to a great depth and then abandoned. The depth of the mine is 172 ft. That is no depth at all; it is playing at mining. I suppose we are qualified to speak about mining, and especially in India. What did we do in the Mysore at 172 ft.? Why, nothing at all. We must not consider that because a reef is worked down to 172 ft. it is not worth a further trial. You have got a lease for 930 ft. on the line of the reef, and you have got, what is a very important fact, a 10-stamp mill, and what is, perhaps, more important still, a full and

PERMANENT SUPPLY OF WATER.

The Canadian West lease also gives 930 ft. on the line of the reef. Mr. James describes this as a very fine vein, 4 to 6 ft. wide, and he says, particularly from what he saw in the shallow level, in his opinion, if properly worked could prove payable. There is another matter put before you by Mr. Lane, which is hardly quite fair. That is that this mine will be so expensive to work. Mr. James says, on the contrary, they will not be expensive to work. He says both mines have large bodies of crushing stuff which could be raised and crushed at a low rate. But we have got other testimony from a letter just received from Mr. Ferguson. Mr. Ferguson, speaking of the Lord Nelson, says, "This mine can be cheaply worked." I believe there is no doubt upon the Etheridge field that they can be very much more cheaply worked than they were at the time Mr. Lane alludes to. I believe the circumstances are very much altered at the present time, and I must say with this testimony coming from such a practical man as Mr. James, I cannot but agree with your chairman and Mr. Tredgold in the first line of their circular—"We are of opinion that the working of the mines should be continued."

VIEWS OF A SHAREHOLDER.

MR. LILLEY said there was one thing on which they must congratulate themselves, and that was that they had a thoroughly impartial board of directors. (Hear, hear.) He was very glad to see that

Mr. Lane, although he differed from the other members of the board, knew how to differ without disagreeing unpleasantly. He was also very glad that the proxy form was drawn up in the manner it was. The present directors had given the shareholders the option of filling in the names they thought best. With regard to the decision they should come to to-day, surely it was better they should put some more money into this mine that had spent so much in machinery than to put it into a new company. The probability was, if they abandoned this property it would be got hold of by other parties that would launch a new company under a new name, and they would invest their money willingly in it, not knowing perhaps that it was the same property. They must all agree with what Mr. Taylor had said as to 172 ft. being no depth whatever. If they gave up at 172 ft. they would not have pluck and courage of mining adventurers. They must not feel certain if they put more money into this mine that they were going to make their fortunes out of it or even make it pay, but all the indications led them to believe

THEY HAD A FAIR CHANCE.

Mr. Lane had said if those mines were worth working why were they given up before. There can be several answers to that question. They must remember the directors who were representing the shareholders before were not considered to be the most satisfactory directors. He did hope for the little risk they would take in paying the full amount on these shares, the shareholders would agree to this resolution. He fully believed in the fairness of this report.

MR. RANKIN, who said he held about 1,900 shares in the company, which had cost him a great deal more than 1£ a-piece, did not attach so much importance to the report of Mr. James as Mr. Taylor seemed to think, because, as Mr. Lane pointed out, these reefs did not live at a depth. Many years ago, he (Mr. Rankin) was told that these properties at that time were very watery. They certainly had a permanent supply of water, but he thought they had a great deal too much water. That could not be lost sight of in the question of economic working. As they got deeper they were likely to make still more water. He did not think, with all due respect to Mr. James, that economic working was possible. It was very far removed from the seaboard, transport and labour were much dearer than elsewhere. Then there were the labour difficulties—the strikes. Mr. Taylor had referred to the trivial depth to which they had got. It was perfectly true 172 ft. was no depth in mining, but they should have the cash to sink deeply before undertaking to go on. The money that remained to be called up did not offer a remote prospect of our coming to real depth. It was true Mr. James said these properties appeared to be valuable, and both had large bodies of crushing stuff. The question for them was whether it was worth while going on with these properties or not. The properties were very widely separated, which would add to the difficulty of economical working. He was decidedly in favour of liquidation.

MR. GRIFFIN asked whether, if the resolution were passed, the directors could call up the whole 9d. on the shares, or would they have to call another meeting?

A SHAREHOLDER asked what was the balance in hand.

THE CHAIRMAN REPLIES.

THE CHAIRMAN: We have upwards of 2,000£ in hand. I am certainly rather surprised at the position which Mr. Rankin now takes up, because he was the first, or nearly the first, who advised re-construction. He was on the committee, and he advised the re-construction, and I went with him entirely. I do not want to get away from the fact that I advised it, but then I advise it still. (Hear, hear.) I have not heard anything either from Mr. James or Mr. Ferguson that would lead me to suggest liquidation now. On the contrary, there is everything in our favour. I need hardly add to what Mr. Taylor said, that our property is all there and paid for. We have a very

LARGE AND EXPENSIVE PLANT,

which cost something like 30,000£, on the spot, and ready to go to work. They are only waiting our telegram to go on. In addition we have a tramway to the mill. Everything is in favour of working these mines economically. We are quite aware that there has been a great deal of money squandered in the past on three or four different mines, but we do not intend to touch those mines. We intend to keep to the Lord Nelson.

MR. RANKIN said the chairman had overlooked the circumstances in being surprised that he had altered his opinion. At the time he recommended the re-construction there was a telegram that they were going to cut a wonderful reef. That wonderful reef had not been cut, and, therefore, he was not inclined to go on.

THE LIABILITIES OF THE COMPANY.

In answer to a question, MR. LANE said the directors had as far as possible ascertained the whole of the liabilities of the company, and paid them up to this date, with the exception of the solicitor's charges in connection with the new company, which they were assured would not exceed 20£.

The motion was then put to the meeting and carried by a large majority.

A vote of thanks to the chairman brought the proceeding to a close.

MIDDLESBOROUGH TOWN CO.—Notice is hereby given that the transfer books of this company will be closed on Nov. 12, until further notice.

HOLLOWAY'S OINTMENT AND PILLS.—Rheumatism, Neuralgia.—It is sometimes difficult to determine which of these diseases is afflicting the sufferer, but this ignorance will not matter if Holloway's remedies be used. They alleviate and cure all muscular and nervous pains. In hereditary rheumatism, after bathing the affected parts with warm salt water, Holloway's Ointment should be well rubbed upon the spot, that it may penetrate and exert its soothing and regulating properties on the deeper vessels and nerves which are unduly excited, and cause both the pain and swelling. Holloway's treatment has the merit of removing the disease without debilitating the constitution, which was the inevitable result of the bleeding, mercury, and colchicum practice formerly adopted in these complaints.

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for giving instruction in subjects specially applicable to mining students, and in a district where the practice of mining may be observed at the same time.

The subjects taught include Mining, Ore-dressing, Vanning, Assaying, Chemistry, Geology, Mineralogy, Steam, Metallurgy, Plan Drawing, Engineering, &c.

The managers of the principal mines in the neighbourhood will afford facilities to students of the School for studying practical mining.

Prospectuses, and any further information, may be obtained of the PRINCIPAL or SECRETARY.

The Session commenced on Monday, 21st September.

Class D, Horizontal Fixed Engine, fitted with Patent Automatic Expansion Gear.

High Speed Engines—Horizontal and Vertical.

"Robey" Winding Engine.

Vertical Engine and Boiler.

THE "ROBEY" PATENT GAS ENGINE

HAS THE FOLLOWING ADVANTAGES:

"Robey" Winding Engine, with Patent Wrought-iron Tank Foundations.

1. Improved design, whereby all working parts can be removed and examined without breaking any joints.
2. Patent Governor, giving perfect regularity of speed.
3. It is fitted with automatic Tube Ignition.

4. Improved Safety Combination to prevent starting backwards.
5. Automatic and absolutely uniform lubrication.
6. Highly economical consumption of gas.
7. Especially adapted for Electric Lighting.

Improved Compound "Robey" Engine.

Improved Stone Breaker.

Portable Engine.

Improved Hoisting Engine.

Compound "Robey" Fixed Engine.

N.B.—Also makers of all descriptions of Pumps, Wrought Iron Pit Head Gears, Mining Plant, and Gold, Silver, Lead, &c., Reduction Machinery.

ABRIDGED PROSPECTUS.

THIS Company is formed for the following objects:—

1st. To acquire the valuable and extensive Freehold Mining Estate, termed "La Platilla" and "Lomas del Calero," and 12 auriferous Silver Lode Mines, situated within the jurisdictions of Santana and Mariquita, between the towns of Santana and Mariquita, in the Department of Tolima, in the Republic of Colombia, and about 20 miles from the Shipping Port of Honda, Colombia. The estate contains an area of about 45,000 acres (or, approximately, 70 square miles).

2nd. To acquire the interest of the Bristol Sublimed Lead Co., Limited, in their recently and well-constructed smelting and extraction works at Avonmouth, near Bristol.

3rd. To acquire the exclusive Patent Rights for the United Kingdom of the Lewis-Bartlett process for the treatment of argentiferous and complex ores and the extraction of the precious metals therefrom.

4th. To dispose of portions of the Company's property to subsidiary companies.

5th. To acquire other properties.

The Company will reap all intermediate profits, carrying on the joint operations of mining, smelting, and extraction, without the usual heavy items for brokerage, commission, &c.

This property is situated in a proved argentiferous district, and is surrounded by the "Cristo" and "Bocanema" Silver Mines, which have been worked with excellent results, and which, in the opinion of qualified experts, are properties of very great value, and also the Santana Mine, from which over \$12,000,000 worth of silver has been won. The "Frias" Silver Mine, which is in the same district, and belongs to the Tolima Mining Co., Limited, yields, under the management of Mr. James G. Green, a profit of about £60,000 per annum, and has some £400,000 worth of ore reserves in sight (*vide* MINING WORLD AND ENGINEERING RECORD, 4th July, 1891).

The results, carefully compiled, of five years' practical working of the process at the Avonmouth Works have completely demonstrated the value of the Lewis-Bartlett process of condensation, and it appears that something approaching 99 per cent. of the *actual or chemical metallic contents* of the ore is obtained.

The mining property has been examined and reported on by Mr. John Webster, of Winscombe, Somerset, a mining engineer of great experience.

The Lewis-Bartlett process has been reported upon by Dr. William Ramsay, F.R.S., F.C.S., Dean of Faculty of Science and Professor of Chemistry in University College, London, and also Mr. J. W. Bevan, F.R.S., F.G.S., of Dublin, who both speak in highest terms of its value.

These reports are set out in full in the prospectus.

ESTIMATE.

The following calculation is based upon Mr. Webster's estimate, taking the minimum output, and adding 25 per cent. to the costs referred to in his report, and allowing an ample margin over the actual ascertained costs of treatment by the Lewis-Bartlett process:—

	£	s.	d.	£	s.	d.
100 tons of concentrated ore, containing 50,000 ozs. of silver, at 3s. 9d. per oz.						
is worth				9,375	0	0
Cost of 100 tons of ore delivered at the Company's works, at say £15 per ton	1,500	0	0			
Treating 100 tons, at say £2 per ton	200	0	0			
Incidentals and contingencies, say	200	0	0			
				1,900	0	0

Estimated profit per month upon treating 100 tons ... £7,475 0 0

Mr. Webster considers that in a few months the mines should be in a position to ship 250 tons of concentrates per month, each ton containing 500 ozs. of silver and costing £12, delivered at the Company's smelting works. Taking fine silver at the moderate price of 3s. 9d. per oz., 1 ton of this ore would be worth £93 15s., from which would have to be deducted £12, the cost of raising, concentration and freight, and say £4 for treatment, fixed and incidental expenses; leaving a profit of over £77 per ton. It will be seen from these figures that, with even one quarter of Mr. Webster's estimated output, the Company would still be in a position to pay handsome dividends.

This is allowing nothing for the lead, zinc, or other metals which may be profitably extracted.

The vendors of the mining properties, works, and patent rights, are to receive from the Company for the sale 90,000 fully-paid ordinary shares, and £20,000 in cash, thus leaving £20,000 in cash for working capital.

The following contracts have been entered into:

An agreement dated 27th of August, 1891, for the sale and purchase of mining properties, smelting works, patents, &c., entered into by Frederick William Aylwin of the first part, the Bristol Sublimed Lead Company, Limited, of the second part, and Arthur Alexander Gill Hall (as trustee on behalf of the Bristol Silver and Lead Company, Limited), of the third part.

A supplemental agreement, dated the 7th of November, 1891, between the said F. W. Aylwin, the Bristol Sublimed Lead Company, Limited, and A. A. G. Hall.

These contracts can be inspected at the Company's office, and applicants for shares will be deemed to have had notice of their contents.

The statements contained in this prospectus are based upon reports which together with copies of the memorandum and articles of association, may also be inspected at the Company's office.

Prospectuses may be obtained from the Company's bankers, brokers, solicitors, or secretary.

Applications for shares should be sent to the Company's bankers, together with the amount payable on application. Should no allotment be made, the amount paid upon application will be returned in full; and when the number of shares allotted is less than the number applied for, the surplus will be applied in payment of calls due on the shares allotted.

November, 1891.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

AXIOM OF THE LATE MR. ABBOTT—NEWSPAPER QUOTATIONS—LORD MAYOR'S SHOW, STORMS AND THE SETTLEMENT FIGHT AGAINST BUSINESS—SHARES IN WHICH CHANGES HAVE OCCURRED.

THE course of the Mining Market latterly has illustrated the sapient remark of the late Mr. Wm. Abbott, whose loss we still deplore, for he gave life and animation to almost every meeting he attended—that once you let prices go down it is heaven's hard work to get them up. The same was the case with Humpty Dumpty, for it will be remembered that when upon a memorable occasion that gentleman had a great fall, all the king's horses and all the king's men could not pull Humpty Dumpty up again. It would require, in the case of the Mining Market, a long pull and a strong pull and a pull altogether of a considerable number of buyers to set shares upon something like the basis of their commonly recognised merits. We have no wish here to repeat the views expressed in the article entitled, "Will Prices Revive?" which will be found in another column, but we cannot help adding to that the information, which will be understood by our readers by this time, that a favourable report or telegram is sure to knock prices down, and a good meeting generally has the same effect. Of course, a bad report, or a disappointing telegram, causes them to be thrown, like old bones, on the market for any scavenger who may be passing to pick up.

In many cases brokers are obliged to reply to their clients who send selling orders (and sometimes buying orders too), that there is no market at quoted prices. Then, say the clients, with a logic that seems perfect, why quote the prices in the newspapers? Why, indeed? Can the editor regard a share as absolutely valueless because there is no immediate market for it? Is a house, for example, of no value because an immediate purchaser cannot be found? Is the editor in question to eliminate a share from the list because temporarily there is no business, and to lead the public to suppose that everything connected with the concern has disappeared? He cannot do it. His only alternative then is to leave prices as they were when last dealt in. The client thereupon says to his broker, "I see these shares quoted at so and so, and you ought at least to get me the middle price," and the sins of the editor, if sins they be, are visited on the head of the broker, who wakes up one fine morning to find that owing to the explanation he has given in something like the foregoing language, he has lost a good client. This is the even-handed justice that is meted out to him, and he regards it as one of the trials of his lot.

The Witwatersrandt output for Oct. being telegraphed as 72,793 ozs., the monthly comparison comes out as follows :—

	1888.	1889.	1890.	1891.
Jan. ...	11,269	24,986	35,038	53,205
Feb. ...	12,161	25,800	36,886	50,073
Mar. ...	14,706	23,705	37,600	52,949
Apl. ...	15,853	27,131	38,799	56,362
May ...	19,002	38,298	38,844	54,672
June ...	16,328	31,272	37,412	55,863
July ...	19,966	32,407	39,452	54,920
Aug. ...	19,877	32,142	42,861	59,070
Sept. ...	20,219	34,369	45,467	65,601
Oct. ...	27,775	31,914	45,250	72,793
Nov. ...	27,336	36,116	46,795	—
Dec. ...	26,148	39,600	50,352	—
Totals ...	230,640	377,740	494,756	—

It will be seen from what follows that lower prices have been the rule throughout the week. Monday was a *dies non* on account of the Lord Mayor's show, and the torrents of rain which fell all day; Tuesday showed some revival of business; but Wednesday, brokers were doing their best, by means of waterproofs and umbrellas, to shelter themselves from the storm of rain and wind which has had such disastrous effects round the coast. Later on there was the settlement, so that altogether this may be called "an interrupted week." At the same time, if there was any vitality in prices the market would not be at the dead level we report it to-night.

Coming to the actual business of the week, there has been some activity in General Foreign shares, but prices do not close at their best. Golden Feather and Golden Gate have suffered a further relapse, and the failure of an inside broker, announced to-day, is said to have been largely connected with speculative dealings in these shares. We have no wish to impeach Col. McLaughlin's veracity, or to cast doubt upon his good intentions, but the injudiciousness of some of his statements has been deplorable. The news from Golden Leaf sent those shares at one time up to 6s. buyers, though they close weaker. There have been dealings in Tolima "A" shares, which left off to-night 5s. firmer than a week ago. New Gustons are also better, and there have been considerable dealings in Yankee Girl shares, the last telegram from the mine showing a profit of about \$10,000. A circular issued in respect to Flagstaff announces the starting of the machinery, the sale of 106 tons of ore for 1,000*l.*, and 364 tons now lying ready for the market at the sampling mills, and important improvements in the mine. The market did not respond in any sense to this news. The announcement of the arrival of the chairman at Palmarejo knocked the shares down 6*d.*, though why this should have been the effect of what in all probability will prove a most useful visit, no one can understand. Would the shares have gone up 6*d.* if he had not arrived? Generally the dealings in Foreign shares have resulted in lower prices.

Colombian shares have been dull in sympathy with other markets, but, nevertheless, close at about last week's quotations. Tolima A shares are being bought quietly at 9½ to 10, at which price they are cheap, in view of the returns, which are now equal to 65 per cent. on the capital, and 35 per cent. on the price of the shares. Colombian Hydraulics have fluctuated between 23*s.* and 25*s.*, and seem to be worth buying between these two figures. Orita has made another return—this time of 300*l.*, which is very satisfactory, seeing that the rim-rock alone has been worked, and there has been some scarcity of water. Colons close at 4*s.* to 4*s.* 6*d.*, or about as last week. Loma and Tesoro have been bought at 1*s.* 9*d.* to 2*s.* and 1*s.* 3*d.* to 1*s.* 9*d.* respectively. These two mines are cheap, and if all that is said of their prospects be true, the shares ought to be worth buying. At present quotations—viz., 2*s.* for Lomas and 1*s.* 6*d.* for Tesoros, these two mines are selling for 30,000*l.* and 9,000*l.* respectively, sums which it must be allowed are low enough to tempt buyers in all conscience if there be any good in the concerns at all.

Coming to Indian Mines, for the first time for many weeks prices are feeble, but this follows upon a steady rise in most of them for several weeks past. Nine Reefs circular is out, and the share-

holders will act wisely in their own interests if they respond to it in the sense indicated by the directors.

There is a prospect of better railway communication with the Colar goldfields. The Dewan of Mysore, at the assembly of the Mysore representatives on Oct. 15, said: "Amongst other railway matters which have engaged the attention of Government during the last year is project for a link to connect the Madras Railway from Bowringpett with the Colar goldfields. A broad gauge line which will obviate break of bulk, and be in every way a greater convenience to the public, and which will be worked by the Madras Railway with their own stock and on very favourable terms, is the one which has commended itself to us as the best. The survey has been made by the railway branch of our Public Works Department, and the estimates and plans are now being prepared. I hope we shall be in a position to undertake actual work in the course of the next few months, should our negotiations with the Madras Railway Co. be carried through to a successful issue."

In the Colonial market prices have been on the downgrade without an exception.

Copper shares have been uneventful, except from their Rio Tinto side. These have fallen 1% on the week, and have, indeed, been as low as 17, but close 17½.

In the Kaffir circus the horsemanship has not been of a very adroit description. Diamond shares have been flabby, whilst Land descriptions have moved unevenly. Oceanas are down again, and so also are Silati, Sutherland Reef, and one or two others. Against this has to be set fractional rises in such shares as those of the Chartered Co., Goldfields of South Africa, both old and new, &c.

In the Gold sections the movements have been unworthy of special notice.

Home shares have moved unevenly, but for the most part they are down. Dolcoaths, however, show an advance of 2%, and Carn Brea, West Frances, and Leadhills are up. Devon Consols issued a more satisfactory report to-night than has emanated in recent times from the directors. We understand that the assents to the Roman Gravels re-construction are coming in well, and will justify the directors in proceeding to allotment under the favourable circumstances set forth at the last meeting.

The outlook for business is certainly more hopeful than it was when last we wrote.

KAFFIRS.

Remarks.—This market has been restricted, to a great extent, by the settlement, and notwithstanding the returns for the past month being better than was expected, prices have, in most cases, fallen slightly, the only exceptions being a small rise in Geldenhuis and City and Suburban.

Business.—A rise is shown in City and Suburban, ½; Croesus, 6d.; and Geldenhuis, ¼. The following have fallen:—Piggs Peak, 3d.; Ditto Preference, ¼; Sheba, 6d.; Bantjes, 6d.; Durban Roodepoort, ½; Great Gold Zone, 1s.; Heriot, ½; Jubilee, ½; Jmmpers, ½; Kimberley Roodepoort, ¼; Langlaagte, Block B, 6d.; Main Reef, 6d.; Salisbury, ½; Vogelstruis, 1s. 6d.; and Witwatersrandt (Knight's), 1s.

DIAMONDS.

Remarks.—The market has been of a very limited nature, the chief fall taking place in Burma Ruby and De Beers.

Business.—There is no rise to record, but the following have fallen:—De Beers, ¼; Gordon, 6d.; New Jagersfontein, ¼; and Burma Ruby, ½.

AFRICAN LANDS.

Remarks.—There has been a somewhat better feeling in several of these shares, and although in some cases prices are lower, brokers are able to deal more freely. British South Africa Chartered are spoken well of, and are slightly firmer. Goldfields of South Africa have also improved. Oceanas, on the other hand, have receded, and likewise Sutherland Reef and Johannesburg Estates.

Business.—A rise is shown in British South Africa Chartered, ¼; Goldfields of South Africa, ½; and Goldfields of South Africa, New, ¼. The following have fallen:—Horo Concessions, ¼; Johannesburg Estates, ¼; Moodies, 6d.; Moodies, fully paid, 1s. 6d.; Oceana, ½; Ophir, 6d.; Silati River, 3d.; South African Gold Trust, ¼; Southern Land, 1s.; Sutherland Reef, ½; Transvaal Estates, 1s. 6d.; Transvaal Gold, 6d.; and Transvaal Lands, 1s.

INDIANS.

Remarks.—The shares in this class have been somewhat disturbed by the settlement, but prices firmed up slightly at the close. Mysore have been offered at $\frac{1}{8}$, although last week a splendid return was shown for the month. Other shares have receded in sympathy.

Business.—There is no rise to record, but a fall has taken place in Glenrock of 3d.; Indian Consolidated, 6d.; Mysore Gold, $\frac{1}{4}$; Mysore Harnhalli, 3d.; and Nundydroog, $\frac{1}{8}$.

AUSTRALIANS.

Remarks.—These shares have been very flat, and in some cases difficult to deal in. Australian Broken Hills and Scottish Australian are lower.

Business.—There is no rise to record, but a fall has taken place in Australian Broken Hills of 2s.; Cumberland, 3d.; Day Dawn Block, 6d.; Gympie Great Eastern, 6d.; New Queen, 6d.; and Scottish Australian, new, $\frac{1}{8}$.

COPPER.

Remarks.—Some excitement has been caused by the rapid fluctuations in Tintos, which leave off 20s. lower. The only rises have been in Quebrada and Tharsis shares, but simply to a slight extent.

Business.—A rise is shown in Quebrada and Tharsis, $\frac{1}{8}$; whilst a fall has taken place in Copiapo, $\frac{1}{8}$; Mason and Barry, $\frac{1}{8}$; Namaqua, $\frac{1}{8}$; and Rio Rinto, 20s.

GENERAL FOREIGN SHARES.

Remarks.—The market has been more or less dull, and prices generally are below last week's quotations. The only rises of importance have been in Golden Leaf (which were bought up to 6s.), New Guston, and Tolima "A." Golden Feathers and Gates have varied, and close lower on the week. Callao Bis and Palmarejo are also down through want of support.

Business.—A rise is shown in Golden Leaf, 6d.; New Guston, $\frac{1}{8}$; Tesoro, 3d.; and Tolima "A," $\frac{1}{4}$; whilst a fall has taken place in American Belle of 6d.; Balkis, 3d.; Callao Bis, 9d.; Don Pedro, $\frac{1}{8}$; Garfield, 3d.; Golden Feather Channel, 2s.; Golden Gate, 3d.; Idaho, 3d.; Linares, $\frac{1}{4}$; Lisbon Berlyn, 3d.; New Eberhardt, 3d.; Orita, 6d.; Oscar, 3d.; and Palmarejo, 6d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

COLONIAL MINES.

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 7th inst.:—"Tons crushed, 650; yield of gold, 1,023 ozs.; approximate value, 3,525l.; fortnight's expenses, 1,230l."

DAY DAWN P.C.—A cablegram from manager at Charters Towers gives the result of this company's crushing for the fortnight ending Nov. 7, viz.:—"1,100 tons, 1,337 ozs." (Estimated value, 4,679l.)

GOLDEN GATE.—Cleaned-up on 7th inst. 299 tons for 647 ozs., value 2,400l. A dividend of 1s. per share was declared, equal to 2s. per share old issue. Crushing still continues.

MIDAS.—Cable from the mine:—"Yield for week ending Nov. 7, 34 ozs."

MOUNT LEYSHON.—A cablegram, dated 10th inst., from the manager at Charters Towers gives the fortnightly crushing:—"880 tons crushed, 330 ozs. gold; 25 stamps mill ran 238 hours."

MOUNT ZEEHAN.—Telegram from Hobart:—"15 tons of first-class ore have been shipped to London per the s.s. Echuca." The shipment advised on Oct. 26 per the s.s. Bungaree should have been read as 35 tons instead of 20 tons, making a total of 50 tons.

TASMANIAN SILVER.—Telegram Nov. 11:—"60-ft. level, lode is 3 ft. thick; second-class ore. Level below the adit, lode is 8 ft. thick; second-class ore."

FOREIGN MINES.

ALASKA TREADWELL.—A cable announces the following clean-up:—"Shipment of bullion, \$56,500; tons of ore milled, 19,535; tons of sulphurets treated, 512. Of bullion there came from sulphurets \$14,938. Number of days mill ran (about) 30. Gross expenses for period have been \$35,370."

ALMADA AND TIRITO.—Cablegram from the superintendent:—"Last month's profit was, gross, \$6,650; expenditure on capital account, \$4,400."

ELKHORN.—The company has received the following cables:—"During the month of Oct., mill worked 29 days and crushed 1,065 tons: shipped bullion amounting to \$37,610; smelting ore sold 160 tons \$13,373; total produce, \$50,983; total expenses, \$23,790. The breast of ore on the 1,250-ft. level south assays 35 to 40 ozs. per ton. Everything is going right." Cable: "Bullion produced for week ending Nov. 7, \$5,480; shut down three days for repairs."

EMMA.—Cablegram from the manager at Salt Lake City:—"18 tons concentrates, sold at \$85 per ton; 2 $\frac{1}{2}$ tons ore, sold at \$120 per ton. Bay City tunnel level improving."

ESMERALDA.—The manager, under date Nov. 11, cables:—"The west cross-cut from the shaft on Esmeralda ledge is out 11 ft.; quartz looking first-rate."

GOLDEN FEATHER CHANNEL.—Cable from Col. Frank McLaughlin, at Oroville:—"Heavy storm of wind and rain in mountains, raised river, but in no way interfering with operations. Weather has changed for the better, and every appearance of present weather continuing. Everything is going well."

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for month of Oct.:—"3,200 tons of ore crushed; 468 ozs. of bullion produced; value, \$6,100. 51 stamps running 30 days."

GOLDEN GATE ALLUVIAL.—Col. McLaughlin, the company's general manager at Oroville, cables:—"Heavy storm of wind and rain in mountains yesterday morning. River flowing over head dam last night; now going down; no loss; am taking out pumps and sub-flume."

GRAND CENTRAL.—The manager (Nov. 11) reports:—"The survey of the road will be completed in two days. Six bags of ore from the various claims were forwarded to England on Oct. 24. (This ore was received in London 11th instant, and is being tested.)"

JAY HAWK AND LONE PINE CONSOLIDATED.—Telegram from Capt. Pridaux:—"Lone Pine mill working day and night, shall melt bullion during the week; shall commence crushing ore Jay Hawk Mill during the week. The mine continues to improve going down into the bottom."

LA PLATA.—Cable 12th inst.:—"Profit at Leadville for the month of Oct., \$1,000; smelting works leased at a rental to the company of \$500 per month; lessees in possession, and are pushing work ahead."

MAID OF ERIN.—The directors have declared a third interim dividend of 1s. per share (being at the rate of 30 per cent. per annum), payable on Thursday, Nov. 26. The transfer books will be closed from Nov. 19 to Nov. 26 inclusive. Cablegram from the mines:—"Gross yield for the week ending Nov. 7, 1,950 tons; estimated value, \$37,000 (7,629l.)."

NEW PIERREFITTE.—The company has sold 150 tons lead ore at 11l. 7s. 6d. per ton, f.o.b. Bordeaux, to Mr. J. F. Kimmel.

ORITA.—Cablegram from the superintendent relates to run No. 58:—"We have cleaned up 300l. from the rim."

OURO PRETO.—A telegram, dated Nov. 11, gives last month's return of gold as follows:—"3,052 tons of quartz produced 9,302 oits. of gold (1,072 ozs.)."

PALMAREJO.—The chairman, who left England on Oct. 17, has arrived on the company's property in Mexico. The following telegram has been received from him:—"Nov. 10. Arrived here to-day; all well; good progress being made.—PIGOU."

PESTARENA UNITED.—Notice is given that the coupon, No. 13,

of the 10 per cent. second mortgage debentures of this company, will be paid at this office, on and after Nov. 16, 1891.

SAN LUIS.—Extract from a cablegram, received on Nov. 9, from the manager at the mines:—"Bullion shipped Oct., assay value, 1,800l.; 250 tons of ore crushed. Mill running 25 days."

WOHLFAHRT.—The directors have declared an interim dividend at the rate of 10 per cent. per annum for the six months ending June 30, 1891, payable on and after the 14th inst., free of income tax.

HOME MINES.

NEW WELSH SLATE.—Output for four weeks ending Oct. 31, 600 tons; gross value, 2,042l.

TIN SALES.—The samplings for to-day's ticketing at Redruth are as follow:—Carn Brea, 70 tons; Dolcoath, 50 tons; Tincroft, 39 tons; East Pool, 23 tons; Phoenix United, 21 tons; Wheal Bassett, 18 tons; South Frances, 16 tons; South Condurrow, 14 tons; West Kitty, 14 tons; Killifreth, 10½ tons; South Phoenix, 10 tons; Wheal Kitty, 5 tons; total, 290½ tons.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN MINES

SEE PAGES 714 AND 715.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

ROODEPOORT.—Oct. crushing, 706 ozs. for 19 days.

CRÆSUS.—Crushing for last month yielded 231 ozs.

CITY AND SUBURBAN.—Crushings for Oct. 1,257 ozs.

NIGEL.—Crushings for Oct. 2,952 ozs.; tailings, 780 ozs.

BOTHAS REEF.—Crushing for Sept., 1,955 tons, yielded 716 ozs.

WORCESTER EXPLORATION.—"Result of last month's crushing, 1,548 ozs. of gold."

STANHOPE.—Crushings for Oct., 1,286 ozs. Tailings to Dec. 31 have been sold for 6,000l.

CHAMP D'OR.—Oct. crushing:—Battery worked 29 days, crushing 810 tons, yielding 1,100 ozs.

EDWIN BRAY.—Cable advices just received report that during Oct. 700 tons were crushed, yielding 300 ozs. of free gold.

MOODIE'S EXPLORATION.—Cable; "303 claims rented or leased, 890 tons crushed by claimholders, yielded 479 ozs. of gold."

NORTH EASTERN BULTFONTEIN.—Telegraphic advice for last week:—"Washed 12,000 loads; one-half yellow-ground, one-half top blue-ground; yield, 1,600 carats of diamonds."

GRASKOP MILL AND MINING.—The consignment of gold from the Sept. crushing of 182 ozs. has been sold, through Messrs. Johnson, Matthey and Co., Limited, for 695l. 18s., or 3l. 16s. 3d. per oz. A cablegram also announces the result of the Oct. crushing as follows:—"Crushed 497 tons; yield, 165 ozs.; estimated cost, 430l."

CROWN REEF.—The crushing for last month during 28 7-12 days was 7,217 tons, which yielded 4,038 ozs. of smelted gold. The revenue for the month was 14,435l. 17s., and the working expenditure was 7,544l., leaving a balance of 6,891l. 17s., as profit for the month. The expenditure on capital account for the month was 1,629l., making a total expenditure for the month of 9,173l.

DE LAMAR.—Cable:—"During the month of Oct. the mill crushed 1,480 tons, yielding bullion of an estimated value of \$40,000; estimated value of ore shipped to smelters, \$15,300; miscellaneous receipts, \$900; total product, \$56,200; total expenses on revenue account, \$26,113. The new engine at the mill will commence duty on Nov. 9. Everything is going right."

TRANSVAAL GOLD EXPLORATION AND LAND.—Summary for Sept.:—Mined during month, 766 tons; average assay, 4 ozs. 9 dwts. per ton. Battery working 548 hours crushed 726 tons Mu ore, yielding 242 ozs. retorted gold, equal to 6 dwts. 16 grs. per ton. Pans working 506 hours treated 93 tons mixed tailings, yielding 43 ozs. 4 dwts., equal to 9 dwts. 7 grs. per ton; and 58 tons rich Theta and Nu ores, yielding 733 ozs. 19 dwts., equal to 12 ozs. 13 dwts. 2 grs. per ton. Total for month, 1,019 ozs. 3 dwts.

RANDT COAL.—Telegram from mine manager to the agent in Johannesburg:—"Coal struck at 83 ft.; have sunk 7 ft. in coal, and not yet through it. Quality of coal, so far proved, is by far the best sample in South Africa, and all coking coal; am personally well satisfied." A sample of this coal is now on exhibition at the Johannesburg offices of the Standard Bank of South Africa. One contract alone, it is said, entered into by this company's agent last month, was for the sale of 1,000 bags of coke per month.

VIRGINIA TRANSVAAL (Oct. 13).—I have made a thorough examination of the different points in the mine. I also took samples from the different points, and at surface bruised and panned them, with a very gratifying result, and whilst I cannot to-day send detailed report, I have cabled that you may know the Virginia is without doubt a genuine good property. My panning results gave from 10 dwts. and 12 dwts. up to 1½ oz. free gold; and, hence, I say results are very gratifying. I intend proceeding at all speed in the erection of battery.—A. P. D. HODGE.

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—The company notifies that warrants for the dividend declared by the Simmer and Jack Gold Mining Co., Limited, for quarter to Aug. 31 last have been posted to shareholders on the London register. The company has received the following cablegram from the head office of the Simmer and Jack Gold Mining Co. at Johannesburg:—"Last month's profit

was 3,800l." Also, a cable from the head office of the Princess Estate and Gold Mining Co., Limited, at Johannesburg, stating that the output for the month of Oct. is 800 ozs. of gold.

PIGGS PEAK ESTATE.—Report from Mr. Murray, Oct. 10:—"Devil's reef—Prospecting drives: Drove for the week 24 ft.; passing through some good-looking quartz. Ore shoot in main drive: Timbering completed; rails laid up to trestle work, and drains made to carry away water. Remaining boys cutting wood, and stacking same for battery. Battery: Working on roof frame all the week. Engine: Have been fitting connecting rods, eccentrics, &c. Now waiting for slide valve, pistons, &c. Have boiler now in battery, ready to put in place. Dam: Sluice box and pipe (to take water to battery) fixed; 23 piles in level of puddled clay from top 11 ft.

CERRO DE PASCO.—The directors have received the following advices dated Barberton, Oct. 12.—Block F extension: Drive south on 10-ft. reef has been driven 16 ft., making total distance 158 ft. Ore extracted 32 tons. Drive north on 10-ft. reef has been driven 9 ft., making total distance 58 ft. Ore extracted 18 tons. There is no change to report in the above work this week. Drive south on 4-ft. reef has been driven 7 ft., making total distance 26 ft. Ore extracted 10½ tons. The lode at this point is 4 ft. 8 ins. wide. Air shaft, No. 1 south, has been sunk 9 ft., making total distance 61 ft. This shaft continues in hard sandstone. Block 12, north-east cross-cut: In accordance with your request, I stopped this work for the present.

HORO CONCESSION (Oct. 7).—Report from mine.—I beg to send you below the report of the work done here during the month of Sept. last: No. 1 tunnel: A length of 54 ft. has been timbered for stoping in the drives to the east and west from the cross-cut put in on the north of the No. 2 west drive at 18 ft. to the west of No. 1 tunnel. On commencing to stope the ground we found it so disturbed that the cost for timbering would be too great for overhand stoping, so I have left it till the open cutting is sufficiently advanced to understop it. The hard quartz met in the cross-cut to the south of the No. 2 west drive has been driven on in all 17 ft. Prospects from the last 8 ft. vary from 1 dwt. to 4 dwts. only. Intermediate level: This level is now 20 ft. past the winze; it shows very little free gold. Battery: The bulk of the ore crushed has come from the open cutting to the east of No. 1 shaft. The ore crushed from the last clean up on Aug. 23 to Sept. 30 was 2,400 tons, the yield of gold 248 ozs. 7 dwts. The 20 stamps worked 24 days 3 hours. In the last half of the month shortness of water prevented us working full time.

JUBILEE.—The directors visited the mine on June 23, and found one of the matters requiring prompt attention was the removal of the accumulated tailings, which had become a serious obstacle at the battery site, owing to want of space, and after careful enquiry we decided upon the disposal of same. This was effected with the McArthur Forrest Gold Recovery Co., who have agreed to purchase at a fair price, to find all labour, and to return the tailings to the mine after treatment for filling in stopes. This will bring in a considerable income during the next 12 months, and satisfactory arrangements have also been entered into with the same company for future tailings. The question of a tram line from mine to mill, as well as the water supply, received careful attention. Many schemes were put before us and considered, and negotiations are now pending which will, we hope, shortly lead to satisfactory results. The vital question of treating pyritic ore was greatly deliberated—by the arrangement made with the McArthur Forrest Co., they hope to extract the gold which is undoubtedly in the ore, and we have every reason to believe from results shown by other mines that the difficulty of treating this refractory ore has been now overcome, and that the result of such treatment will be gratifying. The board closed by saying they had every confidence in the future of the mine.

SUTHERLAND REEF.—The directors state that they have during the last few weeks received communications from the mine confirming the favourable telegrams which were a short time since communicated to the Press. The Sutherland shaft had up to Oct. 4 been sunk to a depth of 150 ft., and the leaders give indications of meeting a little below the level and forming into one body of ore. A sample of the principal leader first struck has been sent home, and has been assayed by Mr. F. Claudet (assayer to the Bank of England), who reports that it contained gold, 17 ozs. 9 dwts. 8 grs.; silver, 1 oz. 10 dwts. per 2,240 lbs. In another part of the property two distinct reefs have been cut on the surface, as shown upon the plan, viz., Kraal reef, which gave at date of advice, Sept. 27, at a depth of 4 ft., an average assay of 1 oz. 12 dwts. to the ton, with a width of 6 ins. to 9 ins. The second reef cut in the trench (at present known as the New reef) has been sunk upon to a depth of 18 ft., at which point it shows a width of 4 ft. 6 ins., carrying gold right across, and assaying 1 oz. 12 dwts. 6 grs. per ton. A shaft is being sunk upon this reef which, the manager in charge advises, can be traced through the whole length of the claims, and which probably runs through the adjacent Potsdam section. The reef has also been cut in two trenches, 90 ft. east and 90 ft. west of the original trench. Letter from the mine dated Oct. 4 advises that Mr. Wilson Moore, of Johannesburg, author of several works on the Goldfields of South Africa, examined this reef on the 4th ult., and expressed a very high opinion of it. The discovery of this very valuable reef makes it possible to work two mines upon the Sutherland Reef property's claims alone, instead of one—a fact which the board would particularly bring under your attention. The new reef is believed by some who have seen it to be the extension of what is known as the Shotover reef, in a property lying some 3 miles east of your mine, which has been found at a depth of 140 ft. to be 4 ft. wide, very rich, and carrying visible gold.

BALKIS CONSOLIDATED.—In a letter dated Sept. 30, our manager at Eersteling reports as follows:—"No. 3 north reef: I have put the miners from the new east shaft to push on the work on this reef, and I am glad to say that the prospects continue to be encouraging. I am naturally, seeing the disappointments we have had here, very anxious to thoroughly prove this reef before any expensive permanent work in hand, and am following the extension eastward as quickly as possible. We have this week found some very rich stone at surface exactly similar in appearance to that in the shafts fully half a mile to the eastward of the present workings. This stone was found in the trenches I had started in search of the reef in this direction, and was lying close on the supposed course of the reef. Though I have not yet found the reef itself in this part I have the strongest hopes that we

shall succeed in doing so in the course of a very short time, and when found we shall have proved it for a length of fully a mile and a half. Ever since I have been on the property I have felt confident, owing to the existence of debital gold quartz, &c., that there must be or must have been valuable reefs somewhere about the position of No. 3 north, and I believe that in it we have found one of them. In this belief I have had some very careful and thorough prospecting work done, and probably there are other reefs yet to be found; if, however, the present one continues to prove up to its promise we should have a valuable property in it. It, of course, remains to be seen how it holds in depth. Samples from various parts of the reef give from 5 dwts. to 1 oz. of gold per ton, and some of the surface stone, believed to have come from the same reef, carries over 2 ozs. of gold to the ton of stone. Further east I have another shaft going down, where we should get from 80 to 100 ft. of backs above water level. This shaft is now down over 40 ft. from surface, and at 25 ft., where we are driving on the lode, the quartz is about 2 ft. 6 ins. wide, and worth from 15 dwts. to 1 oz. of gold per ton. This is a vertical shaft, and should cut the reef at between 60 and 70 ft., but as the dip varies it is impossible to say exactly. I am very anxious not to lead you to over-estimate the value of this reef, or to speak too certainly about it until it is proved beyond all reasonable doubt. At the same time I wish to assure you of my very strong hopes for it. I have been so bitterly disappointed several times already on this property that I am very careful now how I come to conclusions. We have, in addition to this, a very large area of ground still altogether unprospected. I have taken this northern part in hand first, as being the most likely and promising part.

COMMERCIAL NOTES.

METALS.

COPPER has been steady.

TIN has improved in value. Straits declined from 90 $\frac{1}{2}$ 10s. to 89 $\frac{1}{2}$ 15s. cash, and 90 $\frac{1}{2}$ 15s. three months, but has since steadily improved to 91 $\frac{1}{2}$ 10s. cash, and 92 $\frac{1}{2}$ 5s. three months paid, to-day closing firm thereat.

SPELTER quiet. We quote ordinary brands 23 $\frac{1}{2}$ 2s. 6d. to 23 $\frac{1}{2}$ 5s. ex-ship here.

LEAD dull and lower. We quote Soft Spanish, 11 $\frac{1}{2}$ 10s. to 11 $\frac{1}{2}$ 12s. 6d.; soft English, 11 $\frac{1}{2}$ 12s. 6d. to 12 $\frac{1}{2}$; L.B., 12 $\frac{1}{2}$ 10s.; sheets, 12 $\frac{1}{2}$ 15s. to 13 $\frac{1}{2}$.

ANTIMONY dearer. Hallett now asks 60 $\frac{1}{2}$, and other makers ask higher prices; second-hand lots have been sold at 51 $\frac{1}{2}$ to 52 $\frac{1}{2}$, now 55 $\frac{1}{2}$ is asked.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING

Nov. 14.

Anglo-Egyptian Bank ...	2 $\frac{1}{2}$ per cent.
Baker Brothers, Preference ...	6 per cent.
Baker Brothers, Ordinary ...	8 per cent.
Bengal and North-Western Railway ...	3 per cent.
British Bank of South America ...	8s. per share.
Chemists' Aërated and Mineral Waters ...	10 per cent.
Chicago and North-Western Granaries ...	8 per cent.
Colonial and United States Mortgage ...	10 per cent.
Dorman, Long and Co. ...	5s. per share.
Dublin Distillers... ..	3s. per share.
Humber and Co. ...	10 per cent.
Mexican Railway, 1st Preference ...	8 per cent.
Mexican Railway, 2nd Preference ...	6 per cent.
Mexican Railway, Ordinary ...	1 $\frac{1}{2}$ per cent.
Robert Boyle and Son ...	12 $\frac{1}{2}$ per cent.
Swan Electric ...	8 per cent.
Texas Land and Mortgage ...	10 per cent.
Union Mortgage of Australia ...	10 per cent.
Woodhouse and Rawson, Preference ...	8 per cent.
Woodhouse and Rawson, Ordinary ...	15 per cent.

FLAGSTAFF, LIMITED.

GOOD NEWS FROM THE PROFESSOR—SALES AND OUTPUT.

I AM desired to inform you that the directors have received cable advices from Prof. Vincent, stating that the machinery has now been started, and that the action of air compressors, hoisting engine, &c., is most satisfactory. Also that he has sold a further 106 tons of ore for 1,000 $\frac{1}{2}$, which amount he has paid into the bank. He further expects to make additional sales next week. There are 364 tons of ore now laying ready for market at the sampling mills. Ore is now being extracted from three different points on or above 6th level, and work will be started on important bodies of ore which are waiting development on the 7th level, as soon as it is cleared of the accumulated ore and waste. The output for the 12 days prior to the starting of the machinery was 97 car loads (tons). The mine generally is reported to be looking well.—R. S. ARCHBOLD, Secretary.

MIDDLESBOROUGH TOWN LANDS CO.—Cable advices have been received from E. F. Powers that the meeting of the above company, summoned for the 12th inst., has been held at Middlesborough, when the resolutions transferring the undertaking to the new company, in accordance with the scheme approved by the London shareholders, were passed unanimously. The register of the old company is now closed, and shareholders on that register will be entitled to exchange their certificates for certificates in the new company, which certificates will be ready for delivery on and after the 30th inst. Due notice will be given to all such shareholders.

HOLLOWAY'S PILLS.—In the complaints peculiar to females these Pills are unrivalled. Their use by the fair sex has become so constant for the removal of their ailments that barely a toilet is without them. Amongst all classes, from the domestic servant to the peeress, universal favour is accorded to these renovating Pills; their invigorating and purifying properties render them safe and invaluable in all cases; they may be taken by females of all ages for any disorganisation or irregularity of the system, speedily removing the cause and restoring the sufferer to robust health. As a family medicine they are invaluable for subduing the maladies of young and old.

BRITISH MINING INTELLIGENCE.

DRAKEWALLS (Nov. 12).—But very little progress has been made in forking the water. There is such a great strain on the bucket rods that they have parted in the lift on three occasions, and having to stop the engine to change clacks, &c., and also those large wheels breaking the underlay at the shallow adit, there is a great quantity of water again. We also find that some of our pump work was damaged in some places worse than we at first thought at the time of the breakage of two of the main rods. The engine having worked so fast for such a length of time has considerably weakened some of the pitwork upwards. We are getting very rough weather and heavy floods again, which is against the forking also. The stope in the bottom of the 132-fm. level is producing 5 tons of mundic per fm. and good stones of copper ore. We are busy dressing a parcel of tin to be sold at the next ticketing.—H. RODDA.

EAST GRASSINGTON (Nov. 11).—Report from mine manager:—Hammond shaft: In the 47-fm. level west we have met with several cross joints, indicating our close proximity to the cross lode. We are now parallel with the underlay, or western shaft, and the vein is composed of spar and nice cubes of good quality lead ore. No. 1 stope in back of level in a vein 2 ft. wide; yields 12 cwt. of lead ore per fm. No. 2 stope in a vein 18 ins. wide; yields 10 cwt. of lead ore per fm. No. 3 sump: In the east end the vein is 2 ft. wide, carrying limespar and lead ore; worth 10 cwt. per fm. Stope in back of level yields 10 cwt. of lead ore per fm. Stope west of sump in a vein 2 ft. wide; yields 12 cwt. of lead ore per fm. We have commenced sinking a new perpendicular shaft from surface to command the western ground, where the main lode is in entirely whole ground for $\frac{1}{2}$ mile in length towards our western boundary. Harris main engine shaft: In the cross-cut north at the 60 we have intersected the main lode in a very favourable stratum, with the same south inclination as in the upper measures, and the most productive lodes of the district so far as seen into; the lode is composed chiefly of limespar and barytes intermixed with good patches of lead ore, and letting out water freely. We have drawn a nice sample of ore stuff from this point to-day. No. 1 stope in back of 47 west in a vein 2 ft. wide; yields 10 cwt. of lead ore per fm. Stope in back of the 37 east in a vein 2 ft. wide, yields 10 cwt. of lead ore per fm. Good progress is being made in extending 27 and 37 levels eastwards towards the cavity. Dressing and surface operations pushed forward as fast as the inclement weather will permit. The smelting works have been overhauled and repaired, and expected to be in full running order tomorrow or Friday at the latest. The new pitwork and pumping gear have arrived at the station and are now being carted up.

LEADHILLS (Nov. 9).—Brown's vein: The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 30 cwt. of ore per fm. No. 5 winze below the 130 north of Jeffrey's shaft shows a vein 6 ft. wide, charged mainly with kindly spar and ore; worth 30 cwt. per fm. The two stopes above the 130 north of Jeffrey's shaft are each worth 20 cwt. of ore per fm. The rise above the 130 north of Jeffrey's shaft keeps in a vein 6 ft. wide, charged with quartz and stones of ore, not, however, to value. The 115-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, showing promising quartz and ore; worth 30 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The 115-fm. level south of Wilson's shaft is in a vein 3 $\frac{1}{4}$ ft. wide, charged with nice-looking spar, and shows an encouraging dampness, but without ore. The winze below the 100 north of Jeffrey's shaft is in a vein 4 $\frac{1}{2}$ ft. wide, nicely mixed with quartz and spar, with ore worth 25 cwt. per fm. The stope below the 100 south of Wilson's shaft is worth 10 cwt. of ore per fm. The two stopes above the 35 south of Flat Rod shaft are worth 40 and 30 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein 3 $\frac{1}{2}$ ft. wide, charged with kindly spar and spots of ore, not, however, to value.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Nov. 6:—The 275-yd. level.—Stope west of No. 2 rise: Lode 4 ft. wide; worth 3 tons lead ore and 1 ton blende per fm. The 295-yd. level.—Stope east of winze: Lode 12 ft. wide; worth 6 tons blende and 1 ton lead ore per fm. Stope west of winze: Lode 6 ft. wide; worth 4 tons blende per fm. Driving on north portion of lode: The lode is about 5 ft. wide, and though not in good ore, is improving as it advances. The 315-yd. level.—In 65 yds. from winze: Some good ore ground, averaging 3 tons blende per fm., has been driven through during the last fortnight, but the end now is rather poor. Stope east of winze: Lode 6 ft. wide; worth 3 tons blende per fm. and a little lead ore. No. 1 stope west of winze: Lode 6 ft. wide; worth 4 tons blende per fm. No. 2 stope west of winze: Lode 7 ft. wide; worth 4 tons blende per fm. Dressing: 377 tons blende and 233 tons lead ore have been dressed and sold up to date. A new engine and boiler have been erected on the new floors to drive jigs, buddles and other machinery, and the whole will be at work by the end of the month if the weather permits.

PHENIX UNITED (Nov. 10).—We have at various points 19 tribute pitches at tributes varying from 5s. 6d. to 13s. in the £ for tin.—J. WILLIAMS, J. RUNDLE, W. MANLEY, J. HOSKEN.

PRINCE OF WALES (Nov. 11).—We are blasting down the lode in the 180-fm. level west, and are very pleased to say it is producing some splendid tinstuff, and in every way maintaining its size, character, and value, being still 4 ft. wide, and worth fully 35 $\frac{1}{2}$ per fm. In the 180 east the lode which came in the end last week is improving, and is now between 2 ft. and 3 ft. wide, well defined, of a very promising nature, with indications of soon striking something valuable. The men in the 166 west are also taking down the lode, which, as far as seen, is 4 ft. wide, in hard tinny capel and spar, worth 10 $\frac{1}{2}$ per fm. There is no perceptible change in the south cross-cut since last reported.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Nov. 12).—The 155-fm. level north of main shaft has now been driven 32 fms. 2 ft.; the lode, which is 2 $\frac{1}{2}$ ft. wide, contains good stones of lead ore. The 155 south-east on Caunter lode has been driven 33 fms. from Roman lode. This end has improved since last week, and is to-day in a lode 6 ft. wide, and worth 1 $\frac{1}{4}$ tons of lead ore and blende per fm. The 110-fm. level on the same lode has been driven 29 fms.; the lode is quite 8 ft. wide, and worth over 1 ton for lead ore per fm. The two stopes in back of this level are together producing 4 tons lead ore per fm. The 110 south of main shaft is now 28 fms. 4 $\frac{1}{2}$ ft. to the south of No. 1 winze, and the fore-breast contains good stones of lead ore and blende. The winze below

the 140 north is now 6 fms. $4\frac{1}{2}$ ft. deep, and worth $1\frac{1}{2}$ tons lead ore per fm. The two stopes in back of the 140 north are together worth $2\frac{1}{2}$ tons lead ore per fm. The 125 south of main shaft, which has now been driven 86 fms. from the new shaft below the 125 again shows signs of improvement; the lode in the forebreast is about 3 ft. wide, and worth $1\frac{1}{2}$ tons lead ore per fm. The winze below the 125 south is 7 fms. deep, but we are yet unable to estimate the width of the lode. The winze below the 125 south east on caunter lode is 2 fms. deep; the lode here, which is 2 ft. wide, is worth $1\frac{1}{2}$ tons lead ore per fm., and is rapidly improving. A stope in back of the 125 south of Lewis winze is worth 1 ton lead ore per fm. Three stopes in back of the 110 south of Watkin's winze south of main shaft are together worth $4\frac{1}{2}$ tons lead ore per ton. A stope south of shaft in back of same level is worth 1 ton lead ore. Two stopes in back of 80 south of Jones's winze south of main shaft are together worth $2\frac{1}{2}$ tons lead ore per fm. Two stopes on east lode north of main shaft are together worth 2 tons lead ore per fm. The 20 tons of blende sold to-day realised 122%, and we by this mail sending out samples of a parcel of 50 tons lead ore for sale on Thursday next.—A. WATERS and SON.

SOUTH DARREN (Nov. 12).—Driving was commenced in the 151 levels on Tuesday morning, by six men in each end, at 117. 10s. per fm.; the ground is harder or the price would have been reduced, as the stuff will now be drawn by the skip. The east end is worth 17 cwt. of silver-lead ore; the west end is worth 15 cwt. of silver-lead ore per fm., with a branch of copper ore 6 ins. wide in the north side. The pitman and trammers are engaged fixing the ladders and dividing, doing up the lodges, &c. The stope in the 142 west has fallen off in the middle; the ends remain about the same; the average value is 12 cwt. of silver-lead ore per fm. In the winze in the 130 west the lode is strong, with a good branch of copper and a mixture of lead.—J. MITCHELL.

VAN (Nov. 12).—At the 150-fm. level east of Seaham's winze, the lode in the forebreast is spotted with lead ore, and the surrounding ground is all that can be desired for the production of lead in large quantities. The end is being driven rapidly forward by six men and rock drills. Western part of the mine: The cross-cut at the 150-fm. level is going towards the south lode as fast as the hardness of the ground will admit, and we expect another 10 fms. or so should intersect this vein. The several stopes at different levels are yielding on the average 20 cwt. of lead ore per fm. Dressing of ore is being carried on as usual.—J. PAULL.

WEARDALE.—Report on mines for week ending Nov. 7.—Ore raised for week, 66 tons; ore dressed for week, 98 tons; ore, slag, and fume smelted for week, 139 tons, producing 71 tons of pig lead.

WHEAL CREBOR (Nov. 10).—The following points in the mine are now in operation:—Four men driving the 156-fm. level east of new shaft at 57. 10s. per fm. (for 10 fms.). The lode is 4 ft. wide, yielding 5 tons of arsenical mundic per fm. It would appear from the course the hanging-wall is taking that the lode is going to widen out again, but whether this will be in our favour or not remains to be proved. Four men driving the 156-fm. level west of shaft at 77. per fm. (for 10 fms.); the lode is 5 ft. wide, composed of hard and soft spar, black and grey capels, peach, killas, and white iron, yielding about 3 tons of arsenical mundic per fm., and a little copper ore and tin; the tin is found in spots in the peach. Two men driving west at the 132 on the south part of the lode at 57. per fm. The lode will yield 3 tons of mundic and copper ore per fm. Four men stoping the bottom of the 144 east of winze at 37. per fm.; the lode will yield 1 ton of copper ore and 5 tons of mundic per fm. Four men stoping the back of the 144 west of cross-cut at 37. per fm.; the lode is worth 3 tons of copper ore and 3 tons of mundic per fm. In the upper levels we have 14 men working on tribute from 12s. to 13s. 4d. in the £. Taking the tribute pitches all round they are looking a little better.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Nov. 10).—The lode in the 27 end is still unsettled, and the north branch contains stones of mundic and a little tin, but not to value. The south branch is composed of hard capel, mundic, and priam, and looks very hopeful for the production of mineral. The Flow is yielding more tin than usual. The engine pulverisers and other machinery are working very well.—S. P. CURTIS.

WHEAL UNY (Nov. 11).—The water is now 5 fms. below the 203. Still forking. Everything going well.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ARGENTELLA (Nov. 5).—No. 2 Marine—Driving east of south on footwall to cut Africana lode: Driven the past month 8.50 metres, through very favourable ground, highly mineralised. The footwall during the latter part of the month being nearly upright with a good face of flookan, and bearing more south will bring us to the junction much sooner than we expected when we started driving on this side. Quartz reef—Cross-cutting south: Driven 6.50 metres. Our progress has been fair considering the baud of ground we passed through. Another one has just appeared in the forebreast rising up from the foot; it is laying rather flat, so it will be some time before it reaches the roof of the level. All the bands passed through up to now dip north. I think this is a good indication that the large quartz reef dips north also. No. 3 Rowc's workings—Driving east on new lode: Driven the past month 3.60 metres, the forebreast producing strings of quartz containing silver-lead and blende. Towards the end of the month the lode turned north about 45 degs. On account of this I have moved the men to drive east on the north wall in hopes of reaching the point of intersection sooner than by driving on the south wall. The ventilation will also be better.—J. B. ROBERTS.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ended Oct. 1:—Engine shaft—280 level west: Driven 19 ft.; total, 551 ft.; country easier, a little water coming in from back. Stopes—280 level west: Stoping has commenced, and a small quantity of good grade galena broken. Incline from 280 level west: Sunk 13 ft.; total, 178 ft. 6 ins.; lode continues to look well, containing fahlerz and occasionally native silver in small quantities. During the fortnight a small deposit was met with which yielded a few pounds of solid native silver and a little rich fahlerz. Rise from intermediate level west, No. 1: Risen 8 ft.; total, 12 ft.; no change; men have been transferred to old stopes. Intermediate level west, No. 2 from rise: Stoping has been carried on here, and some very rich horn silver, assaying about 12,000 ozs. per ton, met with, besides a fair quantity of ironstone, containing some iodide of silver. The stopes at present look well, show-

ing chloride and iodide of silver in ironstone. Stopes off main rise: Work has been resumed here on a large and promising formation of calcite and ironstone to prospect the block of ground between this and the 180-ft. level. At the moment of writing, a little rich sulphide of silver and canary ore are showing in the face. Intermediate level, No. 2 east from incline: Driven 17 ft.; total, 88 ft.; lode larger, and improving in appearance, with a small seam of galena on hanging-wall. Rise from 280 level east: Risen 13 ft.; total, 31 ft.; formation vughy and looking very promising, consisting principally of carbonate of iron, containing a little galena and copper pyrites. The 180 stopes: Stoping has been continued, and a further quantity of clean galena broken.

BRATSBERG.—Report for week ending Oct. 31.—Hoffnung Mine: At No. 2 adit level the lode is improving, now yielding good saving stuff. No. 1 rise in the back is worth $\frac{1}{2}$ ton per fm., but No. 2 rise has decreased, present value $\frac{1}{2}$ ton per fm. A winze in the bottom of No. 2 adit level has just been started where the lode at present is yielding only saving stuff, but being situated in a good section of ground we look for a change daily. We have also resumed a mid-level in the back of No. 2 adit level; here we have a strong leader of ore, and otherwise good indications for the near future. At No. 3 adit level, the lode in the bottom of the level especially is very strongly formed and is there yielding ore at the rate of $\frac{1}{2}$ ton per fm. The rise in the back at this level is producing $\frac{1}{2}$ ton per fm. No. 4 level for the time being is idle, being blocked with stuff by the stopes above and behind the end. We have also started to sink a winze in the bottom of No. 4 level, but this is also idle for the same reason. At Murchison's section, the trial level is worth $\frac{1}{2}$ ton per fm. In all 70 miners were employed at this mine during Oct. month. Johannes Mine: The western level on Howard lode is unproductive, but there is no change in either the size or composition of the lode. The eastern level on Howard lode is worth about $\frac{1}{2}$ ton per fm., and the rise in the back about the same quantity. The main rise is yielding fully 1 ton per fm. During Oct. 20 miners have been engaged at this mine. Surface work and remarks: A sharp change in the weather has caused the floods to lessen and traffic is now in full swing between Ulefos and Strengen. Dressing has gone on fairly well, and the recent frosty weather gave us an opportunity to test the steam-heating arrangement in the dressing houses, and I am pleased to say the results are satisfactory. It will be observed that in all we have had 90 miners employed during Oct. month, but it was during the latter half of the month that the greatest increase was made, hence as yet we have not felt the full effect on the ore returns, which for Oct. we compute at 120 tons, 20 per cent. ore.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Oct. 31:—The converter wheels having arrived, smelting was resumed on Monday morning under the charge of the man trained by the Frenchman, and was conducted by him satisfactorily until Thursday morning, 6 a.m., when want of coke caused us to stop. 97 anodes were produced, and sent to the electro depositing works. Electro depositing is going on as usual, and we forwarded on Saturday for shipment to you 233 plates, weighing net 3,824 kilos, or 3 tons 15 cwt. 1 qr. 2 lbs., which we hope will realise a good price.—T. F. SMITH.

CASTILLON (Nov. 9).—We have completed forwarding 248 tons blende to Bordeaux. The carriers will now take the lot of 53 tons lead ore to St. Giron. The yields of our lead and blende stopes at per cubic fm. are as follows:—St. Barbe level, Block C 6, 7: Lead ore 35 cwt. and blende 35 cwt. St. Eugenie, No. 1 stope C 13: Silver-lead 30 cwt. and blende 25 cwt. No. 2 stope, B 14, 15: Silver-lead 6 cwt. and blende 25 cwt. No. 3 stope, B 16, 17: Silver-lead 8 cwt. and blende 30 cwt. No. 4 stope, D 20, 21: Silver-lead 10 cwt. and blende 45 cwt. No. 5 stope, E 21: Silver-lead 5 cwt. and blende 35 cwt. No. 5 level, E 13: Silver-lead 7 cwt. and blende 30 cwt. No. 3 level, No. 1 stope, E 23: Silver-lead 10 cwt. and blende 35 cwt. No. 2 stope, C 20: Silver-lead 10 cwt. and blende 30 cwt. St. Victorine, No. 1 stope, A 17: Silver-lead 7 cwt. and blende 65 cwt. No. 2 stope, B 17: Silver-lead 10 cwt. and blende 55 cwt. Ezpeleta, No. 1 stope, A 29: Silver-lead 10 cwt. and blende 50 cwt. No. 2, A 32: Silver-lead 7 cwt. and blende 45 cwt. No. 3, B 30: Silver-lead 6 cwt. and blende 30 cwt. It will be noticed the stope in St. Barbe is not so productive; this is the result of a crossing found in pursuing lode south. We hope as we get away from point of contact, it will attain its former value. All machinery is in good order.—Capt. J. EDWARDS.

CHIAPAS (Oct. 4).—I beg to hand you my report for the past month. Mine: 22 miners have been employed on day's pay breaking ore in the face of the cliff, the amount produced being far in excess of any previous month, partly being accounted for by the fact that at the end of July, and also at the end of Aug., I was unable to measure the piles of ore on account of their inequalities. At the end of Sept., however, I had them levelled off, and the side built up so that I was able to take very fairly accurate measures. 1,600 lbs. of first-class ore assaying 57 ozs. silver, 3 ozs. gold, and 37.4 per cent. copper. 19,950 lbs. amount previously broken; 21,550 lbs. on hand Sept. 30, 1891. 1,848 tons second-class ore concentrating at the rate of 14.8 per cent., the concentrates assaying 3 ozs. gold, 43 ozs. silver per ton, and 30 per cent. copper. 1,848 tons; 2,548 previously broken; 4,396 on hand Sept. 30. Santa Fé Tunnel, No. 2. This tunnel has been advanced 3.50 metres, at \$65.00, by four men. The whole ground is mineralised, showing concentrating ore that concentrates at the rate of 16 per cent., the clean ore assaying 2 ozs. gold, 33 ozs. silver, and 25 per cent. copper. The heading is still in ore. I am putting in a borer hole in the breast of the cross-cut, and am finding some ore in the borings. Santa Fé tunnel, No. 3, has been driven 3 metres, at \$70, by four men. All the ground is mineralised, giving 8.3 per cent. concentrates, which assay 4 ozs. gold, 46 silver, and 28 per cent. copper. Mill: During the past month we have got behind with the work through the difficulty of getting and delivering the sawn timber from the Horcon, and through not having all the machinery on hand. I am hurrying Arciga all I can with the freight of the machinery, but he is very slow with it. He has just left here, and has promised faithfully to have it all here by the 15th of the month. In the meantime I hope to be able to get the rest of the timber up from the Horcon. So far, Mr. Lloyd has done very good work indeed. All the timber foundations for the crushers are in place, and are of good timber, and very solidly put in. Road: The road was finished on the 17th from the mine to Solusuchiapa, but I have had to send the men on from that town towards Teapa to clear out the road in several places where slides had

occurred. We shall have to keep men constantly on the road during the wet season. Water power: Raul is doing good work in Copper Creek, and will, I think, get it done well within the limit of his contract.—A. H. STOCKDALE.

COLORADO BOY (Oct. 23).—Manager reports: In the lower drift they are taking out fine mineral, and another shipment will be made in a few days. In the bottom of the shaft they are getting small streaks of grey copper and iron, which are rich in silver. The ore streak in the lower drift measures 20 ins. in width, and is nearly all shipping ore. The assays of ore from the shaft vary from 40 to 560 ozs. silver per ton.

DAY DAWN P.C.—Report for fortnight ending Sept. 26:—The output of quartz is 879 trucks; sent to the Excelsior mill 954 tons. No. 13 level has been extended a further distance of 12 ft., making a total distance of 113 ft. from the underlie; the formation is 18 ft. wide, carrying 3 ft. of stone on the hanging-wall and about 1 ft. on the footwall, of good quality, the remainder being a horse of mullock with a few small leaders of quartz through it. In the leading stope over this level we have 3 ft. of very good stone on the hanging-wall, and 2 ft. 6 ins. of stone on the footwall, of fair quality. A horse of mullock 5 ft. thick separates the two reefs. No. 12 level has been extended a further distance of 10 ft., making a total distance of 149 ft. from the shaft; this level is carrying 4 ft. of stone, highly mineralised, and of good quality. The leading stope over this level is carrying 4 ft. of very good stone. In the No. 3 stope we have 3 ft. of good stone. In the No. 2 stope there are 5 ft. of stone, of good quality. In the No. 1 stope we have 4 ft. of fair quality stone. The block of ground between the Nos. 1 and 2 winzes has been all beaten out. In the hanging-wall stope nothing has been done this fortnight. No. 1 winze on the footwall level has been sunk a further depth of 24 ft., making a total depth of 54 ft. A very nice reef about 2 ft. thick made in this winze at a depth of about 30 ft., which still continues to go down. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 64 trucks; No. 12 level, 372 trucks; Nos. 10 and 11 levels, 419 trucks; No. 2 shaft, stope under No. 5 west level, 24 trucks; total, 879 trucks. No. 2 underlie shaft: No. 5 west level: In the stope under this level we have a nice reef 3 ft. thick, of fair quality. No. 3 winze on No. 4 level has been sunk a further depth of 16 ft., making a total depth of 60 ft. In the bottom of this winze we have 2 ft. of stone, of good quality. The cross-cut in the footwall on the east side of shaft has been extended a further distance of 12 ft., making a total distance of 58 ft.; we cut a couple of small flat veins of quartz in the bottom of this drive during the fortnight, some of which looked very well, but they have cut out again. No. 3 straight shaft: During the fortnight I have timbered up 35 ft. 6 ins. of shaft, making the total amount timbered, 92 ft. I also put in 3 ft. of concrete with a top lining of cement right round the shaft at a depth of 74 ft. from the surface, which has effectively carried off all the water from the main shaft to the pump shaft. The machinery and everything connected therewith is working well. Lease 1,280: The eastern drive has been extended an additional 2 ft., making the total length of same 27 ft.; there is no change to report. The western drive has been extended 3 ft., making the total length of same 33 ft. There is no change here, with the exception that the footwall is bearing a little more to the right than usual. This slow progress is owing to the fact of our having been busily engaged dam making for a considerable portion of our time. We have built one at the No. 2 level with a holding capacity of 20,000 gallons, and another small one at the No. 1 level, from which it is intended to carry the water through a main pipe to the main dam; by this means the water will be drained off gradually, instead of coming with a rush during heavy rain. Have also hauled the pump up and put it in position; all we have to do now is to make the connections, lay the pipes from the top dam to the main dam, and haul the spare pipes to the surface; we shall finish it this week.—T. LESTER.

DON PEDRO.—Under date of Oct. 16 Mr. Touzeau writes to this company as follows:—New surface works: The greater portion of the gear work loading at entrance of shaft has been completed. A concrete pillar has been built to carry pipe-line across corrego (stream) to site of second Pelton wheel, and the site for latter is now being excavated, ready for the reception of a concrete bed. A trench is being excavated across the corrego below precipice to impound, by means of a dam, the head-waters issuing from and about the middle adit. This dam will allow of our erecting our new reduction, and mill houses below the present reduction house, and, while retaining all the advantages of the formerly selected site, will save the heavy excavation which it would have involved, which we had commenced and promptly abandoned when the advantages of the position now determined upon occurred to me. I found that after laying our second pipe line we should have sufficient pipes over to carry the water round to the new site. The mine: We hope to have Gordon's shaft down to the 50-fm. horizon early next month. (Telegram of Nov. 6 advises its completion.) You are aware that I put the uninterrupted continuance of sinking Gordon's shaft in the first place. I need not go over the old ground of lack of hoisting or treating appliances. (These are now being provided, see "surface work.") Allowing for all this, we are hoping to re-start the reduction department upon reaching the 50-fm. horizon, and our position will then be so much improved that we hope to supply the reduction department up to its present capacity, at least during the day-time. Though the quantity of ore treated may not be a large one immediately, it will be an increasing amount; and of the quality we are now assured.

—(Oct. 15).—Operations since our last have been carried on satisfactorily throughout. Gordon's shaft has been sunk another 6 ft., and secured with timber; total distance sunk under the 40 horizon, 9 fms., 2 ft., leaving 2 fms. 1 ft. to be completed to the 50. This we hope will be accomplished in the early part of next month. (Since finished, see telegram.) The opening out the ground at the entrance of the 50 cross-cut has been satisfactorily carried on. Three sets of timber have been fixed with back and side laths. This is now near completion; when completed, the force will be moved to drive from the 50 cross-cut to the No. 4 stope. This drive will be driven through lode. New adit: This has been continued very successfully through soft sandstone, with lines of jacotinga mixed with quartz of auriferous quality; driven for the month 8 fms.; total distance driven, 28 fms. New lobby: The ground throughout the month has been very hard, and blasting has to be done; driven for the month 20 ft.; total distance driven, 249 ft. We have now drilled a hole 6 ft.,

and communicated on the other end or side of mountain, which gives the men good ventilation. This drive will be completed by the end of the month, and in working order to carry away all storm water from the new reduction department. Running work: A small force has been kept on fixing sets of timber and laths where most required in Gordon's shaft. Several repairs have been made to the old P.P. incline above the 40 horizon. Preparation is being made for fixing the new plunger poll at the 50 horizon in Gordon's shaft. The building with concrete for new gear work at the entrance of shaft is well advanced. Some work is also being done towards the foundation for fixing the new Pelton wheel. A great deal of repairs been done towards Mine Rego for the coming wet season, and all other in connection with the mine and surface been attended to.—Capt. JEFFERY.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ending Oct. 1:—Block 98—Main engine shaft: Sunk 15 ft.; total, 131 ft. Lode formation continues the same, occasionally showing a little galena, copper pyrites and iron-stone. Air-receiver has been placed in position; compressor also received, and will be berthed next week. Engine and boiler houses finished. South engine shaft: Sunk 16 ft. 6 ins.; total, 187 ft. Passed through large quartz formation. Contract for sinking being nearly completed, tenders are being invited for cutting chamber preparatory to putting in level. Plates for air-receiver on ground. Foundation for compressor nearly finished. No. 3 shaft (Block 99): Driven 11 ft.; total, 24 ft. Passed through a vertical quartz formation, which has altered the course of the vein.

EMMA (Oct. 29).—My last report was under date of 23rd inst., and I now hand you report of work at the mine for the week ending to-day. On the Bay City tunnel level I am glad to say the improvement noted in my last report continues on the No. 3 fissure both in the north-west and south-east drifts. The drift north-west on this fissure advanced 12 ft., working two men; total, 65 ft. The fissure is now fully 3 ft. wide. Iron pyrites, oxidized iron and decomposed limestone in the vein matter, besides small seams of ore plainly visible. In the drift south-east on this same fissure we worked one man; advanced 6 ft.; total, 71 ft. The work here the past week developed a cross-seam in the north side of the fissure; this seam is now about 4 ft. long and from $\frac{1}{2}$ to 1 in. wide, carrying carbonate ore and iron oxide. The fissure is still tight, but the rock in the north side shows much improvement, is getting softer, and becoming very much mineral stained, besides small stringers of iron occur quite often. In the level No. 3, south-east, we worked one man, advanced 9 ft.; total, 55 ft. The rock is still improving, shows considerable iron oxide and decomposed limestone and some talc. On the Illinois tunnel we worked four men drifting, cross-cutting, raising, and exploring the vein generally. The vein is from 6 ft. to 8 ft. wide of iron and ore intermixed. We did 25 ft. of work here, raising, drifting, and cross-cutting, making a total of 125 ft. The outlook for cutting a body of ore continues most favourable. On the Emma tunnel level we worked nine men stopping ore and timbering the ground, besides three carmen. We stoped some 60 tons low grade ore; run concentrating mill four days, producing about 5 tons concentrates. Ore now on hand estimated, 20 tons concentrates and 2 tons crude. Will ship ore to market this week, and will close down concentrating mill by Nov. 1, as water is getting scarce and weather cold, so much so that to continue longer will be at a great disadvantage.—H. C. WALLACE.

FLAGSTAFF (Oct. 31).—The mine is looking well, especially the points I am taking ore from. We now have a seam of ore 136 ft. long and from 6 ins. up to 4 ft. wide; in one place we have stoped it 20 ft., and it still continues to go on up. In some places it is all first-class and in others second-class. At one time this week we had 18 ins. of iron in face of main sixth, but a hard slip of ground came in and cut it off. I think that I will find another body of ore out in this part of the mine yet, as the shoots of ore generally are from 100 to 200 ft. apart. Main sixth has been extended 8 ft. the past week. I have stopped driving the seventh level, and put the men at work sinking on that body of ore that we cut some time back; we are now down 6 ft., and the ore still continues, but mostly second-class. We have not yet completed the building for the engineer, but hope to do so in a few days; we will then start the machinery: everything else is ready. Number of tons of ore mined the past week, 45, being 13 first-class and 32 second-class.—A. L. SPORE.

GARFIELD (Oct. 24).—Western Mine, 180-ft. level: Cross-cut at the bottom of No. 15 winze has been advanced 22 ft., giving a total of 57 ft. The ground has continued to look favourable; during the week we have cut through several seams of porphyry, which carried small quantities of quartz.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Sept. 24:—At lease 777 (2 mile) I have to report that at the eastern shaft driving and stoping north and south on the Peter and Paul reef at the 100-ft. level has been continued. The south stope is carried in a total distance of 80 ft.; a small cross-course has been met with, which has thrown the slate up some distance. On the south side of the fault the reef is 1 ft. in thickness, and is showing a little gold. The north drive is advanced a total distance of 78 ft., with back stope following. The reef is 2 ft. in thickness, and during the past fortnight some very good gold-bearing stone was met with on the slate break, but in breaking down the reef to-day it does not show much gold. About 150 ft. has been driven north and south on the reef at this level, and 50 tons of stone have been picked and crushed from the break. 53 tons of stone have also been crushed from the 170-ft. level at the main shaft, making a total of 103 tons stone for a yield of 59 ozs. 7 dwts. smelted gold. This of course is not payable, and as this reef has now had a good trial, having driven about 350 ft. on the line of reef and in good slate country for the whole of the distance, yet no gold patch or anything payable has been met with. I would advise that all work on this reef be discontinued for the present, and that sinking the All Sereue shaft be commenced at once. This shaft is already sunk to a depth of 186 ft. on the reef, and the good slate country met with in the No. 1 North Phoenix shaft at the 300-ft. level should be met with in this shaft at a further depth of 30 ft.; and the slate that they are now cross-cutting at the 400-ft. level should be met with at a depth of 320 ft. from surface (that is about 130 ft. of sinking would prove two slate beds). The All Sereue is a very strong reef, and although it was poor on the surface there is every probability that it may prove to be very rich in the deeper slates.—T. RAMAGE.

HARRIETVILLE (Oct. 2).—Fortnightly report.—Mons Meg Mine:

Shaft on main shoot below tunnel J sunk 5 ft.; total, 65 ft.; the lode formation has widened to 5 ft., and the underlie is much greater than usual, but it has become very poor. We are, however, expecting an improvement as sinking proceeds. Rise at back of north drive 100 ft. above tunnel J extended 19 ft.; total, 37 ft.; lode 3 ft. wide and payable. North drive 170 ft. above tunnel J advanced 10 ft.; total, 172 ft.; lode 2 ft. wide and payable. Drive north of tunnel K extended 15 ft.; total 465 ft.; lode small and poor. A cross-cut has been driven 6 ft. east of this drive, and has intersected a lode which carries a little gold; this lode has not yet been traversed. Guerdon Mine: Drive north of tunnel J on Guerdon lode advanced 3 ft.; total, 223 ft.; the lode is 1 ft. wide and payable. Rise at back of north drive advanced 15 ft.; total, 60 ft.; the lode in 6 ft. wide and payable throughout, although the grade is somewhat lower than when last reported. We are stopping the south shoot from the south rise, where the lode is payable over a width of 6 ft. Tunnel K towards Guerdon lode advanced 14 ft.; total 123 ft. from Mons Meg No. 2 lode. Another small vein has been traversed, which is, however, poor. The drives on new lode in tunnel K have been extended 6 ft. north and 6 ft. south, the total lengths being 12 ft. respectively. The lode in each case is 2 ft. wide, and of payable quality. Tiddledee Mine: Drive south of tunnel D towards Mons Meg advanced 20 ft.; total, 1,325 ft. The lode is 3 ft. wide, and carries a little gold, but not in payable quantities. The influx of water has again increased here. Rise at back of tunnel B on new shoot advanced 2 ft.; total, 50 ft. The lode is 8 ft. wide, of which about one-half is payable. The stope on this shoot, between tunnels C and D, shows a slight improvement. Returns: We cleaned up on Sept. 22 for the following yield, viz.: Mons Meg, 640 tons, 308 ozs.; Tiddledee, 194 tons, 42 ozs.; amalgamators, 34½ tons; concentrates, 63 ozs.; total, 413 ozs. melted gold.—T. G. DAVEY.

JAY HAWK AND LONE PINE CONSOLIDATED (Oct. 26).—During the past week we have broken 500 tons of ore, making 800 tons on hand, and working only one shift of men. The ore in the bottom level has improved in value, we are now at this the 700-ft. level into the ore body 100 ft., no stopes are being worked at this level we having a full supply from our upper workings. The new incline shaft sinking below the 700-ft. level is looking well, and from present indications the ore will be found still richer in depth. The incline shaft from surface, which is to take away the ores from Nos. 1 and 2 levels, will be completed during the present week; the engine and boiler is being put into place to-day. We have here about 200 tons of ore ready to bring to surface. The surface tunnel, through which we shall take out the ore higher up the hill, is progressing satisfactorily. The stopes are all looking well. The new cage and cars for the main shaft have arrived after nearly two weeks' delay and are placed in position; we have been busy putting in the shoots and laying the necessary track to work the mine without shovelling the ore more than once. The ore shipped to the mill is about 100 tons of low grade, 50 tons to each mill; this we shall start the mills on before putting in the richer ores. Mills: I found the Lone Pine mill required some alteration; this has delayed me a few days, but we expect to light our fires in both mills during the present week, and will soon commence crushing; my object is to put everything into good repair, so that no stoppage may occur after. The Frue vanners will also be ready when the mills start.—H. PRIDEAUX.

LA PLATA (Oct. 23).—Manager reports: The White Cloud shaft on Tuesday afternoon cut into ground containing quite a lot of native copper. Several pieces of this copper are as large as half a dollar. Besides the native copper there is a healthy looking break, well mineralised and containing talc and iron. There is now no doubt that the company have a mine, and they are to be sincerely congratulated on the strike. The manager further reports on Nov. 5, that owing to the improvement in the shaft he has decided to sink it to 300 ft. before drifting.

LEEDS COPPER (Oct. 29).—Kent's shaft: The 20-fm. level driving west of shaft is not quite as good as last reported, but in bed vein 4 ft. wide, and producing 2½ tons 12 per cent. per fm. No. 1 stope in the bottom of this level is in bed vein 5 ft. wide, producing 2 tons 12 per cent. per fm. No. 1 stope in the back of this level is in bed vein 6 ft. wide, and producing good ore, 3½ tons per fm. No. 2 stope in the back of this level is better than I have before seen it, bed and quartz vein mixed 4 ft. wide, and producing 4 tons 20 per cent. ore per fm. The 15-fm. level driving west of shaft is in a poor channel of ground, but hope soon to report an improvement in this part. No. 1 stope in the back of this level is in bed vein 4 ft. wide, producing 2 tons 12 per cent. per fm. No. 2 stope in the back of this level is in bed vein 7 ft. wide, but of a mixed character, producing 2 tons 12 per cent. per fm. No. 3 stope in the back of this level is suspended for a short time. The men following a rich quartz vein in the bottom of the level; this vein is producing 3 tons 20 per cent. ore per fm. No. 4 stope in the back of this level continues in a large body of bed vein averaging 7 ft. wide, with good patches of quartz ore mixed throughout it and producing 4 tons 12 per cent. ore per fm. I am very sorry to state we are getting very severe weather; we have 3 ins. of snow on the ground and freezing very hard.—T. R. DAVEY.

MOUNT ZEEHAN.—The manager writes for week ending Sept. 25:—Argent section—No. 1 shaft, No. 4 lode: North drive, 72-ft. level, extended 19 ft. further; total from cross-cut, 120 ft. Remarks: Lode formation 6 ft. wide, improving, composed of graphite slate, siderite, and mostly second-class ore; 17 cwt. of first-class ore raised and bagged, and 9 tons second-class raised. South drive, 72-ft. level, extended further 16 ft.; total from cross-cut, 88 ft. Remarks: Lode formation 6 ft. wide, composed of graphite slate, siderite, and mostly second-class ore; 10 cwt. first-class ore raised and bagged, 8 tons second-class ore raised. Air shaft north on course of No. 4 lode: Sunk further 5 ft.; from surface brace, 50 ft.; timbered 6 ft.; total timbered, 49 ft. Remarks: Lode formation 2 ft. wide, composed of graphite slate and siderite; 5 tons second-class ore have been raised. Air shaft south on course of No. 4 lode: Sunk 9 ft. from surface brace; timbered 7 ft. with log sets; lode formation 2 ft. wide, composed of iron, gossan, graphite slate and siderite, with a little galena; 2 tons second-class ore raised. This should improve in quality next week. Silver Queen Extended section: Main engine shaft further sunk 4 ft. 6 ins.; total from plat 37 ft., or from surface brace 117 ft. Remarks: Still in hard graphite slate. Put on a pump length; wind bore cracked, and have it patched with clamps. Driving south in Air shaft on No. 2 lode at 16-ft. level: Opened out end of shaft, and

driven 2 ft. Remarks: Lode formation 2 ft. wide, 8 ins. of which is solid galena ore. Remaining part iron pyrites and hard light slate and second-class ore; 2 tons first-class ore raised and bagged, and 4 tons second-class ore raised. Montana section—No. 3 lode: The winze 15 ft. north of main cross-cut sunk 6 ft. more; total depth from bottom of level, 18 ft. Remarks: Lode formation 3 ft. wide, composed of first and second-class ore; 2 tons 3 cwt. of first-class ore raised and bagged; 4 tons second-class ore raised; course of lode same as last week, as also the underlay. Total ore raised for week, 5 tons 10 cwt. first-class and 32 tons second-class.

MYSORE (Oct. 21).—Mining report for the fortnight ending Oct. 17:—The 890 south of winze, north of Rowse's shaft, has been driven 22 ft.; total distance, 42 ft.; the lode is yielding a little quartz, but still broken up and disordered. There has been very little done in the 890 north of winze. We have been engaged erecting a small engine and putting on skip road to hoist the quartz from the winze, as it was getting too deep for manual labour; the lode is 2 ft. wide, and assaying 2 ozs. 0 dwts. 7 grs. The 620 south of incline shaft on the west lode has been driven 23 ft. 8 ins.; total distance, 215 ft. 8 ins.; the lode is 4 ft. wide, and assaying 2 dwts. 7 grs. The 550 south of incline on the west lode has been driven 23 ft. 3 ins.; total distance, 260 ft. 9 ins.; the lode is 4 ft. wide, and assaying 1 dwt. 7 grs. This level is nearly up to the south fold at Taylor's shaft. Glen shaft: The 250 north of shaft has been driven 31 ft. 4 ins.; total distance, 527 ft.; the lode is 1 ft. wide, and yielding saving work for quartz. Tennant's shaft: The 360 north of shaft has been driven 14 ft.; total distance, 684 ft. 5 ins.; the lode is 1 ft. wide, and estimated to be worth 5 dwts. The 290 south of cross-cut north of shaft has been driven 27 ft.; total distance, 64 ft.; the lode is 3 ft. wide, and assaying 3 dwts. The 235 north of winze north of shaft has been driven 9 ft. 6 ins.; total distance, 119 ft.; the lode is 3 ft. wide, and estimated to be worth 10 dwts. This level is up to Gilbert's shaft. Schaw's shaft: The 450 cross-cut north of shaft has been driven east 23 ft. 6 ins.; total distance, 46 ft.; the ground is of a mineralised character, but spare for driving. The 450 south of shaft has been driven 6 ft. 6 ins.; total distance, 133 ft.; the lode is 1 ft. wide, and yielding a little quartz, but nothing to value. The 320 north of shaft has been driven 2 ft. 6 ins.; total distance, 196 ft. 6 ins.; the lode is small and unproductive. The 320 south of shaft has been driven 3 ft. 6 ins.; total distance, 266 ft. 6 ins.; the lode is 1 ft. wide, and assaying 3 dwts. 22 grs. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 2½ ft. wide, and assaying 3 ozs. 15 dwts. 9 grs. The lode in No. 2 stope in back of this level is 3½ ft. wide, and assaying 2 ozs. 5 dwts. 1 gr. The lode in stope in back of the 700 north of Rowse's is 3 ft. wide, and assaying 15 dwts. 15 grs. The lode in No. 2 stope in back of this level north of shaft is 2 ft. wide, and assaying 3 ozs. 9 dwts. 12 grs. The lode in No. 3 stope in back of this level is 1 ft. wide, and assaying 5 ozs. 7 dwts. The lode in stope in bottom of the 700 south of Rowse's (on the wide lode) is 2 ft. wide, and assaying 4 dwts. 13 grs. The lode in stope in back of this level is 2½ ft. wide, and assaying 1 oz. 17 dwts. 21 grs. The lode in stope in back of this level south of incline shaft is 2 ft. wide, and assaying 1 oz. 17 dwts. The lode in stope in back of the 620 north of Rowse's shaft is 1½ ft. wide, and assaying 16 dwts. 23 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 13 dwts. 1 gr. The lode in stope in back of the 550 south of incline shaft is 2 ft. wide, and assaying 6 dwts. The lode in stope in back of the 550 north of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 7 dwts. 6 grs. The lode in stope in back of the 550 south of incline shaft (on west lode) is 3 ft. wide, and assaying 6 dwts. The lode in stope in back of the 360 north of Tennant's shaft is 1 ft. wide, and estimated to be worth 1½ ozs. The lode in stope in back of the 290 north of shaft is 3 ft. wide, and assaying 2 ozs. 6 dwts. 3 grs. The lode in stope in bottom of the 290 south of shaft is 1½ ft. wide, and assaying 1 oz. 11 dwts. 16 grs. The lode in stope in back of the 235 north of winze, north of shaft, is 3 ft. wide, and assaying 17 dwts. 6 grs. The lode in stope in back of the 180 north of shaft is 4 ft. wide, and assaying 1 oz. 0 dwts. 5 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 1 oz. 15 dwts. 6 grs. The other stopes throughout the mine are yielding just the same as when last reported. Rising: The rise in back of the 890 west of Rowse's shaft has been put up 11 ft.; total distance, 14 ft. 6 ins.; the ground looks congenial for gold, and we are occasionally meeting with small strings of quartz, but nothing to value. Sinking: Rowse's shaft has been sunk 12 ft.; total distance, 65 ft. 4 ins.; the ground has been very hard during this month, but we are making every effort to get the shaft down to the next level as quickly as possible. Gilbert's shaft has been sunk 18 ft.; total distance from surface, 210 ft.; this shaft is nearly through the old men's workings, and will very soon be in a productive lode of quartz. This shaft has also been sunk 13 ft., which will make 32 ft. 6 ins. below the 290, in a lode 2 ft. wide, and assaying 3 dwts. 6 grs. I regret to say we have had no rain yet to speak of, and, therefore, continue short of water for dressing purposes, but we expect a good downpour every day, as rain is getting more general throughout the southern part of India. Mill samples: New mill quartz, 1 oz. 9 dwts. 6 grs.; old mill quartz, 1 oz. 12 dwts. 16 grs.; new and old mill tailings, 6 dwts. 12 grs.—J. GILBERT.

MYSORE REEFS (Oct. 21).—Fortnightly report.—Harvey's shaft: The cross-cut east of the 520-ft. level north has been advanced 4 ft., now 28 ft. 3 ins. from level. We are now through the lode, which shows a width at this point of 33 ft. With the exception of the last two assays, 13 dwts. 1 gr., and 11 dwts. 17 grs., the ore has been of very low grade. We have commenced to rise above the cross-cut to communicate with the winze sinking below the 460-ft. level. The quartz does not seem so good in the back, assaying only 4 dwts. per ton. As soon as this communication is made we shall continue the drive north and start a winze in the bottom of the cross-cut in the best part of the lode. The 520-ft. level south has been advanced 7 ft., now 73 ft. 6 ins. from cross-cut. The lode is 3 ft. wide, composed chiefly of quartz, assaying 3 dwts. of gold per ton. Winze below the 460-ft. level: Very little has been done. Since the men returned to work I have had them blasting out the side of the 400-ft. level, preparatory to laying tramway; this is completed, and they have again resumed work in the winze. The 400-ft. level south has been extended 11 ft., now 219 ft. 6 ins. from shaft. The lode is disturbed by a hard band of rock crossing it, and is split up in small branches, a sample of same assaying 3 dwts. of gold per ton. The 400-ft. level north has been advanced 13 ft., now 285 ft. 7 ins. from shaft. Small branches and stringers of quartz with a regular course are to be seen

in the present end, assaying 2 dwts. of gold per ton. I have started a company of men with a rock-drill to cut plat at the 520-ft. level, and other preparatory work before the sinking of the shaft is resumed. All our men have now returned to work, and everything is going on well.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports by mail for the fortnight ended Oct. 21:—North shaft: This shaft has been sunk 3 ft. 6 ins., making a total depth of 206 ft. 6 ins. The greater part of the time has been occupied putting in a cistern below the 173 level and changing the pumps and rods, and while this was being done sinking had to be suspended. This work is now completed, and we have no water to speak of in the bottom, and we shall be able to sink down to the 250 without any further delays. 173-ft. level: The drive south has been extended 2 ft. 6 ins.; total from cross-cut 20 ft. 6 ins. There is no change to notice. The end is letting out a large stream of water. The winze north of the cross-cut has been sunk 2 ft.; total, 5 ft. below the level. The lode is increasing in size, and appears to be getting more regular. There is no change in value. I hope it will improve a few feet deeper. The cross-cut west has been advanced 1 ft. 6 ins.; total from plat, 4 ft. 6 ins. The rock is very hard, and the coolies can make but small progress in it. The work in these places is very slow by hand. I am, however, unable to work rock-drills yet, as it would hinder the sinking of the shaft, and this is the most important work in my estimation to push on. As soon as it is feasible I will work rock-drills here, and we shall then be able to make much better progress. South shaft: This shaft has been sunk 7 ft. 3 ins., making a total depth of 132 ft. 3 ins. There is no change. The rock continues very hard, and is difficult both to drill and blast. All our machinery is in good order, and working well.

NEW CALIFORNIA (Oct. 27).—The manager, writes the directors:—You will be pleased to learn that the improvement in the mine, advised in my recent letters to you, continues, and the outlook to-day is a further improvement on last week, making it more urgent still to push developments forward, and to carry out with all practicable dispatch the policy of opening up the mine, sketched out at the general meeting. We have to-day resumed work at the 2,100-ft. level. The plats will have to be completed as a preliminary to drifting on the vein, the levels having been advanced as far east and west as was practicable, without the conveniences for handling rock afforded by plats. The 2,000 drift is being driven in the softer micaceous rock underlying the lode, the lode itself being of hard rock, and less advantageous to advancement. After going forth a good distance, say from 20 ft. to 25 ft., blasts will be put into the vein rock to break it down separately. From all we can see of the vein now it looks strong and healthy. Latest mill tests show it to be of paying grade. The stopes are in a fine lode, which seems to be improving as progress is made. It is yielding from 8 tons to 10 tons per fm. of good grade milling ore.

NEW DEVALA-MOYAR.—Mine manager's report for the week ending Oct. 15:—The 186-ft. level, drive west, driven 6 ft.; total, 93 ft. The 186-ft. level, drive east, driven 6 ft.; total, 31 ft. The 116-ft. level, No. 4 winze, sunk 4½ ft.; total, 54½ ft. In the 186 ft. east drive we thought it necessary to cut into the hanging-wall to prove if any more reef were lying in that direction, as the reef in this end is bending very much off its mean course. Nothing of importance being discovered, driving the east end has been resumed. Boring machinery working well.

NEW EBERHARDT (Oct. 24).—The mine manager reports as follows:—Eberhardt: North drift No. 2 upraise advanced for the two weeks 10 ft.; total length, 63 ft. The face of this drift still shows considerable quartz, which is, as yet, low grade, but I trust that these bunches of low-grade quartz that we are meeting with will eventually lead us to something better. South drift No. 2 upraise advanced for the two weeks 8 ft.; total length, 65 ft. The face of this drift remains unchanged. The whole face of our drift is spar, with small bunches of quartz mixed through it. Cross-cut east from No. 3 upraise advanced for the two weeks 8 ft.; total length, 91 ft. The ground in this drift has become all lime, and some of our men having left who were working on the tunnel level I have had to make some changes, keeping, of course, our most favourable points going, and therefore, for the present have suspended work here. No. 3 cross-cut west advanced for the two weeks, 17 ft.; total length, 196 ft. The general appearance of this drift remains unchanged. The ground through which we are passing is quite favourable for ore; we still have considerable black spar and some little quartz, but no ore as yet. John Wild North: I have been obliged to take the men from this place and put them back in our No. 3 cross-cut west. Beecher cross-cut east advanced for the two weeks, 10 ft.; total length, 83 ft. The face of this cross-cut has not changed; face of drift is still in lime, with some little stringers of spar through it.

NEW GOLD HILL (Oct. 24).—I am sure my new mill will show a much more satisfactory result. Six men, five days, have driven 7 ft. on a 3 ft. vein on the 160-ft. level north-east of Miller shaft. This is one of the best defined veins I have ever seen, and is full of mineral, but low-grade in gold. We are now 37 ft. from the shaft, and have had this good vein all the way; hope it may make into a rich shoot: shall keep two men driving on it and taking out ore, as it is at present the most favourable point in the mine. The 300-ft. level south-west of winze: Six men have made 5 ft.; total from winze, 47 ft. The vein has gone into the hanging-wall and left nothing but a few strings in the main drive, although I believe it will come in again in a few feet. North-east of winze they have made 1 ft. in hard ground. The vein is 2 ft. wide, and well mineralised, but low-grade in gold. The 160-ft. south-west of Barnhardt shaft, on 300-ft. level, men have been engaged in exposing some fine looking ore, which we now have ready to stope out. Martin: In this shaft the vein continues small, but good value in gold, but will not pay to work unless it increases in size.—R. EAMES, jun.

—(Oct. 31).—Cotton mill: The citizens of Gold Hill town are having an organisation meeting of the proposed cotton mill to-day, and I shall read them your offer of a lease of 20 acres, and report to you what they say. Railway: The officials of the Roanoke and Southern Railroad made a call the first part of the week for the citizens of Lexington, Gold Hill, Mount Pleasant, and Monroe, to say what the towns or counties would subscribe. To this end myself and Mr. Manney were elected delegates to attend a meeting of gentlemen from the above-named towns, and had a meeting in Salisbury on the 29th, and it resulted in Gold Hill town being asked to vote \$5,000 in town bonds. The steps have been taken, and the election

will be held on Dec. 15 simultaneously with the other places named. This railway has every prospect of being built sooner than expected, and if you have any idea of making this Gold Hill a town it should be laid off into streets, and lots offered for sale. New mill: We are hauling in the lumber and timber and erecting the foundation for stamps, and have taken down the 10 stamps at old mill. In excavating for stamps, &c., we have found several tons of pay ore in the old dumps, with a prospect of finding more. We are saving all of it. Mine: We are working only six men in the mine. Four of them are engaged in stoping ore from an upraise above the winze, on the 160-ft. level; at present they are up 15 ft. in an upraise 23 ft. long. This ore is of a much better quality than that we have been milling from the 300-ft. level, and we hope it will hold good. Miller shaft: Two men have driven 5 ft. on the 160-ft. level north-east of Miller shaft; total from shaft, 42 ft. The vein is 3 ft. wide, and looks as promising as ever, as it is full of sulphurets of iron and copper, with some gold; but very low grade in the last. However, we are breaking a lot of this ore, and have fully 200 tons in sight north-east of shaft. This will all be valuable when we are prepared to save the copper. At present we are hoping, from indications, to strike a shoot of rich gold ore.—R. EAMES, jun.

NEW HOOVER HILL.—Briol's shaft: Driving south at the 130 the end is looking well for quartz, but is low grade; it is advanced for the month 17 ft. We are getting near the chimney of ore coming down south of the Provost shaft, and we are cutting a little water. Sinking south of Provost shaft the chimney of ore is very small, but is looking well in the bottom, and showing a little gold in the stone, but the water is a great hindrance to us. The mill ran for the month six days; crushed 155 tons of ore, yielding 33,433 ozs. of bullion, which I am shipping you.

NUNDYDROOG (Oct. 21).—Report of work done for fortnight ending Oct. 16:—Taylor's shaft: Distance sunk, 8 ft., by one Italian with a rock-drill; total depth, 634 ft.; the rock seems to be getting harder. The 600 south: Distance driven, 27 ft., by one Italian with a rock-drill; total length, 103 ft.; the lode is still a very fine one, 4½ ft. wide, and worth about 2 ozs. per ton. The 600 north: Distance driven, 23 ft., by one Italian with a rock-drill. We commenced to drive here at the beginning of the month. The lode here is also a very fine one, 4½ ft. wide, and assaying 3½ ozs. per ton. The 520 north: Distance driven, 17 ft., by one Italian with a rock-drill; total length, 302 ft.; the end is getting very hard as the lode gets smaller; at present we have about a foot of quartz, assaying 1 oz. 13 dwts. 18 grs. The 450 south, stope in bottom: Ground stoped, 11 fms., by one Italian with a rock-drill; the lode is 3 ft. wide, and assays 3½ ozs. per ton. The 520 north from Webb's: Distance driven, 15 ft., by one Italian with a rock-drill; total distance, 40 ft., when we holed to the 520 south from Taylor's. We are stoping down some ground in the back of the level, and have some ground to take away below the 450, we shall then carry down the skip road to the 520 level. The 370 north: Distance driven, 11 ft., by one Italian with a rock-drill; total length of level, 436 ft.; the end is very hard, and carries stringers of quartz; there is a little water in the fore-breast. The stopes working by hand are as follows:—The 520 north, stope in back: Lode 2 ft., assay 2 ozs. 19 dwts. 12 grs. The 520 south, stope in back: Lode 3 ft., assay 4 ozs. 3 dwts. 12 grs. The 450 north, No. 1 stope north: Lode 3 ft., assay 1 oz. 18 dwts. The 450 north, No. 1 stope south: Lode 1½ ft., assay 2 ozs. 6 dwts. 12 grs. The 450 north, No. 2 stope north: Lode 2½ ft., assay 1 oz. 11 dwts. 18 grs. The 370 north, stope in bottom: Lode 3 ft., assay 3 ozs. 3 dwts. 12 grs. The 370 north, stope in back: Lode 1½ ft., assay 2 ozs. 4 dwts. 12 grs. The 370 south, stope in bottom: Lode 2 ft., assay 1 oz., 17 dwts. The 300 north, stope in back: Lode 1 ft., assay 1 oz. 12 dwts. 12 grs. Kennedy's shaft sunk 6 ft., by two Italians with a rock-drill; total depth, 180 ft.; the water is still very quick, and is coming through the rock below the 160 level, seriously interfering with the sinking. The ground is very hard and jointy. We are driving two levels here at the 160, one north and the other south, by hand; the lode is about 1 ft. wide in each end, in the north assaying 13 dwts., and in the south 17 dwts. 6 grs. Health: I am glad to tell you that the cholera epidemic is over; we have had no cases here for more than a week, and I have not heard of any cases either in the neighbouring camps or in the surrounding villages. Mill samples: Rough quartz, 3 ozs. 13 dwts.; smalls, 2 ozs. 15 dwts. 12 grs.—F. W. GREY.

OSCAR (Nov. 4).—Hodgkinson's shaft: The lode, which hitherto has been underlying at an angle of 42 degs. is now going down almost perpendicular. Its width is 4 ft. 6 ins., carrying on the foot-wall about 10 ins. of quartz, the assay value of which has, since last report, varied from 7 to 10 dwts. In the 300 level north the quartz is 8 ins., assaying 4 dwts. The 200-ft. level north is showing a decided change, which leads us to hope soon being able to report an improvement. In the winze the quartz is 18 ins. wide, and contains a good deal of pyrites and galena; assay value, 1½ ozs. Next mail we shall report details of crushings from the different points in the mine. Beyond the above no alteration to note.—J. DAW, jun.

PARKER.—Extracted from the special correspondence of the *Engineering and Mining Journal*, New York.—"Work on this property is being pushed. At the head of the gulch they have just driven through a large barren white quartz horse, from 4 to 4½ ft. wide, and which covered nearly the whole face. Two or three black manganese stringers, which are always considered a good indication, and which almost invariably lead to paying quartz veins, have been cut, and the outlook for next month is decidedly encouraging. Prospecting has been going on, and reports are being made on that portion of the company's property known as the Flint Spring."

PITTSBURGH CONSOLIDATED (Oct. 28).—We have managed to keep two mills going almost full time since I last wrote, and the ore is keeping up in value, too, pretty well, I am glad to say. It is chiefly coming from the old stope above No. 5, with one man in C stope No. 6. The vein in the old stope is thin, about 2 ft., but good; it is wider in C, but mixed.

TASMANIAN SILVER.—Report by last mail from the engineer.—Report for week ending Sept. 12th:—The 60 ft. cross-cut has been driven 10 ft. through a very congenial country rock. The steam pump has been lowered and permanently fixed in the shaft. Ore bags have arrived. I have selected and bagged 10 tons of first-class ore from the stack, and have dispatched 5 tons.

(Continued on page 728.)

PESTARENA UNITED GOLD MINING CO., LIMITED.

A PROFIT OF 1,639L.

THE revenue account to June 30 shows a profit of 1,639L. 2s. 10d. The following is a comparison of the results of the last two years' operations:—

	PESTARENA.		VAL TOPPA.		TOTAL.		VALUE.		PROFIT.	
	ozs.	dwt.	grs.	ozs.	dwt.	grs.	£	s. d.	£	s. d.
1889—1890	5141	0	2½	858	0	2½	19642	5 9	2791	10 5
1890—1891	5132	12	3	631	17	14	18962	11 10	1639	2 10
Decrease ..	8	7	23½	176	3	7½	679	13 11	1152	7 7

The average price of the gold was 37L. 5s. 2½d.

Pestarena district: The ore treated amounted to 4,959 tons, which yielded 1 oz. 0 dwts. 16½ grs. per ton, as against 5,633 tons at 18 dwts. 8 grs. per ton in 1889-90. A larger quantity of ore would have been treated but for the unusual severity of the past winter, which greatly retarded the milling operations and surface work generally. The prospects of the mine continue to be good, and much valuable ore ground has been opened up and rendered available for extraction. The works of exploration are being pushed on with vigour, as heretofore, with every probability of developing further productive courses of ore. The reserves of ore are now estimated to be 13,711 tons, and to contain 11,850 ozs. of gold. The mills have continued to work very successfully, and 80.5 per cent. of the gold contained in the ore has been extracted. Val Toppa district: 1,308 tons of ore were milled, yielding 10 dwts. 10 grs. per ton. In the previous year 1,741 tons were treated, yielding 9 dwts. 20 grs. per ton. The prospects at this mine are not at present encouraging, and the greater portion of the ore discovered has been taken away. The chief point of interest is the rise slope over Zero level in the new concession, Tagliata No. 2, and it is hoped a good discovery may be made. The ore met with during the first seven months of the year was sufficient to keep 10 mills supplied; it then became necessary to wait until a further quantity had accumulated, and it is satisfactory to be able to report that the mills were again set to work in the month of Aug. last. Financial: During the year three half-yearly coupons on the debentures have been paid, amounting to 1,800L., the sum of 200L. was expended in completing the purchase of the new concession at Val Toppa, and the debt to the Banca Popolare di Alessandria has been slightly reduced. It is intended that a further coupon shall be paid forthwith.

The directors report the retirement of Capt. William Roberts, the chief mine agent, after many years, and Capt. W. Henwood Trelease has been appointed to succeed him.—R. GARLAND, Secretary.

GOLDEN LEAF, LIMITED.

NEWS FROM BOTH MINES.

I AM instructed to inform you that Mr. J. Henry Longmaid, the company's general manager, has cabled the company as follows:—"Empire: 27 days' run, with 60 stamps, crushed 4,700 tons of ore; producing in gold bullion, \$13,200; concentrates and sundries, \$900; revenue cost for month, \$9,100; total capital expenditure, \$2,400." Bannack: During Sept. and Oct. total amount crushed, 1,200 tons, of the net value of \$24,000. Store and sundry profits, \$1,200. Expenses on revenue account for the past two months, approximate, \$11,500. Crushed during the last seven days, 180 tons. Have decided to add 10 stamps, with pans and settlers to the present mill." By a typographical error "August" was printed in lieu of "September" in some of the reports sent out last month. You will please note that the operations at "Golden Leaf" for the month of Sept. were largely of a tentative character, during which the mill was not working to its full capacity. Annexed will be found the manager's reports upon "Empire" and "Golden Leaf" for the month of Sept.—H. C. RICHARDSON, secretary.

Exhaustive reports on both mines follow, which confirm fully the statements made at the recent meeting.

REVIEWS.

HANDY LIST OF BOOKS ON MINES AND MINING. Compiled by H. E. Haferkorn. London: Gay and Bird, Publishers, 15, King William Street, West Strand.

This is a useful pamphlet for those who wish to consult works on various mining and cognate subjects. It gives them the titles of the works, the names of the authors, and also the houses at which they are published.

A GOOD IDEA.—Mr. J. T. Turnbull, of No. 1, Harley Street, W., is to the fore with a really capital idea, which, of course, will be opposed by Bumbledom in all its forms and by the haters of change (no matter how much for the better), of whom there are far too many in these happy isles. He suggests that the time has come when the lamp post and the pillar post nearest to it should be united, and that (no disrespect to the latter) the former should be placed above the latter as one structure. The advantages of this union are obvious. Who will forbid the banns?

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

S. W. (Ruby).—Higher prices are looked for. Hold.
Foggy.—Sell, although the profit will be small.
Stylo.—In all probability they will go higher.
Auckland.—As an investment, certainly not.
Poultney (Waterford).—You may get out later on without loss.
McCulloch.—Working at a loss just now. Hold your shares for the present.
Waiting.—Very cheap, and should be bought.
N. B.—It certainly does look bad when the persons you name are selling. There may be various reasons, however, for it other than you suggest.
Business.—The shares are of the investment class, and good to hold.
W. T. Leferre.—Realise.
J. Baynton (Tipton).—Hold until after the meeting.
Anxious Holder.—A call will probably be made very soon.
T. Buckhouse.—Safe for a small rise.
J. A. P. R.—Cannot be sold. You must wait events.
Security.—Rather too high, and nothing to warrant it. You can buy cheaper by waiting.
W. Rivers.—Yes. Keep them.
J. J. K.—Crushings are expected to be good for some time. Do not sell your shares.
Thistleton.—A good speculation.
C. W. N.—We are making inquiries, and will write to you early in the week.

YURUARI ONCE MORE.

FOLLOWING up our remarks last week, we have now to state that it is not yet known whether or not Mr. Sneath, of the firm of Price Waterhouse and Co., has accepted the office of liquidator conferred upon him so unexpectedly at the meeting of Nov. 4. The committee were to see him on the subject, and will, doubtless, be prepared to report the result at the meeting called for Saturday next. It is felt by the shareholders that the board ought not to have delayed calling the annual meeting until all the funds were exhausted, but the idea of 1,500l. being required on the spot to protect the company from law suits, is treated by the committee as ridiculous. One of these gentlemen was spoken to in the street on the subject a day or two ago, and could not restrain his mirth. It is generally felt that under a new board and fresh local management the shareholders would come into a re-construction scheme, particularly if the Messrs. Taylor could be persuaded to take over the management, and to admit it into their hospital for seemingly Mining Incurables. There is a strong belief that the way of salvation for Yuruari lies via Queen Street Place, and that the Messrs. Taylor can, under fair conditions, resurrectionise even Yuruari. Of this we are sure—they would try to secure continuity of crushings—a feat that has hitherto baffled every director and every manager that Yuruari has yet possessed.

WILL PRICES REVIVE?

YES. This is a prophecy we know, but it is based upon experience. We have seen the Mining market pass through many periods of depression, but emerge from them after all. Sometimes the change has come suddenly—in fact, as a rule it has done so. We have known account days pass over when brokers have had scarcely a transfer pass through their hands, and we have known them on the account day that has followed to be so overwhelmed with documents of this description, that all-night sittings have become a necessity. How the change has been brought about, by what subtle influences the dry bones of an apparently dead market have shown signs of life, this deponent knoweth not, but the certainty of the fact has remained, whilst the explanation is not easy to give.

Let any practical man consider the state of the market at the present time. Will he say that the value of the shares is at all commensurate with the intrinsic merits of the concerns represented? Why, the break-up value of some of the mines is greater than that at which the market now assesses them as going concerns. A year or two ago many of these mines were quoted at prices considerably above what they are now, but is their value less? Any mining engineer would reply No, for they have undergone greater development, and their merits are more pronounced and declared. In many cases also the earlier defects of management, of machinery and the like, have been corrected, and they have been placed upon a far sounder basis than ever before. The circumstances that led to the first fall in prices, which has culminated in what we see revealed in the share list to-day, have been removed, but the expected reaction has not set in. It may, judging from past experience, be expected to do so when it is thought least probable. A few weeks ago there was a sudden and all round rise in prices. No one knew how it commenced. Some said it was on account of better quotations from America, but an examination showed that these did not exist, but were, if anything, worse. Others said it was fine weather, but those who ventured out without umbrellas did not endorse the opinion. The fact was there, but, as we have said, the explanation was not easy. Again, some thought it was the beginning of the upward movement, for which so many have longed, not to say prayed, but they were wrong, for the excitement passed off almost as quickly as it came on. Promoters were not deceived by it, for though in a chronic state of conception, at that time they brought forth nothing. These sudden changes from better to worse, from worse to better, are not peculiar to mining. Almost every description of investment and of trade is subject to them, but in mining we must own that the present depression has been more prolonged than any we have hitherto observed.

In these remarks we have had in view those sections of the market apart from Indian shares. We specially exempt the latter, for these have been firm throughout. The Baring crisis, and the numerous unpleasant episodes that followed, have not shaken the public faith in these shares, which have either continued steady at their present prices, or have shown a marked improvement. We have so repeatedly spoken in praise of these ventures, giving at the same time the facts upon which our opinions were based, that we cannot but think many are now interested in Indian shares who would not be so but for what we have written.

MINING BY ELECTRICITY.

So much has recently been done to adopt electricity as the prevailing motive force in mines, that mining engineering seems almost to promise to become before long a branch of the electrician's business. The fact that metalliferous mining is very frequently hampered by the long distances over which fuel has to be transported by inefficient and costly means of conveyance is, of course, the main explanation of this success. There is small doubt that electrical transmission, whether of motive power, or of goods and minerals, will, in many cases, open up to development valuable mining properties, which without such aid would have to wait the tedious process of railway construction. The enormous scope which electricity exercises in relation to mining is sufficiently indicated in the electrical transmission of power over 100 miles from the Lauffen Falls to the Frankfort Electrical Exhibition. Where a turbine can be made the original source of power, the advantages of electricity are, of course, enormously increased, and the value of this element in the case is shown by the difference in the cost of producing electrical power. This ranges from about 9d. per horse-power in Paris, where coal is dear, to about 4d. in London, where it is cheaper, down to 1d. at Fribourg in Switzerland, where it is obtained from a turbine. Similar discrepancies are produced also by variations in plant, the extent of the installation, and the method of transforming the transmitted power into actual work. Any mining engineer, therefore, who cares to undertake abroad the same task which has been executed with such striking success in the United States, and latterly in our own coalfields, must not expect to attain the same results unless he utilises to the utmost the advantages of other persons' experience in the matter.

One of the inducements to the use of electricity in new mining plants is the invention of new machinery specially designed for electrical driving. Mr. Edison's latest inventions, it will be remembered, number an electric percussion drill, an electric diamond prospecting core-drill, an electric hoist, an electric fan, and an electric pump. He is not the only eminent electrical inventor who is now turning to mining as the industry affording most scope for his work. In America, coal-cutting machines have been worked electrically with so much effect as to materially lessen the difficult labour problem in the district where they have been adopted. Electryosis is now coming into general practice for the extraction of metals from their ores, and the process has revolutionised the cost of aluminium and nickel within the past few years. This also should make for the employment of electricity in metalliferous mines. The power has been proved available for all the ordinary work of mines, and it has even been proposed that electric wires should convey power from dynamos at the mouths of our coal pits to the

iron works and other industrial establishments in the vicinity. The ease with which electricity can be made to suit to varying pressure of work throughout the workings of a mine is one of its special recommendations for mining work. In South Staffordshire an electric hauling plant has recently been put down to deal with an hourly coal output of 140 to 150 tons. Where collieries are dangerous through the abundance of gas, electricity will probably never triumph over compressed air, but, otherwise, its applications to mining are almost illimitable. Electric safety lamps are so far an accomplished fact that 600 of one make are said to have been recently ordered for a colliery in the north of England.

The payment of heavy expenditure by mine owners in the United States in order to substitute power obtained from stationary engines for power electrically transmitted from more or less distant heads of water, and their apparent content with the charge, should suggest similar action in many mining districts where fuel is dear and labour scarce and intractable. Many a promising mineral property, which is at present waiting to be "opened up" by the advent of a railway, has a more available expedient open to it in the utilisation of water-power. The Frankfort experiment is sufficient to show that the limit of distance is so elastic as to be hardly a limit at all. In numbers of cases the history of a mining enterprise is the record of ruinous expenditure upon transport, fuel and labour. The mining engineer of the future will certainly have to decide how far the position of his mine will render it possible to avoid these calamities by the application of electricity. The American mining engineers have in the recent past made it matter for sarcasm against the same class in this country that they have neglected to utilise electricity with the same boldness as the "Yankees" have shown, or even to follow in the footsteps traced for them. This reproach has been removed to a large extent of late by voluminous contributions, which have been made on the subject of electricity and mining to the engineering bodies of this country, and by the several important electrical plants which have been laid down in the Scotch, North of England, and Midland coalfields. Great Britain is the school of mines, managers and engineers in all parts of the world, and it is to be hoped that the outbreak of professional interest in this matter will bear satisfactory fruit in a ready understanding of the application of electricity to mining in all circumstances where it may forward British mining interests. There is little water-power in this country, and its industrial value is a good deal neglected, but it is frequently and cheaply available in various directions of British mining enterprise.

WOODHOUSE AND RAWSON MEETING.

WOODHOUSE AND RAWSON UNITED, LIMITED, held a long but useful meeting yesterday. The fullest information was given to the shareholders, and the most complete discussion invited. The chairman (Sir R. W. Rawson) was able to announce a profit of 35,000%. Now, this result, achieved at a time when most companies as well as individuals have had a difficulty in equalising receipts and expenditure, speaks well for the careful management of the board, of the managing director (Mr. F. L. Rawson), and of the various heads of departments. It has also been achieved at a time when, owing to the acquisition of new works, and the general extension of the business, the outlay has been exceptionally heavy. There has been no attempt, however, to shift the burden of this outlay from the present to future years, but it was dealt with manfully in the accounts submitted and adopted yesterday. The statement of the chairman was most interesting, and certainly erred nothing on the side of fulness. Shareholders who came primed with a multitude of questions, found it unnecessary to put them, for the chairman's speech for the most part answered them beforehand, and the further explanations required were ably dealt with by the supplementary statement of the managing director. The discussion resolved itself mainly into a criticism of three items; the value of the patents, the value of the goodwill and the locking up of the capital in supplies. As regards the first, we think that less than justice was done to the action of the board by some of the speakers, who seemed to forget the dual fact that there has been written off one-fourteenth each year to depreciation, and that in 14 years the whole item standing against patents will have disappeared; and next, that they are constantly adding to the number and value of the patents without any addition to their cost, save the small registration fee. Then as to goodwill, the directors are resolved that this item shall disappear from the accounts altogether, but, of course, they must reduce it year by year. Then as to the locking up of capital in stores—the explanation was complete that if Woodhouse and Rawson is to maintain its high position for specialities, particularly in the electrical department, it must endeavour to keep supplies so that persons who purchase can obtain delivery on the spot without waiting to have orders executed. Critics, however, forgot the important point that there has been no time to develop fully the businesses lately acquired. The past two years has been a time of sowing to a large extent, and the full harvest cannot yet be reaped. When, however, the earnest of that harvest is to the fore in the shape of dividends for three years out of the five at the rate of 12 per cent. per annum, and for the last two years at the rate of 15 per cent. per annum, shareholders must be difficult to please if they are not satis-

fied with results so satisfactory to them, and so creditable to all connected with the management.

DEVON GREAT CONSOLS—IMPROVED POSITION.

THE statement of accounts of receipts and expenditure for the half-year ending Oct. 31, issued last night by the directors of this company, shows that 2,134 tons of copper ores have been sold, realising the sum of 2,898*l.* 10*s.* 4*d.*, being an average price of 1*l.* 7*s.* 2*d.* per ton. The amount received for sales of arsenic during the six months amounted to 15,658*l.* 7*s.* 8*d.*; which is a considerable increase upon that shown in the previous accounts. The receipts and expenditure to Oct. 31 last show a credit balance of 2,974*l.* 2*s.* 10*d.* The loan account has been reduced from 6,500*l.* by the repayment to the company's bankers of 2,500*l.*, leaving the sum unpaid of 4,000*l.*, and, but for the reduction in the prices of copper and arsenic, this amount would have been further reduced. The directors report that the recent change of management has "in every way proved beneficial to the interests of the company." Since their appointment in May last the directors claim to have given "constant attention to what they consider to be the true interests of the shareholders, and whilst they have been enabled to so far reduce expenditure, they point with satisfaction to the financial statement herewith submitted, in having been able to repay 2,500*l.* of the loan account, and to carry forward a cash credit balance of 2,974*l.* 2*s.* 10*d.*" It will be seen that the directors at the meeting on Nov. 25 will be able to give a good account of their stewardship.

"IN A TRAIN."

(By WAYFARER.)

A FEW days ago I was travelling by train from Saltash to Redruth. In the carriage with me were three gentlemen. One was a clergyman, whose views of life appeared to be bounded by clerical matters on the north, the south, the east, and the west. He was going to a conference in Truro, where, I understood from what he was saying to another clerical friend, some strong resolutions were to be passed on things in general. The third of my fellow travellers, who occupied a seat in the corner, kept silence, but when the two clerical gentlemen got out at Truro he expressed surprise to me at the narrow-mindedness of one of them, who refused, when he could not get the Conservative paper for which he asked, to buy a Liberal one, because it did not give his side of the question. From this point the conversation which ensued between myself and the gentleman in the corner turned on mining, and I asked him, "What are the prospects of mining in Cornwall at the present time?" "Oh!" said my fellow traveller, "they have not been so bright for years. The mines are looking splendid, and everything has a hopeful aspect." "I am glad to hear it," I replied, "but the share lists do not appear to bear you out." "Oh," he said, "you must not look at the share lists, but at the underground prospects." "Pardon me, sir," said I, "but there is one standard by which you can only judge of the value of a thing, and that is the price it will fetch in the market. Do not tell me about prospects and hopes, but tell me whether I can get more, or as much, for my shares as I gave for them, and I repeat I do not think current quotations bear out the rosy tints in which you have painted the condition of Cornish mining at the present time." "But," he said, "if you ignore the prospects of the mines and the reports of the agents you will go astray." "More likely I shall go astray," I replied, "if I trust them. Now look at this paper, which you will acknowledge is entitled to speak in the name of mining. Here is a copy of the MINING WORLD of Oct. 10, which shows me that, assuming I am a Carn Brea shareholder, and I bought my shares at the highest price recently ruling, say 6*l.*, I can only get to-day 3*l.* for them. In the same way I find Dolcoaths have declined from the highest point no less than 23*l.*; Tincroft 12*l.*; Cook's Kitchen 9*l.*; East Pool 5*l.*; South Frances 4*l.*; and so on. Are these facts or are they not? Does this paper state them accurately, or does it not?" My companion did not answer my question, but said, "You should hold for better prices." "That is all very well," I said, "but suppose the necessities of my business require me to sell, how then will the prospects, the agents' reports, and the hopes of which you speak, solace me for the frightful sacrifice I shall have to make?" My friend could not answer, but got out at Redruth, at which station by this time we had arrived. He told me he was going to the tin ticketing.

COPPER AND TIN.

SINCE we referred to the fall in the price of copper three weeks ago, there has been no recovery. Indeed, during the past week the price of bar copper has been below 45*l.* a ton, or fully 12 per cent. below the quotation a month previously. It is expected in some quarters that even a lower level will be reached. The Parisian operators who have been working the metal market in anticipation of the sale of the assets of the Société des Métaux are no doubt wealthy and powerful, and temporarily they may succeed in bringing the price of copper down still further; but that the metal is to remain for any considerable time at much below 50*l.* a ton we do not believe. And for this reason. The influence which, next to that exercised by the French speculators, most affects the copper market just now is the fear that

the re-opening of the Anaconda mine will lead to a large increase in the shipments of the metal from the United States; but it has yet to be proved that American producers will exert themselves to export copper at such a price as that now ruling. We believe they will hold out for something better. The statistical position of the metal in England and France has become less satisfactory since the end of June, at which date the stocks had run down to 57,325 tons; but even at the end of Oct. they amounted to only 59,815 tons, whereas, at the corresponding date a year ago, when the price of G. M. B. copper was 12*l.* a ton higher than it is now, the stocks in England and France stood at 63,225 tons. We may add that the supplies last month would have been unusually small—fully 2,000 tons less than the deliveries—if it had not been for an extraordinary increase in the receipts from "other countries." The supplies from the United States were 1,427 tons, against 3,015 tons in Sept., and those from Spain and Portugal, 1,731 tons against 2,181 tons. Of course, we do not wish to minimise the importance of the falling off of 1,600 tons in the deliveries as compared with Sept., but it is easy to exaggerate the gravity of such a temporary check. And, after all, the fact remains, that in the past 12 months the deliveries have exceeded the supplies by well over 8,000 tons. The following statement from Messrs. H. R. Merton and Co.'s monthly circular may be left to speak for itself:—

	Sept. 30, 1891.	Oct. 31.		
		1891.	1890.	1889.
STOCKS IN ENGLAND AND FRANCE:—	Tons.	Tons.	Tons.	Tons.
Liverpool and Swansea, Chili Bars...	20,761	23,247	16,134	24,230
Liverpool and Swansea, Chili Ingots	237	144	170	183
Liverpool and Swansea, Chili ores and regulus (fine) ...	18	25	206	420
Liverpool and Swansea, other stuff (fine) and English copper ...	10,200	9,127	14,648	29,647
London (including landing) ...	9,244	9,120	7,090	5,858
Havre, Bordeaux, Rouen and Dunkirk Chili bars ...	7,053	4,804	16,320	30,675
Havre, Bordeaux, Rouen and Dunkirk other copper... ..	6,632	7,648	9,357	8,922
	54,150	54,115	63,925	99,940
ADVISED FROM CHILI by mail and cable, fine copper... ..	4,450	4,200	3,400	2,550
ADVISED FROM AUSTRALIA by mail and cable, fine copper	850	1,500	900	1,050
	59,450	59,815	68,225	103,540
AFLOAT from Liverpool to Continent	—	—	—	—
	59,450	59,815	68,225	103,540

Price of Chili Bars and G.M.B.'s, per ton £51 2*s.* 6*d.* ... £46 5*s.* ... £58 7*s.* 6*d.* ... £44 2*s.* 6*d.*

For a few days the market for tin drooped sympathetically with the fall in copper; but there has since been a recovery, and it seems probable that tin will soon rise once more to the level at which it stood a few months ago—say, 92*l.* or 93*l.* a ton. There has been an improvement in the demand from the tin-plate manufacturers of South Wales, and although the statistical position was not quite so favourable at the end of Oct. as it was a month previously, we fully expect that by the close of the current month the figures will be more in favour of producers. The following is a brief comparison of stocks, visible supply and prices at the end of each of the past three months:—

	Oct. 31, 1891.	Sept. 30, 1891.	Aug. 31, 1891.
	Tons.	Tons.	Tons.
Stocks here and landing ...	2,595	2,974	2,754
Total visible supply ...	12,435	11,908	13,040
Price of foreign tin ...	£89 7 <i>s.</i> 6 <i>d.</i>	£91 5 <i>s.</i>	£91 10 <i>s.</i>

GERMAN LOTTERIES.—A CAUTION.

THE Hamburg lottery sharks must evidently find good prey in Merry England, judging from the activity with which they are circularising the whole country. We never yet met an individual who received a remittance in return for the remittance he sent. Hamburg is like the leech—"It all receives and nothing gives." We have repeatedly uttered a note of warning about sending money to Hamburg on the very doubtful chance of getting back one of the "big money prizes," and we utter another, because we have reason to know that the people who issue these circulars have of late been exceptionally busy.

HEXWORTHY TIN.—A PROMISING HOME MINE.

THE hopeful forecast we gave of this company's prospects last week, as gathered from the directors' report, is confirmed by what took place at the meeting on Wednesday. Speeches were delivered by Mr. Malcolm Low, M.P. (chairman), and Mr. Edgar Taylor. The latter spent two days of last week inspecting the property, from the surface to its lowest level. He returned favourably impressed by his visit, and communicated his views in a business-like speech to the meeting. The prospects are excellent, more particularly at Low's shaft, where at the 23-fm. level the workings have been extended north and south, in a lode well-defined and carrying a good quantity

of tin. Above the south level are the two stopes from whence the present returns of tin are being made. The drive on the adit level south from Low's shaft he considers an important feature, as it will cross two other lodes known to exist. At Taylor's shaft the workings are being carried on to explore underneath an exceedingly large working, which was formerly known as the Hen's Roost, and which has a high reputation in Dartmoor. A shareholder, who spoke from the standpoint of one who has personally visited the property, expressed the hope that the success of this company would be the signal for a revival of the mining industry of Dartmoor: only he regretted that, owing to the refuse cast into the river, it would spoil the trout fishing. We have no such regret. If we can see a thriving industry like mining brighten the by no means cheerful view of Dartmoor, we shall have scant pity for Mr. Jepps if he has to go a little further in search of piscatorial joys. Mr. Low is under the strong impression that at the next meeting he will be able to give the shareholders "substantially good tidings"; and a justification of his belief is to be found in all the circumstances surrounding Hexworthy Tin at this time.

BRISTOL SILVER AND LEAD CO., LIMITED.

THE district in which this company's property is placed is one that has been favourably known to mining investors for a considerable period. It is, for example, the home of the celebrated Tolima Mine, which is now making about 60,000*l.* a year profit, and the shares of which (both classes) stand at an enormous premium in the market. It is also the district in which some of the most successful hydraulic mines of the day are found, with others that are rapidly coming to the front. Moreover, it has for its engineer Mr. James G. Green, who has been associated with most of these successes, and whose recent speech in connection with Tolima Co. cannot have been forgotten. The scope of the company's efforts is comprehensive enough, for it includes the acquisition of the freehold mining estate termed La Platilla and Lomas del Calero, with 12 auriferous silver mines in the Department of Tolima, Republic of Colombia, about 20 miles from the shipping port of Honda. The estate comprises 45,000 acres, or, approximately, 70 square miles. Then the company's second object is to acquire the recently constructed smelting and extraction works of the Bristol Sublimed Lead Co., the patent rights for the United Kingdom of the Lewis-Bartlett process for the treatment of complex ores, the disposal of portions of the property to other companies, and the acquisition of other properties for itself. The company will thus be its own miner, smelter, commission agent, and everything combined, so that the charges it should save in these directions should be considerable.

The prospectus gives full explanations as to the 12 mining claims which the company acquires, and it quotes from our columns of July 4, 1891, the striking facts mentioned about the Frias Mine, which yielded last year the profit of 60,000*l.* already named, and has 400,000*l.* worth of reserves in sight. We agree with the prospectus in thinking that the company is fortunate in having secured the services of Mr. Green as its engineer. The property has been carefully reported upon by Mr. John Webster, a mining engineer of considerable experience, who gives much information as to the wealth of these mines in the past, and as to their present position, which is highly encouraging to those who contemplate working them with adequate capital and the latest machinic appliances. Mr. Webster thinks the company has sufficient ore ground to form "half a dozen subsidiary companies." The smelting works proposed to be taken over are also fully described, and it is stated that the desilverising plant can deal with upwards of 140 tons per week. In regard to the acquisition of the Lewis-Bartlett process, the statement is made that by its adoption the loss ordinarily experienced by the best of methods in treating argentiferous and other ores is wholly avoided. We cannot confirm this from actual knowledge, but note the extremely reassuring statement made by such authorities as Dr. William Ramsay and Mr. J. W. Bevan. The latter says: "It is at the head of all smelting operations." The prospectus estimates, on a basis that appears to be reasonable, a monthly profit of 7,475*l.*; and Mr. Webster reports that he found the mines in such a state that in a few months the manager could ship 250 tons of concentrates per month. The sale of the whole of these properties is to be effected for a payment for the most part in fully paid shares (90,000) and 20,000*l.* cash, which on the capital (130,000*l.*) will leave 20,000*l.* for working purposes. The present is an issue of 40,000 shares. The directors are gentlemen of the highest respectability in Bristol and the surrounding district. The brokers are the well known firm of Messrs. Harry James and Co., of the Bristol Stock Exchange, and amongst the first signatories to the articles we find the following gentlemen of position and influence in the west of England:—Herbert Nash, Bristol; John Lysaght, J.P., Bristol; Chas. Hy. Cave, Bristol; C. W. Cope-Proctor, J.P., Bristol; Thos. Williams, Neath; and W. Peddie Struve, J.P., Neath. The company, under the experienced direction of Mr. Green abroad, and the careful management of the board at home, appears to offer every prospect of a successful career.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

NOTWITHSTANDING an evident desire to restrict business and control rates in view of the position of affairs at Paris and Berlin, the Discount Market has weakened under foreign competition for bills to employ money in this country, and the fluctuation in the French exchange has been due to this, and the selling here on Paris account in connection with the liquidation on the Bourse. The Paris financial houses, already overloaded with obligations, added another in the form of the Russian Loan, which, not being freely taken by the French public as hoped, was subscribed by the Syndicate. The result, as we predicted at the time, has proved worse

than "failure," for it is as much as they can stagger under, and may yet come to grief, although, thanks to Lord Salisbury's remarks on our Foreign policy, particularly in regard to Egypt, the panic threatening at the settlement was averted, and a recovery here restored some tone to prices. At Berlin, the situation is no less critical, two important banking failures have actually occurred, the one connected with the upper classes, and the other with the middle and artisan classes, and both through locks up in securities and industrial ventures. Bills are now barely 3 to 3½ per cent., and long dates, nominally 3 to 3½, have been done at 2½, it being assumed that from the position of the Bank money will be easy until the end of the year, but this depends upon the export demand for bullion. Call money has been in better demand, and partly due to the settlement, and loans have been done up to 3 to 3½ per cent., but the supply has increased, and money is now easier. Over a million went into the Bank on the *Gazette* week, and with a return of notes from circulation the reserve has increased 1,373,000*l.*, to 13,973,000*l.*, against 11,105,000*l.* last year; and as the liabilities are rather less, the proportion is 4 higher, at 40½ per cent.

At the Stock Exchange the settlement was approached with misgivings, in consequence of the fluctuations that had occurred in connection with the difficulties at Paris and Berlin, and the collapse in Brazilian Securities on the news from Rio of the revolt of the Province of Rio Grande de Sol, and the reports that others had joined in declaring their independence. As regards the position in Brazil, the uncertainty as to the state of parties in the country complicates the situation, but it is evident that rampant corruption exists, and the loss of gold and the depreciation of the currency with a fall of about 50 per cent. in the exchange has created the greatest uneasiness in commercial circles, and the position in Portugal has suffered in consequence, where the exchange has further receded 4 per cent., and in Spain 2 per cent. The markets, after a fall, rallied, and have since fluctuated violently, but at the present are rather steadier. The Funds fell to 91½, ¾, but have recovered sharply to 95½, ¾, with 95½, ¾ for account, helped by the Bank return and Indian and Colonial Government Securities have been dull. In the Foreign Stocks Spanish fell to 62, but have rallied to 64½, ¾, still 3½ lower on the week. The rally is attributed to better financial news, and the appointment of a new finance minister. Portuguese are only ½ lower, together with Russian, while Italian Hungarian, and Egyptian are rather higher. Brazilian Four per Cent. fell to under 50, but, with a partial rally are 8 lower than last week. Argentine have fallen 1 to 1½, and Uruguay 2 to 2½. The premium on gold at Buenos Ayres has fallen to 273 per cent. Home Rails have moved somewhat in sympathy with Foreign Stocks, but to a less extent, and the result is, generally, some decline, but Metropolitan, Brighton "A" and North-Eastern are better. American Securities have also been heavy, although unaffected by European or South American affairs. New York Central, Union Pacific, and Eries improved, the latter on reports of an Erie Preferred dividend of 3 per cent. Trunks have fallen, but Mexican are firmer.

Discount to-day has been quiet and easier, the nominal quotation for three months' bills being, say, 3 per cent., while the course of the market is indicated by the fact that long dated paper is now quoted 2½, 3 per cent. The cross payments in connection with Treasury Bills led to some demand for money, as they involved the transfer of 800,000*l.* to the bank. The quotation at call and for short loans was 2½, 3, in the morning, but fell to 2½, at which the Government broker took all offering, and afterwards gave 3 per cent. for loans to the 27th inst.

At the Bank no gold operations took place. Bar silver was rather lower at 43½*d.*, and Rupee Paper was weaker, the 4 per cent. being 73½, ¾, and the 4½ per cent. 73½, ¾.

The Stock Markets have been flat, and nearly all securities appear to have suffered. The Continental Bourses were also lower, and the continued interruptions with those centres was partly responsible for the condition of prices to-day, but some slight recovery occurred in the last hour. Consols were fully maintained at yesterday's levels, but did not retain the best, viz., 95½, of this morning. Indian loans were steady, and Metropolitan are rather firmer.

Home Railways were inactive, and, except for a little further improvement in Hull and Barnsley, Great Western, and Metropolitan District, are rather lower; however, the fall rarely exceeded ¼. Foreign Bonds have suffered severely from renewed selling of Russian, Spanish, Brazilian, Portuguese, Uruguay and Greek, all of which exhibit a loss of 1 to 2 per cent. Other inter-bourse descriptions are quite ½ down, but there is an exceptional recovery among Argentine loans upon a fall in the gold premium to 263 per cent., and because the wool clip is now moving more freely. Canadian and Mexican lines show a moderate reduction, and Brazilian railways, too, have fallen, while such enterprises in the River Plate tended upward. The American department experienced a general decline, aggravated by the forced closing of an account. Although quotations leave off stronger there is a fall of \$½ to \$1½ in all active roads. Nitrate-producing properties evinced increased firmness, in accord with a recovery in the soda; otherwise Miscellaneous, &c., were quite featureless. Some movement took place in coal and iron shares.

Annexed are the final quotations to-day:—Consols Account, 95½, 95½; Egyptian Preference, 87½, 87½; Egyptian Unified, 93½, 93½; French Four-and-a-Half per Cents., 10½, 10½; Hungarian, 83½, 83½; Italian, 87½, 87½; Mexican, 82½, 82½; Peru Five per Cents., 8½, 9½; Peru Six per Cents., 25½, 26½; Russian 1889, 89½, 90; Portuguese, 31½, 31½; Spanish, 63½, 63½; Turkish 1871, 90½, 90½; Turkish Defence, 86½, 87½; Caledonian, 119½, 119½; Great Eastern, 87½, 88; Great Western, 157½, 158½; Brighton "A," 146½, 147½; North Western, 170½, 170½; Metropolitan, 86½, 87; Metropolitan District, 29½, 30½; Midland, 161, 161½; North British 4½, 4½; North Eastern, 156½, 156½; South Eastern "A," 83½, 83½; Mexican Ordinary, 30½, 30½; Grand Trunk, 9½, 9½; Grand Trunk First Preference, 67½, 67½; Grand Trunk Second, 46½, 46½; Grand Trunk Third, 24½, 25; Canadian Pacific, 89½, 89½; Denver Pref., 16½, 16½; Erie, 29½, 29½; Milwaukee, 77½, 77½; Lake Shore, 126½, 127½; Louisville, 79½, 79½; Atlantic First, 35½, 36; Ontario, 18½, 18½; Ohio, 20½, 20½; Norfolk and Western, 51, 51½; Reading, 18½, 19; Reading Bonds, 85, 86; Union Pacific, 41½, 41½; Wabash Preference, 27½, 27½; Ottoman

Bank, 10½, 11; Anglo-Telegraph, 48½, 49½; National Telephone, 4½, 4½; Hudson's Bay, 15½, 15½; Suez Canal, 106½, 106½; Guinness, 320, 322; Allsopp's Ordinary, 21, 23; Bryant and May, 13½, 14; Eastman's Ordinary, 3½, 4.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

BRISTOL SILVER AND LEAD CO., LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—In reply to the letter of Messrs. Hopcraft, Wilson and Co., which appears in to-day's issue of some financial papers, I beg to state that my directors have already adopted the suggestion of Messrs. Hopcraft, and have taken the opinion of Mr. James G. Green before printing their prospectus, of which he approves. Mr. Green, who has accepted the management of the mines, informed me a few weeks since, in the presence of Mr. T. Williams, the solicitor to the company, that in his opinion the celebrated Santana Lode runs through our property. My board has, therefore, exercised the necessary precaution which the letter in question suggests.—I am, &c.,

J. W. HALL, Chairman.

YURUARI.

SIR,—I cannot understand how Yuruari manager can be so out of funds when he said in his report, received Sept. 24 last, that there were 4,000 to 5,000 tons of good quartz in sight for crushing. It seemed really a question of days till he started the mill. Since then I have not seen any report from him whatever. It is inexplicable.—I am, &c.,

B.

Nov. 9.

SIR,—The result of the meeting of this company puts the shareholders in an awkward position. The chairman has practically washed his hands of the concern, and the company is unable to meet its liabilities. What is going to be done? There are two alternatives. The liabilities must be met and funds provided for future working, or the company must go into liquidation. It is a question of two evils, and it appears to me the lesser is the former one. Whatever may be said of Mr. Watt, it cannot be said he did not conduct the meeting with fairness.—I am, &c.,

R. L. S.

SIR,—We have another sample of the consideration which the present Yuruari board has shown throughout to the shareholders in the notice convening the meeting, which is fixed for the appropriate date of the 21st, which is a Saturday. It will be remembered that the special meeting of the shareholders, convened by requisition, was called on the day before Good Friday, and that a meeting prior to that was held in the purlieu of Westminster. Further comment seems needless in respect to the manner in which the directors seek to meet the convenience of shareholders.—I am, &c.,

SENEX.

SIR,—The report of the Yuruari meeting in your last issue, and the remarks which you then made upon the position of the company in consequence of the resignation of the chairman and the failure to pass the re-construction resolutions by a sufficient majority, must have convinced every shareholder of the fact that the company is in imminent peril. I do not propose now to go into the question of whether Mr. Watt was right or wrong—that matter was fully discussed at the meeting; but I would urge upon those gentlemen who took such a prominent part in the opposition, and who succeeded practically in overthrowing the resolutions for re-construction, that they should immediately seek an interview with the directors, take steps for providing the company with funds, and formulate a scheme whereby operations can be continued. If this is not done the last state of the company will be worse than the first.—I am, &c.,

Nov. 9.

ANXIOUS.

SIR,—I was unfortunately prevented from attending the recent meeting of the Yuruari Co., but I have read with much interest your very excellent report of the proceedings, and I trust you will allow me a few lines in your next issue in which to express my unbiassed opinion regarding the present situation.

In the first place, let me say that whatever Mr. Watt's opponents may think and say of him—and I venture to believe that in their calmer moments they will regret many of the charges and insinuations they levelled at him in the heat of debate—he certainly has shown indomitable perseverance and pluck in the management of their property. Some of your readers, doubtless, will regard it as mismanagement; but it seems to me that all along Mr. Watt has had a hopeless task in hand, and, figuratively speaking, he has been attempting to whip life into a dead donkey. One re-construction scheme has followed another, but with no success; experience has proved that it has only been throwing good money after bad. Instead of dividends have come up droughts, revolutions, boundary troubles, and what not.

However, the curtain has now fallen, and another act in the Yuruari drama has been played. The question, therefore, that presents itself to the mind of the unfortunate shareholder is—What is to be the final issue? I have long ceased to regard my Yuruari shares as worth more than the paper upon which they are printed; but there are some who still profess faith in the property, and who might be glad to take advantage of this opportunity of acquiring it for a small sum, and thus something might be snatched out of the fire. It is not to be expected that Mr. Watt, or his friends, will assist the company financially again as they have done in the past, and I am quite sure that those who have made the chairman's position anything but a "flowery bed of ease" will be very loth to lend the company any of their financial support. I trust, however, that someone will take the matter in hand and endeavour to effect a sale of the property; other-

wise it must inevitably go into the hands of the creditors, who will dispose of it for a mere song, and, as far as the shareholders are concerned, it will vanish into thin air.—I am, &c.,

SHAREHOLDER.

EAST BLUE HILLS MINE.

SIR,—At the meeting held on the 6th inst. an attempt was made by Messrs. Waggstaff and Hodgkinson to puff up this worthless concern at the expense of my reputation. They said our late manager got things into a very bad state; well, let us see how far this can be borne out. Up to Aug. last year the mine had been under the management of various local agents; they all condemned the mine, and the purser relinquished his shares, and advised the committee to go into liquidation, and the mine would no doubt have been stopped had it not been for a discovery of tin in Blue Hills, the adjacent mine. Now I said to the committee—"If you will allow me to manage the mine for the next four months I will take up the relinquished shares." This was agreed on, and I took over 700 shares, and proceeded to the mine to see if anything could be done to resuscitate this unfortunate concern, and I found that the machinery was not only in the most deplorable and filthy condition that I ever saw, but that a greater part of it was worn out before it was brought there eight years ago, and I think the engines are the oldest working in the world. I did little but tinker up these rattletraps to keep them rolling during the 10 months I was there, and it is a barefaced statement to say they were left in a worse condition than when I found them. I reduced the consumption of coal at one engine 30 per cent., and at the other over 50 per cent. The first important matter I recommended to the committee was the sinking of the engine shaft, as the tin in Blue Hills was much deeper. This the committee would not allow me to do, although I urged it repeatedly. Now this, of course, was a breach of contract, as I had taken the shares on condition that I should have the management of the mine; and I contend that the committee had no right whatever to interfere with my management, as they had most distinctly contracted it into my hands. The next thing I discovered was that the banking account was overdrawn 1,100£. or more, and that this overdraft had been made by the committee without being authorised by the shareholders at a general meeting, which, of course, renders all the calls since made illegal, and, hence, the arrears of calls which cannot be enforced; and at the time I took my shares I was informed that there were no liabilities, which, of course, was an incorrect representation, and I believe an infringement on the Stannaries Act. Then, when I left, about a year's merchants' bills were owing; and it was in this condition when the mine stopped, excepting pumping the water and cleaning up a little tin, that I again and again urged the committee to stop the expense of pumping, and sell what they had towards paying the debts; but, having obtained a small piece of ground from Blue Hills it was decided to try it, but there was a great difficulty in the way of working it. The Duchy reserved a barrier of ground between the two mines, 10 fms. thick, and, although Mr. Waggstaff instructed me to go to work there, the Duchy had positively forbidden us to touch it, because it had been infringed on by the former agents, and most of the tin discovered was in this barrier, and as soon as I discovered that we had no right I stopped the men working there, and seeing the critical position of the company, a general meeting being then considerably overdue, which, of course, is another infringement of the Stannaries Act, our credit stopped, and being threatened to be put in the Stannaries Court for debt, I came to London to see the secretary, who immediately sent out notices convening a meeting.

It was under these circumstances, combined with the fact that Blue Hills had become very poor in the meantime, that I had relinquished all my shares, finding that the tin did not extend into the new ground. But the day after I left the mine Mr. Waggstaff arrived there, and put the men to work again in the forbidden ground, and although application has since been made to the Duchy for permission to work the barrier, no reply, to my knowledge, had been received for several weeks, neither do I believe they have ever received any permission to work there, although the most of the tin, little as it is, was obtained by this infringement.

The liabilities are stated to be 1,243£.; a call of 1s. per share, if paid, will only realise 450£., or thereabout, as there have been a great many relinquishments, so that it leaves 793£. to be added to the debts. It rather puzzles me to understand how they make out these to be all the liabilities. About a year ago the overdraft at the bank was 1,100£., and a few weeks ago there was, and may be still, over a year's merchants' bills owing. 2s. 6d. per share had been called, exclusive of the last call, to meet these debts, which would give 1,125£., and the cost since June has been over 300£. per month, and previous to that it was about 150£. per month, and the tin has only realised in the last four months 436£. I doubt very much the accuracy of these figures. The call and tin sold would be 1,125£. + 436£. = 1,561£., whilst the bank draft being 1,100£. and, say, 600£. merchants' bills in arrears, and labour cost 1,300£., and current bills 250£., makes a sum total of 3,250£.

As to the report, it is "poverty and puff" from end to end; there is not a point in it worth the paper it is written on; and this 30-fm. level, which is being driven and ventilated at a great expense, is now a few fathoms off the boundary again, and no one, in my opinion, excepting for the benefit of the adjoining mine and their own salary, would advise the company to spend a farthing there. If they make a good discovery on the boundary so much the better for their neighbour, but there is not the slightest probability of doing so, as there is a winze sunk 20 fms. below adit, near the boundary, and there is nothing in it; and that, with what I had done, sufficiently proved this piece of ground, of which so much fuss is made, to be utterly worthless, and although some 20 or 30 fms. have been driven in that direction since, it has proved to be worse than worthless.

Mr. Waggstaff's statement is that the manager had bought 100 shares. No one believes the Captain soft enough to buy the shares when he could get thousands of relinquished shares for nothing, although I suppose he has to do pretty much as he is bid.

In conclusion, I beg to say that this calumny and persecution has been going on ever since I relinquished my shares and advised the committee so urgently to stop a losing game; and I believe the cause may be sought for in their fear of the Stannaries Court in

liquidation, and my refusal to pay debts concealed from me when I entered into partnership.

The liquidation, of course, being a day of reckoning with committees, I strongly advise all the shareholders to relinquish their shares if they wish to avoid heavy cost in liquidation, which will probably amount to 17. per share. The outlook since Blue Hills has become poor is quite different to what it was when I went down; and my idea now is not to sink East Blue Hills shaft until Blue Hills has made a permanent discovery.—I am, &c.,

W. NANCE.

Prince's Chambers,
Cophthall Avenue, London, E.C.

THE NEW GUSTON CO., LIMITED.

PROFIT OF 16,012. FOR THE MONTH.

MR. HARVEY, the mine superintendent, under date Oct. 26, reports on the mines, viz.:—No. 6 level, South drift, New stope: Length of stope, 37 ft.; height over back of No. 6 level, 42 ft.; width of ore, 12 ft.; value from 60 to 2,000 ozs. silver per ton; gold from $\frac{1}{2}$ to $1\frac{1}{2}$ ozs. per ton; copper, 4 per cent. to 30 per cent. South drift, Outside stope: The stope referred to in my last as being 25 ft. back or north from new stope has been extended a total length of 26 ft.; height over back of level, 9 ft.; width of ore, $\frac{1}{2}$ ft.; value from 40 to 130 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ ozs. per ton; copper, 2 per cent. to 4 per cent. Old south drift: The south drift has been cleared and re-timbered a further distance of 15 ft.; total distance extended from main south drift, 51 ft. At one point in the old drift good shipping ore has been met with from 1 ft. to 18 ins. thick. I anticipate at an early date starting a stope in this ore. North level, South drift: Distance driven, 12 ft.; total distance extended from south end of winze, 89 ft.; width of ore in the forebreast, 3 ft.; value, from 25 to 40 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{1}{2}$ oz. per ton. The drift has been driven in ore for the whole length from the winze, and is now communicated on the east side with old No. 6 ore body stope. North level, South stope: Length of stope, 69 ft.; height over back of level, 43 ft.; width of ore, 1 ft.; value, from 20 to 40 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{1}{2}$ oz. per ton. North level, North stope: Length of stope, 49 ft.; height over back of level, 43 ft.; width of ore, 5 ft.; value, from 45 to 1,000 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ oz. per ton. No. 7 level, No. 7 ore body stope: Length of stope, 36 ft.; height over back of level, 43 ft.; width of ore, 12 ft.; value, from 20 ozs. to 8,000 ozs. silver per ton; gold, $\frac{1}{2}$ to $1\frac{1}{2}$ ozs. per ton; copper, from 2 per cent. to 15 per cent. South drift, Middle stope: Length of stope, 23 ft.; height over back of level, 8 ft.; width of ore, 2 ft.; value from 30 to 120 ozs. silver per ton; gold, $\frac{1}{4}$ to $\frac{3}{4}$ ozs. per ton; copper, 2 per cent. to 4 per cent. South drift: Distance extended, 11 ft.; total distance driven, 106 ft. There is no ore (at present) of value in the forebreast. No. 8 station: Good progress is being made with the cutting and timbering of No. 8 station. The mine continues to look well throughout.—A. HEBDEN, Secretary, *pro tem*.

N.B.—The directors are glad to inform the shareholders that the appeal in the action brought by Col. Tottenham's representative against the company, was this day decided, in the Court of Appeal, in the company's favour with costs.

ESTIMATED RETURN FOR SEPT. MONTH.

The mine superintendent cables to the following effect:—"Ore shipped, 1,350 tons; value, 20,454.; mine expenses and supplies, 3,399.; railway freight, 1,043.—4,442.; profit for the month, 16,012."

YANKEE GIRL SILVER MINES, LIMITED.

A BETTER REPORT FROM THE MINE.

THE mine superintendent cables to the following effect: "Ore shipped for the month of Oct., 700 tons; estimated value, \$28,500; working expenses, \$17,900.

Mr. Harvey, the mines superintendent, under date Oct. 28, reports on the mines, viz.:—Robinson mine—No. 1 level, south drift, No. 1 stope: Height of stope over back of level 52 ft., length 28 ft. Ore scattered throughout the stope. Value from 10 to 35 ozs. silver per ton. No. 3 level, south drift, No. 3 stope: Height of stope over back of level 62 ft., length 10 ft.; width of ore 2 ft. Value from 10 to 40 ozs. silver per ton. No. 5 level, north drift, boundary stope: Height of stope over back of level 15 ft., length 12 ft.; width of ore from 6 to 8 ins. Present value from 10 to 20 ozs. silver per ton. We anticipate the ore here will improve in size and value as the stope gets up. Shaft: The main shaft has been sunk a further depth of 25 ft.; total depth below base of No. 5 station, 84 ft. Yankee Girl Mine—No. 2 level, Orphan Boy ore body, Stope: Height of stope over back of level, 39 ft.; length, 24 ft. For 6 ft. in length the ore is 2 ft. 6 ins. wide; remaining portion of stope scattered in appearance. Value from 20 to 100 ozs. silver per ton. Five and half level—Yankee Girl ore body—Stope: 45 ft. north, 20 ft. west from the old Yankee Girl stope. Recently some rich stromeyerite ore has been met with. At the present the ore is about 2 ft. wide by about 4 ft. in length. There is approximately 40 ft. of ground between the point where this ore has been met with and No. 5 level. To date we have already taken out about 5 tons of rich ore. No. 6 level, Orphan Boy ore body: The waste has been cleared out of the old Orphan Boy ore body stope for the purpose of prospecting for ore the quartz surrounding the stope. No. 8 level, south west ore body: Height of stope over back of level, 53 ft., length 30 ft. In the east portion of stope for about 10 ft. in length, the ore averages 2 ft. wide, the remaining part of stope is poor; value of ore from 10 ozs. to 30 ozs. silver per ton. West ore body: Length of stope 24 ft., height over back of level 28 ft.; ore scattered in appearance; value from 10 ozs. to 35 ozs. silver per ton; copper from 5 per cent. to 10 per cent. No. 9 level, west drift: Drift extended 6 ft.; total length, 181 ft. There is quartz in the forebreast, with small patches of ore in places. This drift in the past has been designated as the south west drift, but in future will be known as the west drift. South-west ore body, stope: Length of stope 56 ft., height over back of level 24 ft. for 28 ft. in length, balance of stope average height over back of level 14 ft. East portion of stope for 28 ft. in length, width of ore 2 ft. West portion of stope for 28 ft. in length, ore from 7 ft. to 10 ft. in length. Value from 25 ozs. to 130 ozs. silver per ton. East drift: Drift extended east from the old Yankee Girl ore body

stope a total distance of 50 ft. This drift is being driven on a well-defined channel of soft porphyry. Occasionally small patches of good peacock copper ore have been met with. The station and drifts have been cleaned out, and track laid in the west drift. West drift: Drift extended 12 ft., total length driven from station 74 ft. This drift has approximately 10 ft. more to drive to get underneath the south-west ore body which is being worked at No. 9 west level. Yankee Girl ore body stope: The exploratory work done here in the past being exceedingly limited, we are clearing the stope with a view of prospecting the quartz for ore. The water is being kept 14 ft. below No. 10 station. On the arrival of new pump column, daily expected, we shall at once commence lining same and place it in position in order to fork the water out to No. 11 level.—T. NEAL, Secretary (*pro tem*).

AMERICAN BELLE MINES, LIMITED.

HOISTING APPARATUS COMPLETED.

THE following information has been received by cable from the mine superintendent:—"Shipped from Silver Bell during Oct., 52 cars of ore, about 520 tons; estimated value, \$8,400; working expenses, \$11,700. We are drifting at Nos. 9 and 10 levels towards the ore-bearing ground." Capt. Harvey reports as follows, under date Oct. 26:—National Belle Mine—Shaft: The main shaft has been sunk a further depth of 30 ft.; total depth below the base of No. 3 station, 100 ft. The contractors have a sump of 14 ft. to sink to complete their contract. Silver Bell Mine—No. 1 or adit level, South drift, No. 1 stope: Length of stope, 76 ft.; height over back of level, 23 ft. South portion of stope, ore 3 ft. wide for 12 ft. in length. North part of stope, ore 2 ft. wide for 12 ft. in length. Value of ore from 20 ozs. to 85 ozs. silver per ton. No. 6 level, South-east drift: Drift extended 7 ft. Not meeting with any improvement, I have deemed it advisable to suspend operations here for the time. No. 7 level, South drift, No. 1 stope: Length of stope, 76 ft.; height over back of level, 64 ft. North-west portion of stope, ore 6 ft. wide for 14 ft. in length. South-east part of stope, ore 6 ft. wide for 20 ft. in length. Value of ore 16 ozs. to 35 ozs. silver per ton. No. 8 level, South drift: No work has been done here since my last. South drift, No. 1 stope: Length of stope, 30 ft.; height over back of level 48 ft.; width of ore, 4 ft. for 14 ft. in length, remaining portion of stope, ore broken in appearance; value of ore from 16 ozs. to 35 ozs. silver per ton. South drift, No. 2 stope: Length of stope 80 ft.; height over back of level, north part of stope 23 ft. for 35 ft. in length. South portion of stope, height over back part of level 19 ft. for 45 ft. in length. Ore scattered averaging 5 ft. in width for 40 ft. in length. Value from 16 ozs. to 35 ozs. silver per ton. No. 9 level: Distance driven from shaft towards ore-bearing ground, 35 ft. We expect to commence opening for station at an early date.—T. NEAL, Secretary, *pro tem*.

N.B.—The hoisting apparatus at the mines has been completed.

REPORTS OF MEETINGS.

EAGLEHAWK CONSOLIDATED GOLD MINING CO., LIMITED.

12 MONTHS' WORKING EXPENSES IN HAND, AND THEN IF NO GOLD DISCOVERIES, RE-CONSTRUCTION.

THE ordinary general meeting of this company was held on Wednesday, 4th inst., at Winchester House.

Mr. John Wallace

presided.

THE CHAIRMAN said that he had a feeling of great disappointment at meeting the shareholders after four years of hard work with the same tale which he had had to tell on previous occasions. They had acquired the property almost entirely on its past history, and the price paid was almost all in shares, so that the bulk of the money contributed went for working expenses. They had sunk the Alliance shaft a distance of 750 ft., and then cross-cut, but although they had on several occasions come upon a few feet of gold reef there had been nothing permanent. They had cut altogether about 1,136 ft. in the 650-ft. level, and nearly as much in the 750-ft. level. The directors in London and the colony were of the opinion that

THE BEST THING TO DO WAS TO SINK DEEPER.

Their funds had greatly diminished, but they still had over 5,000. in hand, which would be sufficient, he thought, for about a year's working, and then if they had not come upon gold, it would have to be considered by the shareholders whether they should keep on or not. He did not wish to consider the matter of re-construction at that time, as the shareholders would be called together on some future occasion to go into the matter if necessary; he was satisfied, however, according to letters which he had received from the other side, that if the London shareholders were willing to give their part, the colonial holders would do the same. He concluded by moving the adoption of the report, which was seconded by Mr. G. E. KEITH.

A considerable discussion followed in connection with the re-construction of the company, and the prospects of gold being found in the lower levels of the mine, as it had been found on a neighbouring property, and in reply the CHAIRMAN said that they were not within measurable distance of the re-construction, and he would prefer not to discuss it. He thought the finding of gold on a property a quarter of a mile off theirs at a low level was decidedly encouraging, as it showed that gold was to be found at lower levels than they had yet reached.

The report was adopted, and other formal business having been transacted, the proceedings terminated.

REPORTS OF MEETINGS.

THE HEXWORTHY TIN MINING CO., LIMITED,

AFTER 18 MONTHS' DEVELOPMENT WORK THE COMPANY BIDS FAIR TO BECOME SUCCESSFUL—VIEWS OF MR. EDGAR TAYLOR.

THE second ordinary general meeting was held at the Office, No. 6, Queen Street Place, on Wednesday, "to receive the report and balance-sheet; to elect directors and auditor in place of those retiring; and for other general business."

Mr. Malcolm Low, J.P., M.P.

(chairman of the company), presided.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, the report, as you will perceive, gives a short summary of the operations of the company from the time we met last under the presidency of my friend, Capt. Retallack, and carries down its history to the present date. It presents the accounts from the first incorporation of the company up to June 30, and it is supplemented by a careful report from our purser, Mr. Mogridge, and our agent, Capt. Webb. In addition to the information thus given, we have here Mr. John Taylor, who will be very willing to answer questions in connection with mining details. We have also Mr. Edgar Taylor, who has spent a very useful two days in the inspection of our property, and who will also give us his views upon our mining operations, so that I think, gentlemen, you will perceive there is really not very much fresh matter for your chairman to deal with. At all events, it would be totally inexcusable if he were to detain you with a long speech. You will have noticed that there has been allowed to creep into our report a little paragraph about difficulties—quite exceptional difficulties. Now, as far as my experience goes,

IN MINING THERE ARE ALWAYS DIFFICULTIES,

and I have observed that such difficulties as there are manage not unfrequently to get themselves under the category of "quite exceptional difficulties." (Laughter.) However, personally I am a little apprehensive of what I may call a directorial tendency to posture as "good men struggling with difficulties," but I think that upon this occasion we shall not endeavour so to exhibit ourselves, inasmuch as any little difficulties we had at the commencement have now been practically overcome. The roads are all made; our building accommodation is completed; our water races cut, our water wheels, battery and other machinery erected; and we have made two very fair sales of tin, which I trust are only the forerunners of others assuring us of increased prosperity in the future. Low's Mine continues to look very well as we develop it, and it is continuing to be very rich for tin. From Taylor's I think I may say we are expecting good things, and have every reason to believe that our expectations will be realised. Then

WE HAVE TWO OTHER KNOWN LODES

—at least two—which I name as Skir and Retallack's, which we have not been able with our small capital very seriously to attack, but which, undoubtedly, we do propose to work if Low's and Taylor's shafts hold down as we fully expect they will. Then, as regards our power, our water, supplemented occasionally by our little portable engine, is sufficient for our present pumps and battery, but, undoubtedly, as the enterprise grows and as our mines deepen we shall certainly be in need of more power. That power will be probably derived in some shape or other from the River Dart—whether by electrical transmission or otherwise remains to be determined in the future. Mr. Edgar Taylor will give us the benefit of his views upon that subject, to which he has given special attention. As regards our finances, with our little capital of 10,000*l.*, all told, it has been, perhaps, rather a tight fit, but still it has been a fit, and I have no doubt that if we go on with sales as we have begun, when the time comes that we desire to have rather a bigger coat we shall have no difficulty whatever in finding the cloth from which to cut it. That is all I need trouble you with on the present occasion. The next time we meet we hope we shall have still more pleasant tidings to give you, but meanwhile I think you will agree with me that we have made

A FAIR RECORD FOR OUR PRELIMINARY 17 MONTHS,

and that you will be satisfied altogether with what we have been able to accomplish. We have every reason to be thankful to our purser, Mr. Mogridge, and to our agent, Capt. Webb, for their services. Great benefit has been derived from sundry visits paid to our property by our experienced and able secretary, Mr. John Garland; and as to your directors, I can assure you that we, one and all, take a very keen interest in this little undertaking, which I hope will grow into a much bigger one, and I think we have all paid one or more visits to it. I beg now to propose "That the report and balance-sheet to June 30, 1891, be received and adopted."

Capt. RETALLACK (director): I second the motion.

VIEWS OF MR. EDGAR TAYLOR.

Mr. EDGAR TAYLOR: Mr. Chairman and Gentlemen, last Friday and Saturday I devoted myself to making a thorough study of your mine, and am pleased to be able to bring back with me most favourable impressions as to its future—a remark that applies more particularly just now to the workings at Low's shaft. At that shaft the 23-fm. level has been extended north and south, in a lode which proves to be strong and well defined, and carrying tin to a payable extent. The two ends north and south of this level must certainly be pushed as rapidly as you are able. Above the south level you have two stopes, from which at the present time your returns are being made. In these stopes rich stone has been found, and from them the returns mentioned in your report have been extracted. The driving of the adit level, I think, from Low's shaft is a most important feature. This level, when driven further to the south, will

CROSS TWO OTHER KNOWN LODES,

besides those already spoken of by your chairman—one known as the Cross lode, and the other as the South Dolly lode. Upon these two lodes the old workers have made considerable excavations, and therefore the drive of this end is a matter of considerable importance. I may now perhaps refer to Skir lode, although it does not

immediately connect with Low's, but from a point in front of the present drive of the south end it will in the near future be advisable to commence a drive right through the hill in order to come beneath the workings upon this particular lode. It will be a considerable undertaking, but it is one that I strongly recommend being put in hand as soon as possible. The workings on the north side of Low's shaft are also important, as in the adit level a considerable number of shoots of tin have been passed through; therefore, the drive of the deeper level is important. At Taylor's shaft the operations are being carried on to explore underneath some exceedingly large old workings formerly known as the "Hen's Roost," and which had quite a reputation on Dartmoor. The explorations so far have not proved anything of great value, but the level is now being pushed on in the right direction, to make a discovery underneath the ancient workings. I was surprised on my visit to see the enormous extent to which these ancient workings had been carried out. Thousands of tons of ore had been extracted and picked over, and the richest tin taken out, which shows there must have been valuable lodes to search for which in the future will be the object of this company.

THE QUESTION OF POWER.

I made careful study as to where auxiliary power could be obtained from on the River Dart, and find there is a site at a distance of 1 mile from the mine, where ample power can be obtained, and I came to the conclusion that the use of electric transmissive power would be most advantageous. Your machinery is in thoroughly good working order, and is at present, when the Moor supplies sufficient water, ample to carry on all the works which you have now in hand. I shall be pleased to answer any questions gentlemen may wish to ask about the mine. (Hear, hear.)

A SHAREHOLDER VISITS THE PROPERTY.

Mr. JEPPE: I think the shareholders cannot fail to be pleased with the prospects of the mine, considering it has only been in existence for 17 or 18 months. I have paid two visits to Hexworthy, and was extremely pleased with all I saw. I hope to pay another visit next year, and that the expenses thereof will be defrayed out of the dividend I shall receive in the interval. (Laughter.) There is no doubt large quantities of mineral have been taken from this district, and I suppose there is no doubt also that large quantities will be taken in the future. I should not be at all surprised if this mine proved to be the herald of a revival of the mining industry on Dartmoor. I trust it may be so for the benefit of our friends in Devonshire, who certainly want a little capital to urge them forward—I was going to say, "in their wild career." (Laughter.) There is only one regret that I have in connection with the revival of Dartmoor mining. I believe it is quite possible if we are successful that so many mines will be started on Dartmoor that they will utterly spoil the trout fishing with their refuse. (Laughter.)

QUESTIONS.

Mr. PROBYN: As a shareholder, I cannot help recognising one satisfactory point—the smallness of our capital, which is only 25,000*l.* It promises very well to have so small an amount from which to pay dividends. I see you have 6,600 shares still unissued, and would ask you what your intention is with regard to them—whether you intend to retain or to issue them. If I might venture an opinion, I think it is desirable to keep the capital as small as possible for our future benefit, and that, if necessary, you should retain the profits we make for working and development purposes, rather than, for a time at least, devote them to the payment of dividends. I should like to ask you a question, as a miner, whether the tin lodes increase in value as they go deeper?

REPLIES.

The CHAIRMAN: With regard to the question of the shares unissued, we have not made any effort whatever to place them, and should not think of attempting to do so under par. If any of our friends are anxious to take a few shares, up to a limited extent, they can be supplied. I quite agree as to the desirability of keeping the capital as small as possible as quite true and right. At the same time if we should hereafter find it desirable to erect electrical plant for the transmission of power, I think it would be probable, with the assent and approval of the shareholders (Mr. Probyn, I am sure, included), we might find it desirable to issue a few shares for that particular purpose. (Hear, hear.) We have listened with the greatest interest to the speech of Mr. Jeppe. It is a great thing in these cases for proprietors to take a personal interest in the undertaking sufficient to induce them to be at the trouble and expense of going to inspect it. We welcome Mr. Jeppe's opinions, and receive them with the utmost respect, from one so well competent to form them upon such a subject as this.

The report was unanimously adopted.

Capt. RETALLACK: The next resolution is the re-appointment of two directors, the chairman and Mr. Walter Izard, which I propose.

Mr. PROBYN seconded the motion, which was carried unanimously.

Mr. HENRY WARD proposed the election of the auditor at a remuneration of five guineas.

Mr. PROBYN seconded the motion, which was carried.

EXTRAORDINARY MEETING.

The meeting was then made extraordinary for the purpose of considering and passing a resolution to the following effect:—

"That articles 88 and 89 of the articles of association of the company be repealed, and that in lieu thereof the following articles be substituted: '88. The company shall employ Messrs. John Taylor, Frank Taylor, and Robert Taylor, now carrying on business in partnership as civil engineers at No. 6, Queen Street Place, London, under the style or firm of "John Taylor and Sons," as the consulting engineers and managers of the company, and so long as any or either of the present partners shall remain members or a member of the said firm, and the said firm shall be willing to serve the company as consulting engineers and managers, the said firm shall be employed as such engineers and managers. Provided that the employment may be determined by a special resolution of the company.' '89. Either of the managers may resign his office, but in that case or in the event of the death of a manager the continuing managers or manager shall be deemed to be the manager or managers for the purposes of these articles.'"

The CHAIRMAN: I propose the resolutions as read by the secretary.

They embody a purely formal alteration, arising from the fact that subsequent to the commencement of our company Mr. Frank Taylor has been admitted a partner into the firm of John Taylor and Sons. The articles remain without any change in their effect, except to include Mr. Frank Taylor, who, as I say, has subsequently entered into the partnership of our managers.

Capt. RETALLACK seconded the motion, which was carried unanimously.

Mr. HENRY WARD proposed a vote of thanks to the chairman.

Mr. PROBYN seconded the motion, which was carried unanimously.

The CHAIRMAN, in returning thanks, said: We think extremely well of this undertaking, and hope to bring it to a successful issue. By the next time we meet we expect to have some substantially good tidings to convey to you.

LATEST REPORT.

Mine report for four weeks ending Nov. 7.—Low's adit level has been extended 3 fms. 2 ft. by four men; the lode is 2 ft. wide, and very good for tin. The level is now 35 fms. 6 ins. south of Low's engine shaft. Low's bottom stope: The lode is about 1 ft. 6 ins. wide, and fairly good for tin. Low's back stope: The lode is about 1 ft. 6 ins. wide, and very good for tin. Low's 12 fm. south level has been extended 14 ft. by four men; the lode is about 20 ins. wide, with tin in it. Low's 12 fm. north level has been extended 11 ft.; the lode is 14 ins. wide, and fairly good for tin. Taylor's engine shaft and 12 fm. south cross-cut. No improvement has taken place. We have roofed in the stamps, as Dartmoor is a very exposed place, and very cold for the watchman at night. We are extending our dressing floors, and hope by another report to have them covered in; the timber and corrugated iron is on the mine. Since our last monthly report Messrs. Braby and Co., of London, have almost completed one of their corrugated iron dwellings, to accommodate about 18 men on the mine. We have commenced stocking tin.

WOODHOUSE AND RAWSON UNITED, LIMITED.

RAPID EXTENSION OF THE BUSINESS, AND A BIG DIVIDEND, IN SPITE OF BAD COMMERCIAL TIMES—VALUE OF THE PATENTS AND GOODWILL EXPLAINED BY MR. F. L. RAWSON—A NET PROFIT OF £35,000.

THE third ordinary general meeting was held at the Cannon Street Hotel, yesterday, to receive and consider the annual statement of income and expenditure and balance-sheet and the report of the directors and auditors thereon; to elect directors and auditors in the place of those retiring by rotation; to sanction the declaration of a dividend; to determine the remuneration of the auditors; and to transact the other ordinary business of the company.

Sir Rawson W. Rawson, K.C.M.G., C.B.

(chairman of the company), presided.

Mr. W. T. STUTCHBURY (secretary) read the notice of meeting.

35,000Z. PROFIT.

The CHAIRMAN said: Gentlemen, I have much pleasure in rising to present to you the account of our stewardship during the second year of our existence. Considering the extraordinary financial crisis that has occurred during that period, and the general commercial depression which ensued, we trust you will find the result of the operations during that period eminently satisfactory. (Cheers.) Taking the balance-sheet and profit and loss account, you will find the following result: Deducting from both sides of the account the amount of 16,000Z. brought forward from the previous year, the total earnings of the company amounted to 89,000Z. Out of that we have provided for all current expenses; for writing off what we consider (as I shall explain presently) a sufficient amount from the value of our patents: after paying interest due upon our debentures, and after writing off 10,500Z. of extraordinary expenses, some of which might fairly be distributed over a further length of years—after doing all this we leave a balance of 35,000Z. to meet our dividends, which we promised, and to which we this year were almost pledged, of

15 PER CENT. UPON OUR ORDINARY AND 8 PER CENT. UPON OUR PREFERENCE SHARES.

That dividend amounts, as you see, to 30,500Z., consequent upon having made a clear nett profit of 35,000Z. We have the surplus of 4,000Z. applicable to such purposes as the shareholders, agreeing with the directors, may see fit. If we add to that the 10,000Z. of extraordinary expenditure our earnings during the year were 15,000Z. above our current expenses, and that without trenching upon the 16,000Z. carried forward from the previous year. (Cheers.) Now, gentlemen, the directors hold, and trust you will also, that in a year such as that through which we have passed, affecting peculiarly and adversely a business such as that of this company, you will deem that result satisfactory, because one of the objects of this company is to avail itself of new inventions, and to utilise the patents it possesses as well as to interest the public with new inventions connected chiefly with electricity. This has been a year in which the public have not been disposed to enter upon new undertakings, and, consequently, we have had very little encouragement. We have had proposals of different kinds which we have not thought it right to accept, and yet in spite of all this,

WE HAVE MADE A CLEAR PROFIT OF 35,000Z.,

which we think, and hope you will also, a very satisfactory result from the operations of the company. (Cheers.) Perhaps the most useful course I can adopt will be to

RUN THROUGH THE BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT,

and give explanations of those matters which may appear to require them. Taking the first column of the debit side, there is not much to be said respecting it, but the points are these:—We have reduced

the mortgages on freehold property by 3,000Z. The sundry creditors stand at 8,000Z. less. We have swept away the whole of the guarantee fund, which stood in the last account at 75,000Z. We have refunded to Woodhouse, Rawson, Limited, according to authority which you gave us at the previous meeting, or we have repaid that to the old company, and, therefore, it disappears from the balance-sheet, and you find inserted for the first time the

RESERVE FUND OF 25,000Z.,

and the pension fund of 1,065Z. for our employes. Turning to the credit side—in the freehold premises there is an increase of 12,000Z., which is caused by the building and improvements at Cadby Hall, of which an account is given, and also sundry improvements on Kildgrove property, which was taken over just at the commencement of this year, and necessitated certain outlay. The next item merely relates to leasehold premises, where we have a small increase. The next three items are heavy ones—plant, stock, and expenditure on contracts. They show a large increase, but the explanation is very simple. We almost commenced our work last year. The United Co. having acquired new works, having made a new organisation, having extended its business, I may say throughout the world, in Australia, South Africa, and elsewhere, necessarily had to make a large outlay on the works for plant, on the supply stations for stock, on the installation and contract work for the work in progress; in fact, what did we ask money for but to extend our business? We have extended it, and the explanation of the increase in these items is given in this—that we have extended our legitimate operations connected with our trading and manufacturing pursuits, and it is an evidence of the increase of our business. (Cheers.) The next item is moiety of special expenditure on advertising, repayable by instalments. You can well understand that at the commencement of our operations it was advisable, and necessary, to advertise largely, for we had to let the public know what we were doing, and what we were prepared to undertake. Now we have prepared, and are on the point of publishing, what is certainly the best catalogue, the most complete and exhaustive, of electrical and engineering apparatus and supplies connected with electricity that has ever yet appeared. It is generally admitted to be so, and, at all events, we are proud of our bantling, and confidently assert it to be the best volume of the kind extant, and well fitted to improve the standing and credit of the company, and to extend its business throughout the world. The consequence has been that in this first year (perhaps in the present year also) there has been an excessive amount, though not an improper one, for advertising and publishing the catalogue, and we have thought it right to divide the whole of the expense of this over the past and present years, and not to spread it over three or five years. The result of the work is prospective; the expense is immediate; but we think it better to meet as far as possible all our expenditure as it arises, and so far as our earnings are sufficient to cover them. We have charged in this instance half to last year, and the other half is intended to be charged to this year. The next item is

PATENTS AND PATENT RIGHTS,

in which there is an apparent increase of 10,000Z. This is not arisen from any material addition to our patents, but for the completion of the original purchase of two of the Woodhouse and Rawson subsidiary companies. This was delayed for a while, but was affected last year, and, of course, we took over their patents, business and goodwill, according to the arrangement. It is not that we have enhanced or added to the value of our patents or goodwill, except by the completion of our original contracts with these companies. The next item is

SUNDY INVESTMENTS.

If you compare the first balance-sheet with this you will find, in the former, only 11,000Z. under that head, but you must take into account that below there is 75,000Z., which was reserved to repay Woodhouse and Rawson, Limited, so that our investments in the first year were 87,000Z., and that figure now runs to 119,000Z. I shall be very glad to enter fully into, and show you exactly what these investments are, but it would be opposed to your interest and to the practice of companies to do so. (Hear, hear.) All I can say is this, that the valuation of these has been taken at the lowest and most reasonable valuation, that they are not speculative investments, but investments in which you can have perfect confidence—our arrangements for the purchase of patents and the profits from companies that have been established, and, therefore, all I can say, that last year the investments, which stood on our balance-sheet at certain sums, were parted with at prices above those sums. We have a reasonable hope that by not throwing these investments on the market in an injudicious manner, which any gentleman here, who does business, must know would be attended with injurious consequences, both to ourselves and the companies concerned—(hear, hear)—I say, we have a reasonable hope to dispose of these this next year on the same equally advantageous terms as we did our investments last year. We have already disposed of some of the investments at a profit above the price in the balance-sheet. The sundry creditors have increased, 30,000Z. of which is guaranteed, the whole increase, and it is natural that, as our business extends, our debtors will extend also. I now turn to the profit and loss account. The first item is salaries, from which my friend, and relation,

YOUR VERY ABLE MANAGING DIRECTOR,

is the chief sufferer. The salaries of the first year were very largely increased by his remuneration, which, as you know, depends upon the surplus profits of the year, and the consequence is that this year the surplus profits being smaller his remuneration is smaller.

A POINT TO REMEMBER.

Mr. SAMUEL POPE, Q.C. (director): The surplus, be it remembered, is after making enough to pay 15 per cent. (Cheers.)

The CHAIRMAN: Precisely; and that is after paying all claims, and a dividend of 15 per cent. to our ordinary shareholders. Advertising and exhibition expenses I have already explained. There is a large increase under the head of debenture interest on account of debentures issued during last year. With regard to the writing off of patents, we have applied 4,15Z. to that purpose, upon this principle, that we consider if we write off one-fourteenth each

year it is sufficient. The minimum life being 14 years (the foreign patents are not all limited to 14 years, though the English patents are)—taking, therefore, the life of a patent as 14 years, we consider that if they all have a life like that, and if we deduct one-fourteenth, they will in due time disappear. Last year we applied 7,400% for that purpose. This year we have applied not so much, but we make up two-fourteenths in the two years, so that we have written off 11,500% from our patents in two years, and shall go on wiping off at the same rate one-fourteenth every year. If it be objected that these patents do not have a remaining duration of 14 years the answer to that is—for some of our patents we have paid nothing, and they do not stand in our books as of any value, and yet some of them possess a large value. With regard to another class of our patents—the only charge that we create for a new one is that of registering, and therefore placing this against the fact that all our patents have not a life of 14 years, we consider that

TO DEDUCT EVERY YEAR ONE-FOURTEENTH FROM THEM

is a reasonable calculation, and will bring us, at the end of 14 years, to a blank sheet so far as these patents stand as a claim against the company. (Cheers.) The next item is income-tax for 1890-1891. For 1891 it is a legitimate charge, but the other is an arrear, though it could not be put into the account last year because we did not know the amount. There was a dispute between our officers and those of the England Revenue Office as to the amount which was not settled until last year, and so two years are now charged. The mortgage debenture redemption account is explained by the sum paid to the holders of debentures of 6 per cent. for their redemption, and the acceptance of others at 5½ per cent., and it will only occur in proportion as our shareholders express their willingness to change them according to our application, and our wish, as well as the real interest of the company. As to preliminary expenses—those are the charges actually paid on the formation of the company, which it is impossible to explain in detail, but all of which were not paid in the first year. The amount then paid was so small that it was brought into a general charge last year, but this year it has been considered proper to wipe off the whole of it. The Cadby Hall removal (2,000%) is part of the estimated cost of that removal from the one block before we leased it into the new block. It is partly the cost of removal and partly of loss occasioned, as you may fancy, from the shifting of the machinery, and the impossibility of undertaking fresh work whilst we were on the point of removing into a new building. I think that disposes of all the items of importance. On the other side, we find that the gross profit is not as large as it was last year, but it is impossible to be blind to the fact of the very different state of the circumstances last year from the preceding one, and the opportunities possessed by the board of making profits. The balance of interest is about 3,000% more. We have also an item of rent derived from our West Kensington leasehold, which did not appear in the other sheet. The premium on shares and transfer fees remained stationary. Now, how do we propose to deal with this balance? The report and loss shows a profit carried to the balance-sheet of 51,000% odd. We have a reserve for bad debts, and we carry about 9,000% to the next year's account. I trust you will find that a satisfactory explanation of our work during the year. The managing director, prompted, I believe, by our excellent colleagues, points out that it brings up our reserve made upon the two years to 45,000%. We have not used anything carried forward last year.

A SHAREHOLDER: Yes; you have used 8,000%.

The CHAIRMAN: No; we put 10,000% to reserve.

The SHAREHOLDER: What will the reserve stand at when this 10,000% is added?

Mr. POPE: It will stand at 35,000%. The shareholder was right in saying it was not 45,000% to the reserve fund, because 8,000% to 9,000% is nominally carried to the new profit and loss account, and not to the reserve fund.

THE QUOTATION.

The CHAIRMAN: There is one point on which I personally feel a great interest—the refusal by the committee of the Stock Exchange of our quotation. (Hear, hear.) I wish to say Lord Aberdare promised it as far as he could, and I did the same, and in all my communications with shareholders I have stated my belief, and given my assurance, that as far as I know there was nothing to prevent our having it. I had full justification for that. Our papers, after sundry references and considerable delays, required by the Stock Exchange, were announced to be in order. We had every reason to suppose that we should receive our quotation, and that the only cause of delay was the convenience of the committee, owing to the voluminous character of our papers, and some trouble on their part in understanding them. Three weeks before the quotation was refused we had the most reasonable assurances from persons of the highest position in the Stock Exchange that the quotation would be granted, and the refusal took us wholly by surprise. It would be useless for us to ask their reasons, as the Stock Exchange, being an autocratic body, would decline to state them. The only surmise we have is that until the old Woodhouse and Rawson, Limited, Cos. are wound up, the Stock Exchange will not give us a quotation, though they have granted a settlement. We are given to understand that after a reasonable delay we may apply again. I hope you will allow us to use our discretion as to the proper time for applying for it. My own impression is we should not do so until those companies are wound up.

A SHAREHOLDER: When is it likely they will be?

The CHAIRMAN: I am happy to say that also is progressing, but there were difficulties in the way which are now in process of removal. Having discharged myself of those remarks, I will only add that I have acquired an experience which will render me very cautious in making promises which depend for their fulfilment upon third parties. (Cheers and laughter.) With reference to the report, I am able to speak of the very great improvement that has been made at the West Kensington Works, by the erection of a new block of buildings there, and a new engine house. These will enable us to undertake a class of business likely to prove highly profitable. One of the sources of our credit and profit is

OUR MANUFACTURE OF SPECIALITIES.

We aim at possessing, and giving to the public, special apparatus of value and of importance. This new block will enable us to under-

take on a larger scale the manufacture of mechanical apparatus, as for instance type-writers and articles of that kind, requiring great delicacy in construction. We have at present contracted in one large floor of that building (a very extensive one too) to turn out several thousands of machines. We have another contract which we hope in a few weeks to commence upon of a similar character. We look, therefore, to a considerable extension, both of business and of profit, in that new block. Then as to Kidsgrove—we only entered into possession at the commencement of last year. It was a business that required considerable improvements in many ways, as we anticipated when we bought it. All that has passed away, and in the coming year we expect very different results from Kidsgrove Union Foundry. It must not be supposed that the directors have plunged into the acquisition of works simply to make a new business. The object of acquiring the Union Foundry was this—we possessed the means of making all electrical apparatus of a small character—switches, and variety of things of that kind, but we had no works in which we could manufacture on a large scale dynamos and engines peculiar to electrical purposes and to introduce new inventions such as are noticed in our report—Messrs. Anderson and Galloway's hydraulic engines, which are of great promise, Mr. Bolton's electric cranes, and things of that kind. That was our object in acquiring Kidsgrove Works, and we hope, before we meet again, we shall be able to report to you that we have established there a sound and profitable business. The Cornbrook Telegraph Works I may pass over, and with regard to the supply department, that is going on very satisfactorily. It was necessary during the year to incur a large expenditure to bring up our stock to the requirements of our trade, but this expenditure, I believe, will not be necessary in two or three years. We have obtained now a degree of completeness in that department, which will not necessitate any large further outlay, and the work is going on well. With regard to our installation department, we have every reason to be satisfied. It is largely increasing, and I am glad to say that

THE CHARACTER OF OUR WORK IS SUCH AS TO DO US CREDIT,

and to secure us the confidence of our customers. Then with regard to the Epstein accumulator—I hope you will consider it a proof of the discretion of the board that out of four inventions that had passed to the stage of our final examination and test, we have accepted only one. We are not dealing with inventions that we are not satisfied will yield us a profitable return. With regard to the Epstein accumulator, we have had it under observation and test for two years with most satisfactory results. We entered into no obligation with regard to it until we were satisfied as to its efficiency, and that it opened a new field for traction purposes; that, as regards efficiency and economy, it was superior to anything that existed, and also that we were secure with regard to the patents in relation to it. We have had the authority of four or five of the leading counsel and most competent patent agents, to satisfy us before we entered into any arrangement with the Epstein Company, and believe we have in it a most valuable property. We are carrying on the manufacture in our own buildings at present, which are yielding us not only rent but profit. I do not like promising, as I said before, but may conscientiously say that the

REPORT AND BALANCE-SHEET GIVES YOU AN UNEXAGGERATED AND FAIR STATEMENT

of what we have done, and I have every reason to expect that our next year will be at least as good as this, or even better. Whilst offering to give the fullest answers to questions that may be asked, I formally beg to move the acceptance and adoption of the report. (Cheers.)

Mr. PHILLIP RAWSON, J.P., D.L. (director): I second the motion.

DISCUSSION.

Mr. DIXON: You informed us, as a reason for the somewhat small allowance for depreciation of the patents, that foreign patents had more than 14 years to run; but is it not a fact that these to be of any use must be patented first in England, where they have only 14 years to run? You have not informed us of the countries where they run more than 14 years, though I should be pleased to have this information from the managing director. I shall also be glad to know if our foreign patents apply to those particular countries that we do work in. I am a comparatively new shareholder, though a large one, and have nothing to do with last year's accounts, but it strikes me that even 10 per cent. written off last year from patents was barely enough for the purpose, and I submit that 7 per cent. is quite insufficient, though I do not undertake to say what the amount should be. I come now to goodwill, which, perhaps, would be better called "price paid for the business." Last year the directors took a reasonable view, and allowed a reserve which is scarcely an appropriate term, for a reserve is not money you use in your business. Instead of the 100,000% being kept separate for the goodwill, it is lumped with the other 15,000%, and we have no information as to what has become of the 25,000%. I suppose it is amongst the 119,000% investments, and is, therefore, no investment in the proper sense of the word. No one would reckon goodwill as an asset, but he would save up and recoup it out of capital. Last year this was acknowledged, but this year not one penny is allowed for the purpose, and the amount stands nearly at 100,000%, whilst the reserve is nowhere as applied to that item. We have no power of judging as to the investments. There may be reasons for not showing the investments, but there the amount stands. All these are

BLOTS UPON THE ACCOUNTS,

and until removed I should be disposed to move, "That the meeting be adjourned for a fortnight to give the directors an opportunity of reviewing that matter."

Mr. BURBURY: I second the amendment without endorsing everything that my friend has said. We on this side know nothing except what the accounts tell us, but the directors know everything. It does seem to me to be wise to carry forward more and divide less.

Mr. GRIFFITHS: On referring to the auditors' report I find they certify merely upon the books and vouchers given them, and consequently on the certificates of the company's officers. It would be more satisfactory if those certificates were set out with the signatures of the responsible officers, appended to them as it is done in the case of railway companies, under compulsion by law. At present we have merely before us a book audit, which does not enable us to

come to a satisfactory conclusion on the questions involved. To some extent I agree with the remarks of the first speaker as to the accounts. Patents may be valuable at one moment, but almost valueless at another, particularly in electricity, where the discoveries have been so marvellous that, from day to day, we hardly know where we are. It is unwise to take too many new patents, for I have been connected with companies having electrical patents which were almost immediately superseded. That is a point we may leave to the skill and science of the board who are men of great weight in electrical matters. I would suggest that it would be wise not to extend our business too much by buying new companies and starting new departments in different parts of the world. We have been in existence some time, and our works and establishments are fully developed and secure, but when we have a reserve fund, then by all means use it for extending the business, but while that fund is so small it is highly speculative to do so, as the expense is certain and the profit uncertain. Our chairman told us that the gross profits were less this year than last, and yet we have extended our business greatly. This, I think, supports the argument that at present it is not wise to go in too much for extension.

Mr. PEAKE: As to investments, I am connected with a company, the name of which I will not disclose, where the same question was asked two years ago, and directions were given to the secretary to allow shareholders to inspect the books. I should think it

MOST UNWISE TO PUBLISH THEM TO THE WORLD,

for no man in his own private business would think of doing so. (Cheers.) It would, however, give great confidence to shareholders if they knew where their investments were placed. As to the remarks made by the various speakers, it appears to me nobody would go into such a company as this unless he were ready to a certain extent to speculate—I do not mean Stock Exchange speculation, but ready to take the ordinary risks of commerce as presented by a business of this kind, which is entirely new, and was hardly thought of 10 or 15 years ago. It would be better if the directors took us a little more into their confidence. It is impossible for them to convince me that the price paid as goodwill for any property is a right and proper price, but if you allowed us to go into the matter in the office I fancy most of us would get tired before we had gone very far. (Laughter.) I have been through the accounts, and agree in the main with the remarks of the last speaker. The gross profit is 25,000% less upon an increase of capital of 150,000%. That seems rather unfortunate, but may be explained. I take it that you have gone to untoward expense in the purchase of these works, but no one can expect capital to be turned over in a new business in a year. It cannot be done, and if anyone can do it he is very lucky indeed. In a commercial company, dealing with electricity, when almost every week certain inventions may be superseded, it is gratifying to know that the directors have been testing inventions, and have only accepted very few. If we are to go on we must take up new things and test them, for that is the very *raison d'être* of this company, and, as far as I can see, all we can do is to impress upon the directors to be careful what they do take up, and then leave the responsibility with them. I do press my point that we should be allowed to attend at the office and see what the investments are, and get other information that belongs to us as proprietors.

Mr. BACON: When I first saw the prospectus of this company, and found it was for the manufacture and disposal of articles connected with engineering and electrical matters, I felt there was a great field for profitable investment, and though this might be called "speculative," yet it was only so upon what I deemed to be solid grounds, and therefore I became a shareholder. I have no idea of making any remark which would disparage this valuable business, or call into question the feeling that the directors naturally have to present to the shareholders a fair and proper statement of accounts. Nor do I see that we should be advantaged by refusing to pass the accounts. What I would call particular attention to is

THE LOCKING UP OF OUR IMMENSE CAPITAL.

I was in business 40 years, and know the unwisdom of locking up your assets in such a form as has been done in this instance, though I dare say it has been done with a perfectly right and proper view. Still the directors have locked up 93,000% in stock of the company, being an increase of between 30,000% and 40,000% on last year. Now I argue that to lock up money in stock like that is the height of folly, particularly when it is spent in acquiring stock that may to a large extent be superseded by something better and fresher. I see also the book debts have largely increased. This we might have expected, and it is right they should, but not in such a proportion. It looks to me as though the directors were financing a number of their customers—a very unwise thing to do. The

LOCKING UP OF 119,000% IN INVESTMENTS,

that they do not tell the shareholders anything about, is another action on their part of which I do not approve. I have no doubt they will be all right, and that some of them have been realised at a profit, but still, that is a matter of speculation to a certain extent. Probably these investments are placed in companies they have helped to float. I am connected with companies which publish their investments for the information of shareholders, but in this instance I would not press the matter. I do not think it would be to the advantage of shareholders that these details should be known. (Cheers.) I only offer these remarks by way of caution, and in no spirit of antagonism.

A SHAREHOLDER: With reference to the patents, I am not surprised at the point having been raised, as your words, sir, were rather indistinct. But we understand that you are adding to the number of the patents at almost a nominal figure, patents taken out by your own workmen, and which are added to the general stock, without making any addition to the total sum credited to that item.

POINT OVERLOOKED BY SPEAKERS.

Therefore, if it be admitted that you are not writing off sufficient, let us remember what you are adding without increasing the figure in the balance-sheet. Shareholders may rest assured, I think, as to the way you are dealing with the patents. I should like to have the assurance that the subordinate companies will be wound up within the next year, as I believe will be the case.

The CHAIRMAN: I will ask my son, who is more familiar with the patent's question than I am, to answer the various speakers.

Mr. FREDERICK L. RAWSON (managing director), said: I must first apologise to Mr. Dixon for not having answered his letter, but the reason was that I did not know whether the investments would be stated at the meeting or not, and the exact particulars given, and, therefore, I kept back your letter, Mr. Dixon, and must apologise for not having answered it. With regard to the question of the patents, there are certain foreign patents, which have a longer term to run than 14 years. Mr. Dixon is technically right when he says that some of the foreign patents are limited by the term of the English patent, and therefore it is the regular course to take out the American patents in particular before you take out the English ones, so as to get the extended time. We have a number of patents continually being taken out by our own staff. You must recollect that, on account of our having a technical business, and having continually to investigate many patents, we keep a highly trained staff, whose patents are the property of the company.

IMPORTANT POINT.

Those patents are put in the balance-sheet at *simply the cost of registration, which is under 14l.* Therefore, from time to time our patents, instead of becoming less valuable, become more valuable, but, as a matter of fact, they gradually get eliminated by the process of writing off one-fourteenth each year, so that I hope in time the entry will be cleared from the account, and we shall have patents standing at a nominal sum, which are in reality of considerable value. (Cheers.) One special patent I am thinking of at this moment was recently taken out, and we had a tentative kind of offer for it of 10,000%. This gives you an idea of the value of new patents of this description. One speaker did not seem to understand that we had written off in the two years two-fourteenths in all, last year the directors could not well tell what the value of the patents was as they had only had a year to work them. They could not tell whether the new patents would turn out of the value expected, and therefore the larger amount was written off, but now they have had two years' experience, and therefore can write off one-fourteenth with confidence. The same with the goodwill. Although the

DIVIDENDS PAID BY WOODHOUSE AND RAWSON

have been respectively for five years, 12, 12, 15, 15, and 15 per cent., the value of the goodwill of this company could not well be told till after the first year. Many people said to me, "You made a big profit last year, but this year you will not make any, and more especially when the financial crisis came did they say this. Therefore, it was very wise to put a large amount to special goodwill reserve. The goodwill now has been proved, because in a period in which it has been most difficult for us to make large profits we are able to say, 'We can make profits enough to pay 15 per cent.'" (Cheers.) What I believe is the intention of the directors, and what certainly my own advice to them will be, is that when the reserve gets large enough

THEY WILL WRITE OFF GOODWILL ALTOGETHER.

(Cheers.) The officials have taken the responsibility Mr. Griffiths says they should, and our auditors had every single item certified by the actual certificate from the person who was responsible for the department. The accounts outside this country have to be dealt with by auditors employed abroad, but my instructions have been to cut down as low as possible the valuations and a complaint was made by our works manager to me that the auditors had done this so well that his profits did not show properly, and he did not consider the result fair to him. With regard to extending the business, of course you cannot expect, as one speaker stated, that any business, commenced in one year, will make any profit within that period. (Hear, hear.) We have special powers in our articles, in respect to the expenses incurred in new businesses, to spread the outlay over a series of years, so as to prevent it bearing too heavily upon the first year or two, but we have not taken advantage of this; we have written off every penny to revenue account. We did it last year, and we have done it this year, and it was a heavy amount in each case. With regard to investments, one of to-day's speakers called upon me yesterday, and I showed him a list, and went through it with him. The chairman and directors have stated they would be glad if Mr. Peake would call upon me, when I will go through the investments with him, show him a list, and give him the full particulars with regard to them. (Cheers.)

Mr. PEAKE: That, I suppose, will apply to all the shareholders?

Mr. RAWSON: No; to you yourself. Last year we had 86,000% in investments, and supposing it had got out that we had had them, do you suppose we should have been able to get out of them at the profit we did. (Hear, hear.) It happened to be known that we had a certain investment, and I found the greatest difficulty in the world in dealing with it. A jobber in the market will never speculate for a rise if he knows this. He says "Woodhouse and Rawson have a big lump and I will wait." Consequently, a buyer comes along and says "quote me a price." He will not quote one, and he does not like selling a "bear," so the broker writes back "no market," and off the probable purchase goes. That is an example of the difficulty where it is known that you hold a big investment. (A VOICE: And worse than that.) Very often it is.

Mr. DIXON: Shall I be allowed to see the investments?

Mr. RAWSON: I am perfectly willing. Yes. You and Mr. Peake.

Mr. PEAKE: All the shareholders? (Loud cries of "No.")

Mr. POPE: How do we know what some who may come want with this information. Some of them may be dealers who will use it for their own purposes, and our wish is only to give the information to somebody really seeking it, without ulterior objects. (Cheers.)

The CHAIRMAN: Mr. Dixon has a large interest, and is entitled to it.

Mr. RAWSON (continuing): With regard to locking up capital in stock—when I saw the actual amount I said to myself "This will not do," and in consequence I went through the items, particularly with the manager of one of our departments, who I see now looking at me, and who is responsible for a large sum, and I tackled him as to whether he had no dead stock, that is

to say stock that is antiquated. I went carefully into this myself in that particular department, the supply department, where it is necessary to keep a large stock, because people want to come in and buy anything they like without the delay of ordering. If those interested will look at our catalogue after the meeting they will see

THE EXTRAORDINARY VARIETY OF ARTICLES WE HAVE

which is one of the reasons our business is increasing so much, for people know they can come to us and get what they want without having to wait for it. Mr. Pope just suggests, and it is rather a good idea, that we should make the heads of the different departments personally responsible to the shareholders. There is not the slightest objection to it, because it will be for our own guidance and protection. It is the thing I am most careful about, that the various departments do not overvalue their plant and stock, and as long as I am on the board I think you may be certain that will not be done. I shall keep it under my closest supervision. With regard to

THE PROGRESS OF THE BUSINESS,

I should like to give an explanation of the policy that I, personally, have endeavoured to adopt, and that is gradually, as time goes on, to build up a business in purely electrical work, that is the manufacture and selling of various articles. I believe chiefly in doing a merchant's business in goods connected with electricity, because there I do pretend to have certain knowledge, though with regard to the manufacture I do not pretend to be such an expert, but have to look to the heads of departments, who are all able men. It is not with us a question of price, but of efficiency, and of getting good men. During the past we have only been on the eve of what will be an immense extension of electrical work. To be in the van, to take part in that, you must spend largely on all sorts of new things and keep yourself to the front. If you look to electrical companies in a similar position to ourselves, you will find very few are able to pay large dividends, or to pay anything at all out of the year's trading on their ordinary shares. Private individuals also have had a very bad time of it during the last four, five, or six years, but owing to our having special knowledge in connection with patents and new inventions, we have been

ABLE TO BUILD UP THIS BUSINESS AND PAY DIVIDENDS,

where other people have had to show a loss upon the same class of work. (Cheers.) If we limit ourselves to only taking the best things, and only being connected with such things that we are well acquainted with, as we have had up to the present, I believe it will pay us over and over again. The only danger is that of rushing into things to the examination of which we do not give proper time and care, and on that point you may depend upon it we shall not err. For example, this past year we have spent money in one particular matter which we could have turned over at a profit, notwithstanding that financial matters have been so bad, but we have considered it best to wait. Another business, however, at which we have been working for some time we shall be able shortly to bring before you. If we do a moderate amount of that class of work which is most paying, and confine ourselves to things that we can stand by in the future, it will not be long before the electrical industry, both in the departments of manufacture and supply, will increase to such an extent as to enable us not only to make the improvements suggested in regard to our balance-sheet, but to do even better things still. (Loud cheers.)

BUSINESS AND THANKS.

The CHAIRMAN then put the amendment, which was only voted for by one besides the proposer and seconder, and the report was carried with unanimity.

The CHAIRMAN then proposed a resolution: "Resolved, that for the second half of the year a dividend at the rate of 8 per cent. per annum be paid to the members of the company holding preference shares in the company on Nov. 13, 1891, in proportion to the sums paid up, or credited as paid up on the said preference shares; resolved also that a dividend for the second half of the year, at the rate of 15 per cent. be paid to the members of the company holding ordinary shares in the company on Nov. 13, 1891, in proportion to the sums paid, or credited as paid, on the said ordinary shares."

Mr. PHILLIP RAWSON seconded the motion, which was carried.

The CHAIRMAN proposed the re-election of the retiring directors, Mr. Samuel Pope and Mr. Phillip Rawson.

Sir JOHN STOKES (director) seconded the motion, which was carried unanimously.

A SHAREHOLDER proposed, and it was seconded, that the auditors, Messrs. Jackson, Pixley, Husey and Co., be re-elected auditors at the same fee as before, and it was carried.

On the motion of Mr. BACON, a specially cordial vote of thanks was passed to the chairman.

PIONEERS OF MASHONALAND SYNDICATE, LIMITED.

A NEW FIELD OF ENTERPRISE FOR YOUNG MEN AND MEN OF ENTERPRISE—VIEWS OF AN EXPLORER.

The first general meeting (statutory meeting) was held at the Cannon Street Hotel, Cannon Street, E.C., yesterday.

Sir John W. Campbell, Bart., C.B.,

presided.

Mr. H. C. CORYNDON MANSFIELD (secretary) read the notice calling the meeting.

A CHANCE FOR YOUNG MEN.

The CHAIRMAN said: Gentlemen, this is only the statutory meeting of the company, and is held such a short time after the company started that there is nothing of immediate importance to tell you; but the news from Mashonaland, I am happy to say, is very good indeed, and we only want the proper support of the public to develop one of the latest and most promising possessions of Great Britain. A new country, no doubt, is wanted as an opening for young men and

men of enterprise, and I think Mashonaland promises to supply that want, if it was only properly supported by the British public. Perhaps, gentlemen, you would like to hear exactly what has been done with regard to the expedition. On Oct. 8 Mr. Colquhoun and his party left England in the s.s. Hawarden Castle. Since his arrival in Africa he has been sent all that is necessary and all that he asked for, to enable him and his party to reach Fort Salisbury, and to maintain them in Mashonaland for several months. Most encouraging reports are almost daily received of the richness and extent of the goldfields, scattered with no sparing hand, over our new territories. We are in treaty to purchase a valuable property on the river Umzweze, and have every confidence in our ability to make a large profit on the transactions for our company. The negotiations are not quite completed, and until they are it will not be advisable, for your own interests, to state the exact nature and locality of the purchase. But you will have probably noted, in only this morning's papers, that "rich reefs have been struck, particularly on the Umzweze river," and Mr. Harman, one of our shareholders, who knows the country well, can support these statements, if he will kindly do so. I may say that Mr. Colquhoun, who is a man of a great deal of experience in South Africa, has gone out at the head of the party, and I have every confidence in his ability, zeal, and energy to carry the matter through to a successful issue. He is going to acquire the most promising reefs or alluvial claims that can be got, and we expect daily to get a report from him that he has been successful in his undertaking. Now, gentlemen, I do not think there is anything more I can say at the present moment, but my brother directors, as well as I, have every confidence that this syndicate will prove a success, and that before very long we shall have received information of good and satisfactory finds of gold in South Africa. I shall now call upon Mr. Harman, who is an expert, to address the meeting. (Cheers.)

VIEWS OF AN EXPERT.

Mr. F. E. HARMAN, F.C.S., F.G.S. (late chief of the Bechuanaland Exploration Co.'s Mashonaland Expedition) said: As a shareholder in this company, and as an explorer who has had the honour of leading a large party of explorers for an important company into Mashonaland, I feel that it is only fair to state my opinion of the company. My opinion has already been several times before the public, the Press having on several occasions been kind enough to quote *in extenso* the report that I have sent home. I can only now reiterate what I have said upon these occasions, namely, that I believe in the future Mashonaland will be a fine gold-producing country. My opinion of the country is based on practical experience of many years, and as an expert, I am bound to take notice of many points which are beyond the actual word, gold. I have looked at the timber, the water supply, the supply of labour, and the facilities for cheap working. Once the railway is established from the coast, I think that there is every reason, as all these things combine, to predict that the fields will be worked at a cheap rate, and that is, after all, one of the chief tests of gold mining. However, beyond my own personal opinion, I should like to quote the two last reports which are to hand from public sources. On Nov. 1, the edition of *South Africa* contained the following:—

RESULTS.

"Fort Salisbury, *via* Nuanetsi, Oct. 10:—94 ozs. of gold from 20 tons crushing at the Golden Quarry battery, Mazoe, is now on view in camp at Messrs. F. Johnson and Co.'s."

I may say that I know Mr. F. Johnson, who led the pioneers, to be a most energetic gentleman, and there is no reason to suppose that this result—magnificent as it is—will not be followed by others as good as Mr. Johnson, or rather the Goldfields of South Africa, have large interests which they are now rapidly developing.

"The Matchless and Duchess Reef at Umfuli is attracting great attention. Mr. Selous has started to take charge of Tuli and the transport of food stuffs."

Other points of interest are:—

"The telegraph will be open shortly to Fort Salisbury, while the east coast route is already open for passengers, a pioneer having beaten the record by travelling from Salisbury to the coast under 18 days. The Portuguese are facilitating matters, and have opened a fortnightly postal service from Massi Kesse to the coast. A new road has been made from Salisbury to Massi Kesse, which Mr. Selous vouches will be passable during the rainy season. Reports from the mining centres continue to be satisfactory. A sample of 4 lbs. of quartz taken from the Jumbo reef, Mazoe, by Mr. Maddocks, the company's surveyor, has been assayed by Mr. Hahn, professor of analytical chemistry at the South African College, and, although no gold was visible, assayed 2 ozs. 1 dwt. to the ton. Between July 15 and Aug. 19 over 1,000 new claims were registered. The Chartered Co. also received in nine days in Aug. 400l. for licenses for hotels, stores, and other businesses, and are receiving 2000l. a month from tenement holders at Salisbury."

NEWS UP TO DATE.

That, as I said to you, is dated Fort Salisbury, Oct. 10. Then this morning the *Daily Graphic* contains very interesting news in a telegram through Reuter's Agency, dated Cape Town, Nov. 6th:—

"A telegram has been received here by the British South Africa Co. from the Hon. Cecil Rhodes reporting the discovery of extremely rich gold reefs near Fort Victoria. Other agents of the company report that the developments on the Mazoe river are very favourable, the rock improving at every foot sunk. On two properties the shafts have been sunk to a depth of 63 and 30 ft. respectively. The agents also state that rich reefs have been struck in many other places particularly on the Umzweze river."

I am personally acquainted with the Umzweze district, and I am not in the least surprised to hear this report, because I have on two occasions received private advice which absolutely confirms it, and I think, therefore, as a shareholder in this company, I am right in saying that it has bright future prospects. (Cheers.)

The CHAIRMAN invited discussion.

No questions were asked.

The CHAIRMAN said that he had no resolution to propose, and that concluded the business of the meeting.

Commander ANSON, R.N., moved a vote of thanks to the chairman, Sir John Campbell for his able and courteous conduct in the chair that day, and for his interesting address.

Mr. COOK seconded the motion.

The resolution was carried.
The CHAIRMAN briefly responded.
The proceedings then terminated.

CHICAGO AND NORTH-WEST GRANARIES CO., LIMITED.

AN ABNORMALLY GOOD GRAIN CROP THIS YEAR—PROSPEROUS TIMES FORESHADOWED — ECONOMIES EFFECTED — DIRECTORS' FEES.

The second annual general meeting of the shareholders in this company was held yesterday, at Cannon Street Hotel.

Mr. H. Seton Karr, M.P.,

presided.

The notice convening the meeting was read by the SECRETARY.

TWO GREAT DIFFICULTIES.

The CHAIRMAN: Gentlemen, you will see by a glance at the accounts that our position is this—that after writing off 396*l*. 3*s*. 3*d*. against preliminary expenses, and providing for the debenture interest 7,200*l*., there remains a balance of 12,758*l*. 9*s*. 7*d*., and after also having appropriated 3,000*l*. towards the 5,000*l*. for the debenture sinking fund, we propose a dividend on the preference shares of 8 per cent. per annum, leaving a small balance to be carried forward to the next account. In placing these accounts before you, I may say at once that we regret as much as you do that it has not been possible for us to declare a dividend on the ordinary shares, but I say—and I say it with a considerable amount of confidence—that when you hear our statement, and realise the two great difficulties with which this business has had to contend during the past year, I think you will agree with me that the showing is most distinctly satisfactory. The two great difficulties to which I allude are a short wheat crop and a tight money market. The former was by far the greater difficulty of the two. I was over in America this summer, and I took the opportunity of meeting our local managers in Chicago, and I cannot demonstrate to you better how the

SHORTNESS OF THE WHEAT-CROP

has affected us than by giving you shortly the following figures which I received from them. The amount of wheat we have handled in our country houses and in our elevator at Minneapolis has amounted to 1,432,088 bushels, as compared with 2,184,630 bushels in the preceding year. Now, that is a deficit of 752,542 bushels in the amount of wheat that we have handled during the past year—or a reduction of 30 per cent. upon the preceding year. The cause of that is simply this—that throughout south and west Dakota, where the large majority of our country houses are situated, the crops were injured during the critical portion of the year by drought. Of course, we handled a considerable amount of other grains. For instance, we handled during the past season 412,922 bushels of flax, but on that we receive little or no profit—our great profits arise from the handling of wheat: and when Providence does not choose to send to the continent of America a good harvest, concerns like our own suffer in consequence.

EFFECT OF A TIGHT MONEY MARKET.

Our second great difficulty has been the adverse state of the money market, particularly during the whole of last winter. This was only a reflection, to some extent, of the state of things that prevailed in London at the same time, in consequence of certain occurrences to which I need not refer just now. The result was that our interest account, which last year I held out hopes to you of having a great reduction in, has this year amounted to very much the same amount as last year. Of course, this year we have had the benefit of our full working capital. During our first year's operations we were not able to send out any of the working capital until nearly six months of the year had gone; because the company was only floated in the autumn, and the shareholders had not paid up their calls. This year that cause did not operate, so that we had that advantage; but, on the other hand, in spite of the high credit and reputation of our local managers, we had to pay a higher rate of interest than in the former year. This has not, however, been such a serious drawback to us as you might suppose, because it is a rule in our business that tight money markets very often make high carrying charges. As a matter of fact, we have only been able to make the good showing that we have, owing to the good carrying charges, which were 7*c*. a bushel as compared with 5*c*. in the preceding year. You might well ask—How is it, then, that the American companies have been able to declare a somewhat larger dividend than last year? The answer is, that although they have had to pay a higher rate of interest for their money, on the other hand they have made a better use of it and earned larger carrying charges. We did not employ quite as large an amount of borrowed working capital this year. I should like to say that it is very largely—in fact, almost entirely—owing to the energy and ability and

GOOD STANDING OF OUR LOCAL MANAGERS,

that we have been able to do so well. These men are second to none in Minneapolis for commercial credit and high standing, and, consequently, they have sometimes been enabled to borrow money at better rates than some of their competitors; and I believe that the profits we have shown on our business in Minneapolis has, at all events, been in no way inferior, and I am inclined to think it has been better than the majority of our competitors in the grain business. I will now allude to one or two points which I think it right to bring to your notice. With regard to our country elevators—our managers informed me that in 12 of them they have replaced the kerosene engines, which were worn out, by horse-power, and made other improvements and additions. They have spent a considerable sum in improvements to the principal elevator in Minneapolis. They have a large fire-pump there with a capacity equal to three of the largest steamers in Minneapolis. The whole of these improvements and repairs have cost the company \$7,000, the whole of which has been debited to profit and loss account by the American companies. I think you will agree with me that that is very satisfactory.

THIS YEAR'S PROSPECTS.

As regards the prospects for the coming year—it is not necessary for me in a meeting of business men like this to argue about the excellent wheat crop of the present season. This year America is practically the garden of the world. The wheat crop is estimated to exceed last year by 250,000,000 bushels. It is a matter of common knowledge that the wheat crop is something abnormal, and it is to us a matter of very great congratulation because it is simply on the bulk of the amount of wheat that we handle that we derive our profit. Writing on Sept. 17 the managers told me that they had 1,250,000 bushels in the Star elevator at that date, as compared with 850,000 bushels in the preceding year—an increase of 400,000 bushels for a period of little more than a month of this year's working; and the purchases of new wheat in Aug. last amounted to 115,000 bushels, as compared with 79,000 in the preceding year—an increase of 36,000 bushels. The prospect of earning good carrying charges this year is extremely good. I may also tell you that we have extended our line of country houses. Our managers have leased, on favourable terms, 23 additional warehouses and elevators. They are on the same line of country as our own houses, and, consequently, can be operated with very small additional expense, and in a year like the present we may expect a considerable increase of profit from the fact of having those houses. Efforts are also being made to lease more.

LONDON ADMINISTRATION EXPENSES.

Last year we promised you considerable economies in the direction of the London administration expenses, and you will see that whereas the accounts of last year showed the expenses to be 3,294*l*., they this year have amounted to 2,067*l*., or a saving of over 1,200*l*.. We are now paying only 250*l*. a year for office expenses and clerical work; so that this item will show a further considerable reduction in the next accounts. We propose to limit the expenses of the London management to the sum of 1,000*l*. a year, until the company is in a position to pay a substantial dividend on its ordinary shares—say, for example, a dividend of 8 per cent. (Cheers.)

DEBENTURES.

With regard to the debenture sinking fund—we are, as matters stand now, bound to spend 5,000*l*. every year in redeeming debentures at the sum of 110. Of course the debenture holders are not likely to give up that advantage without some *quid pro quo*; and the suggestion we desire with your approval to make to them is this—that instead of having a compulsory drawing of debentures at 110 we should be allowed to spend this 5,000*l*. in purchasing debentures in the open market. The debenture holders will probably ask—“Where do we come in in this scheme?” Well, the chances of any one debenture holder being drawn at 110 is something like 25 to 1. On the other hand, supposing we spend the money as I have suggested, the market will be improved. The debentures are now quoted at 75 or 80, but if we spend 5,000*l*. every year in purchasing them, their market value is sure to be improved. It is obvious, too, that the company will be benefited by the fact that we shall be able to redeem the debentures at a lower price than 110. We submit this scheme to you for your indirect approval; of course, the direct decision on this point will rest with the debenture holders. In conclusion, the Chairman referred to the experiments which are being made in the United States with respect to “rain-making,” which, if successful, he said, would greatly minimise the risk of an enterprise like this. He moved the adoption of the report and accounts.

Mr. W. A. BEVAN (director) seconded the motion.

CRITICISM.

Mr. W. W. DUNCAN, in the course of a long speech, asked if the directors had taken more than the 850*l*. agreed upon last year as the limit of the fees.

The CHAIRMAN: Since the date of the last meeting that is exactly the amount that we have taken.

Mr. DUNCAN: That is not it. Your pledge was for the year now under review.

The CHAIRMAN: I am sorry if you misunderstood us at the time. I certainly did not intend to convey that impression.

Mr. DUNCAN thought the meeting was entitled to know the exact amount taken by the directors during the year. He complained of the bold statement given in the accounts of the dividends paid by the American companies, remarking that it was an insult to intelligent shareholders to think that they could be satisfied with such a statement. He went on to refer to the fact of his having obtained proxies in order to oppose the re-election of the chairman, but said he had told the directors that he would withdraw his opposition if they would undertake to reduce the administration expenses to a maximum of 1,000*l*. a year, and allow the item to remain at that until they got the consent of the shareholders in general meeting to increase it.

Mr. MUNRO asked how often reports were received from the property?

The CHAIRMAN replied that they had monthly trial balance-sheets from their secretary at Rochester.

Mr. MUNRO, in a long speech, called attention to the fact that everything had to be done “according to the laws of Minnesota,” and he contended that the board were powerless to do anything.

Mr. HANCOCK said that there was not the slightest hint in the prospectus that the ordinary shareholders would ever be without a dividend; on the contrary, 15 per cent. was foreshadowed. The shareholders could not lose sight of this fact, that if a dividend were declared next year it would be owing to the accident of an abnormal wheat crop. He thought 850*l*. a year was too much to pay as directors' fees, and he complained that from one year's end to another the shareholders did not receive one scintilla of information as to what was going on.

A SHAREHOLDER: How many directors are there?

The CHAIRMAN: Four; Mr. Vanderbilt, Sir Roper Lethbridge, Mr. Bevan and myself.

AN AMENDMENT.

Mr. PEALL moved an amendment—“That a committee of the shareholders be appointed to take into consideration the question of the management of the company.”

Mr. WILLIAM JONES seconded the amendment.

The CHAIRMAN, in reply to the various questions, said that they would be very happy to give every information to the shareholders if they would call at the office, but it was undesirable to publish to the world the details of their business. The gross profit this year was \$321,000, and the net profit, \$100,000 odd. In all the remarks made not a single word had been alleged in which the directors had failed in their duty. What did the shareholders expect when they invested their money in a commercial enterprise in America? They had had an 8 per cent. dividend on the preference shares, and 10 per cent. on the ordinary last year, and they were having a dividend of 8 per cent. on the preference this year. Besides that, they had paid 8,000*l.* out of revenue towards the debenture sinking fund, and he thought they could not avoid paying a very substantial dividend next year.

The amendment was put to the vote and declared lost.

The report and accounts were then unanimously adopted, and a dividend of 8 per cent. on the preference shares authorised.

On the motion of Mr. VANDERBYL, the chairman was unanimously re-elected, and the auditors having been re-appointed, the proceedings terminated.

FOREIGN MINING INTELLIGENCE.

(Continued from page 713.)

PESTARINA UNITED.—Report for Nov.—Pestarena—No. 1 lode: The 55 end south has been started to reach the ore shoot now seen at the 70-fm. level. In the 70 end south the lode is rapidly improving, and produces 6 tons of ore per fm.; worth 1 oz. per ton. The 70 end west has developed into a fine lode, and is still improving, it produces 7 tons of ore per fm.; worth 2 ozs. per ton. The 90 end south was abandoned for a branch that went off in the north side, which proved worthless. Driving has been again resumed on the No. 1 lode, the vein producing 2 tons of ore per fm.; worth 10 dwts. per ton. In the 130 end north the lode is 50 centimetres wide, but carries no pyrites. Caunter lode: In the 55 end east the lode averages 30 centimetres, and is carrying more pyrites than when last reported on; it produces 4 tons of ore per fm., worth 10 dwts. per ton. The 55 end west has been abandoned. The intermediate over the 110-fm. level east has been communicated to (stope west of cross-cut. The 150 cross-cut south has traversed some divisions, but no ore has been met with. Valle Rossa cross-cut: Nothing of any importance has yet been met with. The intermediate end north over 120 on No. 1 lode consists chiefly of quartz carrying a little pyrites; it will improve in height, and at present produces 7 tons of ore per fm.; worth 8 dwts. per ton. We have 10 stopes working, which produce on an average 6 tons of ore per fm.; worth 17 dwts. per ton. Val Toppa Mine: In the rise stope over zero level the level has fallen off in value, but it may be only temporary; it produces at present 2½ tons of ore per fm., worth 9 dwts. per ton. In the stope on arch under No. 2 level in west lode, the branch is 80 centimetres wide, and of the same character as last reported; it produces 9 tons of ore per fm., worth 10 dwts. per ton. All the machinery continues to work satisfactorily.—W. H. TRELEASE.

RUBY.—Report upon the mines for the week ending Oct. 24:—Dunderberg: We have six men on day's pay and three tributers at work here. On the 800-ft. level we continued the main drift about 12 ft. further, and struck a pipe of ore. On the 400-ft. level have nearly worked out the ore, and will discontinue it next week. Lord Byron: We have four men on day's pay and six tributers at work; the mine shows no change since my last. Bullwhacker: We have five men at work here, producing the usual quantity of ore, but the grade is not so high.—A. FRASER.

—Telegram from Eureka:—"14 tons tribute ore shipped, none smelted; 45 tons ore on company's account shipped to Salt Lake."

SOUTH-EAST MYSORE (Oct. 21).—Fortnightly report: During the past two weeks the winze below the 500-ft. level has been deepened 11 ft. 6 ins., which now makes a depth of 100 ft. 3 ins.; the lode in the bottom is small—about 6 ins. of quartz, assaying 6 dwts. 12 grs. of gold to the ton. We shall now commence to drive north from the bottom of winze, so as to prove the length and value of the shoot. I must say that I fully anticipate the result of this work will be satisfactory. It is already proved by the winze that the value of the quartz is improved, and I fully expect a much better result by opening on the lode with this level.—M. SCANTLEBURY.

WENTWORTH PROPRIETARY.—The following cablegram has been received from Mr. W. H. Irwin, the company's permanent manager:—"Progress for the week 150 ft. In the Crinoline vein 300 ft. level we have found rich ore this morning, but cannot yet tell size of vein. In the south drift of Shamrock shaft 240-ft. level the vein is already 6 ft. wide, and the face is gradually improving as we advance. In the cross-cut at the same level we are cutting stringers

of quartz in the old workings of the Uncle Tom vein. The tonnage and value of the ore milled are greater than was expected, and we shall clean up in 14 days. The ore in the stopes of the Industry vein is getting richer."

THE KAPANGA GOLD MINING CO., LIMITED

YEAR CLOSES UNDER BRIGHTER AUSPICES THAN IT COMMENCED.

THE directors, in their report to June 30, say that the quantity of ore treated has been comparatively small, and the yield of gold proportionately less. It is with much pleasure they call attention to the fact that the anticipations of Capt. W. H. Argall in respect to meeting with gold at the 300-ft. level on Kapanga lode have been realised, and that the workings for the past month have resulted in a profit of 1,100*l.* In the opinion of the directors this discovery will prove most important, inasmuch as it is parallel with the run of gold found in the same level on Scotty's lode. The revenue account for the year shows a loss on the year's working of 4,768*l.* 4s. 8d., and a debit balance of 4,140*l.* 11s. 4d., which it is proposed to carry forward. The amalgamation with Coromandel Co. has been duly carried out, and the 65,000 shares created for the purpose have all been applied for and allotted to the members of that company, with a liability of 1s. 6d. per share.—W. J. LAVINGTON, Secretary.

CORNISH FINANCE.—We (*West Briton*) gave an extract from Wheal Agar accounts, as presented at the meeting last week, in our issue of Thursday last, which showed that there was a profit on the 16 weeks' working of 921*l.*; and we intimated that no dividend could be declared. We confess, however, we were very much surprised to learn that the members of the local committee appointed some months since positively so far exhibited their ignorance of mining accounts and the requirements of the mine as to propose that a dividend should be paid, notwithstanding that they owed to their bankers no less a sum than 1,204*l.* It appears almost incredible that in the year 1891, after the weakness displayed for some years, to call it by no stronger terms, men who make the least claim to any knowledge of finance should have acted in this way. Such actions tend to bring the management of Cornish mines into disrepute amongst outsiders. Our contemporary then quotes the article which appeared in our last headed "Cornish Finance."

AGENTS FOR

GATES CORNISH ROLL PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

SIZE 00 FOR CHEMISTS' SAMPLING, OR THE LABORATORY, £25 COMPLETE.

THE INGERSOLL-DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A BAD WEEK, BUT A REVIVAL OF PRICES TO-DAY—
TIMIDITY OF THE PUBLIC AS TO ALL SECURITIES—
KAFFIR MINES—VAN MEETING—GENERAL COURSE OF
THE MARKETS.

If the Mining market had closed yesterday instead of to-day, our tale would certainly have been pitched in the minor key. Down to this morning the position was little short of heart-rending. Sellers were everywhere, and buyers did not show their faces. Even Indian shares, the mining gods of our idolatry, have dropped, though to-day there was a satisfactory recovery of prices. On Saturday last there was a serious drop in Mysore consequent upon provincial selling. Rumour, speaking as usual with the tongue of untruth, said that the ends were getting poor, and that the well-informed shareholders were selling. The reply to this, of course, is that the mine was never looking better, and that the shares which were offered were readily picked up at prices for which more could be obtained to-night than the "too previous" sellers realised earlier in the week.

The truth of the matter is, that owing to the unsettled state of affairs in many parts of the world, and the general timidity of the public, dating from the Baring crisis, any stick is good enough with which to beat the Share markets. The Mining market is peculiarly sensitive to false rumours, for, however absurd they may be, they have only to be repeated persistently, and to be circularised and pressified sufficiently to knock down prices. Were it otherwise the bears would retire to their dens and caves of the earth, from which they would never be allowed to emerge in search of prey if the public had only a little financial backbone and common sense. As it is they suffer themselves to be the sport of every idle tale, for the most part "full of sound and fury, signifying nothing." Week by week we write like this, but our voice is as that of one crying in the wilderness. The Mining market is, however, depressed in good company, for it would be impossible to mention any other description of security which has not fallen enormously during the present year. Last week in general stocks and shares there was the same stagnation that has been observable during the present week in the mining market.

This week the public seem to have been unusually frightened, and in many instances sent orders to sell at any prices that could be obtained. Upon the unwisdom of such a course no ink need be wasted. The consequence is that in the Kaffir, Indian, Copper, General and Home sections, there has scarcely been any business without lower prices being recorded. When, however, all this is said, it must be added that to-day there was a general revival, and

prices by no means close at the lowest points touched during the week.

We may here call attention to the elaborate article we publish this week on the Kaffir mines with statistical tables accompanying them, showing the gold the companies have produced, the dividends they have paid, and in fact all about them. Such an article cannot fail to prove useful for the purposes of reference.

In regard to the meetings, they are mostly dealt with in our leader columns. That of Vau Co. was very unsatisfactory. Since the re-construction the liabilities have been found to be greatly in excess of those stated at the time, whilst the assets to meet them appear from the statements made to have been over-estimated. The directors are now making an effort to continue the working of the mine by an issue of debentures—the uncalled capital being totally insufficient for the purpose. All the speakers were agreed as to the valuable points in the mine that ought to be tried, and as to the excellence of the management of Capt. Panll, the present superintendent.

Coming to the general course of the markets, we have first to refer to Kaffir gold shares, where the falls and rises have both been fractional. Perhaps the most notable fall has been in Robinson, which, it will be observed by the article to which we have referred, in spite of its enormous output, pays no dividend, because its capital is nearly three millions sterling. In the Land section there has been a downward movement, but not of importance, and Diamond shares call for no comment.

Indian Gold shares have already been referred to. There has been no rise on the week, but prices are decidedly firmer than they were a day or two ago.

The Copper section has been remarkable for the fluctuations that have taken place in Rio Tintos. In the early part of the week these shares were depressed on heavy selling from Paris, but the declaration of the 12s. dividend, and Paris having to-day been buyers instead of sellers, prices have firmed up. Cape Coppers rose on the announcement of 1s. dividend, and Mason and Barrys are also firmer. The price of copper is not for the moment favourable to any substantial rise in these shares.

Not much has been doing in Colombian shares, though this is a remark which applies to nearly every department of the mining market. Tolimas close quietly at 9½ to 10. Colombian Hydraulic have been bought quietly at 22s. to 23s., in anticipation of increased returns, arising from a rumoured completion of the new pipe line. Oritas have also been bid for, but close unchanged at 12s. 6d. to 13s. 6d. Colons have been strongly bought, upon a report that the mine is now in full work, and should shortly announce a good return. Lomas have also been slightly firmer. In view of the prospects these shares look cheap. Of Tesoros a favourable report is expected; the mine, it is said, will be in full work in December. Gravel Golds close at 10s. 6d. to 11s. Reports from all these mines are expected next week.

The Australian Market has again been at a discount, and though the movements have only been fractional, yet they have been of the downgrade order.

In the General Foreign section the movements have also been downward, and notably in American mines. There is no news in any case that one can put the finger upon to justify the fall that has occurred, which is solely to be attributed to the apathetic state of the market.

In regard to British mines, with the exception of a rise in East Pool and South Condurrow, the shares have also been on the downgrade, and this practically closes our notice of a positively hateful week for Mining shares.

In regard to the outlook, some justification is found for the opinion that it is more hopeful by the partial recovery of prices which has been witnessed to-day.

KAFFIRS.

Remarks.—There has been very little active business, and in many cases quotations have been purely nominal, although prices have not fallen to any material extent. Ferreira, Crown Reef, and City and Suburbau have been the chief sufferers, but Jubilee and Stanhope are better.

Business.—A rise is shown in Bantjes of 6d.; Johannesburg Waterworks, 1½; Jubilee, ½; Luipaards Vlei, 1s.; Randfontein,

6d.; and Stanhope, $\frac{1}{8}$; whilst a fall has taken place in Sheba of 6d.; City and Suburban, $\frac{1}{8}$; Crown Reef, $\frac{1}{8}$; Durban Roodepoort, $\frac{1}{8}$; Ferreira, $\frac{1}{2}$; Jumpers, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Main Reef, 6d.; Robinsons, $\frac{1}{8}$; Simmer and Jack, $\frac{1}{8}$; and Wemmer, $\frac{1}{8}$.

DIAMONDS.

Remarks.—With the exception of North-Eastern Bultfontein the market has been dull. Dealers are short of these shares, and in one instance 800 shares were spoken of. The fact of 2s. 6d. "back" be given speaks for itself. New Jagersfontein are lower.

Business.—A rise is shown in North-Eastern Bultfontein, $\frac{1}{8}$, whilst a fall has taken place in New Jagersfontein, $\frac{1}{4}$. Others remain unchanged on the week.

AFRICAN LANDS.

Remarks.—The market for this class of shares has again been neglected, and when business has been transacted, it has generally resulted in lower prices. Oceanas have, as usual, come in for considerable attention, and close lower. South African Goldfields and Chartered are also down.

Business.—A rise is shown in Transvaal Estates of 6d.; whilst a fall has taken place in Bechuanaland, $\frac{1}{8}$; British South Africa Chartered, $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{8}$; Goldfields of

South Africa, New, $\frac{1}{8}$; Johannesburg Estates, $\frac{1}{8}$; Oceana, $\frac{1}{4}$; Transvaal Gold, 3d.; and Transvaal Lands, 1s.

INDIANS.

Remarks.—Business has been brisk in this department. Mysore, after having been forced for sale, and at one time during the week freely offered at 4 $\frac{1}{2}$, rallied and close firmer, though showing a drop on the week. There is no truth in the statement that the ends are becoming poor, and, in our opinion, the shares at present price are a good investment. Nundydroogs and Ooregum close considerably above the lowest price touched on the week, and the general appearance is favourable.

Business.—There is no rise to record; but a fall is shown in Balaghat of 6d.; Glenrock, 3d.; Goldfields of Mysore, 6d.; Mysore, $\frac{1}{8}$; Nine Reefs, 3d.; and Ooregum Preference, $\frac{1}{8}$.

AUSTRALIANS.

Remarks.—These have given way on the week, although not to any considerable extent. New Queens, notwithstanding a fair return, close weaker. It is very certain there are not many shares on the market of either Gympie Great Eastern, Day Dawn P.C., or Day Dawn Block, and very little buying would easily put them up several shillings. Australian Broken Hill are a shade lower, while Broken Hill Proprietary have fallen 20s.

Business.—There is no rise to record, but a fall has taken place in Australian Broken Hill of 9d.; British Broken Hill, $\frac{1}{8}$; Broken Hill Proprietary, 1; Day Dawn P.C., 3d.; Gympie Golden Crown, 6d.; Gympie Great Eastern, 3d.; Kangarilla, 1s.; Mosman, 3d.; and Wentworth Proprietary, $\frac{1}{8}$.

COPPER.

Remarks.—There has been a fairly good market in copper shares. Tintos show a loss on the week, but close 25s. better than the lowest price touched. The buying of these shares set in from Paris this morning, and caused a speedy rise to take place. Masons have been in demand at slightly firmer prices.

Business.—A rise is shown in Capes of $\frac{1}{8}$; Mason and Barry, $\frac{1}{4}$; whilst a fall has taken place in Libiola of $\frac{1}{8}$; Namaqua, $\frac{1}{8}$; and Rio Tinto, $\frac{1}{4}$.

GENERAL FOREIGN SHARES.

Remarks.—There has not been much business in these shares. Golden Gates and Feathers are again slightly lower. Callao Bis have been offered, but found ready buyers; and on 400 Don Pedro being offered for sale, the price gave way 2s., but closes firmer. In St. Augustines a large business has been done at prices varying from 3d. to 6d., this being 3d. paid up in the new company. Of Yuruari it may be said that there appear to be large numbers of shareholders anxious to sell, and in consequence shares have been freely offered at 1d. each, without tempting buyers.

Business.—There is no rise to note. The following, however, have fallen:—Amador, 3d.; American Belle, 1s.; Balkis, 3d.; Barrett's, 3d.; Callao Bis, 6d.; Colombian Hydraulic, 1s. 6d.; Colon, 3d.; De Lamar, 2s.; Don Pedro, $\frac{1}{8}$; Elkhorn, 6d.; Flagstaff, 6d.; Golden Feather, 1s.; Golden Gate, 9d.; Golden Leaf, 6d.; Linares, $\frac{1}{4}$; Montana, 6d.; New California, 6d.; New Guston, $\frac{1}{8}$; Ottos Kopje, 3d.; Palmarejo, 1s.; Richmond, $\frac{1}{8}$; Spitzkop, 9d.; Tesoro, 3d.; and Yankee Girl, 3d.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, Nov. 13 :—"Incline level from 280 level west raised 5 cwt. rich ore, containing 1,000 ozs. of silver, including one quarter native silver."

BRILLIANT.—A cablegram, dated the 17th inst., reports that the company has cleaned up 1,460 tons for 2,180 ozs. smelted gold; value, 8,175*l*. A dividend (the 28th) of 2*s*. per share is declared.

BRITISH BROKEN HILL PROPRIETARY.—During the week ending 12th inst. 377 tons of ore were treated, including 36 tons of iron ore, yielding 72 tons lead, containing 4,901 ozs. silver. For the week ending Nov. 19, 396 tons of ore were treated (including 37 tons of iron ore), yielding 67 tons of lead, containing 4,356 ozs. silver.

BROKEN HILL PROPRIETARY.—During the week ending 12th inst. 4,393 tons of ore were treated, yielding 615 tons of lead, containing 180,113 ozs. silver. For the week ending Nov. 19, 4,200 tons of ore were treated, yielding 588 tons of lead, containing 176,400 ozs. of silver. Cable also states price of shares, 6*l*. 16*s*.

CAPE COPPER.—The directors have declared a dividend of 1*s*. per share, free of income tax, payable on Dec. 10, to the shareholders on the books of the company on Nov. 25, 1891. The transfer books will be closed during the said Nov. 25.

DAY DAWN P.C.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold ex s.s. Dorunda, which realised 2,930*l*. 2*s*. 3*d*.

GYMPIE GREAT EASTERN.—A cablegram, dated Nov. 17, gives the result obtained during the past month, viz.: "26 days; 630 tons; 603 ozs.; 2,100*l*. value; 1,100*l*. profit."

HARRIETVILLE.—A telegram from the mine, dated Nov. 19, is as follows :—"Cleaned up Nov. 17. Mons Meg Mine, 500 tons; Guerdon Mine, 250 tons; together, 294 ozs. Tiddlee Mine, 57 tons 22 ozs. Amalgamating pans, 27 tons 44 ozs."

MIDAS.—Cable from the mine :—"Yield for week ending Nov. 14, 28 ozs."

MILL'S DAY DAWN UNITED.—The mine has cleaned up 3,289 tons for 2,910 ozs.; value 10,750*l*. Dividend 3,750*l*. declared, balance carried forward. The cable adds, "Crushing continuously; mine looking splendid in lower levels."

MOSMAN.—Cablegram from the manager of Charters Towers :—"The Wyndham shaft has attained a depth of 1,060 ft., and connection has been made with the 1,015 ft. level. There are 300 tons of quartz on the surface, which I shall start to crush next week."

NEW QUEEN.—A cablegram (Nov. 14) gives result of crushing for the past fortnight :—"320 tons yielding 590 ozs. gold."

SUNBURST.—The company announces cleaned up on the 13th inst., 416 tons for 740 ozs. smelted gold; value 2,800*l*. Battery starts crushing rich classed ore in fortnight. No. 7 north-east Queen, 14th inst., cleaned up for 12 days crushing 240 tons for 546 ozs. smelted gold; value 2,000*l*.

VICTORIA.—On 14th inst. this company cleaned up small crushing of 290 tons for 1,328 ozs. smelted gold; value 5,000*l*.

VICTORY (CHARTERS TOWERS).—A letter, dated Oct. 12, gives the following particulars of the last crushing :—"Total quantity of quartz reduced was 1,479 tons, for a yield of 3,091 ozs. 14 dwts. 6 grs., value 10,717*l*. 13*s*. 4*d*., from which a dividend of 1*s*. per share was declared, payable on Oct. 1."

FOREIGN MINES.

ANGLO-MEXICAN.—From cable advices received, the superintendent at the mine reports that the Oct. shipment amounts to \$32,560.

CASTILLON.—The company has sold 50 tons silver-lead ore to Messrs. Nevill, Druce and Co., at 8*l*. 19*s*. 6*d*. per ton f.o.b. Bordeaux.

DE LAMAR.—Cable from the mine :—"The new engine and battery of boiler works well. Work on the pans and settlers is being pushed ahead. Everything is going right."

ELKHORN.—Cables from the mine :—"The face of the drift at the 1,250-ft. level south is now in ore 5 ft. wide, assaying 40 ozs. to the ton." "Estimated value of bullion produced for week ending Nov. 14, \$8,120."

FRONTINO AND BOLIVIA.—Advices from the mines for the month of Sept. are as follows :—"Produce, 6,030*l*. 9*s*. 7*d*.; cost, 4,368*l*. 6*s*. 11*d*.; estimated excess of returns, 1,662*l*. 2*s*. 8*d*.

GOLDFIELDS OF URUGUAY.—The directors have sold, through Messrs. Pixley and Abell, the bullion produced during the month of Oct., which realised 1,253*l*. 14*s*. nett.

MAID OF ERIN.—Cablegram from the mines :—"Gross yield for the week ending 14th inst., 1,800 tons; estimated value, \$30,000 (6,186*l*.)"

RIO TINTO.—The company notify that at the 15th half-yearly drawing of their Five per Cent. Bonds, 1884, to be held on the 1st prox., bonds amounting to 10,340*l*. will be drawn, to be paid off at par on Jan. 1.

SAN LUIS.—Cablegram from the manager :—"Bullion shipped Nov. 18, 820*l*.; everything is going well."

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

DRACHENFELS BANKET.—The following cable is from the manager, dated Nov. 17 :—"Started crushing to-day, all the plant running well."

LANGLAAGTE ROYAL.—Total expenditure from Sept. 1 to Oct. 2, 2,560*l*. 15*s*. 1*d*.; smelted gold returned, 1,315 3/4 ozs., taken at 72*s*. 6*d*. per oz., 4,770*l*., showing a net profit of 2,209*l*. 4*s*. 11*d*.

NEW CONSORT.—A cable advice from the attorney at Pretoria states that the properties acquired have been duly transferred to the company in accordance with the law of the Transvaal.

NORTH EASTERN BULTFOUNTAIN.—Telegraphic advice for last week announces :—"10,500 loads of top ground, yielding 1,300 carats of diamonds; increase of blueground on floors, 4,700 loads."

TRANSSVAAL COAL TRUST.—A cablegram from Johannesburg with reference to the operations for Oct. states :—"Output, 10,700 tons; profit, 2,500*l*. Declared a dividend of 2 1/2 per cent.; shareholders registered Nov. 30. Transfer books will be closed from Dec. 1 to Dec. 5, 1891." Notice is given that the London transfer books of this company will be closed between the same dates.

TRANSSVAAL GOLD EXPLORATION.—Mill.—The dry crushing mill and pans with three heads of stamps only were run during week. Owing to the addition of the new dry crushing mill to the plant it will be necessary to take steps to increase the water power so as to serve the whole battery. This can be done at trifling expense, and is being proceeded with. Transport of ore was active.

PIGGS PEAK.—The board, having cabled for information as to when the battery at the Devil's reef will start, has to-day received a cabled reply, to the effect that crushing operations will start on 20th inst. The mine manager, writing by the mail which has come in to-day, attributes the delay to the fact that the Barberton foundry, from which he had ordered some castings that were needed to make good the engine for the battery, failed to supply them at the date promised.

VIRGINIA (TRANSSVAAL).—The stamp mill will give every satisfaction. The late engineer has been paid off, and I have engaged a thorough practical millwright and amalgamator at 25*l*. per month. He was millman to another company at a salary of 30*l*. per month, but left to join me here, as he has every opinion that this will be a good paying property. I am very pleased shares are being taken up, and no one will regret having a good lot of them. Von Brandis is the talk of the place.

HORO CONCESSION EXPLORATION.—Report from manager Oct. 16 :—"I beg to send you report of work done here from the 1st to

the 15th of this month. Intermediate tunnel: This tunnel has been driven 6 ft. in the half month. The rock is very hard, and does not pan 1 dwt. of gold. Winze from No. 2 tunnel: We are stoping reef from both sides of this winze. The stope extends for 18 ft. to the east of the winze, and 11 ft. to the west. Open quarry: The bulk of the ore sent to the battery is being taken from the open quarry by No. 1 shaft. There is hardly as much ore worth milling in the face of the quarry to the west as the open quarry showed at the beginning of the month. Battery: The 10 stamps have run 10 days 3 hrs. in the half month. Shortness of water has prevented our crushing full time.—W. LEYSON.

RANDT COAL.—The following extract is from the *Standard and Diggers' News*, Johannesburg, Oct. 24:—"Randt Coal Mining Co.—The seam of coal recently struck by the Randt Coal Mining Co. at 63 ft. below the level of the Oliphant's river bed, has been developed, and proved to be 13 ft. thick. A splendid specimen of the coal in question was on view yesterday at the Standard Bank. Several tons have been passed through the company's coke ovens, producing excellent results. With only 10 ovens working, 1,000 bags of coke are being turned out per month. Twenty more ovens are, however, in course of erection, and in six or eight weeks' time the whole 30 will be in full swing. The output of coke for months to come is already sold to different customers. The original ovens were built of Johannesburg bricks, the transport on them frequently exceeding the cost at the kiln, but a fortunate discovery of fire-clay on the property has enabled the management to build the new ovens of bricks made on the spot."

METROPOLITAN.—By resolution of shareholders, passed Oct. 30, 1890, the head office was removed to Johannesburg, and a Johannesburg board appointed. Upon taking office the board found the company heavily in debt—16,601l. 10s. 11d.—development being backward, machinery incomplete, and working capital exhausted. In Feb., 1891, a provisional agreement was made final whereby the capital was reduced, and then increased to 55,000l. to make provision for existing debts, and to secure further working capital. A sum of 32,000l. cash was made available by this agreement, of which, as will be seen by the accounts, 17,550l. was spent in paying off liabilities, and the balance, 14,500l., remained for working capital. Your board, in taking over direction of affairs, resolved upon closing down milling operations until ample development justified resumption. Owing to the successful development so obtained at the 100-ft. level, and to the fact that the 200-ft. level has also been reached, the board resolved to resume milling with a 40-head mill. The development for the period under review has been limited to the six claim outcrop block, the bulk of your property it untouched, and in reserve, and in the outcrop block the reefs dip south at the angle of 75 degs. from the horizon, giving 70 ft. of backs above the 100-ft. level. The increase of stamping power will necessitate still more working capital.

EDWIN BRAY.—Manager's report for week ending Oct. 10:—No. 2 level: Underhand stoping west of winze. No. 3 level: Stopping and driving east and west of winze. Mine: During the first part of the week most of the mine boys were working on the ropeway line, helping to change a piece in one of the carrying wires. Ropeway: The ropeway has done very little work. After turning the carrying wires, as advised, in my last report, I found it necessary to put a new piece about 200 yds. long in the light carrying wire (viz., empty side). This took till Wednesday afternoon to complete, and then the hauling wire had to be attended to, and new strands put in three places. The moving of the star knots in the hauling wire was also begun. Mill: 20 stamps have been at work the whole week, No. 3 battery only being stopped during the day on the 8th, to have a new key put in the driving pulley. Report for week ending Oct. 17:—No. 1 level: Clearing entrance of No. 1A cross-cut. No. 2 level: Underhand stoping east of winze; quartz worth from 6 dwts. to 8 dwts. No. 3 level: Stopping and driving east of the winze. Our drive being full of quartz below the winze, I had to discontinue stoping west of the winze, but will continue immediately the quartz has been removed. Ropeway: The ropeway has transported more than necessary to supply the mill, but the hauling wire had to be repaired nearly every day. Mill: 20 stamps have been working continually.

BALKIS CONSOLIDATED.—In a letter dated Oct. 21 the manager at Eersteling reports:—No. 1 east shaft: This shaft is now down 54 ft. 8 ins. from surface vertical, and has just (at 51 ft.) cut the reef on its southern dip, and from this point will follow on the underlie: the lode in the bottom looks very promising, and I have good hopes for it improving in depth. At surface here the reef carried very well, and at 22 ft. in the shaft we cross-cut to it, and where intersected found it worth over 1 oz. of gold to the ton. On driving east, however, it quickly depreciated in value, and for the 25 ft. driven is not worth more than 5 dwts. for gold. In the end of this drive the reef is about 5 ft. 10 ins., with about 14 ins. of as good-looking quartz as I have ever seen. I am carrying on the drive in hopes of it improving again in value shortly. Where cut in the shaft the reef is 3 ft. wide, also with a course of very excellent looking quartz, and worth, by the pan, about 7 dwts. gold per ton; the reef is not yet settled, and we are apparently not yet deep enough to find it solid; it is fairly well defined, and is very persistent in its course, being traced already a considerable distance both east and west of this run of shafts. The back of the reef on this side of the creek is composed of what is known as a gossan, and that in itself is accepted as a good sign for the productiveness of the reef. The No. 4 north reef is very small in the shaft now sinking, but carries fairly well, with a good deal of visible gold. The shaft is now 42 ft. from surface on the underlie. We have certainly a back of stone here that will do for the mill, but I am not able to say its extent at present. I intend driving north and south from the shaft on the reef shortly. The deeper shaft on this reef I have been compelled to keep standing for the last two weeks, the ground being very hard, and taking too much of the shaftman's time from other points, but I hope to restart here soon, and to quickly find the continuation of the reef.

SALT UNION.—The tonnage of salt delivered by the Union in Oct. 1891, was approximately 118,000 tons, and in Oct., 1890, 137,000 tons.

THE MEXICAN EXPLORATIONS LIMITED, have arranged with the Mexican Association, Limited, that on and after the 20th inst., the joint offices of the two companies will be at 21, Lombard Street, E.C.

COMMERCIAL NOTES.

METALS.

COPPER has been easier. In G.M.B. warrants a large business has been done at declining prices, from 45l. 15s. cash and 46l. 10s. three months, to 44l. 1s. 3d. cash and 44l. 17s. 6d. three months, closing yesterday at 44l. 5s. cash and 45l. three months. To-day prices improved to 44l. 15s. cash and 45l. 10s. three months. The statistics for the half-month give supplies to England and France as 3,715 tons, and deliveries, 3,688 tons; visible supplies, 59,842 tons, against 59,815 tons on Oct. 31. We quote English tough, 48l. to 50l.; best selected, 49l. to 51l. strong sheets, 58l. to 59l.; India sheets, 56l. to 56l. 10s.; yellow metal sheets, 53d. to 54d.; sheathing, 54d. to 6d.; ore, &c., 8s. 3d. to 9s. 9d. per unit.

Tin: Straits on the spot has declined from 91l. 10s. to 90l. 15s. cash, and three months from 92l. 5s. to 91l. 7s. 6d. To-day there was a sudden advance to 92l., for both spot and three months. Straits shipments for the half-month were 590 tons, viz., 230 tons to London, 230 tons to America, and 130 tons to Continent. Estimate for the month about 2,000 tons. English ingots, 94l. 10s. The Dutch market is steady. Banca, 55fl.; Billiton, 54½fl. to 55fl.

TIN PLATES are quiet. We quote ordinary coke 13s. Liverpool.

SPELTER has been quiet and easier. Present quotation 23l. ex ship here.

LEAD quiet. We quote soft Spanish, 11l. 12s. 6d. sellers; soft English, 11l. 12s. 6d. to 12l.; L.B., 12l. 5s.; sheets, 12l. 15s. to 13l.

QUICKSILVER dull. Rothschild's price still 8l.; second-hands, 7l. 15s. to 7l. 16s.

ANTIMONY firm and dearer. Hallett's price is 60l. From second-hands we quote G.M.B. 56l. to 57l.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING NOV. 21.

Bristol College Green Hotel	4 per cent.
Bengal Central Railway...	12s. per cent.
Colonial Bank of New Zealand	7 per cent.
Ilfracombe Hotel...	7 per cent.
London and River Plate Bank...	12s. 6d. per share.
Leeds and Wakefield Breweries, Preference	6 per cent.
Leeds and Wakefield Breweries, Ordinary	10 per cent.
Merry and Cunninghame	7 per cent.
Northern Assurance	1l. per share.
Richard Hornsby and Sons, Ordinary...	3s. 3d. per share.
Richard Hornsby and Sons, Preference	6 per cent.
Rohilkund and Kumaon Railway	2l. 11s. 3d. per cent.
Trustee, Assets, and Debenture Corporation...	4½ per cent.
Trust and Loan of Canada	6½ per cent.
Tenement Dwellings	5 per cent.

THE PAHANG CORPORATION, LIMITED.

REPORT SHOWS THE STEADILY PROGRESSIVE CHARACTER OF THE WORK.

THE directors' report for the year ending Apl. 30, 1891, shows that the amount of ore which has been raised, though still not very considerable, shows a great improvement on the previous year's workings. The comparison would be still more favourable were it not that the amount of ore in stock on Apl. 30, 1890, seems to have been over-estimated. Regular shipments of black tin from the mines commenced in July, 1890. In that month but 6½ tons were produced, but the returns have since gradually increased, until in June this year the output for the month amounted to 22 tons, of a value of about 1,200l. The July output was a little short of this amount, but in Aug. it had again increased and was slightly better than in June, notwithstanding that several delays had occurred owing to Chinese holidays and other causes. This return amply covers the expenses of mining, raising and dressing, and is within a very short distance of covering all other expenses. Since Mr. Neild's arrival at the mines the monthly expenses have been considerably reduced notwithstanding that the output has been increased. Of the 60 heads of stamps which have been sent out, 20 were erected at Jeram Lumpong, which site had been selected on account of its proximity to the lodes that promised to give the earliest returns. Other stamps will be erected on suitable sites. The directors state that several of the European staff, including all the tin dressers, left their posts in a body simultaneously with the termination of Capt. James Hosking's engagement under circumstances for which the board consider there was no sufficient justification. Since the arrival of the new staff they are reported to be all that can be desired, and to be working together with a harmony and efficiency which had been greatly wanting under the former managements. The labour difficulties have now been practically overcome, and there is no reason to suppose that there will be any considerable scarcity in the future. Every possible arrangement has been made to safeguard the health of the men. The properties are described *seriatim* in the report, and then the directors refer to the fact that the Governor of the Straits Settlements appears to be much pleased with the efforts that have been made to develop the concession granted to the Corporation. The Acting British Resident states in his annual report for 1890, that "the Pahang Corporation in Kuantan is now doing good and vigorous work, as also are its two sub-companies, but the former alone has as yet exported tin." He also states in connection with Pahang generally, "that more solid results have been obtained during the year under review (1890) than has previously been the case. In fact, this year may be regarded as the first in which Pahang has been proved by Europeans to contain mineral resources in any way sufficient to justify the reputation as a rich mineral bearing country, which it has obtained among the natives of the Malay Peninsula." The directors propose to provide for the increased outlay which the extension of the mining operations will involve, by an issue of 50,000 preference shares of 1l. each, carrying a cumulative preferential dividend of 10 per cent., and which shall in addition rank for dividend *pari passu* with the ordinary shares of the company. This issue, in the first instance, will be offered rateably to the existing shareholders.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

At this period last year the crisis raised by the collapse of Messrs. Baring's firm was being met, the Bank rate had been raised to 6 per cent., and 3,000,000*l.* of gold had been brought over from Paris to strengthen the reserve, making it 14½ millions. A year has elapsed, and the arrangements for meeting the difficulties of the situation have so far been successful as to prevent any actual disaster, although the Argentine trouble has been complicated by other difficulties. At present the Bank's reserve stands at 14,873,000*l.*, or only in excess of what it was last year by reason of this week's addition of 400,000*l.*, produced by the reflux of notes and coin from circulation. This, however, is a stronger position than usual at this season, and is due to the anxiety of the directors to be prepared to meet the exceptional drain of gold in connection with the deficiency or failure of the harvest in Europe, and its abundance in the United States. So far, although the demands have been heavy, they have not been so great as feared, but gold is again in demand for Germany, and it cannot be doubted that with the shipment of the crops now cumbering the American railroads, the demand for that quarter, dormant for some time, may revive suddenly, and perhaps create a temporary scare. Under these circumstances, the present ease in money, and the expectations of an equally easy termination of the year, may prove deceptive, as should a million or two be taken it would perhaps be necessary to make a 5 per cent. rate to check the export. Discount is now under 3 per cent., or 1 per cent. below the Bank figure, and money commands no more than 2½ per cent., at which the Bank itself is borrowing into December, with the hope of controlling in some measure the supply counteracted by the position of financial and political affairs on the continent.

The course of the Stock markets has again been chequered, and more or less eventful. Financial affairs on the Continent continue to engross all attention, and there is no genuine improvement in the situation there. In all directions an enormous "bear" account exists, and upon the slightest favourable rumour, the ursine fraternity immediately become buyers and realise their profits, but with nearly all points in their favour. The open position for a fall is still very large, and it would also seem that political considerations are entering into the calculations of operators. This new factor should it become established, must aggravate the difficulties of the financial situation abroad, likewise increase the sensitiveness of the markets, and paralyse business. Consols have been flat, and touched 94½ for cash, but more investment purchases have since been made, and in Colonial Inscribed there is also a better feeling. Home Railways are lower, though the traffics continue satisfactory, and altogether a good deal of stock has changed hands. The North-Eastern Co. propose to absorb the Hull Docks, and the securities of the latter company are rising rather rapidly. In the Foreign Department there is a considerable fall, though at the same time prices are now quite an average 1 per cent. or more above their lowest. Russian, Spanish, Egyptian, and Hungarian have suffered most, the latter in connection with the recent panic at Vienna, and Turkish, too, have been largely offered. Suez Canal were very irregular, also Uruguay, while Guatemala and Argentine recovered. Canadian Railways were fairly steady, Mexican flat, and American Railroads neglected and lower, a favourable incident, like the Burlington and Quincy declaring an increased dividend, being counteracted by fears that the Richmond and West Point Co. will pass theirs, but traffics continue remarkable despite a block over freight. Trusts, Miscellaneous Banks, and South American Corporation loans show depression, likewise Breweries of the United States and Gas and Waterworks.

Monetary rates displayed a harder tendency to-day, owing to a reduced supply. The Bank broker, moreover, continued his operations, and paid up to 3 per cent. for fixtures, while the call of over 1,000,000*l.* on the New South Wales Loan not having been anticipated caused money to be wanted. Call loans rose to 2½, 3, and three months' bills were generally quoted at 2½.

No bullion movements occurred at the Bank of England to-day. Bar silver remained at 43½*d.*, while Rupee paper was dull.

Public securities have shown a decidedly better tendency to-day, and apart from some activity through "bears" buying back Foreign Bonds and Home Railways, there was also more business, so that many descriptions have appreciated. Consols have changed hands at 95½, but leave off rather below that figure, and Indian stocks were easier. In the Railway department, Brighton "A" has fallen over 2 per cent., through heavy sales upon reports of a fresh capital issue. South Eastern "A" fell 1 in sympathy, and North Eastern and the Scotch lines are weaker, but Midland and their leading stocks improved. The gold premium at Buenos Ayres having lately risen from 251 to 268 per cent., Argentine loans are flatter, and in Portuguese Venezuela and Guatemala External there is likewise a relapse, but Brazilian and Uruguay show decided firmness, and Inter-bourse securities closed with a pronounced improvement in response to Paris, and a recovery in the value of the rouble, notwithstanding the exportation of Russian wheat is now prohibited. American Railroads have since the opening been quoted in advance of New York parity, but this market has been neglected, and transactions were very limited. Grand Trunks were moderately firm but with few transactions, and Mexican Railways improved fractionally. Banks, Miscellaneous and Nitrates were steadier.

Annexed are the final quotations to-day:—Consols Account, 95½, 95½; Egyptian Preference, 87½, 87½; Egyptian Unified, 93½, 93½; French Four-and-a-Half per Cents., 103½, 104½*xd*; Hungarian, 87½, 87½; Italian, 87, 87½; Mexican, 80½, 81½; Peru Five per Cents., 8½, 9½; Peru Six per Cents., 24½, 25½; Russian 1889, 90½, 91½; Portuguese, 32½, 32½; Spanish, 64½, 64½; Turkish 1871, 89½, 90½; Turkish Defence, 86½, 86½; Caledonian Railway, 118½, 118½; Great Eastern, 87½, 88½; Great Western, 158½, 158½; Brighton "A," 143, 143½; North Western, 171½, 171½; Metropolitan, 87½, 88½; Metropolitan District, 29½, 30; Midland, 161½, 161½; North British,

43½, 43½; North Eastern, 156½, 156½; South Eastern "A," 82, 82½; Mexican Ordinary, 29½, 30½*xd*; Grand Trunk, 9½, 9½; Grand Trunk First Preference, 67½, 67½; Grand Trunk Second, 46½, 46½; Grand Trunk Third, 24½, 25½; Canadian Pacific, 89½, 89½; Denver Preference, 45½, 45½; Erie, 29½, 29½; Milwaukee, 78, 78½; Lake Shore, 126½, 127½; Louisville, 79½, 79½; Atlantic First, 36½, 36½; Ontario, 18½, 18½; Ohio, 19½, 20½; Norfolk and Western, 51½, 51½; Reading, 19½, 19½; Reading Bonds, 86, 87; Union Pacific, 41½, 41½; Wabash Preference, 27½, 28½; Ottoman Bank, 10½, 10½; Anglo-Telegraph, 48½, 49½; National Telephone, 4½, 4½; Hudson's Bay, 15½, 15½; Suez Canal, 105½, 106½; Guinness, 319, 321; Allsopp's Ordinary, 22, 24; Bryant and May, 13½, 14; Eastman's, 4, 4½; Elmore's, 2½, 3½.

THE DEVON UNITED COMPANY, LIMITED.

PLAN OF FUTURE WORKING.

THE directors submit a statement of accounts for the half-year ending Oct. 31, 1891. The agent's report gives details of work done at the several points of development, and it is recommended therein that the 144-fm. level be extended westward, where it is fully expected that the dip or shoot of ore ground seen in the levels above will be met with. It is also advised that the 132-fm. level west and the rise in the back of the 60-fm. level west should be resumed. Since the last half-yearly meeting the loan account, which then showed an amount due to the bankers of 800*l.*, has been reduced by the re-payment of 30*l.*, thus leaving an amount now due to them of 500*l.*—G. HADLEE, Secretary.

WASSAU (GOLD COAST) MINING CO., LIMITED.

MANAGER STILL CONFIDENT AS TO RESULTS.

IN the report to Dec. 31, 1890, a considerable loss is shown on the twelve months' working. By the monthly circulars sent out during the past year the shareholders were informed of the long-continued and unprecedented wet season, which not only seriously curtailed the output from the mine, but also added considerably to the cost in pumping water from the shafts. This accounts for the heavy sum charged to profit and loss account for the past year. In the directors' last report, dated Dec. 30, 1890, they stated that improved prospects (from that date) were confidently expected by the manager. This anticipation has been only partially realised: still, at the same time, the average monthly remittances for the first eight months of this year have increased from 97 to 137 ozs., and the yield per ton from 8 dwts. to 13 dwts. Appended herewith is a synopsis of the manager's report (who is now in England). The suggestions herein contained for the deeper sinking of the mine, and the means by which this is to be effected, will be fully laid before the meeting. The manager, in his report, says: I have every confidence in the future results of the mine, and that the shareholders will (at no very distant time) be well repaid for the time and money spent upon it.

FOREIGN MINING INTELLIGENCE.

ARGENTELLA (Nov. 12).—No. 2 Marine: The south wall has shown a great improvement, it now stands nearly upright with a good lode of quartz and carbonate of lime running along side with more pyrites than I have seen since we commenced operations here. In the forebreast the face of the wall is as smooth as glass with graphite facings. The ground is also more favourable for breaking. Quartz reef: There is but little change since my last report, a little better ground has come in on the right hand side. No. 3 Rowe's workings—Driving east: The progress here to meet the junction is much better than driving from the other side, the joints in the ground are pointing that way and will, I hope, be the means of direction, and prove in actual fact the theory we have had after finding the galena in the cross-cut south. I am of opinion we shall cut the first strings found in the cross-cut in about six weeks, if the ground continues favourable.—J. BROAD.

BALAGHAT-MYSORE (Oct. 28).—North engine shaft: The 600-ft. level north has only been driven 10 ft. 6 ins., or 335 ft. from the shaft; the quartz is about 15 ins. wide, and assays 5 ozs. 1 dwt. 18 grs. of gold per ton. The machine rise in the back of this level has only been advanced 4 ft., or 46 ft. 8 ins. above the back of the level; the quartz is about 18 ins. wide, and assays 5 ozs. 14 dwts. 20 grs. of gold per ton. In consequence of a bad accident to the plunger pole connection, necessitating the stopping of the pumping engine for some hours, the bottom of the mine became full of water; we were, therefore, unable to work at the above-mentioned places, hence such little progress. I am, however, glad to say the water is now in fork again, and work is again being resumed at the 600-ft. level. Comparatively little has been done at the 600-ft. level south since my last; there is, therefore, no change to report. The stopes in the back of the 600-ft. level north produce quartz of about 16 ins. wide, and assay, on an average, 4 ozs. of gold per ton. The No. 1 midway winze in the bottom of the 500-ft. level south has only been sunk 1 ft. 6 ins., or 45 ft. below the level; the quartz is about 6 ins. wide, and worth 1 oz. 5 dwts. 20 grs. of gold per ton. We have commenced a new rise in the back of the 500-ft. level north; it is now up 10 ft. 6 ins. above the level; the quartz is about 1 ft. wide, and assays about 3 ozs. of gold per ton. This rise is immediately under the No. 1 winze in the bottom of the 410-ft. level, and we hope to communicate them shortly. The stopes in the back of the 500-ft. level north yield quartz of about 14 ins. wide, and assay 3 ozs. 5 dwts. 18 grs. per ton. The No. 1 winze in the bottom of the 410-ft. level north has been sunk 2 ft., or 60 ft. below the level; the quartz is about 14 ins. wide; but this week the sample only assays 16 dwts. 20 grs., but it will, I think, very soon again improve. The stopes in the back of this level produce quartz about 1 ft. wide, and assay 18 dwts. 3 grs. of gold per ton. The stopes in the back of the 330-ft. level north yield quartz of about 1 ft. wide, and assay 18 dwts. 3 grs. of gold per ton. The machine rise in the back of the 270-ft. level north has been advanced 14 ft. 4 ins., or 31 ft. above the level; the quartz is about 14 ins. wide, and assays 1 oz. 16 dwts. 10 grs. of gold per ton. The stopes in the back of this level yield quartz of about 14 ins. wide, and assay 2 ozs. 17 dwts. 8 grs. per ton. The stopes in the back of the 270-ft. level south produce quartz of about 9 ins. wide, and assay 2 ozs. 7 dwts. 12 grs. of gold per

ton. We have again resumed the sinking of the winze in mid level above the 270-ft. level north; it is now down 26 ft. 6 ins.; the quartz is at present very small, but will, I think, very soon improve. This winze is immediately above the 270 machine rise, and will soon be communicated. The stopes in the back of the 165-ft. level north produce quartz of about 3 ft. wide, and assay about 13 dwts. per ton. Haines' shaft: We are pushing as fast as possible the cutting down and securing of this shaft below the 410-ft. level. Surface: I am glad to say the additional 10 heads to our mill are now ready for working, and will at once be set to work, but I cannot as yet promise to keep them fully supplied with quartz, but will endeavour to do so as quickly as possible. All other surface work is progressing fairly satisfactorily.—J. PRYOR.

BRATSBURG.—Report for week ending Nov. 7:—Hoffnung Mine. No. 2 adit level has further improved, but not yet sufficient to value, although yielding good saving stuff. No. 1 rise at this level is producing about $\frac{3}{4}$ ton per fm., but No. 2 is now unproductive; the winze in the bottom is worth $\frac{1}{2}$ ton per fm., and apparently improving. The mid level east in the back of No. 2 is promising, but not of value. No. 3 adit level still produces ore in the bottom, but it has not improved in the back, although indications continue favourable. The rise here is worth $\frac{3}{4}$ ton per fm. No. 4 level and the winze in the bottom are still idle, and will continue so in all probability during the current month. At Murchison's mid level the lode is yielding about $\frac{1}{2}$ ton per fm. Johannes Mine: Both the western and eastern level on Howard lode, for the present, are unproductive, but the main rise is worth 1 ton per fm., and the eastern rise $\frac{3}{4}$ ton per fm. In all we have now 95 miners employed. Surface work and remarks: We are now engaged in laying air pipes to the sorting house, and have men also employed in cutting stone for the foundation of the engine to be fixed here, also making a cutting for a tram road that it is necessary to lay, otherwise nothing new to report.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Nov. 7:—Smelting works: There is nothing to report here this week, as our operations are stopped pending the arrival of coke. Electro-deposition works: The works are progressing as usual, and there is no change to report here. We despatched to you on Saturday 5,677 kilos copper, equal to 5 tons 11 cwt. 3 qrs., which we hope will arrive safely and realise a good price.—T. F. SMITH.

BRITISH BROKEN HILL (Oct. 7).—No. 1 shaft, 2nd level: No further work has been done in the west cross-cut near block 14 boundary, as the best way to get at the carbonate ore body lately exposed there will be by a branch off the main section of timbers. The re-timbering of the creep is making good progress. The extension towards the west at the boundary has now exposed a wall of soft schistose rock lying very flat. This may be the true hanging-wall, but we cannot tell definitely yet. No. 2 shaft, 1st level: We are still breaking lead-ore at the south end of this stope, and will continue it to take out the body of ore lately passed through by the winze from 50 ft. to 1st level. Second level: The north stope is still yielding ore, and has good faces showing on three sides and overhead. The ventilation here is bad, which hampers work considerably, and steps will be taken to alter this. No. 5 shaft, 2nd level: The east cross-cut has been extended 6 ft., and is now 74 ft. long. The week's work has been through hard country rock. The west cross-cut has also been extended 6 ft., making its total length 66 ft., without change. Junction Co.'s 400-ft. level: Our cross-cut has had 6 ft. added to it, making a total of 33 ft. into our ground. We seem to be approaching the wall of the lode, and one-half the face is now in country rock. Surface: A tunnel is being run in from the bottom of the O.D. mill into No. 2 shaft, through which the dressed ore will be trucked and hoisted, as the present inclined hoist does not work satisfactorily.

CAPE COPPER.—Sept. report: Ookiep: The 117-fm. level east of 72 winze is yielding occasional stones of copper ore. The 117-fm. level south towards the new shaft is still in massive quartz. At times it presents spots of copper ore. The 105-fm. level east of No. 6 level north is yielding stones of copper ore, but not to value. The rock in the 80-fm. level (No. 16) south-east of new shaft having become hard and spare for driving, and unfavourable for copper ore, it has been suspended. The 68-fm. level (No. 6) south-east of 24 winze is producing rich stones of copper pyrites. The stopes throughout the mine are yielding their usual quantities of copper ore. Trial mines: Nababep south: The 59-fm. level south-east of north-east level, and the 59-fm. cross-cut north of south-east level, are both yielding saving stuff. The ground in the 43-fm. level north-east of shaft contains spots of copper ore. Spectakel: The rock in bottom of new shaft sinking below the 36-fm. level is yielding stones of copper ore. The winze sinking below the 36-fm. level has passed through 14 ft. of good copper ground. The present bottom is in stone, but we hope the falling off is temporary. The stope in the 36-fm. level east of No. 1 hookan course is worth 2 tons of copper ore per fm. Ookiep east: The rock in bottom of shaft sinking below the 66-fm. level is composed chiefly of quartz, containing stones of copper pyrites.—Capt. HENWOOD.

Returns for Sept: Ookiep, 1,970 tons of 23 per cent. Arrivals at Port Nolloth: The John and Hinda. Arrivals at Swanssea: The Cubana and Cumberland. Bills of lading received: 410 tons of ore per L'Esperance, 500 tons per John, and 970 tons per Inverness.

CHAMPION REEF (Oct. 28).—Fortnightly report.—Mysore section—Carmichael's shaft: Sinking 1 ft. 9 ins.; total depth, 250 ft. 6 ins. No. 1 cross-cut at the 225-ft. level has been driven 6 ft. 9 ins.; total length, 88 ft. Work was suspended at this point at the end of the first week. The same pair of men have since been employed driving 7 ft. north on the lode, which is at present small, and carrying a few inches of quartz only. The south drift at this level has been advanced 13 ft. 6 ins.; total distance from shaft, 151 ft. 3 ins.; the lode in the end is 2 ft. wide of quartz, but the assays are still low, and only show a value of 3 dwts. per ton. Ribblesdale's shaft: Sinking 4 ft. 6 ins.; total depth, 257 ft. 6 ins.; the rock is getting a little more mineralised. At the 240-ft. level the north drift has been driven 8 ft. 3 ins., and a cross-cut east from the end 4 ft. In the breast of the drift the lode is very small, and the surrounding rock disordered. The cross-cut east will be continued a few feet to prove if any portion of the lode has been heaved in that direction. The south drift 240 level is extended 20 ft. 3 ins.; total length, 131 ft. 9 ins.; the lode in the end is 1 ft. 6 ins. wide of quartz, which has an assay value of 1 oz. 2 dwts. per ton. A rise has been commenced at this level, about 100 ft. south of shaft, and 8 ft. has been risen, the result of one week's work only; assays from the lode give 1 oz. 17 dwts. per ton. There is a little water issuing from the back, and the quartz

is iron-stained; we are probably getting near old workings. Garland's shaft: Sinking 3 ft. 6 ins.; total depth, 269 ft. 6 ins. On account of meeting with old workings at the 240-ft. level the sinking has been retarded, as the shaft was filled with water to the level; the lode in bottom of shaft is $2\frac{1}{2}$ ft. wide, and assays 15 dwts. per ton. At the 240-ft. level the south drift has been advanced 22 ft.; total length, 139 ft. 3 ins. At a distance of 124 ft. from shaft we holed into old workings, which was quite unexpected at this depth. A large body of water which had accumulated in the old workings filled the shaft several feet above the level; consequently, a little delay was caused in sinking and driving. The pumps, however, were able to cope with this influx of water, and the work in the north drift was only checked for a day. The old workings are partially filled with *débris*, so at present we have no idea as to the distance they extend south, or the depth below the level; the level will be continued to communicate with the north level from Dalyell's shaft, and as soon as convenient a winze will be sunk to prove the exact depth that the former workers attained, which will be a guide in commencing the next level from shaft. The 240-ft. level north has been advanced 15 ft. 4 ins.; total length, 114 ft. 3 ins.; the quartz has opened out a little during the last few feet, and appears to be getting stronger as the drift is advanced. The cross-cut east from this level has been driven 10 ft. 3 ins.; we have passed through a branch of quartz 4 ins. wide; the rock east of this is much cleaner, and unless there is another change in the course of a day or two this end will be stopped. Dalyell's shaft: Sinking, 6 ft.; total depth, 288 ft.; the lode continues very regular, and carries a small branch of quartz. At the 240-ft. level the north drift has been advanced 11 ft. 3 ins.; total length, 160 ft. 7 ins. Trial shaft: 9 ft. 6 ins. have been sunk; the lode on the south side of the old workings is 2 ft. wide, and the quality of the ore has slightly improved, the last assay giving 15 dwts. per ton. The collar of shaft has been raised 7 ft. 9 ins., making the total depth 141 ft. 9 ins. Coromandel section: At Prospect shaft the 380-ft. level has been driven 5 ft. 9 ins.; total length, 55 ft. 3 ins.; the lode is a little smaller, but the value of ore has increased, and assays 1 oz. 1 dwt. per ton. The winze below the 320-ft. level has been sunk 6 ft.; total depth, 49 ft. 9 ins.; in the course of a few feet more sinking we shall be deep enough to commence driving to meet the 380-ft. level. At the 290-ft. level very little work has been done; the end has been driven 3 ft. and the cross-cut west 3 ft.; in the cross-cut there is a branch of mineral about 1 ft. wide, which shows a trace of gold in assay. General work: Owing to the rains very little work has been done towards the buildings. At Coromandel shaft we are pumping out the water in order to change the buckets, valves, &c., before they get unfit for duty. Machinery working satisfactorily, and the health of the camp is good.—R. C. JONES.

COLAR CENTRAL (Oct. 28).—The 200 north has been driven 5 ft. 6 ins., making a total of 62 ft. 3 ins.; the lode in the back is 3 ft. wide, but it pinches as it gets down to the bottom of the level. The assay value is 5 dwts. 4 grs. to the ton. The 200 south has been driven 4 ft. 9 ins., making a total of 54 ft. 9 ins. No change since last report. Winze: Sunk 4 ft.; total depth, 41 ft. 9 ins.; the average width of the lode is 4 ins., assaying 7 dwts. 18 grs.

COLORADO.—Manager's report for fortnight ending Oct. 31:—Terrible lode—8th level west: The lode continues to hold at 4 ft. wide, and the mineral vein is 1 to 2 ins. wide; the ore vein is regular and well-defined. The 1st level: Lode 4 ft. wide; mineral vein 2 to 3 ins. wide. The 2nd level: Lode 4 ft. wide; mineral vein 2 to 3 ins. wide. Coin lode—Rockwell adit level: Lode 4 ft. wide; mineral vein in breast of drift 3 ins. wide. Brown adit level: Lode 4 ft. wide; vein 1 to 2 ins., carrying solid ore. Brown lode—Rockwell adit level: Two stopes being worked; lode 4 ft. wide; mineral vein 2 ins. wide; last shipment gave 103 ozs. and 79 ozs. silver per ton, in two classes. Brown adit level: Lode 4 ft. wide; mineral vein 2 to 3 ins. wide. Mammoth tunnel level: Lode 5 ft. wide; mineral vein 3 to 4 ins. wide. Silver ore tunnel level—1st stope: Lode 4 ft. wide, and ore vein about 3 ins. The 2nd stope: Lode 4 ft. wide; ore vein 2 to 3 ins. wide. There are 17 points now actually at work, of which the above are the most important. It will be noticed that there is in several cases an improvement in the width of veins. Since last report the drifts have been extended 23 ft. The ore from the various workings is now being prepared for the market, and will be reported next mail.

CUMBERLAND (Sept. 30).—I beg to submit my report for the past three weeks:—No. 2 shaft: Sinking has been going on somewhat slowly owing to the scarcity of men for a few days, and an increase of water. I am, however, pleased to say stone of good quality has been "making" more or less all the time, and at the present bottom there is what I believe to be a payable reef, 2 ft. in thickness, which goes strong right across the shaft. I cannot, of course, speak positively as to whether or not this stone will keep up its size and quality, but should it do so, we have splendid prospects for stoping on both sides of the shaft. No. 1 winze north: I regret that up to the present the shaft has not tapped the water in this winze, it has, therefore, remained untouched. Sinking will, of course, be resumed as soon as possible.—A. GALLAGHER.

FRONTINO AND BOLIVIA.—The statement for the month of Sept. is as follows:—1,267 tons of ore produced; bar gold, 1,838 ozs.; tributary gold produced bar gold, 828 ozs.; bar gold, 2,656 ozs. Also 5,706 lbs. of sulphurets, valued at 4687. 11s. 2d. Estimated value of the gold and sulphurets, 6,0307. 9s. 7d. Cost at the mines, Medellin, and in London, and paid for gold bought of tributary, 4,3687. 6s. 11d. Estimated excess of returns, 1,6627. 2s. 8d. On Oct. 21, the board received a telegram as follows:—"Silencio new mill working very satisfactorily, 20 stamps, Eustice." The completion of the Silencio mill has been rapidly pushed forward and the sum included in the above cost, expended on the work during the month of August, amounts to about 460.

GRAND CENTRAL (Oct. 31).—The manager reports:—In a trial cut near the north end of the Washington claim two of the miners have this week broken between 10 and 12 tons of ore. There is a good breast of ore in front of them and ore under them.

GYMPIE GREAT EASTERN (Oct. 1).—Fortnightly report: During the past fortnight the cross-cut at the 730-ft. level east of the Orient reef has been extended 7 ft.; total 463 ft. from the shaft. The country is very hard green stone at present; it may change soon. The north drive has been extended 10 ft.; total, 112 ft. There is a large body of crushing stuff not showing much gold. The south level has been extended 7 ft.; total, 82 ft. There is about 18 ins. of

crushing stuff, but I have seen no gold in it. The stopes going north over the level are all showing fair gold. The best gold is seen in the leaders over the reef. There is not much showing in the reef. The stopes over the level going south are showing a little gold, but the reef is small and bumpy. I have started to rise on the reef west of the dyke, the country is hard green stone. 690-ft. level: The stopes going south over this level are showing a little gold. Crushing was started from the mine on the 24th ult., with 15 head of stampers. The other ten head are crushing for seven and eight Monkland Tribute. Everything about the mine and battery is in good working order. I have had to send to the foundry for two boiler makers to put some patches on the boiler of the winding engine, as around the doors of the mud holes is very much worn. When this is done it should be right for years to come. There are 63 men employed; 53 on the mine and 10 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (Oct. 24).—Phoenix section:—No. 1 level: The ground here is very hard, and without change, only a little quartz showing. At this point we have only extended 10 ft. Tramway level has been driven 23 ft. The ground here is much the same as in my last, easier to work than in No. 1. A little quartz is visible, with a band of decomposed stuff about 15 ins. wide across the face of the drive. A stope: The lode here is about 3 ft. wide, a good deal mixed with rock, but good in patches, and the same remarks apply to B stope. C stope shows a lode of 5 ft. in width, of good quality; this is now the best point in the mine. E stope: Here we have 7 ft. of quartz, of fair quality, and in this neighbourhood contractors are also breaking out the old pillars. All other points have been stopped; the ground especially in G, H, and J has become very poor. The mill has been working well, but, unfortunately, ground being now very tight, we cannot get sufficient stone to keep it working continuously. Since the north-east monsoon burst, water has been abundant, and, luckily, the heavy storms which have done so much damage on the other side of the Nilgiris did not reach here. I expect to work with water through Nov.—C. A. PATERSON.

—Oct. 23.—Colar section: No. 1 new shaft has been sunk for the past fortnight 8 ft., making a total of 271 ft. 9 ins.; we have passed through a small branch of quartz here since last report, but we do not attach any importance to this, and are continuing the sinking vertical. No. 2 new shaft has been sunk 18 ft.; total depth on the underlie, 172 ft. 3 ins.; we are still sinking through the dyke. The 240 main shaft: West cross-cut has been driven 22 ft. 9 ins.; total distance from shaft, 586 ft. 3 ins.; there is no change at this place. No. 5 shaft: The 425 north drive has been extended 21 ft.; total, 43 ft. 6 ins.; the lode here is 2 ft. 6 ins. wide, composed of schist and quartz; the quartz separated from the schist gave, as per assay, 5 dwts. 4 grs. of gold to the ton.—M. STEPHENS.

LEEDS COPPER (Nov. 5).—Since my last report, we have a good improvement in No. 2 back stope west of the 20-fm. level, giving excellent quartz ore as well as good bed ditto. The other points the same value as reported last week.—T. R. DAVEY.

MOUNT ZEEHAN (Oct. 2).—The manager writes:—Argent section, blocks 1 and 2: No. 4 lode south end 72-ft. level, extended further 12 ft.; total distance from cross-cut, 100 ft. Remarks: Lode formation, 6 ft. wide, composed of graphite, slate, siderite, and second-class galena ore. Two good walls, but lode matter best at bottom of the level; 8 tons of second-class ore raised. North end, 72-ft. level: Extended 12 ft.; total distance from cross-cut, 132 ft. Remarks: Lode formation, 7 ft. wide, composed of 18 ins. second-class galena ore, mixed with siderite; other part of lode is graphite slate, and, like south end, has two splendid walls; 6 tons second-class ore raised. Air shaft north: Sunk 7 ft. further, making total depth to back of level, 57 ft. Remarks: Lode formation, 18 ins. wide, composed of second-class galena, and mixed with siderite. Have now holed through to back of level; we have a little more to square down and a little more timber to put in. We have then done with this air shaft for a time; 5 tons second-class ore raised. Air shaft south: Sunk 3½ ft. further; total from surface brace, 12½ ft. Remarks: Lode formation, 3 ft. wide, composed of second-class ore, mixed with siderite. We are not deep enough to catch shoot of ore south of shaft yet for the solid ore; 3 tons second-class ore raised. Rise back of 72-ft. level north: Have risen 7 ft. Remarks: Lode formation, 4 ft. wide and very strong, composed of siderite and first and second-class galena; 6 cwt. first-class and 8 tons second-class ore raised. Hope to have better from here next week. Queen Extended section, Block 5: Drive 16-ft. level, south air shaft, No. 2 lode, extended 6 ft.; total from end of shaft, 8 ft. Remarks: Lode formation, 4 ft. wide, 8 ins. of which is solid galena, remaining part pyrites and hard light slate, with second-class ore; 2 tons 3 cwt. first-class ore raised and bagged, and 2 tons of second-class raised. This shoot of ore seems to dip south, and is going underfoot. I am going to follow this, and have put on four more men here. Main engine shaft: No. 1 lode sunk further 5 ft.; total depth from platt, 42 ft.; from surface brace, 152 ft. Remarks: Country rock much the same as last week. Started to timber up today and make ready for the first frame set below plat. Montana section block 9: Winze on No. 3 lode has been sunk further 5½ ft., and have driven south on course of the lode at the 20-ft. level, leaving a well 3½ ft. deep for water; total depth of winze, 23½ ft. Remarks: Lode formation, 4 ft. wide, composed of first and second-class ore, with graphite slate. Water was getting too strong to sink deeper, and by driving south we shall very soon be getting very good ore. It is a very strong lode, but is not turning out as much solid ore as I expected. One ton first-class ore has been raised, and 4 tons second-class ore. Total ore raised for the week, 3 tons 9 cwt. first-class ore, and 36 tons second-class ore.

MYSORE HARNHALLI (Oct. 27).—No. 2 shaft 85-ft. level: The north drive has been extended 26 ft., making 73 ft. from the main west drive. No quartz has been met with. Cross drives east and west will now be started. The reason for this north drive was that Mr. Evans thought the main west level might be a little to the south. The 125-ft. level west drive has been extended 17 ft., making 53 ft. from shaft. This will be continued for the present. The ground has changed a little, and is softer. Water remains about the same.—W. LONSDALE.

NAMAQUA.—Abstract of superintendent's report for Sept.: Tweefontein Mine.—Shaft below the 73-fm. level: Three miners and six labourers are now employed in driving a cross-cut south to reach the lode. Shaft below the 73-fm. level east: There is no change in this driving. Shaft below the 73-fm. level west: There is very little change in the character of the lode in this driving. The small vein of

copper is of very high percentage, and the appearance of the ground gives indication of an early improvement. Worth 1 ton of ore per fm. Shaft below the 58-fm. level west: The ground in this driving is of no value. Shaft below the 58-fm. level east: A winze in the ore ground in the bottom of this level has been started, to prove whether the ore continues in depth. The quality of the ore is satisfactory. Worth 3 tons of ore per fm. Shaft below the 43-fm. level north-east: When this point has been sufficiently developed, better access will be given to the eastern part of the mine at this depth. Stopes—58 east, 43 east, 33 east, 33 west: A considerable falling-off in the out-turn of these stopes has taken place, and, in consequence, the percentage of the ore is lower. Worth 4 tons, 5 tons, 6 tons, and 4 tons per fm. respectively. Wheal Julia Mine: The ground is becoming more mineralised, but at present there is only a very small quantity of yellow ore. Shipping: The Matabele reached Swansea on Oct. 19. Output for Aug.: 263 tons of 24½ per cent.

NEW CALIFORNIA (Nov. 3).—The manager writes: The work underground is progressing satisfactorily. The new drainage arrangements in the shaft continue to be most helpful in dealing with the water, which is now under good control, and on the whole is decreasing in quantity. Work is going on steadily at the 2,100-ft. level, and the flats are well advanced. In the course of another week or 10 days drifting on the vein will be resumed on either side of the shaft. At the 2,000 west level we are taking down, or more properly, cutting into the vein, along which the last drifting was done as described in my last. The lode is from 4½ to 7 ft. wide in this place, and the latest mill runs are an improvement on previous one, which points, I think, to a good run of ore ground in these parts. The stopes continue to yield good-grade stuff. You will be anxious to know how soon we are likely to get at work in the very bottom of the mine (2,200 ft.), and in this connection I must explain that we have some difficulty in ventilating the working at that depth; and it is not safe to put men to work there while work is being carried on in such close proximity to the shaft as occurs during the making of the flats at the 2,100. We shall have to push out the levels at that depth first, and make some connections for air before much can be done to advantage deeper down. The milling department is doing most satisfactorily.

—(Nov.).—Telegram: "Oct. output, 560 tons; yield, 272 ozs. of gold; value, 860%; costs, 790%; expenditure on mine development and exploration account, 60%."—RICKARD.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Oct. 22.—The 186-ft. level drive west driven 6 ft.; total, 99 ft. Here the reef is of black glassy quartz, exactly like what I have seen in many of the Colar mines. It carries little or no pyrites. The hanging wall is almost downright, and very regular; the footwall is not uncovered by the drive. The quartz is very hard for driving. The 116-ft. level, No. 4 winze, sunk 4 ft.; total, 58 ft. 6 ins. Here the quartz and walls are exactly similar to those in the 186-ft. level west. The 186-ft. level drive east driven 3 ft.; total, 34 ft. Here we have one well-defined vein of white quartz, about 1 ft. thick, carrying a little pyrites; but it is difficult to say what width of reef there really is as it is so mixed with wall rock, and what we take to be the walls are very irregular.

NEW EBERHARDT (Nov. 1).—The mine manager reports as follows:—Monitor: Total weight of ore extracted and assorted during the two weeks ending Oct. 31, 24 tons; assay value of same, as per mine samples, \$30 per ton. Mine: The outlook at the mine is somewhat better this week, as the seams of ore are beginning to enlarge again, and the grade also is getting better. Bullion shipment: Enclosed herewith please find shipping receipt for six bars of bullion; total, 9,295.69 ozs.—\$10,714.12. Eberhardt: North drift No. 2 advanced for the week 5 ft.; total length, 68 ft.; the face of this drift is nearly all spar. Yesterday I moved the men back from the face of the drift about 20 ft., and I shall cross-cut into the hanging-wall, or easterly, for a few feet. There is at this point considerable quartz, and I am anxious to test it and see if there is not some of a better grade further back from the footwall. South drift from No. 2 upraise: Advanced for the week 3 ft.; total length, 68 ft. The men have only been working in this drift three days during the past week, one of them being on the sick list. The ground has become much softer, which will enable us to make better progress, if it will only continue. The spar still continues with us, carrying some bunches of quartz. No. 3 cross-cut west advanced for the week 7 ft.; total length, 103 ft. The general appearance of the ground through which we are passing is quite favourable for ore, and, as mentioned in many of my previous letters, it is a mixture of black and white spar, carrying some low-grade quartz, which altogether looks quite favourable. Beecher cross-cut east advanced for the week 5 ft.; total length, 85 ft. The face of this drift continues in hard lime, with some few stringers of spar running through it. On our tunnel level I am breasting out some ground and straightening one of our cross-cuts, and making ready to sink as soon as the cold weather comes. I desire to have everything in readiness, so that we may get down below and see if we cannot find a continuation of the ore we had here in 1883. I feel quite satisfied there must be a continuation of this ore, and I do sincerely hope that we shall be fortunate in soon finding the same.

NEW VIOLA (Nov. 5).—The manager of the mine writes:—The total expenditure for Oct. amounted to \$1,775.16, and 118 ft. of work was done in sinking and drifting at various points on the Joe claim. The limestone is getting softer, and shows quite a number of small pockets of iron. The drift from shaft west was driven along a seam of yellow decomposed limestone, lying between the quartzite and brown lime. As the material did not change, and the ground became dangerous, owing to the presence of water (in small quantities), I started a drift about 25 ft. above the bottom of this shaft, and am now driving it to the south-east in a stratum of rather good-looking limestone. I am doing some surface prospecting east of the bore-hole, where we have found some good-looking pockets of iron.

OOREGUM.—Mine report for fortnight ending Oct. 27: Wallroth's shaft has been sunk 10 ft. 6 ins.; total, 411 ft. 6 ins. from surface; lode 3 ft. wide, assaying 2 ozs. 8 grs. per ton. The 360-ft. level south advanced 11 ft. 6 ins.; total, 124 ft. 3 ins.; lode, 1 ft. 6 ins.; worth 4 ozs. 18 dwts. per ton. The 360-ft. level north has been driven 1 ft.; total length, 42 ft. 9 ins.; lode, 1 ft. 3 ins. Winze 360-ft. level south has been sunk 2 ft. 3 ins.; total, 7 ft. 2 ins.; lode, 3 ft. wide; value, 3 ozs. 17 dwts. 7 grs. per ton. The 230-ft. level south advanced 31 ft. 6 ins.; total length, 872 ft. 7 ins.; lode, 5 ft. 3 ins. wide; assay value, 2 ozs. 14 dwts. 10 grs. per ton. The 215-ft. level north extended 1 ft. 6 ins.; total length, 92 ft. 9 ins.; lode, 2 ft. wide; worth by assay, 3 ozs. 5 dwts. 8 grs. per ton. The 215-ft. level south has been advanced

2 ft. 6 ins.; total length, 283 ft. 5 ins. On arrival of the new compressor, on order, and after its erection, greater development and output may be looked for here. With our present compressing machinery we can only keep important points going with rock-drills; hand labour progress is necessarily slow in wet places. Low's shaft: The 350-ft. level north has been advanced 5 ft. 6 ins.; total length, 103 ft. 6 ins. The 350-ft. level south advanced 6 ft.; total, 202 ft. 10 ins.; lode, 6 ins. Winze 350-ft. level north has been sunk 4 ft.; total depth, 23 ft. 9 ins.; lode, 2 ft.; value, 1 oz. 12 dwts. 16 grs. per ton. Winze 270-ft. level north has been sunk 2 ft. 6 ins.; total, 66 ft. 10 ins.; Probyn's shaft has been sunk 10 ft. 3 ins.; total depth from surface, 602 ft. 4 ins.; lode, 5 ft. wide, assaying 3 ozs. 16 dwts. 5 grs. per ton. The 550-ft. level south has been extended 32 ft.; total length, 150 ft. 3 ins.; the lode is 3 ft. 6 ins. wide; worth, 1 oz. 17 dwts. 10 grs. per ton. Rise back 550-ft. level south 11 ft. 4 ins. risen; total, 20 ft. 2 ins.; lode, 7 ft. wide, assay value, 4 ozs. 7 dwts. 2 grs. per ton. This rise is now holed to No. 1 winze, 450-ft. level south, laying open a rich block of quartz for stopping. The 450-ft. level south advanced 10 ins.; total length, 331 ft. 7 ins.; lode 1 ft. wide, assaying 1 oz. 12 dwts. 16 grs. per ton. The rise in back of 450-ft. level south has been risen 11 ft. 4 ins.; total height, 18 ft. 4 ins.; lode 3 ft. wide; worth 2 ozs. 7 dwts. 21 grs. per ton. No. 2 winze 450-ft. level south has been sunk 1 ft. 6 ins.; total depth, 37 ft.; lode 4 ft. wide; assay value, 1 oz. 17 dwts. per ton. No. 3 winze 450-ft. level south sunk 3 ft. 2 ins.; total, 11 ft. 8 ins.; lode 3 ft. wide; assaying 1 oz. 10 dwts. 12 grs. per ton. Winze 450-ft. level north has been sunk 4 ft. 10 ins.; total, 27 ft.; lode 3 ft. wide; value, 6 ozs. 14 dwts. 21 grs. per ton. No. 2 winze 300-ft. level south has been sunk 3 ft. 10 ins.; total, 25 ft. 10 ins.; lode 1 ft. 3 ins. wide, assaying 1 oz. 17 dwts. 18 grs. per ton. The 300-ft. level south extended 10 ft., total length, 339 ft. 3 ins.; lode 1 ft. 3 ins.; assay value, 2 ozs. 4 dwts. 15 grs. per ton. It will be seen that the lode continues to be strong and rich, with every indication to lead us to suppose it will so continue. We are getting over our labour trouble; machine coolies, carpenters, and masons are regaining confidence and returning to their work. The machinery is working well, and the mill is yielding daily good returns. We yesterday tried the 18-in. and 30-in. by 3-ft. stroke compound engine for tailings machinery, which, running light, appeared to be a first-class piece of work. The tailings will start this week. This work, but for the troublesome time passed through during the past year, would have started four months ago. We are now commencing the fixing of the piles for the new 20-head mill. Health of the camp good, only one Italian off duty with a crushed finger.

(Continued on page 747.)

REPORTS OF MEETINGS.

THE KAPANGA GOLD MINING CO., LIMITED.

TELEGRAM OF OCT. 27, SHOWING £1,100 PROFIT FOR THE MONTH
CONFIRMED—PROSPECTS OF THE MINE EXCELLENT.

THE ordinary general meeting was held at Winchester House, yesterday, "for the purpose of receiving the directors' report and statement of accounts, the election of a director and auditor, and transacting the general business of the company."

Mr. W. Molesworth St. Aubyn

(chairman of the company) presided.

Mr. W. J. LAVINGTON (secretary) read the notice of meeting.

TWO LODES.

The CHAIRMAN: Gentlemen, I presume I may, as usual, take the agent's report, the statement of accounts, and the directors' report as read. I will therefore proceed to call your attention to the principal points referred to in our agent's report. To begin with, no operations have been carried on during the year below the 420-ft. level. The increase of water consequent on the workings southward has been more than our engine could manage, hence the developments have been confined to the operations at the 420, the 300 and intermediate levels, but you will see from the report that at these levels the extent of the tutwork has been considerable, and in excess of that done in the previous year. You will remember that we have two lodes in our sett—viz., Scotty's and Kapanga lodes. These are parallel with each other, and about 180 ft. apart. About three years ago we had a very rich shoot of ore in the 300-ft. level on Scotty's, and the level has been carried on steadily southward with a view of finding other shoots, and from the manager's last reports, it will be seen that the appearances of the lode in the extreme end are decidedly favourable; the end will be pushed on steadily. While the operations detailed in this report were in progress, the 300 end in Kapanga lode has been pushed forward, with a view of bringing the level parallel to the shoot of ore on Scotty's, as the opinion was that a similar shoot of gold might be found on that lode. This view has apparently been fulfilled, as a month ago we had a cable from our manager, saying, "Struck payable gold;" followed in a few days by the announcement that the working for the month had resulted in a profit of 1,100%. The message does not say that the discovery is on the Kapanga lode at the 300-ft. level, but a reference to the reports for the last few months will show that the conjecture is not wide of the mark. Now, gentlemen, one word in respect to the discovery. None of us, of course, can tell the evident value of the shoot of gold, but we can recollect that the one on Scotty's was very valuable, and that the last run of gold, had at the Kapanga lode, which we fancy has always been considered the better of the two, resulted in a return of something like 60,000%.

THE RECENT DISCOVERY.

We shall be better able to judge of this after a short time. These, gentlemen, are the more particular points of interest connected with the matter, for the fuller details I must refer you to the manager's report, which has been already circulated. The future operations will be, first, the pushing on the levels southward to intersect other shoots of gold, and I may here mention that, with a view of being prepared,

we have applied for the piece of ground immediately adjoining our southern boundary, so as to follow the veins; and, secondly, the sinking of our main engine shaft, now suspended for want of engine power, but which is already sunk to a depth of about 570 ft. The sinking of this shaft is with the view of getting into more settled ground, where it is believed the lode will become permanently rich, as well as to reach a depth sufficient to meet with the junction of the Kapanga and Scotty's lodes, which, from all appearances, are making towards each other, and it is one of the aims of the present company to effect this, although circumstances have prevented steady work at it; yet considerable progress has been made. The principal obstacle has been deficient engine power, and when our present manager left England in the spring of last year, he had instructions to take up the work energetically. He found, however, that the increase of water southward was so great as to tax the power of the engine, and thus prevent regular work being carried on in the shaft. Therefore he sent us a requisition for a new engine, and sundry other machinery, to enable him to take up the working of the engine shaft in a proper and energetic manner. Just at the time the requisition was received the idea of amalgamation with the Coromandel Gold Co. was broached, and, as upon consideration the board considered the idea good, it was in due time submitted to the shareholders, accepted by them, and has since been completely carried out. You will observe that in their report the directors expressed their opinion that the amalgamation is likely to be of good service to the company. You may wish perhaps to hear from me why the board is of that opinion. In the first place, the amalgamation puts us in possession of a first-class powerful engine, amply sufficient to carry down our shaft to any depth, together with spare machinery such as we really need, and all of it, so to say, at our very doors, thus preventing a considerable outlay in cash, as well as making a great saving in point of time. Further, the amalgamation has also put us in possession of a valuable freehold known as Blagrove's; the freehold is situated south of us, and immediately adjoining the new piece of ground we have lately applied for and taken up. We have traced our lodes into the ground; it is absolutely virgin, and, being situated in the midst of property which has been rich in gold, gives us the opinion of its great value, especially as slight workings have already resulted in finding gold.

COROMANDEL AMALGAMATION.

I need hardly say that as soon as the amalgamation was assured cable instructions were sent to Capt. Argall to remove the large engine to Kapanga, and to work Blagrove's Freehold vigorously, instructions which have since been fully detailed and confirmed by letter. But, gentlemen, there is another reason why the amalgamation may be considered beneficial, and that is the fact that the Coromandel shareholders have not only handed us over their freehold machinery, but have provided us with funds to work the former. It has been our constant aim to use the funds raised at the formation of the company for the purpose of developing Kapanga Mine, and more particularly for sinking the shaft. When, therefore, the amalgamation was mooted, it became a matter of discussion whether any of the company's funds should be used to work any portion of the Coromandel property, a proposition to which we were averse. It was, therefore, arranged that in the amalgamation the Coromandel shareholders should have 65,000 shares for division amongst them, with a liability of 1s. 6d. a share, making 4,925l., from which the debts of the Coromandel Company have to be paid. We calculate that this will give us fully 3,000l. with which to open up the freehold. I think now that I have touched upon most of the matters connected with the mine and the Colonial operations, and I trust I have been able to set the position clearly before you, and before leaving this I must congratulate you upon the improved prospects of the company. They are, in fact, very satisfactory, and I believe and hope that the coming year will be prosperous.

IMPROVED OUTLOOK.

Turning now to the statement of accounts, I cannot say much in explanation, as we endeavoured to set out the figures so clearly and distinctly that everyone of you may ascertain for yourself the actual position of the concern. The expenses have been heavy during the year, owing to the considerable amount of dead work that has had to be accomplished, but the work has already commenced to bear fruit. The appearances are altogether in favour of enabling us to show a very different statement at the end of the current financial year. I now formally move "That the directors' report and statement of accounts be received and adopted." (Cheers.)

VIEWS OF MR. HENRY WILSON.

Mr. HENRY WILSON: I second the resolution moved by the chairman, and adopt in their entirety the remarks he has made. It perhaps would have been more agreeable—it would certainly have been so to myself—if he had expressed some regret at our not being able to place before you a better statement as regards the results for the year to which the report has reference. No doubt, gentlemen, you will have carefully read the report of our representative on the mine. It is from that you will glean the chief causes to which our keen disappointment has been attributable. We are associated with this mine, and I see other gentlemen present who are associated also with other mines, but they have not a notion of what a treacherous mine Kapanga is, and the difficulties in administration it has entailed upon the directors and the staff. From day to day we have hopes which lead us to believe that almost within a few hours we shall drop upon some of those nuggets from which we derive our prosperity, but that has not been the case during the greater part of the period to which the report has reference. We have driven an enormous amount of ground, the greater portion of which has been composed chiefly of clay and sandstone, until

THE DISCOVERY IN THE 300 AT SCOTTY'S,

which has been made known to you and to us through the medium of the telegram of Oct. 27. The chairman has explained to you the importance of that telegram. The manager has opened new ground, and if it continues, as we have every reason to believe and hope, it will give us an enormous amount of backs and sufficient produce to please you all. (Hear, hear.) As regards the difficulties with which we have had to contend—they are to be found very clearly stated in the penultimate paragraph of Capt. Argall's report. If you have read that report, that paragraph cannot fail to have

attracted your attention. He states "the gold returns for the year have been anything but satisfactory." Although we have raised an enormous amount of quartz, a great deal of it was so poor that we could not put it through the mill. One satisfactory feature is this—that our ore readily yields to amalgamation. There is no refractory ore, so that the expense of reduction is slight, although we must also bear in mind that it is not what is called rich gold, but pale gold, inasmuch as the percentage of silver (as it is in all New Zealand mines) gives it this particular colour. The gold returns for the year have been anything but satisfactory. This is accounted for because the "shoot" did not lengthen out or hold down at the Intermediate and Blithe's levels, and also at our not being able to find any gold at the 420 ft. level. Gentlemen, these were the very points which gave indications such as every miner would base his hopes upon. Unfortunately, in consequence, they have been abandoned. The chairman has also mentioned the great benefit which must accrue to this company from the acquisition of Coromandel. I was a considerable shareholder in Coromandel, and took a warm interest in the property, as I believed then, and believe now, that it is a property superior to Kapanga. We endeavoured to place our views, and we had substantial reasons for expressing them strongly, before Coromandel shareholders, with a view, if possible, to get sufficient funds to develop the property, which we never had. However, I suppose we must regard it as an illustration of the axiom that "what is one man's meat is another man's poison," and we have the meat most certainly. We have a property upon which a large amount of money has been expended. We have 116 acres of freehold known amongst the shareholders as Blagrove's. We have a complete mining plant, two engines with boilers, in addition to the Cornish 40-inch beam engine, the other engines being rotary, and that engine, when put up and erected, cost 1,783*l*. 14*s*. 9*d*. The property which was on Coromandel, and which we now have acquired, actually was valued, irrespective of that engine, by experts as worth 10,000*l*. or upwards, so that we have taken over the property with all the machinery thereon, and, as the chairman has explained, the Coromandel shareholders, for the privilege of being allotted 65,000 shares in this company, have joined us, and they pay 1*s*. 6*d*. upon each of those shares. With reference to the machinery, the chairman has explained the peculiar circumstances in connection with it, and the necessity of providing for the sinking of the Green Harp shaft. It has always been a peremptory order to our managers to go on with the working below the 160. No man, with any experience of mining, for a moment believes a mine has been half developed, the lowest level of which is only 160 ft. from grass, but we have had difficulties to contend with, with which most of you are familiar. Although not in the tropics, the rainy season is certainly tropical. We have had a great deal of difficulty with the old engine. It has been patched up repeatedly, and so has the winding engine, into which a new piston was put, but notwithstanding that we received such remonstrances from Capt. Argall that it would be dangerous to hazard the engine for another lift, that we were obliged to accept his recommendations. Now, having the new boiler, which will take but a short period to transplant (for it is only 1½ miles distant), instructions were sent some time since that that work was to be commenced forthwith.

FUTURE PLANS.

Our engineer, who was unfortunately at home on sick leave, has left, and will be there probably next week. The intention is to sink the shaft on the incline from the 160, with a view to get between the Coromandel and Kapanga lodes. I must take exception to the statement of the chairman as to the distance of 250 ft. between the two lodes, for I believe it is 125 ft., because on the scale map the distance between the two lodes below the 300 was about 100 ft., so that the sinking of the shaft on that incline will give some opportunity of testing the lodes right and left—the value of the two lodes—as he goes down. As to the difficulties which must necessarily be encountered in an oblique or incline shaft, they will be those principally of hauling; but the main object to be attained is to give him facilities so that he may be able to test economically at various distances both the Kapanga and Coromandel lodes. We wrote to him, carefully telling him we would not take upon ourselves the responsibility of advising him upon the subject, and that we would take no exception to his policy, but would look to him to do his best for the advantage of the company.

A BIG STAKE.

Probably for every shilling that most other shareholders have put into this company I have put in a pound, and it is a matter of great regret to me that we, as a board, cannot place before you a more satisfactory state of things. It has been owing to no dilatoriness on the part of the directors, or want of energy upon that of the local managers, because you know that everything that marks towards success is to be derived from the local management. The question, then, is—have we confidence in our local manager? We have absolute confidence. Any man who reads his letters can only come to the conclusion that he is a man who knows his work, and does it. The position we occupy to-day is not so satisfactory as I could wish, but I think from the remarks made by the chairman with reference to the new ground opened up at the 300 in Kapanga, and the results which have accrued as far as I can make out, the prospect is very hopeful, for out of a month's working upwards of 1,100*l*. profit has been made, to which you may add the expenses. Believing that that run of gold bearing ground will last, I think we may safely

LOOK WITH SATISFACTION TO THE FUTURE.

Other points that were unproductive have been abandoned for the time, but who knows, with 1 fm. of driving in one or more of these points, something might not have been developed, for which we have been all this time working? All you who have been associated with mining know perfectly well that the barren point of to-day may by the next stroke of the miner's pick develop into a bonanza. That is exactly the position of this mine. Although from day to day the appearances are most favourable, they are but too frequently evanescent. I second the resolution. (Cheers.)

The SHAREHOLDER: It would be satisfactory to know the balance in hand available for operation.

The CHAIRMAN: About 12,000*l*.

The report was unanimously adopted.

A SHAREHOLDER: Have you received any telegram since Oct. 27?

IMPORTANT CABLE.

The CHAIRMAN: Yes, we have. But I know, from experience of meetings, that people think if a telegram comes just before the meeting, it has reached the directors in some other way than it should. However, I am glad the question has been put, but, in any case, before the meeting closed, I should have read the copy of a telegram we received only two or three days ago from our manager:—

"Indications favourable for further discoveries. Expect good returns when stoping commences. Late discovery important for future of the mine." (Loud cheers.)

A SHAREHOLDER: Cannot we have the meeting earlier, as a long period elapses between the date of making up the accounts (June 30) and this period? The manager does not seem to write his report till two months later.

The CHAIRMAN: There is an enormous amount of work to be done, and during Sept. and Oct. shareholders like myself are generally out of town. If we can manage to meet you earlier we shall be most pleased, but Mr. Lavington tells me that the accounts only arrived on Oct. 16, so that not much time has been wasted. (Hear, hear.)

Mr. WILSON: The shareholder will accept the assurance of the board that they will do their utmost to hold the meeting earlier, but on this occasion there has been a considerable amount of extra work in consequence of the recent acquisition of Coromandel; otherwise we might have held the meeting earlier. I am a great advocate for letting you know, for weal or woe, everything that occurs, and in future we will endeavour to meet shareholders' desire. I propose the re-election of the chairman as a director. He has presided over many of our meetings in the capacity of chairman, and you will have had ample opportunity of judging for yourselves his fitness for the post.

Mr. BREUER (director) seconded the motion, which was carried unanimously.

IMPORTANT TELEGRAMS TO BE SENT TO SHAREHOLDERS DIRECT.

Mr. ATKEY: It will be gratifying to the shareholders if, when telegrams arrive, they are sent out.

Mr. WILSON: With regard to the telegram of Oct. 27, it was not three minutes in the office until it was posted up in the Stock Exchange. It was published in all the leading papers and appeared the next morning. It does not seem desirable that we should incur the expense of sending out 1,500 notifications when telegrams arrive. That money can be better spent underground, and we have not one shilling too much for such a purpose.

Mr. LAVINGTON, in reply to a question, said that the last telegram was kept for the board meeting and for the meeting to-day, but otherwise telegrams were always put up in the office directly received.

The CHAIRMAN: I am not at the office every day, though my colleague, Mr. Wilson, is. We thought it would be better to keep this telegram for the meeting, and Mr. Lavington thought so too, and he is a man of great experience. (Hear, hear.) It is nothing more than a confirmation of the telegram of Oct. 27. There are 1,500 shareholders, and notwithstanding the expense, as it seems to be the desire of the shareholders, particularly for the benefit of those living in the country, the really important telegrams shall be sent out—most probably on a postcard.

A SHAREHOLDER: Although I am in favour of every information being given to country shareholders, I trust it will be left to your discretion as to what telegrams should be dealt with in this way. If all were sent out as received, the expense would surprise the shareholders. (Hear, hear.)

Mr. DAWSON: I was not aware that it was proposed to send out all the telegrams, for Mr. Atkey, who made the proposition, simply suggested that important telegrams should be sent out, particularly for the benefit of those shareholders who live in the country, and who do not see the financial papers. (Hear, hear.) Many of these shareholders, seeing a sudden rise in the shares, might be induced to sell their holdings, because ignorant of the contents of the telegram. I suggest that such a telegram as that of Oct. 27 should be printed on a post-card, and sent to each shareholder.

The CHAIRMAN: I will give my assurance that telegrams shall be dealt with as suggested.

Mr. GREY proposed the re-election of the auditor, Mr. J. C. Bolton, at a fee of 30 guineas.

The motion was seconded, and carried unanimously.

Mr. BOLTON, in returning thanks, said that no delay occurred in preparing or sending out the accounts as soon as received from the other side. His experience of Mr. Lavington's office was that work of this kind was done with the utmost possible speed.

Mr. LAVINGTON: The instructions of the board to the manager are—that as soon as the accounts are completed they shall be forwarded, and this takes about six weeks, but that he shall not send his report until a month later, during which month we are preparing the accounts for the shareholders. By the time they are ready the report giving later information arrives and is sent with them. (Hear, hear.)

A cordial vote of thanks to the chairman closed the meeting.

THE RAVENSWOOD GOLD CO.

REPORTS BAD FOR THE PAST YEAR, BUT MUCH BETTER THIS YEAR.

AN ordinary general meeting was held on Monday at the Offices, Woolpack Buildings, Gracechurch Street.

Mr. T. Benfield Harbottle, a director of the company, presided.

In moving the adoption of the report and accounts for the year ending 1890, the CHAIRMAN stated that during the period covered by the accounts the revenue account showed a loss of 2,970*l*. 15*s*. 10*d*. A large portion of that sum, however, was due to opening up and developing the Mellaneur Mine, and to the expenses incurred in freeing the mines from water after the floods of last year. During the present year reports of a far more satisfactory character had been received from the mines. They were now about 1,200*l*. better off than was the case in the previous year, and many of their liabilities had been wiped off.

After several questions had been asked, and answered by the CHAIRMAN, the motion was unanimously agreed to.

FOREIGN MINING INTELLIGENCE.

(Continued from page 744.)

OSCAR (Nov. 12).—Hodgkinson's shaft: The timbering of this shaft, lengthening of skip road, and the fixing of a larger boiler will be completed to-day. We shall, consequently, be able to continue the sinking of the shaft again to-morrow. In our last we called your attention to the great alteration in the dip of the lode. We are now inclined to think it has been split by a band of intrusive rock into two divisions, one of which will, with a slight heave, be found to continue on the former dip; while the other dips almost perpendicular. We are putting out a short cross-cut to see if this is the case or not. The quartz which we crushed a fortnight ago, and which milled nearly 17 dwts., came from the latter division of the lode. The 300-ft. level: As these men have been employed as shaftmen there is no alteration to report this week. The lode in this level, although fairly defined, has not been rich in quartz. We have selected and made a mill test of 10 tons, which milled 5½ dwts. to the ton. This shows an improvement of about 25 per cent. on our last crushings from the upper levels. The 200-ft. level: Since leaving the dyke we have driven several metres through dead ground. About the middle of last week we broke into a vein about 2 ft. wide, carrying some quartz, calcite, and a little iron pyrites. As it has a westerly underlie, it is scarcely probable that it can be the main lode. We shall follow it a short distance, and then cross-cut to prove the ground; no assays have been made. The lode in the winze remains unaltered both in width and value. We have crushed 30 tons as a test for the value of free gold in this section of ground; result, 10½ ozs., or nearly 7 dwts. of gold to the ton. This also shows that there is every probability of meeting with richer quartz as we get deeper. Stopes above 200-ft. level: From these we have crushed 30 tons this month, and 55 tons a short time ago; result, 13 ozs., or a little over 3 dwts. to the ton. The total crushings amounts to 131 tons, which has given 31 ozs. bullion, or an average of nearly ¼ oz. to the ton. During the last few months our work has been chiefly confined to the sinking of the shaft and the extension of the levels. We are now engaging men to stope some of the ground opened by the winze between the 200 and 300 levels, so as to commence crushing early in the new year.—J. DAW, jun.

PINOS ALTOS (Oct. 21).—The manager writes as follows: The work done in the mine for the week ended Oct. 17 was as under: The drift on the 11½-level west was started and run 3½ ft.; the assay was \$24.84. The 13th east drift was run 6½ ft.; the last assay \$24.4. I have this week started the regular 50-ft. cross-cut. The ledge here still seems to be broken up, but not so much as further back. The 13th west drift was driven 5½ ft.; the last assay was only \$8.86. The 14th west drift was advanced 6½ ft.; the last assay gave \$3.70. Both this drift and the 13th west are looking better this week, especially

the latter, which has native silver in the face. The 17 east drift was advanced 5½ ft.; the last assay was \$3.45. This drift is in hard quartz, and carries hanging-wall matter on the foot. The 17½-level west winze was sunk 2 ft. The average assay of the broken ground was \$15.76. The winze is spotted with bunches of good ore, and I can only refer to what I said on this matter last week. I am levelling down the 17th west drift to almost a dead level, so as to be able to use the above-mentioned winze, or the shoot that will be put in the shaft, to deliver ore or waste to the cars in the tunnel. There were hoisted 853 skips of ore and 99 skips of waste during the week. The average number of pairs of drillers was 28 for the week. Timbering is being done in the 14th west stopes for reasons explained in my former letters. We are still opening out the connection between the main shaft and tunnel, using air drills for the purpose. It is very slow work on account of raising and lowering the machines and tools, but I hope to have it done in two or three weeks. We are now continuing the re-timbering of the tunnel, so as to have it in perfect order when we are ready in the shaft. The following is the statement from the mill for the week ended Oct. 17:—Lost time on batteries: General repairs, 2 hours. Ore worked in mill: 559 tons crushed, at \$22.38—\$12,510.42; 29 tons slimes, at \$10.33, equal to \$299.57; 530 tons tailings, at \$7.12, equal to \$3,773.61; equal to \$4,073.17. Week's return, \$8,437.25. As will be noted, the battery sample was better for the week; it has still further improved during this week.

TILT COVE.—East Mine—Minnie winze: We have intersected the rock wall at bottom of winze, which appears to underlay at an angle of 45 degrees to the south-west under the ore body. After sinking a few feet further to prove the ground, if nothing to value is met with, we shall probably suspend operations at this point, as it may be advisable to sink a new shaft more in the centre of the deposit. Our hoisting appliances are not for an underlay shaft. Ground sunk last month, 1 fm. 4 ft. 3 ins. Total length below the 10-fm. level, 18 ft. 3 ins. Taken by nine men at \$180 per fm. Output for month: 3,800 tons of 4½ per cent. wet assay. Arrival at Swansea: The s.s. Alfonso with 1,150 tons of East Mine ore of 6 per cent. wet assay.—Capt. W. R. TOMS.

WENTWORTH PROPRIETARY.—Cablegram from Mr. W. H. Irwin, the company's general manager:—"We are now opening up the Crinoline vein (Shamrock shaft), which is 10 ins. wide, and assaying 30 to 35 ozs. gold to the ton. We are at present cross-cutting 25 ft. deeper, and hope to cut the vein during the next few days. We have very good indications in the south drift of Shamrock shaft 218-ft. level. We will have the water out of the Reform mine in six days, and work will be commenced towards the Homeward Bound vein (Golden Point shaft). We are now starting winze in the north drift of Phoenix shaft 200-ft. level. The vein is compact and well defined with fine prospect."

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

LORRISON AND CO.,

HOME, COLONIAL, AND AMERICAN STOCK
DEALERS,

AVENUE HOUSE, and 15, COTHALL AVENUE, E.C.

TELEGRAPHIC ADDRESS: "OSTREOSUS, LONDON."

BANKERS: LONDON AND NORTH-WESTERN.

LORRISON and CO. deal in all stocks for three months forward on deposit of 2 per cent., six months 3 per cent., and guarantee to close all transactions immediately instructions are received, and remit differences by return of post. No contangos are charged until the expiration of the account mentioned on the contract. Lorrison and Co. make it a speciality to enclose Stock Exchange official closing prices when instructions are executed; therefore country operators are never deceived by fictitious prices appearing on contracts. Lorrison and Co. have been established for some considerable period, and through giving immediate attention to clients' wishes we have successfully secured a gigantic connection. Although it is not our desire to praise ourselves, operators can at once perceive where they receive fair and straightforward treatment, and in the event of these remarks being contradicted, we can refer with confidence to those clients who have profited by following our advice; otherwise they are at liberty to expose us in these columns if they desire.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Thunder.—Looks very like a swindle.

T. Parker.—No market for the first named, and the latter we do not advise.

Sorrowful.—Expenses are too heavy. Cannot pay.

Orient.—Market all sellers just now, therefore you must hold.

Venturesome.—Buy and hold for a time.

Lady Investor.—It is not due to any falling off at the mine. Hold.

Stores (M. K.).—Yes. A small rise may be expected.

M. G. (Delfast).—Their anticipations will, we think, be fully realised very soon.

Looker Out.—A good purchase.

Mining Speculator.—The shares should go better.

Uncut.—Ample working capital. Hold your shares.

Campden.—The management is good both here and at the mine. Shares look a fair purchase.

B. T. R. (Montgomery).—Not as an investment.

S. Maynard.—Yes, at first opportunity.

Warrupte.—We have no knowledge of either of them. Throw circulars in the fire.

Small Holder.—Cannot say definitely when the stamps will be at work. Write to the secretary on the subject.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other securities for European investors.

Professional and confidential reporting upon companies, mines, mineral properties, lands, and generally advising European shareholders and others in South African ventures.

To act as agents on behalf of principals interested in South African investments, and for the protection of their interests, and where desired, to register shares in such undertakings, and to issue certificates in exchange for same, thereby enabling European holders to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndicates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South African securities or interests.

A Mining Circular containing special information will be posted weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNICATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the Company.

The Mining World.

LONDON: SATURDAY, Nov. 21, 1891.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

RE-ARRANGEMENT OF THE CAPITAL ACCOUNT OF A BIG DIVIDEND-PAYING COMPANY.

MR. W. M. BULLIVANT, the holder of 7,614 shares of the New Pierrefitte Mining Co.—a re-constructed company, by-the-bye, has for some time been exercised in his mind as to the position of the share capital of this highly profitable concern. In the first place, we may state that the company paid 15 per cent. in 1888; 55 per cent. in 1889; 80 per cent. in 1890; and, up to the Sept. of this year, 30 per cent. The mines, which are in the Pyrenees, were never looking better than they are now. A new source of revenue will be from the blende, which was formerly regarded as worthless, but which is now rendered marketable at about 5% per ton. It will naturally be asked why Mr. Bullivant and the other shareholders under these circumstances are not satisfied with the satisfactory state of things that exists? Well, for the simple reason that the concession embraces 46 lodes, in addition to the one from which alone these big profits have been made, any of which, according to the report of Mr. Charleton, the well-known mining engineer, who has spent six months on a visit of inspection to them, may be more valuable than Pierrefitte itself. To the working of some of these lodes the shareholders might either apply their Pierrefitte dividends, which would be unpleasant after the regular way in which they have been paid, or they might re-arrange their capital account, and so admit a larger body of shareholders who might at the same time provide the capital for the preliminary workings. It is the latter course upon which the shareholders have resolved, and we applaud their decision. Our readers will not lose the time they may bestow upon a perusal of Mr. Bullivant's speech, whilst of course for Pierrefitte shareholders it possesses an interest that is paramount. The general reader and the shareholders alike will see the nature of the scheme he submitted, and unanimously carried at the meeting on Wednesday, and the general public in particular will perceive the chance they may possibly have at an early date of joining one of the most prosperous mining companies of the present time.

KAPANGA MEETING.

THE meeting of the shareholders yesterday was a decidedly more pleasant function than a few weeks ago one would have believed possible. Whilst Kapanga must be debited with many disappointments, it must, in fairness, be credited with many pleasant surprises. One of these came on Oct. 27. To directors who have studied the reports (particularly to a director like Mr. Henry Wilson, who is in daily attendance at the office) the telegram of that date announcing a profit of 1,100% for the month did not come altogether as a surprise, thought to many of the shareholders it must have done so, for they were under the impression that the mine was doing badly. In fact, with Kapanga it is always a feast or a famine. A feast came a couple of years ago when dividends were paid, and when the shares rose to 22s. 6d. Since then there has been a famine. Now again there promises to be a feast, for when Kapanga strikes a rich body of ore as it has done in Scotty's lode, there is no knowing how much gold may be got out of it. Our full report may be left to tell its own tale. True, it is illustrative of the vicissitudes of mining, but it is also demonstrative of this, that everything is possible in the case of a mine honestly and faithfully directed as Kapanga has been.

GOLD MINING IN THE RANDT.

ALTHOUGH valuable auriferous reefs were discovered in the Witwatersrandt district of the Transvaal early in the year 1883, it was not until fully three years later that the gold-mining industry in that portion of South Africa began to assume the important dimensions which it has since attained. Since then, as our readers have been made fully aware from time to time, a very considerable amount of development has taken place, and despite almost systematic blundering and bungling, and not a little dishonesty, in connection with the management of many of the mines, such progressively increasing results have been shown as to lead to the belief that the Randt goldfield is destined to become the greatest producer of the precious metal in the world. Under these circumstances, it seems to us desirable that we should review as concisely as possible the steady growth of the industry as a whole, and the progress shown by the principal properties which are contributing to the aggregate yield of gold from the district. It is the more interesting that we should make this review now, as the production of the precious metal in the district has recently shown such an enormous expansion, that sooner or later investors and speculators are bound to give more of their attention to Randt gold shares than they have been giving lately. We would add here that we have no desire to urge the merits or the demerits of any particular company. All that we wish to do is to place the facts as succinctly as we can before our readers, and leave them to form their own conclusions upon them.

Until nearly the end of 1887 no really authentic particulars were published of the monthly crushings of the Randt mines, and even since then some of the returns have not been quite accurate, as gold obtained from the Klerksdorp and Zoutpansberg districts have been included. In the tables, which we subjoin, these extraneous crushings have been eliminated. To the end of 1887 it is estimated that the amount of gold yielded by mines in the Witwatersrandt district was about 34,897 ozs., or less than one half of last month's total. The monthly crushings since then are given in the following table:—

Month.	1888.	1889.	1890.	1891.
	Ozs.	Ozs.	Ozs.	Ozs.
January ...	11,269	24,986	35,038	53,205
February ...	12,162	25,800	36,886	50,073
March ...	14,706	28,075	37,600	52,949
April ...	15,853	27,136	38,799	56,362
May ...	19,002	36,298	38,854	54,672
June ...	16,328	31,272	37,412	55,863
July ...	19,966	32,407	39,452	54,920
August ...	19,877	32,142	42,861	59,070
September ...	20,495	34,369	45,467	65,601
October ...	27,775	31,914	45,250	72,793
November ...	27,336	36,116	46,800	—
December ...	26,148	39,218	50,352	—
Total ozs. ...	230,917	379,733	494,801	575,508

Up to the end of last month, therefore, the aggregate production of gold from this district amounted to 1,716,088 ozs., which, at an average value of 37. 12s. per oz., represents a total of nearly 6,178,000%. It will also be seen that for the past 10 months the yield has exceeded by 80,707 ozs. the whole amount raised in the preceding 12 months, and, judging from the latest information received from the district, there is every probability that for the current year the aggregate production will reach something like 725,000 ozs. of gold, or roughly, 2,610,000%. The expansion appears to be due to several causes, among the more important being the additional number of stamps employed, the gradual use of machinery for treating the tailings, the improvement of the reefs in depth in some of the properties, and more systematic and capable management in several directions. To what degree these influences will continue to affect the returns it is, of course, impossible to say; but if they only operate to a moderate extent it is not unreasonable to anticipate that the Randt

district will shortly be yielding gold to the amount of over six millions sterling per annum, and that the industry will stand in the front rank among the gold-mining industries of the world. A district which has grown into such a position in about five years certainly possesses great attractions for enterprising investors, whatever may be thought of the tactics which have, unfortunately, been adopted by some of the local wire pullers, who have employed the shadiest methods of enriching themselves at the expense alike of their fellow proprietors, and of the good name of the Randt.

So much for the general aspect of affairs. Now, let us see what progress has been made by individual properties. It would serve no useful purpose, even if space permitted, to trace the proceedings of all the companies which make returns to the Johannesburg Chamber of Mines. We, therefore, propose to confine our attention to the leading properties, and to show what they have contributed to the total production of gold during the past 10 months by a couple of tables. The first table sets forth the monthly yield of the mines specified up to the return for Oct., while the second table states the percentage of gold per ton of ore treated. The second table gives particulars of only nine months' crushings, as the complete statement for Oct. has not yet come to hand, and will not be received for a few weeks to come.

Wemmer ...	37.1	18.9	21.7	19.1	17.9	18.8	15.6	19.3	20.7

These tables speak pretty much for themselves; but it may be useful to draw attention to a few of the facts brought out by them. Speaking generally, it will be seen that the production of gold from the respective properties has shown a more or less steady improvement, the most noticeable instances being City and Suburban, Durban-Roodepoort, May Consolidated, New Primrose, Robinson—the increase in this case being largely due to the successful treatment of the “tailings”—Salisbury, Simmer and Jack, and Stanhope. At Geldenhuis crushings were for a time suspended, but since they were resumed there has been a marked expansion in the monthly yields. The Jubilee Co. has had a disappointing experience, and for some months now there has been no dividend, whereas, for about a couple of years previously, at least 5 per cent. was paid each month. From the second table it will be observed that the proportion of gold obtained per ton of quartz has fallen off since the year commenced, though in this respect there has been some improvement just recently. In Apr. the average production in the district amounted to 10.1 dwts. per ton of quartz treated; in May it was 10.2 dwts.; in June, 11.2 dwts.; in July, 10.63 dwts.; in Aug., 12 dwts.; and in Sept. just under 12 dwts. per ton. It is, of course, impossible to fix any hard and fast line as to the cost of production, the mineral-bearing bodies varying considerably in value in various parts of the Randt; but in some of the well-established companies it would seem that a yield

of about 7 or 8 dwts. of gold to the ton covers expenses, and it is estimated that with improved transport facilities and a better regulated supply of labour, even a smaller percentage of the precious metal will suffice to meet all the outgoings.

It is somewhat surprising, in view of the results obtained, that so few of the companies are at present paying dividends. The following table shows the dividends paid since the end of 1888:—

Company.	1889. Per cent.	1890. Per cent.	1891. Per cent.
Aurora	25	nil	nil
Banket	10	"	"
Chimes... ..	10	"	"
City and Suburban	50	"	"
Crown Reef	6	15	50
Durban-Roodepoort	20	20	20
Ferreira	nil	nil	50
Heriot	15	"	nil
Johannesburg Pioneer	nil	10	"
Jubilee	90	55	37½
Knight's	15	nil	nil
Langlaagte	29	15	5
Meyer and Charlton	20	20	27½
Robinson	5	4	nil
Salisbury	50	nil	nil
Simmer and Jack	10	"	20
Stanhope	20	"	30
Wemmer	10	"	10

It is satisfactory to observe an improvement in the dividend distributions so far this year; though, as we have said, the number of companies making returns to their shareholders is still exceedingly small. It seems reasonable to assume, however, that better results in that respect will follow shortly. The Robinson, Geldenhuis and City and Suburban Companies must, we should think, pay substantial dividends in the near future. With regard to the prices quoted for the leading shares, we show in the following table the capitals of the respective companies, the highest prices touched, so far as we have been able to ascertain them, the highest and lowest prices last year and this, and the current quotations:—

Company.	Capital. £.	Highest Price.	Highest and Lowest. 1890.	Current Price.
City & Suburban	65000	16½	9½ — 2¼	4
Crown Reef	120000	11½	5½ — 2¾	4½
Durban Roodepoort	100000	11	4½ — 2½	2½
Ferreira	45000	26½	11¼ — 7¼	9½
Geldenhuis	120000	4½	2 — 1½	2½
Henry Nourse	100000	12½	5½ — 1½	1½
Jubilee	26000	10½	5½ — 3½	2½
Jumpers	100000	20½	11 — 1½	2
Knight's	250000	4	1½ — ¾	6/6
Langlaagte	450000	7¼	4½ — 2½	2½
May Consolidated	450000	2½	1½ — 1½	½
Pioneer	21000	15	5½ — 2	3½
Robinson (5l. sh.)	275000	*5½	4½ — 1½	3½
Simmer and Jack	85000	11½	4½ — 3½	3½

* The old 1½ shares touched 68½.

This table shows some very remarkable fluctuations. On the one hand, we see what utterly absurd market values were reached three or four years ago; and on the other, we observe what an enormous shrinkage there has since been, though in nearly every case cited there has been a considerable recovery from the lowest figures quoted this year. To emphasise the figures given in the table we may take a few examples of the value placed upon some of the properties at the highest and lowest quotations of the shares, and at the prices now ruling. The figures are, of course, only approximate, but they are near enough for all practical purposes:—

Company.	Highest Valuation. £.	Lowest Valuation. £.	Current Valuation. £.
City and Suburban	1,072,000	146,000	275,000
Crown Reef	1,335,000	330,000	540,000
Ferreira	1,192,000	304,000	416,000
Henry Nourse	1,250,000	50,000	138,000
Jumpers	2,038,000	146,000	208,000
Knight's	1,000,000	25,000	32,000
Langlaagte	3,161,000	900,000	934,000
Robinson	3,025,000	1,070,000	1,582,000

Having now provided our readers with all the facts at our disposal, to enable them to judge of the merits of the various Randt properties, we must now leave them to decide for themselves as to whether or not they will invest in the shares.

VAAL RIVER DIAMOND CO.

THE lengthy discussion which took place at the meeting of this company on Wednesday last answered a very useful purpose in bringing out some facts of an encouraging nature which would not otherwise have been given. The question was whether a call should be made and operations be actively resumed, or whether the company should be wound up. It is, no doubt, a disappointment to shareholders to find that the concern into which they have put their savings has not come up to

expectations, but we have often been at pains to impress upon our readers the fact that in mining a success may, and very often is achieved just when things look at their worst. This company has had difficulties of no ordinary kind to contend with, the works having been flooded out on two occasions. Mr. Prince, however (one of the directors), in an eloquent speech, pointed out that they were only having difficulties similar to those with which the Kimberley and other diamond fields had had to contend, and he urged the shareholders to trust the directors with a little more money. When it is remembered that these gentlemen are giving their services gratuitously, and have intimated their intention of continuing to do so until the mine pays, the course adopted by the shareholders on Wednesday of subscribing another shilling was, no doubt, a wise one. The mine is well worth a further trial, and we sincerely trust the expenditure of this capital will result in the success of the company.

NEW VANCOUVER AFFAIRS.

MR. GALSORTHY at Tuesday's meeting was able to report a bigger output of coal than had ever taken place since the establishment of the company. During the half-year the net output was 253,296 tons, and the sales were 254,025 tons, against 217,333 tons in the previous half-year, and 215,000 tons in the previous half-year to that. The result has been the large profit for the half-year reported to the meeting, and the consequent dividend paid to the shareholders. In fact, both the chairman and Mr. Tendron, his colleague described the balance-sheet they presented as the best they had ever submitted to the shareholders. There was one remark dropped by the chairman, not for the first time at similar gatherings, that the working capital of the colliery has never been what it should be. It was this, coupled with the indisposition of the shareholders to provide it, that led to the agreement with Messrs. Rosenfeld, who in season and out of season, in good report and bad report, in times of prosperity and times of adversity, have been faithful friends of the company. It is they who have provided the capital with which the big developments now taking place on the property are being carried out, and which promise to make it one of still greater value than it is now. The thanks of the shareholders were readily given to the Messrs. Rosenfeld and also to Mr. Samuel M. Robins, the superintendent, who appears for the first time during eight years to have taken a holiday, which, at last, the state of his health imperatively demanded. Mr. Robins has done yeoman service for the company, and the shareholders know it. The directors and shareholders alike are to be congratulated on the cheerful aspect of affairs as revealed in the report and balance-sheet, and emphasised by the speeches of the chairman and Mr. Tendron at the meeting.

AFFAIRS IN SOUTH AFRICA.

(From our Own Correspondent).

Kimberley, Oct. 26, 1891.

THE WITPOORTJE SYNDICATE.

MR. H. J. TROTTER, secretary to the Witpoortje Syndicate, is just now undergoing examination at Johannesburg for forging and embezzlement to the tune of something like 2,000%. Under ordinary circumstances I should not have noticed this fact, but it so happens that Mr. Trotter has a history, and a by no means enviable one. Some few years ago Mr. Trotter was junior partner in the firm of Hannam, Archibald and Co., merchants, of Port Elizabeth, and whilst in that position he forged and embezzled to a considerable extent, completely bringing the previous well reputed firm to ruin, and on being convicted was sentenced to a long term of imprisonment. You will ask how such a man could subsequently be employed in a position of trust. Well, queer things happen in this part of the world. How he came to be placed in such a position I do not know, because there are a lot of men of business in Johannesburg who well knew his antecedents. However, he got appointed, and was soon at his old tricks again.

THE NEGLIGENCE OF DIRECTORS.

A correspondent writes on the above to the following effect:— "When is the Randt going to have capable men to direct her affairs? The question may well be asked after the *exposés* which have been made in connection with mining ventures. Time after time have shareholders had to suffer by the misdeeds of secretaries, and up to the present they have done so in silence. By and bye, perhaps, directors will be forced to pay any defalcations which may be discovered out of their own pockets, for I contend, and, with good reason, I consider, that it is due to their carelessness that opportunities are given to men of dishonest inclinations to embezzle. Only a few days ago the directors of the Simmer and Jack Co. announced that they had been obliged to purchase stock in the open market to replace fraudulently issued scrip. Other companies have had to announce to their shareholders losses entailed by the sudden disappearance of their too well trusted secretaries with the contents of the cashbox in possession. Now we have the case of another secretary, who is charged with embezzlement. These defalcations were found out by the merest accident. Had it not been for Mr. Trull, one of the directors of the Witpoortje Syndicate, being chaffed by the manager of the Bank of Africa about the overdraft of 13½, the

shareholders of that syndicate would still have been in blissful ignorance of the way in which their money was going, and the 900% which had been secreted might have been used for a hasty retirement from the sunny shores of South Africa. From the evidence given in court it would appear that the defalcations extended over some considerable time, and that they have been concealed by systematic forgeries of the weekly statements issued by the bank. Curious to see by what process the directors had been hoodwinked, I glanced at the sheets in question, and it positively astounded me that any business men, or persons calling themselves such, could possibly have allowed such flagrant alterations to have escaped their attention. The merest novice could have noticed in the first altered statement that there was something wrong. To let you understand what I mean, I must state that in all the accounts rendered, the bank clerk has written the figures most plainly, as, for instance, 2994. In the forgeries this has been made to appear 2,994. There is a comma after the figures representing the thousands. This never appears in the total written by the clerk. Again, in one cheque where the figure has been altered for 2, it is apparent at once that there has been an alteration, for there is an erasure evident on the paper, and the three little dots underneath, which are seemingly scratched out with the figure, have been reproduced with original ink. Again, the added figures are different in every way to the original one, being shaky in character. Now, I only held the document in my hand for a minute, and I am ready to bet that the details I have mentioned will be visible to the most superficial observer. If, however, directors allow themselves to be imposed on in such a barefaced manner they should be made to bear the loss. Even granting that the forgeries were so clever that even the cleverest man might have been duped, it passes my comprehension how a body of business men could have signed a number of cheques for large amounts without even enquiring whether one of their colleagues had not previously done so." This is a pretty fair illustration of the happy-go-lucky style of doing business on the Randt.

THE ORANGE RIVER ASBESTOS CO.

You will remember the account of the rumpus in connection with this company, which I sent you three or four weeks ago, and how I informed you that a committee was appointed to go fully into affairs, and to report to a future meeting. That meeting took place last Thursday, and a nice pretty state of things was revealed. It will be seen that the late secretary's defalcations were only incidentally referred to and confirmed, and the attention of the shareholders directed to other matters quite as serious. The committee's report was a very long one, but I shall only give a *résumé*. The committee found that no ordinary meeting of shareholders had been called as required by the provisions of the trust deed; no books had been kept; that the finances had not been examined since the formation in 1888, until they were audited by Mr. Pooley in Sept. last; that large sums of money, instead of being placed to the credit of the company, were placed to the secretary's private account; and that the property acquired by the company from the Volharding Copper Syndicate had never been transferred. In order that the shareholders might know their legal position, the committee instructed their attorney to prepare a case for counsel, having especial reference to the question of the liability of the directors to make good the apparent deficiencies, to have the properties properly registered, and to ascertain how they stood with regard to the purchase of the farm Zoetvlei, and the sale of 10,000 shares to Mr. Oats. Subsequently Mr. Advocate Soloman, Q.C., was interviewed by the committee, and Mr. Soloman advised that the directors of the company had been grossly negligent of the interests of the shareholders; that they had neglected to see that true and proper accounts were kept of all sums of money received and expended; and that as they had failed to see that proper transfer was taken of the assets of the Volharding Syndicate, the directors are responsible to the company for any loss sustained in consequence, and that the directors will have to make good any such losses. Although there was an irregularity in the purchase of the farm Zoetvlei, Mr. Soloman did not think the company could repudiate the sale, and ask the directors to refund the money paid for the farm. Regarding the report made by Mr. Oats, and the consideration given by the company, Mr. Soloman was of opinion that the directors should be called upon to refund to the company all that they paid to Mr. Oats beyond what was a reasonable remuneration to give an expert for making a report, and that it is the duty of the company to bring an action against the directors for an account of their administration of the affairs of the company from its formation. It was not considered desirable at present to publish the case submitted or Mr. Soloman's written opinion. In accordance with that opinion the committee recommended that the business of the present meeting be not proceeded with; that no election of directors take place; and that an extraordinary meeting be held on Nov. 5, for the purpose of electing directors and auditors, and to pass the necessary resolutions authorising the trustees of the company to institute legal proceedings against the directors.

Mr. Stead, the chairman of the committee, moved the adoption of the report in a long speech, from which I make a few extracts. He started out by darkly hinting that seemingly the directors did not think the property worthy their attention, but the members of the committee had their own opinions as to the causes of the neglect, but they had to be careful what they said. Then he went on to say:—"The

company had several reports on the property, and they would remember it came out at the last meeting that at a meeting of directors a request had been made for an honest report! Mr. Oats, when asked to make a report, answered that he knew nothing about asbestos. Yet certain letters were written to that gentleman asking him to report on the property, and in the event of its leading to business, but not otherwise, he was to receive 1,000% cash, and have the option for 14 days to take up 10,000 shares of the company at 20s. No entry of any kind was made of the transaction in the company's books. On the same date that the letters were written, and which were read at the last meeting, the company's shares were sold at 13s. to 14s. per share on the Stock Exchange, and unless a boom was made in these shares, Mr. Oats, in accepting 10,000 at 20s., granting that he also got the 1,000% cash, stood to lose 2,000% and his travelling expenses. The object for which the report appeared to have been ordered turned out most successful. The shares rose to 50s. 6d. on Aug. 22, 1889, and on Aug. 21, the date on which Mr. R. Hendrichson demanded the 10,000 shares, the price on the Kimberley Stock Exchange was 48s. 6d. The shares were allotted to Mr. Oats, and paid for by Mr. Hendrichson's private cheque, and on the same day the 10,000 shares were transferred from Mr. Oats's name. If it was a *bonâ-fide* sale at market price it would represent a profit of 14,250%, to which had to be added 1,000%, representing in all 15,250% for the report. The thing was monstrous. And what did they find to-day? That Mr. Oats did not possess a single share in the company."

Mr. Beveredge, in seconding the motion, asked the chairman (Mr. Hirsche) if Bell's Asbestos Co. had been asked to report on the asbestos on the company's property?

The Chairman believed such was the case. They had never been asked officially, but they reported to Mr. E. Harris privately that it was worthless.

Mr. Beveredge wondered how the Bell Co. could be asked anything on the subject, seeing that they held a monopoly of the business. He wondered also if the chairman believed the report.

The Chairman said the directors at that time did not believe in the reports regarding the property.

Mr. Beveredge wanted to know if the Bell Co. had approached the directors on the subject.

The Chairman replied, not so far as he knew.

Mr. Beveredge complained that he could not get plain answers to his questions. He dared to say that these reports were kept private by the directors until they were found out. He believed that the Bell Co. gave a contrary report in regard to their property, but at the same time, from information he had received, they would be glad to get it.

Mr. Van Ulsen elicited from the chairman that he had received a report from Europe to the effect that their asbestos was of no market value but he did not place much reliance on it, on account of the Asbestos ring, which was very strong.

At the request of Mr. Van Ulsen, Mr. Daniels, assistant engineer of the Kimberley Waterworks, stated that he had been requested by one of the directors to give his opinion of the asbestos. He had used some of it, and considered it quite equal to anything imported.

After some further wrangling, Mr. Beveredge asked the chairman if he received on Feb. 23, 1890, the amount of 15,000%, for which he never gave a voucher?

The Chairman replied that he received that sum as part payment for making over the company.

Mr. Beveredge: Did you receive 20,000 shares as well?

The Chairman could not recollect.

After this the report was adopted, and the meeting stands adjourned to the 5th prox.

Coming out, a man of business remarked that this affair will either all end in smoke or it will prove a veritable South African *cause célèbre*.

RENEWED HOSTILITIES AT DEVON CONSOLS.

HOSTILITIES have again broken out in connection with Devon Consols affairs. We greatly regret the fact, because we thought that a year ago the few malcontents who troubled the peace of the company would have seen that the shareholders in the mass were satisfied that the present directors were doing all that was possible for the success of the company. The voting then was overwhelmingly in favour of the Peter Watson board, and if anything could surprise us in mining it would be the present weak attempt to upset that decision, as well as to revive old quarrels and re-open old sores. People of far more weight and influence with the shareholders than the gentleman who has now rushed to the front, tried it and failed, although the guns they carried were of far heavier calibre than those now handled.

Since the memorable fight a year ago many things have happened. Poor Mr. Cattley Stewart is dead, Mr. Oxland, we believe, has ceased to be a shareholder, changes have been made in the management of the mine, and Mr. Stanley Morris is no longer a member of the board. In spite of untoward circumstances, for which no reasonable being can hold the directors responsible, the affairs of the company have changed decidedly for the better, but the new members of the board have scarcely had time to seat themselves firmly in the directorial chair before they are compelled to arm themselves with a quill to answer a circular which they

say "abounds in misstatements." The circular in question proceeds from Mr. Edwin Sloper, of Taunton, whose investment in the company, made before the meeting in May last, appears to have cost him 57l. 10s. Small shareholders, as well as large, are unquestionably entitled to every consideration; but when a gentleman with a holding like this seeks to divide the shareholders upon questions of high policy, particularly when those questions have already been decided within a year, he must expect criticism as to the nature of his holding, and in this case the most that can be said of it is that it is not large. Mr. Sloper gives himself away almost in the opening sentence of his circular. He says, "The recently issued accounts of the company do not show the liabilities." Of course not, and for a very good reason—they do not exist. A postcard to the secretary would have saved him from such a stumble as this. Then we must call attention to the injustice of his remarks on the connection of Mr. Watson with the management. Over and over again this question has been submitted to the revision and adjustment of the shareholders in public meeting, as the minutes and reports will show. Had Mr. Sloper been long a shareholder he would have known this. It is perfectly true that Mr. Watson is also the managing director of three other companies, one of which pays large dividends, but it would never have done so if the shareholders in that case, as in this, had been quarrelling and wrangling amongst themselves. As to the foreshadowing of an early dividend on Devon Consols shares, we thought at the time, and said so, that Mr. Watson was too sanguine, but circumstances, beyond the control of any board, as, for example, the decline in the price of copper and arsenic, have operated against him. Mr. Sloper tells the shareholders—but it will be no news to them—that the shares of this company were once quoted at 800l. each, but, in justice to Mr. Peter Watson, whom he attacks, he might have mentioned that even under that gentleman's management they have been 20l., and that in one year dividends at the rate of 160 per cent. were paid. Mr. Sloper is incorrect in stating that when the office of local director was abolished the dividends ceased, for a considerable sum has been paid in this way since that event occurred. Mr. Sloper made two suggestions, of value in their way, at a former meeting, but as he is a great advocate of economy, he should be told that whilst the good they would do would be doubtful, the expense would be certain. He suggested that the directors should visit the mines six times a year, and that a map of the mines should be sent to each shareholder. The former would cost a considerable amount, for the directors could not be expected to pay their own expenses when going on journeys at the bidding of Mr. Sloper, and we venture to think that Mr. Sloper would not do so himself if he were a director—he is far too practical. Then as to the maps—why, to understand this vast property it would require a series of drawings, and the money they would cost can be better employed in bringing mineral from underground. Mr. Watson is blamed for not going to the mine often enough, but even Mr. Sloper does him the justice to say that since his appointment, towards the end of 1880, he has been there 27 times, or at the rate of twice a year.

We must certainly call in question the statement of Mr. Sloper—that Devon Consols is the laughing stock of Cornish miners. Cornish miners, we regret to say, are in anything but a laughing mood. Nearly the whole of their mines are making calls every quarter, from which visitation Devon Consols shareholders at least are spared. It is all very well to point to the present price of Devon Consols shares, but if Mr. Sloper will extend his researches into the county where he says Devon Consols is provoking mirth he will find facts like these:—The highest price touched by Carn Brea shares this year was 61—it is now 29; by Dolcoath, 74—it is now 56½; by Cook's Kitchen, 17—it is now 6½; by East Pool, 23—it is now 18; by Tincroft, 35½—it is now 19½; by West Bassett, 2½—it is now 4s.; and so on through the whole list.

These are facts which the digestive organs of Mr. Sloper will find it hard to deal with. We are sorry that we do not happen to have recorded Mr. Sloper's protest at the last meeting against the re-appointment of Mr. Bawden, but we thought that our report of his speech—the fullest that appeared—had made it clear that he had protested not only against that, but against the present management and all its works. Mr. Sloper will, at the forthcoming meeting, move a resolution for the appointment of a committee, but he will then find that it is easier to pen a motion of this sort, in the privacy of his sanctum at Taunton, than to persuade the shareholders of its utility in London. He will also find it easier to make statements in a circular than to sustain them in the presence of the persons against whom they are directed. Mr. Sloper in this onslaught is riding for a fall, in which case he will resemble Nicias, the Athenian general, who was famous for his defeats.

PESTARENA.

WE have often urged the re-arrangement of the capital account of this company, but suppose there must be some obstacle thereto which the directors at present do not see their way to overcome. Pestarena has, if we mistake not, to bear the capital burden of three distinct companies. It was a state of things which Messrs. John Taylor and Sons inherited when they took over the company some 13 years ago. In addition they had to deal with a debt to the Bank of Alessandria,

incurred in a way that it is bootless now to recall. During all these years, despite the fluctuating character of the lodes, they have managed Pestarena with considerable success, and, in fact, in 11 years out of the 13, have shown a more or less substantial profit, but the capital with which the company is saddled, not to speak of the legacy of debt that has had to be discharged, has prevented real justice being done to their figures. Profits are shown, but they are eaten up in debt and preference charges. Now last year was typical of its predecessors. A fair profit was made—a good profit we might say—had it not been for the dual changes before mentioned. For example, the debt to the bank has been reduced from the original 16,000l. to 800l., and in the interval the debenture interest has cost 7,200l. With a re-arrangement of the capital account, and the writing off of that portion of it which was totally lost before the Messrs. Taylor took the management, Pestarena shares would be largely dealt in on the market, and hence it seems desirable in the interests of all concerned that some drastic measure in this direction should take place. Perhaps Mr. Swaffield, who has just been elected to the board, can conceive some financial scheme by which the desired result may be brought about.

As regards the mines, Pestarena shows an improved grade of ore. A mine that produces gold to the tune of nearly 2 ozs. to the ton, that is within 48 hours of London, and that has all the advantages such a property can reasonably expect, is not to be despised. Val Toppa is not so good, though the agents are not without the belief that certain points in operation will result favourably. Interesting speeches, setting forth the position in the fullest and clearest terms, were delivered by Mr. Robert and Mr. Edgar Taylor, who have both recently visited the property. We note, with satisfaction in the former gentleman's address, that 80 per cent. of the gold is being saved—a much larger proportion than can be claimed by most other gold companies. The reserves are 13,711 tons, and shareholders will be glad to learn that in the four months that have elapsed since the date of the report the mines have yielded 2,100 ozs. of gold. We note also that the result of Mr. Edgar Taylor's underground inspection gave him such satisfaction that he could say "there is life in the old mine yet." Mr. Swaffield also seems to have made a pilgrimage to Italy to overhaul the accounts, and expressed himself satisfied. The property has thus been inspected from all points of view, and not been found wanting in any. If, as we have said, all interested in Pestarena could be brought to agree upon a radical reduction of the capital account, the market and the public would hear much more of Pestarena than it does at present.

THE LONE PINE MINE.

NEWS FOR JAY HAWK SHAREHOLDERS.

L. C. FYHRIE last week visited Dewey's Flat and the Lone Pine group of mines located in that vicinity. From a conversation with that gentleman the *Examiner* reporter obtained the following facts regarding the operations of the Jay Hawk and Lone Pine Consolidated Mining Co., which has recently been taken charge of by an English syndicate. The mine is running in full blast. The cage for the main shaft was completed on Sunday. The company will start two 10-stamp mills by the first of the month, and expects to crush about 45 tons of rock every day. The ore taken out now averages about 40 ozs. of silver to the ton, and it is calculated to save enough of the ore to produce from 35,000 to 37,000 ozs. silver per month. Thirty men are employed in the mine, 20 in the mills, and about 30 more are engaged in chopping and hauling wood and ore, making a total working force of 80 men. The shaft is now down 800 ft. on an incline, and at the bottom of the incline the breast of the ore is fully 6 ft. wide. The mine is in charge of Capt. Henry Prideaux, the general manager of the company, who is an efficient and experienced mining man and develops the mine in a systematic and workmanlike manner. The property is located 5 miles above Dewey's Flat on Quartz Hill, and Mr. Fyhrrie tells us that that locality is in a prosperous condition. The mines are showing up better every day, and much work is done on them.—*Dillon Examiner*, Montana.

LATEST REPORT OF THE MANAGER.

—(Nov. 3).—My last report was dated Oct. 26, since which we have taken out of the mine 400 car loads of ore, and have still underground, ready to hoist, about 600 car loads. There is also in ore shoots at surface over 100 tons, and about 300 tons at the mills. The Lone Pine mill was started on Nov. 1. We shall run for two days on low-grade ore, and then commence crushing the richer ore. The Frue vanners are, with the exception of the elevator buckets, ready to work; these we expect to-morrow from Chicago. The Jay Hawk mill will start by the end of the present week. The bottom or 700-ft. level has improved in value, my last assay giving 145 ozs. per ton. The incline shaft, sinking below the 700-ft. level, is producing rich ore; the vein is from 5 ft. to 7 ft. thick. The stopes are about the same, except one at the 700, which is looking better. At the Nos. 1 and 2 levels we are full of ore. I hope in a day or two to be able to hoist from these levels. If the bottom of the mine continues to improve I shall have to ship the rich ore to a smelter. This, however, will not interfere with the working of the mills, and will be an addition to our returns. The result of the treatment of the ore will be sent you as soon as ascertained.—H. PRIDEAUX.

MEXICAN MINERAL RAILWAY CO., LIMITED.—Interest warrants of the company for the half-year ending Nov. 24, 1891, at the rate of 6 per cent. per annum on shares, and 7 per cent. per annum on debentures, will be sent out on the 23rd inst. Coupon No. 5, due 24th inst., on first debenture issue must be presented for payment at the company's offices, 4, Copthall Buildings, London, E.C.

REPORTS OF MEETING.

VAN MINING CO., LIMITED.

EXPLANATIONS AS TO THE ABSORPTION OF CAPITAL—PROSPECTS OF SUCCESS IF THE DEBENTURES BE TAKEN UP.

THE ordinary half-yearly general meeting was held at the Offices, Dashwood House, Old Broad Street, on Wednesday.

Mr. Charles Clark

(chairman of the company) presided.

Mr. A. J. LAVINGTON (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

THE CHAIRMAN: Gentlemen, we are assembled here to-day in pursuance of the provision in our articles of association that the shareholders shall have the opportunity, every six months, of ascertaining in general meeting how the business of their undertaking is progressing. I propose, with your permission, to make a few remarks on the financial position, and then to call upon our manager, Capt. Paull, to make a statement by way of supplementing his report, which has been circulated among you. After that it will be open to the shareholders to ask questions as to any matter which they may think has been omitted or imperfectly treated, and to express their opinions freely as to the management and direction of the company's affairs. First, then, as regards the financial position. We cannot disguise the fact that it is disappointing and unsatisfactory to an extent for which most of you were, I fear, altogether unprepared, and you will very naturally ask, and expect me to tell you, how it is that such a state of things has come about.

TWO MISTAKES.

The explanation can be given in a very few words. Two mistakes were made when the company was re-constructed. First, in departing from the recommendation of the committee, and making the liability on the shares 6s. only instead of 7s. 6d.; and, secondly, in spreading the payment of the calls over too long a period—so long that 10 months must yet elapse before the final call can be made; whereas, we need every penny of the money now, and are sorely pressed for want of it. The re-construction, with a liability of only 6s. per share, was, in truth, based on the expectation that as the shareholders were unanimous in accepting it they would, at least, apply for 45,000 shares—their holding in the old company. But only 38,000 have been taken up, leaving us about 2,000% short of the working capital we had reckoned on. Furthermore, we were led to expect a return of 30 to 35 tons of lead per month, while development works were in progress; and we have had during the whole period since last Dec. only 150 tons in all, viz., 50 tons on July 18, 50 tons on Oct. 9, and 50 tons on Nov. 16. The development operations themselves too have been more tedious and costly than we were prepared for; and in the overhaul of plant and machinery, when our new manager took charge, it was found that a good deal had to be done in the way of repairs and renewals. The combined effect of all these things has been—as I have said—to cause a financial pressure upon us, from which the board of directors see no practicable means of extrication other than the debenture issue, which, under the powers given them in the articles, they have resolved to make. If the shareholders respond, as we hope they will, each one taking his proportion, it will mean a contribution of about 2s. 6d. per share.

ALTERNATIVES.

If, on the other hand, the shareholders should not respond, the directors must endeavour to place the debentures elsewhere, and if that effort should unfortunately fail, there will be nothing before us but winding up, for, however promising the indications and expectations of the mine may be, the directors have resolutely determined not to incur liabilities which they do not clearly see their way to meet. At present the concern is perfectly solvent. The liquidator of the old company places on the table to-day a statement showing the position of that company at the date of liquidation—Jan. 26, 1891. The liabilities at that date were:—3,970% 12s. 2d. for wages and to merchants; 944% 14s. 10d. for rents and royalties; 400% for loan due to bankers; 383% 6s. 1d. for local rates and London expenses; total, 5,698% 13s. 1d. It will probably be in your recollection that in answer to questions put at the meeting held on Dec. 12 last, it was stated that the then ascertained liabilities were about 3,000%, exclusive of accruing costs, local taxes, rents and royalties, and exclusive also of the 400% loan from the bankers, against which we were told there were 40 tons of lead ready for sampling. There was no lead ready, so that 400% had to be added to the 3,000%. The cost sheets for the seven weeks to the date of liquidation came to 1,677% 14s. 2d., and the rents and royalties to 415% 5s., giving a total of 5,492% 19s. 2d., or about 200% less than the actual amount as ascertained and shown in the balance-sheet which is now before us. I have purposely abstained from saying anything to you about the mine itself, and its prospects. I prefer that you should get that direct from Capt. Paull, who will now address you. But it is only right that I should state, on behalf of my colleagues and myself, that we have entire confidence in him and in his management, and we are sure that he will do everything that can be done to lead us on to success.

VIEWS OF THE MANAGER.

Capt. PAULL: I do not know that there is any matter of importance to refer to that has arisen since the date of my report of Nov. 5. We have been prospecting the chief points—the 150-fm. level east from Seaham's winze, and the cross-cut south in the western division of the south vein, towards the 135, which was found productive above. That cross-cut is still 8 fms. short of intersecting the vein, and the work may be accomplished in eight or nine weeks from this time. From indications above, and the stope from which we are getting our chief returns, the 135, it is fair to assume we may cut a productive vein at the 150 cross-cut. We shall not be long now in ascertaining that point. At the 150 east from Seaham's winze we have driven forward in a large vein 20 fms., cross-cutted from it, and found it rich with lead ore and blende, but not of sufficient quantity to pay to stope away. Still, the indications altogether are such that at any moment

we may cut a lode worth several tons to the fm. That point is one of great interest to remember, for

IT WOULD BE FOLLY TO ABANDON THE MINE,

now upon the eve, I believe, of important discoveries at either or both those points. The returns from the mine have been somewhat disappointing to me, as I thought we should have got more ore. However, I found that the mine was poorer even than I thought at the time, and although we had sold 150 tons of ore, it is not all that has been broken in the mine. As you are aware, in working the stopes a certain amount of stuff has to remain under the men's feet in order that they may take away the ground in a proper way. There are, I should say, 50 tons of undressed ore, so that if that had all been obtained it would not have been far off the 30 tons I spoke of.

THE CHAIRMAN: I was not referring to your estimates, but to those of the previous manager.

Capt. PAULL: We have not benefitted by all the ore broken in the mine. It is there, to be obtained subsequently, but the five stopes now in operation will produce about 25 tons a month. It will thus be seen that the

RETURNS ARE ABOUT MEETING HALF THE PRESENT EXPENSES, and, as I said before, these two points that are being carried on now may lead to a good discovery that may put us in an entirely different position. Still, the works cannot go on without money until some discovery is made. I think there is

EVERY CHANCE OF MAKING A VERY GOOD CONCERN ULTIMATELY OF THIS,

if it be fairly developed. There is a very long range of ore ground 30 fms. above where we now are, and I cannot think that that is entirely barren. If the mine is well opened below that, I think there are grounds for expecting success in the future.

Mr. KEMPSON: Can you tell us about the 135 that Capt. Williams made such a fuss about? Can we get at it?

Capt. PAULL: There were several branches of ore found in driving that cross-cut to intersect the south vein at the 135, but if you refer to the report of Mr. Francis, who specially inspected the mine, he says: "None of these are rich enough to work separately, and they are too far apart to work connectively. None of these were of much importance, excepting one rich spot, where they said it was 3 ft. wide of solid ore, but I have never seen it. That bunch was only a small one, and was entirely worked away before I examined the mine."

Mr. LAVINGTON: Your upper stopes in the 135 are on the south lode?

Capt. PAULL: Yes; but not upon the short rich bunch I am alluding to.

Mr. PETER WATSON (director): When I was at the mine there was a good lode of blende in the 150 east of Seaham's.

Capt. PAULL: Yes, for the first 9 fms. driven, but it has worked out, and the lead is beginning to appear. There are small stringers of lead throughout the vein, and the gas is coming out in such a way that if you put a light to it it will flame for 6 ft. long.

A GOOD SIGN.

Mr. WATSON: In the olden time that was a good indication of the vicinity of rich ore.

Capt. PAULL: They invariably had these outbursts of gas upon the approach of a good ore deposit. The ground is darker than it was opposite Seaham's winze where they first cross-cutted to the lode.

Mr. WATSON: The amount of lead and blende you are breaking now would come to about 30 tons a month.

Capt. PAULL: About 25 tons, and we have an accumulation of about 50 tons of ore already at surface. As I have said, we are about half paying our way at present. You are aware we are not driving the 120-fm. level, which was a third point recommended to be carried on. For the last few weeks it has been abandoned, and the men have been put to increase the returns. That point should be pushed if we have money to do it.

A SHAREHOLDER: Is it true we are pressed for money?

THE CHAIRMAN: Yes, decidedly.

A SHAREHOLDER: Is much owing on calls?

THE SECRETARY: 705% is due at the present moment, including the call made on the 12th.

Mr. WATSON: The calls have been paid up very well indeed, and some few have paid in full.

VIEWS OF A NEW DIRECTOR.

Mr. HAMILTON: As one of the new directors, who joined at the meeting in Mar. last, I feel I ought to say something with regard to the present position. I may say at once that my ideas with regard to Capt. Williams' bad management were fully proved to be right within a very short time of our taking office, and when I went down to Llanidloes, as I did with the majority of the directors, as soon as working was resumed, I was not long in that neighbourhood before discovering that our former manager had utterly misled us. Personally, I feel disappointed at our present position. I was the one who advocated that instead of having the liability on the shares 6s., it should be 8s., but the former sum was carried, and, consequently, we are short to that extent. Practically we re-formed the company, largely upon the advice of Capt. Francis, who went down as an expert, and who said he thought there would be no difficulty in getting from 70 to 100 tons of lead a month. Now, if we had had 50 tons, we should not have had our capital run out as it has, for we expected the returns would be much larger than they have proved to be. The liabilities were increased between Dec., when they were estimated at 3,000%, and Mar. by some 2,000%; so that altogether instead of having the balance over 3,000% for development, we practically only had the balance over 5,500%, and it has not been sufficient, and I can say, as a director, it has been a painful experience to me at the meetings to have letters pressing for claims arising from the workings of the old mine. These claims have been pressing largely, from the fact that

BAD IMPRESSIONS HAVE BEEN PUT ABOUT IN LLANIDLOES

by somebody who believes in the non-success of the company, and, consequently, we have had to contend with a great deal of difficulty. Our position is this—if you were to have the whole of the calls paid

up, there would be only 1,200*l.* available for the further prosecution of the work,

WHICH IS NOT SUFFICIENT.

We say we will be no party to incurring liabilities that cannot be met. We are in our present position largely owing to the misrepresentations of Capt. Williams in the time of the old mine. When I thought the capital was running out, I came with a strong recommendation that we should not incur liabilities on the old mine, and so did the chairman. Unfortunately, those liabilities were incurred, and practically we find that instead of having the lead we were supposed to have, we had been misled entirely by Capt. Williams. I should like to say a word in regard to our present manager. He is not an optimist, but all that he has said has been fully borne out by the result. I have

EVERY CONFIDENCE IN CAPT. PAULL

—(cheers)—and, reluctant though I am to spend more money on this mine, I am quite willing to take up my proportion of the debenture interest, and perhaps more. I should have preferred that the matter should have been left in the way of a liability on the shares, but we have to meet the present position, and I may certainly say that, so far as the present board are concerned, we have no responsibility for being placed in the condition we find ourselves to-day. We have done what we thought was for the best, and finding we are in this position we come frankly to you to tell you the facts. (Hear, hear.) I think, after having seen the mine and carefully gone into the matter with Capt. Paull, that it will be a mistake to let it go, but there is no alternative but liquidation unless we are provided with money, and the whole thing will pass from us. I may say that we have been doing all we can with regard to the question of our dead rent and royalties, because these claims are pressing heavily upon us, but we cannot go on without money, and I think it is due to the shareholders they should know frankly the whole position of the company, because in the last resource the decision must be left to them. I was not a fortunate original shareholder in Van, but bought my holding at 2*l.* 10*s.* per share, and have not reckoned up how much I have spent on the mine, but I said in Dec. as I say now—I thought it would be a great pity that the mine should be abandoned without this point that Capt. Paull has referred to being thoroughly proved. It is not thoroughly proved. If no ore came in within the next six months, then I should be prepared to say it would not be worth while to go on, but it would be a great pity to lose that chance of getting back something we have paid, and, personally, I am prepared to do my part. I think the whole assessment does not amount to more than 2*s.* or 2*s.* 6*d.* per share, and if the recommendation of the committee had been attended to we should not have had to ask for this money. 5,000*l.* would be better than 4,000*l.*, but the latter is absolutely necessary.

I STRONGLY URGE UPON SHAREHOLDERS

that they should not allow the mine to be abandoned without this money being provided, in order that the important points of development referred to by Capt. Paull may give us a higher quality of ore. We want ore giving 2 or 3 or 4 tons a fm., and then there would be no difficulty with regard to the future, but at present it gives only 25 cwt., which is not much more than a contribution towards the expenses. (Cheers.)

Mr. ROBERTSON: After the brilliant prospects that were held out some months ago, it is disappointing to find that the directors now want more money. Personally, I do not think it worth while going on with the enterprise.

VIEWS OF ANOTHER DIRECTOR.

Mr. McILQUHAM (director): Since you did me the honour of electing me a director I have used my best endeavours in your interests by visiting the mine repeatedly and going thoroughly into everything, as Capt. Paull can testify. On one occasion I spent two days there, going over everything both on surface and underground, and can assure you that in Capt. Paull you have a really good, honest, and practical miner who understands his work and is doing it well—a far different state of things from that which prevailed in the past. I went over the books and found that in the past the mine has been very badly managed indeed—in fact, your money has been literally thrown away. If Capt. Paull had been there a few years ago we would be in a different position from now, and would not have been called upon to contribute 5,000*l.* in debentures. I cannot understand how our capital has melted away like this. All we have spent on the mine is about 3,000*l.* or 4,000*l.*, and when all your calls are paid up there is simply 700*l.* left, if you deduct the next cost sheet. There are points in the mine, as, for example, the south lode, which Capt. Paull might cut, if he had had money, in a few months, and return large quantities of mineral. It is for you to say whether you will furnish that money. I have been very much disappointed, and but for the friends whose interests I represent I would resign, and wash my hands of the whole affair. I think

THE REAL STATE OF AFFAIRS WAS NOT TOLD US

at the time of re-construction. Mr. Lavington told us the financial position, which is this:—The liabilities to the present time are about 3,000*l.*, and Capts. Hodge and Francis say about 5,000*l.* will be required to carry out their recommendations, which, with the liabilities, will be 8,000*l.*. We have 45,000 shares, and a call of 5*s.* will amount to 11,000*l.*—3,000*l.* beyond the estimated amount, and the directors will not call up more than is absolutely required. If the mine were carefully managed, as it is now, no doubt it will turn out well eventually, but the bills ought to be paid every month and the discounts taken, instead of which they are not, and our credit is gone. Capt. Paull has saved by his system of mixing slack with quick coal about 25 per cent., but the people who sell the coal have refused to do so and stopped the supplies.

The CHAIRMAN: That is not so.

Mr. McILQUHAM: We are in debt, and 5,000*l.* will only be like a drop in the bucket to this mine. We ought to have spoken clearly to the lessors before the re-construction, but nothing has been done, and I think you ought to know our position. (Hear, hear.) I will not be a party to anything else than what is straightforward and honourable. (Cheers.) The debts, instead of being 3,000*l.*, were nearer 5,000*l.* or 6,000*l.*, but that information was withheld. The mine is a good one, and if carefully managed, and capital provided, it will return good results.

Mr. HAMILTON: I have no wish to be other than frank and honourable in the matter, but as the issue is raised as to the secretary's figures, you will find on examination that the three months interregnum between the re-construction and the formation of the new company the works were proceeded with, and the 400*l.* worth of ore which were said to be at the mine did not exist. I think, with this exception, all the difference is accounted for by what took place in the three months during which we were re-constructing the company.

Mr. LAVINGTON: Mr. McIlquham says he cannot understand where the capital has gone, but I will tell you how the figures stand. The total amount from calls would be 11,424*l.*, and we have at present 4,658*l.*, not called up, which leaves 6,766*l.* that the directors have received. They have paid 4,900*l.* of that at the mine. They have paid off from the old debts the difference up to 1,500*l.* or 1,600*l.*, and as far as the 3,000*l.* was concerned, it has already been explained that there were seven weeks after that sum was mentioned before the mine was closed, during which the expenses were running on. The expenses were a little over 200*l.* a week, including wages and merchants' bills, and that with the 400*l.*, against which we borrowed 400*l.* from the bank (as Capt. Williams said we had 40 tons of lead), makes as nearly as possible the amount I stated.

Capt. PAULL: All the lead in the bin when I went there was about 2½ tons, and I had it weighed.

Mr. KEMPSON: We shall like to hear Mr. Watson's opinion.

Mr. PETER WATSON: I have been often underground in this mine in its palmy days, and have been to the mine on two or three occasions since the formation of this company, and must confess that, so far as the accounts are concerned, we have been disappointed to the extent explained by Mr. Lavington. It is no use disguising the fact that in the past we were misled, but the new directors cannot be accountable for that. So far as the present condition is concerned, I make out that we are about half paying our way, and in about two months we shall be under the ore ground in the 150 to cut the south lode where there was a rich lode going down, and we have gone to a considerable expense in deadwork in order to approach this place since the re-construction. Capt. Paull has worked most vigorously, and in a couple of months I should imagine we ought to be underneath this. Now, if you cut a rich lode there it will make a complete alteration in the affairs of the company, because

I HAVE SEEN ENORMOUSLY RICH BODIES OF ORE

coming in at the vein when they were hardly expected. The indications both at Seaham's and at the cross-cut I think are very cheering indeed. The unfortunate part has been in our finances. When the company was re-organised you had a millstone round your neck in the shape of a big debt. Mr. Hamilton very properly states that we were all of opinion that the liability should be 8*s.* per share, and the committee strongly recommended 7*s.* 6*d.*, but a gentleman proposed 6*s.* and carried the meeting with him, who

AFTERWARDS TOOK NO SHARES AT ALL.

His advice was listened to instead of that of the committee, backed by the report of Capt. Francis—with the result you see. We went on with the hope that things might improve, but lead has gone down, though blende has gone up. Of the latter there is a small stock, which will be sent to market, and at any moment a discovery may be made which will again bring us into great riches. When I was there last time I saw Mr. Kempson, who went over the mine with me. Capt. Paull was courteous and communicative as to the real position, and if the shareholders will come forward now and subscribe this amount I think there are good things in store for us, and that we shall live again. (Cheers.)

Mr. KEMPSON: I have rather a large holding in this mine, and visited it as Mr. Watson has stated, though I did not go underground. I was most courteously received by that gentleman, and by Capt. Paull. Nothing was kept back, and I was pleased with the business-like and straightforward character of the management. I was also pleased that we had got rid of Capt. Williams. I never suspected that things had been done there that had been done, and it is a good thing you have now such a manager as Capt. Paull. It would be a thousand pities to let the mine fall into other hands, because I feel it offers a great promise in the future if capital be provided. It would be a great pity not to go on working for at least another six months. If the directors will come forward and take up their full proportion, shareholders will, in all probability, do the same, and I certainly will do so on those conditions, and the further one that we raise at least 4,000*l.* Unless we do that the mine must stop, and we shall lose all the benefit of the development work we have done.

In reply to a question,

The CHAIRMAN said they had no idea of spending the money in deep sinking, but to put down Seaham's shaft from the 120 to the 150.

Capt. PAULL: The money required to sink Seaham's shaft from the 120 to the 150 would be about 1,200*l.* or 1,500*l.*. This operation would only be necessary to carry on the economical development and extraction of the ore, supposing it be found in the 155-fm. level we are now driving. Seaham's winze is opposite the shaft perpendicularly, and is cutting the lode 30 fms. deeper than where seen at the bottom of the shaft. That winze is valuable at present for driving the level both ways, but if we find ore there now, the power we have would not deal with the water to wind up a sufficient quantity of stuff as well without putting the shaft down. This will be a 12 months' job, and should be commenced as soon as we have money to do so. The moment we meet with ore that shaft should not be delayed.

Mr. WATSON: Our costs are about 600*l.* a month, and the returns will come to half of it, but you are pushing on tutwork operations, and in a couple of months you will cut the lode.

PROSPECTS OF SUCCESS.

Mr. McILQUHAM: In one of the stopes there is some of the finest lead I ever saw in my life, and most people think the lode will be cut rich again. If you give Capt. Paull the money to spend he will make a grand mine of Van yet.

The CHAIRMAN: As to the subscriptions to the debentures, Mr. Hamilton has already said he will take up his proportion, or more, and I do not suppose there will be any difficulty with the directors in taking up their proportion.

On the motion of Mr. HAMILTON, seconded by Mr. ROBERTSON, the meeting closed with a vote of thanks to the chairman.

VAAL RIVER DIAMOND CO., LIMITED.

THE CHAIRMAN FULLY REVIEWS THE HISTORY OF THE COMPANY, AND THE PRESENT POSITION AND PROSPECTS—CONFIDENCE AS TO THE FUTURE IS CORROBORATED BY THOSE ON THE SPOT—THE SHAREHOLDERS AGREE TO FIND A LITTLE MORE MONEY TO GIVE THE MINE A FINAL CHANCE.

THE third ordinary general meeting of the company was held at Winchester House, Old Broad Street, E.C., on Wednesday, Nov. 13.

Sir Edward Thornton, G.C.B.,

presided.

Mr. WM. CURTIS THOMSON (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: Gentlemen, I should like to make a few observations as to

THE HISTORY OF THIS COMPANY.

In the early part of last year the mine was visited by heavy rains, which considerably impeded operations; in Feb. the mine was flooded to a depth of 15 ft., and the pump had to be kept going night and day; the wet weather continued during Mar. At that period, under the advice of experienced engineers, we were cutting and hauling away the rock from the face in the open, and a great deal of hauling of boulders and unprofitable soil was a necessity from which there was no escape. Both engines were kept constantly at work, the one in pumping and the other hauling soil. Comparatively few finds were made during the first half of that year, and the manager (Mr. Williams at that time), together with the local directors, came to the conclusion that the open workings were not the most economical mode of operation. Some changes had to be made, and Mr. Craig, who had been working under Mr. Williams, was placed in sole charge, and, under his advice, the open working was abandoned, and the system adopted of tunnels and cross-cuts. The expenditure on the open cannot be considered, however, as thrown away, since it enabled the company to thoroughly test the upper strata, which proved diamondiferous, although from the small number and size of the finds not remunerative for general working, and the clearing of the ground down to the bed-rock, both enabled the company to work the lower strata and to adopt the tunnelling system from the open, instead of compelling the sinking of shafts and the raising of soil vertically to the surface. The more costly expenditure, therefore, of the early part of last year may fairly be treated, to a very large extent, as preparatory work necessary for the subsequently improved mining operations. In the first 10 months of last year the number of carats found amounted to 251, whilst in the months only of Oct. and Nov. they amounted to 128, the finds for Nov. on the deep level, which it is now proposed to work, being more than double the finds in any preceding month, with the exception of last July. These facts bear out the manager's statement as to the highly profitable character of the lowest strata, and the desirability of devoting special, if not exclusive, attention thereto. At the end of last year, and in the early part of the present year, the water again gave considerable trouble, and in the month of Jan.

THE EXCEPTIONAL FLOODS EFFECTUALLY PUT A STOP TO MINING OPERATIONS.

Mr. Craig hoped at first that the water would subside sufficiently to allow of his resuming pumping operations with the present plant, but he came to the conclusion that it would be hopeless to attempt to cope with the water unless with additional pumping gear. Some considerable delay ensued in obtaining from the manager the necessary specifications for the additional pump, and the local directors expressed themselves as confident of being able to purchase at the Cape the necessary pump and gear, and so avoid the delay which would be consequent on its being obtained, and sent out from England, and fitted up at the mine. They were, however, unable to purchase a pump to suit the manager's requirements, and it was ultimately decided that the pump, &c., would have to be sent out as the water in the mine showed little symptoms of subsidence. The funds in hand having become nearly exhausted, the directors wrote to the local directors at the Cape, informing them that it would be impossible to fulfil the manager's requirements, and provide additional working capital for the resumption of mining operations upon anything like a profitable scale without making a further call upon the shares, and that they hesitated to make such a call without being in a position to satisfy the shareholders that the prospects of the mining operations would justify the raising and expenditure of such additional capital. It has only been recently that the directors have been able to obtain from the local directorate and the manager such definite information as would justify the directors in recommending to the shareholders the raising of such additional capital for the resumption of active operations. The letters received both from the manager and the local directors (extracts from some of which accompany the report) urge very strongly the desirability of resuming work, and the directors feel it, therefore, incumbent on them to present and support those earnest recommendations. With regard to

THE REVENUE FROM THE PROPERTY OTHER THAN THE FINDS,

it should be stated that the floods and the suspension of operations by the company had a tendency to discourage syndicates and individual diggers from working other claims on the company's property, and a considerable falling off in the revenues had accordingly taken place. A vast amount of trouble was experienced in obtaining from the Government a statement of the claims held by outsiders upon the company's property, but it was at length obtained in Mar. last, with the result that the number of claims held by outsiders was returned at then only 63; these, however, have since been still further reduced. Every encouragement was offered to others to develop the company's property, and it was hoped that the Grahamstown Prospecting Syndicate would have taken up a large number of additional claims. They took out a prospecting license for a portion of the company's property not comprised in the surveyed Gonggong diggings, and through the efforts of the local directors a considerable additional area was proclaimed—in accordance with the local statutes—a public diamond field. Mr. Fairbridge, the resident Government surveyor, was the manager of that syndicate, but owing to the heavy rains and

other causes, was not able to secure the support upon which he relied, and the expected additional claims were accordingly not taken up as was anticipated. Mr. Craig has been strongly urged to take steps to improve and develop the revenues derivable from grazing licenses and surface rights, and he advises the directors in a recent communication that in a very short period he hopes to have no appreciable portion of the company's

ARABLE LAND

unlet. Some reference should perhaps be made to a resolution passed at the last annual meeting, to the effect that all shares in respect of which calls were in arrear should be declared forfeited. With respect to these the directors have duly taken all the necessary steps to entitle them to declare a forfeiture at any moment at which it might be deemed advisable to do so, but as these shares are at present unsaleable, the directors are, under the advice of their solicitors, holding the actual forfeiture in abeyance. It is estimated that the proposed call of 2s. per share would produce a sum of about 4,000l., out of which some 500l. would be expended in a new pump and necessary gearing, including freight, transport and erection. There would be the cost of clearing the mine of water, which Mr. Craig estimates at about 40l., including fuel and engine driver, and which he thinks would occupy a fortnight or so; the remainder would, in the manager's opinion, provide sufficient capital to enable the workings to be actively resumed and carried on efficiently. The water was about 23 ft. deep, and it has diminished about 10 or 13 ins.—something like that, entirely insignificant, and it will be necessary to pump it out. I now beg to move that the report and balance-sheet be received and adopted.

Mr. PRINCE (a director) seconded the motion.

The CHAIRMAN invited

DISCUSSION.

Mr. MELOHERS said that the directors desired to make a further call of 2s. per share upon the shareholders. He felt it his duty to oppose it, and he trusted that in his opposition he would have the support of the other shareholders. The reasons for his opposition were mainly that the promises of the prospectus had not been duly carried out, and that in making another call it appeared to him to be for the benefit of the vendors. He believed that some of the directors were vendors of the company.

The CHAIRMAN: No, no.

Mr. PRINCE said that Mr. Searle, who was one of the directors, was a vendor, but that gentleman was dead.

Mr. MELCHERS (continuing) said that he held a good many shares, and that his view was that no further calls should be made.

A SHAREHOLDER: May I ask how many shares this gentleman has.

Mr. MELCHERS: I have got a lot of shares.

A SHAREHOLDER: It is not a matter to go into; it has nothing to do with the company. (Chair, chair.)

The secretary having consulted the share register,

The CHAIRMAN announced that Mr. Melchers held 1,500 shares.

A VOICE: If he has only 15 it is the same thing.

Mr. MELCHERS: It is a question that ought not to have been asked.

The CHAIRMAN: I am sorry that it has been, but it is generally allowed.

A SHAREHOLDER: It gives more weight to a gentleman's words.

Mr. MELCHERS asked whether or not the vendors had any claim upon the company?

Another SHAREHOLDER thought that if the vendors had any claim upon the company the shareholders should not be asked to put further money into it for the benefit of those vendors.

The CHAIRMAN, in reply, explained that it was only in the case of a liquidation that the shareholders could be called upon and compelled to pay up the 4s. per share still due. That call would have to be made by the liquidator in the event of a liquidation, in order to equalise the ordinary shares with the vendors' shares.

Mr. MELCHERS thought that this was very unfair, because the vendors had already had their money out of the company, and he did not think that the shareholders ought to be asked to put in more money for the vendors to share in.

The CHAIRMAN: The company have nothing to do with it. The liquidator does it. It is legislation, and we cannot be responsible for legislation.

In reply to a further remark,

The CHAIRMAN said that such could only happen if they only liquidated, a course of procedure which he did not think the shareholders would be at all disposed to agree to—(hear, hear)—but that would depend upon the vote of the meeting.

Mr. MELCHERS expressed his thanks for the explanations that had been afforded him, but said that he had no option but to oppose any further call.

POSITION UP TO DATE.

Mr. J. J. SMITH said that the report and the balance-sheet presented on that occasion took them up to Dec. 31, 1890, and he would like to ask the chairman to give them a little further information, in order that they might understand the position up to date.

The CHAIRMAN: Are there any further questions to be asked?

A SHAREHOLDER: I think that should be answered before there is any further discussion.

Mr. WHITE: Will you tell us the amount of liability up to the present time, as near as you can guess?

The CHAIRMAN said that he could not exactly say how matters stood, as they had not got all the vouchers and accounts necessary, but from the statements they had received up to the present time, they had spent about 400l. odd more than they had received during the present year up to date.

Mr. WHITE: That makes our liability now—

The CHAIRMAN (interrupting): I cannot say what our liabilities are, because there is an amount of salary due to the manager. Likewise, there may be something due on licences, which has not been paid, and so on, and rents to come in, and things not actually due.

A SHAREHOLDER: How much do the leases amount to now?

The CHAIRMAN: It is not much.

The SHAREHOLDER: They used to be between 800l. and 900l. How much are they now?

The CHAIRMAN, in reply, said that they had 81 claims, and they had to pay 3l. per claim per annum, which made 243l., of which they got one half back.

STATISTICS.

Mr. J. J. SMITH, who spoke at some length, said that he rose to move an amendment, to the effect that no call should be made. He reviewed the position of the company at some detail, and expressed the view that it was unwise to make any further call. He considered that the wiser course would be to go in for the liquidation of the company, and the saving of the money still left, without troubling about that which was gone. He was in a measure disposed to approve of the call of 2s. per share if it were likely that they would achieve success, but he had gone through the figures of the balance-sheet, and they had led him to form a different conclusion. The position to his mind was this: if they wound up immediately, and the liquidator, as he was obliged to do, made the call of 4s. per share, it would realise the sum of 8,500*l.*, which, when divided upon the whole of the capital of the company, would give a return of 3s. 4½*d.* per share, which really meant that the cost of the liquidation would be 7½*d.* per share, plus the cost of the liquidation. The balance-sheet showed a sum of calls in arrear of 1,471*l.*, which it would be the duty of the liquidator to get in, and he (the speaker) took it that the whole of that money would be recoverable. His opinion, therefore, of the financial position at the present moment was that they had 2,000*l.* of net assets, without the necessity of any call, in excess of their liabilities, so that after all, although they must pay this call as a matter of

LEGAL FICTION,

it was really unnecessary for the shareholders to place their hands in their pockets at all; therefore, under all the circumstances, he considered that it would be wiser to liquidate at once.

A SHAREHOLDER seconded the amendment.

AN ELOQUENT APPEAL MEETS WITH A SUCCESSFUL RESULT.

Mr. PRINCE (a director) said that he would like to be allowed, at this point, to offer a few remarks to the shareholders. The directors had worked incessantly and conscientiously in the interests of the company, and for two years they had given their time and abilities without any remuneration whatever, and they would be happy to go on doing so until the affair became a success, or until the end. In his opinion they had only spent a small amount upon the development of an extensive property, but taking it that the sum of money itself was a considerable one, they had had a great deal of dead work to do in the removal of hundreds of tons of stuff, and their manager had pointed out that these were only similar to the difficulties that had to be faced at other diamond fields—Kimberley and elsewhere. (Hear, hear.) Some time back the position was, their manager stated, that they had got to a point in the soil where they would find diamonds at last, because diamonds being heavier went through the soil until they found a resting place on the bedrock. Well, when they had got to that satisfactory point, the heavy floods came down and stopped their work, but after these had passed away, as the chairman had told them, they found diamonds, and in two months they found more diamonds than they had done in the previous eight months. Now he asked them whether they were not

A LITTLE TOO HASTY

in their desire to abandon the mine at the present moment, and whether it would not be worth while to take, at any rate, a half-way course, and pay up a third further 1s. per share, and see whether they could not pump out the water, and get down to where the diamonds were. (Hear, hear.) He did not wish to say there was any analogy between the Vaal and the Kimberley diamond fields, but he would like to tell the shareholders this, that, as an old Cape resident, he could remember the time when diamonds were discovered at Kimberley, and he could remember that these fields were worked to a certain depth (almost the same as the Vaal diamond fields were at the present time), and they were then abandoned, and he could have bought any of the claims in the Dutoitspanburg district for 30*l.* a piece, because the owners believed they had got down to the bedrock, and had exhausted the diamonds. Each of those claims was now worth from 5,000*l.* to 10,000*l.* a piece, and perhaps much more, for someone discovered the idea of going right down to what was now known as the blue, which was the matrix of the diamond. And they had gone down in those mines hundreds and hundreds of feet, and were going on further still extracting diamonds. This was at Kimberley, and he repeated that he did not wish to make out that there was any analogy between the mines at Kimberley and the Vaal district, but he did say this, that it was wise to devote a little more money to finally testing these mines. They all knew that

MINING WAS A VENTURE,

and as a director of that company he had no interest in recommending the shareholders one way or another; they must decide for themselves. But he had felt a pride in coming on that board as a director, and he did not want to leave a ship when it appeared to be sinking. He asked the shareholders to trust the directors with a little more money, and in asking them to trust them with this money he wished them to remember one thing—to remember it was a risk, but that it was a risk worth undertaking with a view of seeing whether they could not make it a success, as Kimberley had become a success. The directors' desire was to take the shareholders into their confidence, or they would have been perfectly justified in exercising their right in calling up the other 4s. per share, and in purchasing new machinery. The board had, however, felt it their duty to call the shareholders together and to inform them of the exact position of the company. He urged them to find another 1s. per share. If, on the other hand, as one shareholder had suggested, they desired liquidation, why need they go into the expense of a compulsory liquidation.

Mr. SMITH intimated that a voluntary liquidation would meet his views.

Mr. PRINCE (continuing) said: Let the shareholders tell the directors that they did not wish to go any further in the matter, and that they wished the thing to come to an end, and the directors would fulfil their wishes, but, under any circumstances, he felt that it would be wiser to work the company a little more, and find a few more diamonds, and then if they wanted to sell the mine, sell when they were finding diamonds, but not now. (Hear, hear.) On the other hand, if they found that they were having some good "finds," they might, after all, think it best to continue working it themselves. If they must liquidate, there need be no hurry about it. They could stop, and

they could shut down the mine, and the revenue derivable from leases and the few claims which they had let would be, perhaps, sufficient to pay the reduced expenses of a caretaker, but then the question would be where were they going? They would practically be at a standstill; and, in conclusion, he could only again urge on them to adopt his view and find a further 1s. a share for a last effort.

Mr. PRINCE resumed his seat amid loud applause.

Mr. LAMBERT: I should like to know what it will take to get the pumping work over. I should think myself about 400*l.* or 500*l.* I propose that we spend another shilling and have another try at it.

I AM A POOR MAN, BUT I WOULD BE WILLING TO GIVE MY SHILLINGS.

I think it is worth trying, as we shall never know anything unless we do, and if we do not succeed we can try again. I think that shareholders who have not paid up the calls upon their shares should forfeit them, and we might be able to do something with the shares if we made a good thing of the mine. I shall be happy to move that the shilling be subscribed.

Mr. CHARLES SCOTT: I shall be pleased to second it.

Mr. LIST: With regard to what has been said about making further expenditure upon the mine, it seems to me that it will not get us out of our difficulties at all. There are 22 or 23 ft. of water in the mine, which it is proposed to pump out; all very well, but at the next big flood you will be in the same position, and the money will have been spent. I do not think that doing this pumping will make the mine any more saleable than before, out there, as the people know there it is a bad mine. I shall, therefore, support the recommendation for liquidation.

Mr. EDWARDS: Mr. Chairman, I attended a meeting about this time last year when we had a similar meeting, and the same proposition came before us for pumping out the mine. A shilling call was to be made, as at the present time. We now get a balance-sheet up to Dec. 30, but are left quite in the dark as to the liabilities.

Mr. PRINCE: There are no liabilities, or very few.

The CHAIRMAN: There is very little liability.

Mr. EDWARDS: Well, then, the expenditure.

The CHAIRMAN: It is a very small affair.

Mr. EDWARDS: Well, as a man of business I do not understand the difference between the 400*l.* which is stated as the amount we are wanting, and the 2,000*l.* we expected to lose last year. The net loss was 2,916*l.* 15s. 9*d.* put in the balance-sheet last year.

The CHAIRMAN: The difference is because we have not been working.

Mr. EDWARDS: If we make a shilling call I do not see we shall be any better off than this time last year.

Mr. LAMBERT: We are going to chance that.

Mr. EDWARDS: When I last saw Mr. Thompson I informed him that I had information about the mine appertaining to the purchase by this company, which, had I known at the time, I should not have touched it. A gentleman who was one of the vendors—I think Mr. Searle was his name—(The CHAIRMAN: Yes)—really knew all about the mine.

The CHAIRMAN: I do not think so.

Mr. EDWARDS: My information is that the thing was hawked about over there, and no one would look at it.

The CHAIRMAN: I think it is very hard to speak so of a man who is dead.

A VOICE: Hear, hear.

The CHAIRMAN: Mr. Searle was one of the most honest men I have ever met, and his heirs hold a number of the shares at the present time.

Mr. EDWARDS: I think we had better make the best of a bad bargain. We are no further forward this year than last.

Mr. MELCHERS: I advise the taking of an independent opinion of a first-class engineer.

Mr. PRINCE: We have exercised a policy of caution, but as far as I can say, your recommendation would meet with approval, as it would relieve us of a great deal of responsibility, but it would cost about 100 guineas.

The CHAIRMAN: The only thing is the expense; we wish to keep that down.

A SHAREHOLDER: It is no use going to an engineer; he would give an opinion, but it would only be in theory, and not in practice.

Mr. ARNOLD: Can the water be got rid of? It is no use getting it out unless the shareholders have the security that it will be got rid of, and permanently so. I should like to know if the pump will be of sufficient force to keep it down? The remarks of Mr. Prince have made a great impression upon me, and although I came into the room bearing in mind the promises of the chairman last year, and the still worse position of the company to-day, I feel that Mr. Prince's explanations have been very good. I should like to know if we have reached the blue yet?

The CHAIRMAN: The proof, I think, that it is desirable to continue the work of the mine is that in the month of Nov., the last month we were working, we discovered more diamonds than at any other previous time. With regard to the water power, there will be sufficient force to keep the mine constantly clear. There is already one pump out there.

A SHAREHOLDER: Is it not the case that in this mine there is no compound system, and you have, therefore, no guarantee that the diamonds will not be stolen by the natives? In the Kimberley mines the whole of the works are on the compound system, but if it is not the case with ourselves, there is no guarantee that the diamonds will not be lost to a large extent. On the Kimberley mines the whole of the native workers are searched, and it should, I think, be done on our mine, particularly as

THE RIVER WORKINGS PRODUCE VERY FINE DIAMONDS,

and they will have a great chance of being stolen.

Mr. PRINCE: Notwithstanding the compound system, a great deal has been stolen in Kimberley. They do not have the compound system on the Vaal River, and our company with only 8,000*l.* or 9,000*l.* could not possibly have it. The natives who are working at the Vaal River will not go to the companies that insist upon searching; but endeavours were being made to bring the Searching Act to the Vaal River.

Mr. J. J. SMITH: I think that the whole thing is impracticable. I think when you have succeeded in pumping the mine dry, at the next heavy flood you get, the whole thing will have to be done over

again. It seems to me sheer madness, and you had better wind the thing up.

Mr. HALLETT: Does the 1,400% refer to the last call made?

The CHAIRMAN: No; that is the default upon the whole of the calls.

Mr. HALLETT: How much refers to the last shilling call made? I think that is something the shareholders ought to know, so that we may be able to judge what to expect if another call is made. (Hear, hear.)

The CHAIRMAN: About 125%; but the secretary will look it up. The motion which has been proposed by Mr. Lambert, and seconded by Mr. Scott, is "That a call of 1s. a share be made and the work proceeded with."

The resolution was then put to the meeting, and upon 22 voting for it and 14 against, the chairman declared it carried, amidst considerable applause, and Mr. J. J. Smith's amendment was not pressed.

The CHAIRMAN then moved: "That the report and accounts be received and adopted," which he also declared carried, 17 voting for the resolution and eight against.

Mr. SCOTT: I beg to move the re-election of the auditors.

A SHAREHOLDER: I think, Mr. Chairman, we ought—

The CHAIRMAN: The discussion is now closed.

Another SHAREHOLDER: Before the meeting is closed, I think we really ought to know the amount of shares which are in arrears, and as the secretary is looking out the number, I think the meeting is not closed as regards that question. I think it very important that we should know the number of shares affected by the unpaid calls, and although you have suggested, Mr. Chairman, that the meeting is nearly finished, you could give us some decided opinion as to what has been done with respect to these unpaid calls. I think if anything could be done here, it is better to do it than leave it in the hands of the solicitors.

The CHAIRMAN: The number of shareholders is 16, representing 2,665 shares, and this amounts to about 1,124%. The defaulters who could be got at have been sued, but there are some who are out of the jurisdiction, and these we cannot get at.

A SHAREHOLDER: May I make a suggestion that the shares be forfeited? (Hear, hear.)

The CHAIRMAN: They will not come in if we do, so I think it is best for the present, at least, to keep forfeiture in the background.

Mr. J. J. SMITH: Do I understand, then, Mr. Chairman, that those who have not paid their calls are in just the same position as we who have?

THE SOLICITOR ON UNPAID CALLS.

The SOLICITOR: Allow me to explain. If we forfeit the calls now we can only get the amount liable up to the date of forfeiture. We are about to make a call of a shilling. Now, follow me. If we forfeit after making the shilling call, they are also liable for that, and we can forfeit the whole of the shares and then sue them. (Laughter.)

A SHAREHOLDER: Well, I think that is a good thing, as if the company becomes a success we may be able to sell the shares.

The re-election of the auditors was then proposed, seconded, and carried.

The CHAIRMAN: That, gentlemen, concludes the business of the meeting.

A vote of thanks to the chairman closed the proceedings.

THE NEW VANCOUVER COAL MINING AND LAND CO., LIMITED.

BEST BALANCE-SHEET AND REPORT THE COMPANY HAS EVER SUBMITTED—DIVIDENDS KEPT DOWN BY THE COMPANY'S INSUFFICIENCY OF WORKING CAPITAL—THE VALUABLE SERVICES OF THE MESSRS. ROSENFELD, OF SAN FRANCISCO, AND MR. S. M. ROBINS, THE SUPERINTENDENT.

A SEMI-ANNUAL GENERAL MEETING of this company was held at the Offices, No. 12, Old Jewry Chambers, Old Jewry, on Tuesday, to receive the report of the directors.

John Galsworthy, Esq.

(chairman of the company), presided.

Mr. JOSEPH RAMSDEN (secretary) read the notice of meeting.

SATISFACTORY REPORT AND ACCOUNTS.

The CHAIRMAN: Gentlemen, before moving the adoption of the report, I should say that Mr. Fry, one of our oldest colleagues—in fact, I think the oldest—has written to me to say that he is at St. Leonards for the benefit of his health, and is unable to attend this meeting. He is much better, but desires me to apologise for his absence. Gentlemen, I should think, from a perusal of the report and accounts, you must have come to the conclusion that I have, in common with the board, that they are eminently satisfactory, and that the operations of the past half-year are quite calculated to show that the company is in a fairly prosperous state. During the half-year the nett output was 253,296 tons, and the sales were 254,025 tons, against 217,333 tons, and 215,000 tons in the previous half-year. That is a very large increase, and

THE TOTAL OUTPUT IS THE BIGGEST

we have had since the company was first established. It has been derived from five different sources. From the East Field we had 75,000 tons from the No. 1 level, and from the telegram we received a day or two ago, that level is still continuing in good coal, and is 5½ ft. thick. It has now reached a length of 1,400 yds. from the bottom of the slope, so that that level is underneath Protection Island. In the same field we have now the north level below, and from that we hope also to get a very large output. At present that level is in 9 ft. of coal, equally good with the No. 1. It is an excellent coal, and we hope to find the coal between those two levels, and, if so, there is, undoubtedly, a large field of it upon which to work. That is what I alluded to in my former remarks to you as being a very large field of coal which we expect to find there. The next source of supply has

been from the South Field Mine, No. 2, from which we obtained as much as 100,000 tons. Now, in that mine, so far as that part of it is concerned, we see our way to its terminating at no very distant period, but have in the No. 5 shaft, which we have sunk in its neighbourhood, the hope of finding the coal again, and that it will take the place of the one which we think at no very distant period will be worked out. Another source of supply has been from the South Field No. 3, where we got 35,000 tons. That is a mine where the pillars are being worked out, and we do not expect to find coal there beyond a few months. The No. 4 slope yielded 66½ tons, and may now be considered abandoned. From the North Field Mine, in the Wellington district, we got 42,257 tons. Owing to this large output, and the reasonable prices prevailing in San Francisco,

WE HAVE REALISED A VERY LARGE PROFIT

for the half-year, which is shown you in the balance-sheet. In addition to the work accomplished in regard to those mines, there were seven borings, the cost of which was written off to revenue. Besides this there is in progress a shaft on Protection Island, and from a telegram received yesterday it is now down 547 ft. out of a probable distance of 620 ft., so that in a very short time we shall be down on the coal at Protection Island, on that seam which is worked from the level I pointed out. Another shaft was sunk in the South Field, No. 5, which is to take the place of South Field, No. 2 Mine. Then the railway was partly constructed from No. 5, South Field, to the main line, and the wharf in the North Field has been completed. All those works as you will readily understand, must have involved

GREAT EXERTION ON THE PART OF OUR SUPERINTENDENT, MR. ROBINS.

The consequence of all this has been that Mr. Robins has to a certain extent broken down in health. He has, in fact, been overworked, and has thought it requisite to take a short rest in San Francisco. He has been there for three or four weeks, and the report from him is that he much better, and hopes to get back to Nanaimo as good a man as ever he was. We sincerely hope that will be so, because there is not the slightest doubt he did require a rest, and we were only too delighted when we heard he had gone to San Francisco. He has had the benefit of physicians there, and we are very pleased he has derived the benefit he reports. (Cheers.) There is no doubt that what I have pointed out to you has really involved a considerable amount of enterprise in this concern, and that enterprise has, perhaps, been brought about by the fact of our

ENTERING INTO THE AGREEMENT WITH THE MESSRS. ROSENFELD,

for without that agreement, and the moneys they agreed to find, and did find under it, we should not have embarked in these matters. (Hear, hear.) We could not have done so but for them, for we should not have had the means to accomplish the works to which I have referred. I propose now to refer to the balance-sheet, and at the outset do not hesitate to say that it is

THE BEST WE HAVE EVER SUBMITTED TO THE SHAREHOLDERS.

You will observe that the main asset on the credit side of the account, which is 272,000%, shows an increase of 2,900% since the last balance-sheet was issued. We have laid out various large sums of money on the items which are involved in that account, and the principle we go on is this—when we find that we are on the eve of working out a mine, or that we see the end of it (and, unfortunately, in this concern the end has been too often seen of many of the collieries we have opened)—when we find that, we write down the item to the lowest possible point. Suppose a colliery has cost 50,000%, and we see it is going to be worked for a considerable time, the usual rate at which the depreciation goes on is 6c. per ton. That will probably work it out if the colliery has good life in it; therefore, there will not be that severe writing down which we adopt when we see the end of a colliery. This policy has the effect of keeping down that big item, which would otherwise run into enormous size, and would be exceedingly delusive. Now, that item is kept down, and you have, therefore, every right to congratulate yourselves upon the fact that the property is well worth the amount set against it. On the balance-sheet also we have an improved state of things with regard to cash assets, because you have 84,000% against 70,000% on the other side, and you will see that we have put to the reserve funds a sum which increases them to the amount of 44,900%; so that the balance-sheet, I do not hesitate to repeat, is now in a much more healthy state than it has ever been since I have been connected with the company. There is one item in it I should refer to—

45,000% SUNDRY DEBTORS TO THE COLLIERY.

The principal item is 26,000% for land, which is quite secured by the fact that we do not part with the land until we get all the instalments paid; therefore, it is practically as good as cash. I do not know that there is any other point that I need refer to. Certainly we have had some protests (I may call them), on account of the smallness of the dividend. People think it is too small a dividend we are paying on the state of affairs disclosed by the accounts. Well, it is a small dividend; but I may say that, looking at the work we have been performing, and looking at the fact that

OUR WORKING CAPITAL HAS NEVER BEEN WHAT IT OUGHT TO BE,

and what I have always said in this room it should be, we consider we have acted wisely in limiting the dividend. That working capital ought to have been provided by the shareholders, though I have never been able to see my way to ask them to do it. It is now being provided for by that which has come out of profits, and by the reserves, which we have set aside. That cannot be done if we are to pay away all our earnings in dividends. (Hear, hear.) We think a 5 per cent. dividend, whilst your property is being built up in this way, is infinitely better than paying a large dividend and then borrowing money at a heavy rate of interest. I think the shareholders, upon reflection, will say it is better to have a steady dividend of 5 per cent. until we see our way to an ample working capital, than it is to borrow money at a large rate of interest in order to pay the dividends. Besides, that there was an understanding when we entered into the agreement with the Messrs. Rosenfeld, as far as we could come to it, that the dividend, whilst that

agreement continued, should not be more than 5 per cent., except in the case of extremely large profits. Well, we made it 6 per cent. in two half-years, but on this occasion, looking to the fact that this present half-year will not be so prosperous as the last, as prices have gone down in San Francisco, and are likely to rule considerably lower than they did in the last half-year, and looking also to the fact that the output has been largely reduced, and that there was this understanding with the Messrs. Rosenfeld, we have kept the dividend within 5 per cent. I beg to move "That the report and accounts now presented be received and adopted." (Cheers.)

Mr. FREDERICK TENDRON (director) : In rising to second the resolution, I should like to refer to one point Mr. Galsworthy, I think, made clear to you in connection with the Nos. 1 and 3 levels, East Field Mine, and that is, that if the coal lasts between the two, which we have reason to expect, not only is the balance-sheet the most satisfactory ever presented, but the known reserves of coal are larger than they have ever been in the history of this company, which, of course, is a most important matter. The balance-sheet certainly is a very satisfactory one, but shows you how very insufficient our capital is. We are obliged in selling land to allow a large amount of payment to be made, by instalments, but we hold security during the whole of the time. The indebtedness for land is perfectly good, but we are also carrying on the trade of coal merchants in the island, and have a very large sum owing to us for that commodity. In addition, we must naturally pay the monthly wages before the coal can be got out and shipped to San Francisco, and that means close upon another 20,000*l.* a month, from which will be seen that a large amount of working capital is required. Whether when the expiry of the bonding period comes the shareholders will be asked to find the requisite working capital, so as to get the benefit of the full earnings distributed amongst them instead of being applied to other purposes, remains to be seen. Certainly you have never had so clean a balance-sheet as the present, or so few assets, that can in any way be challenged when called by that name. Your capital is hardly adequate to the trade you are carrying on, and this property has increased from 7,000 acres to 30,000 acres, and from an output of 5,000 or 6,000 tons a month to an output which averaged last half-year no less than 10,000 tons a week. You cannot expect to have 10 or 11 miles of railway, three collieries, wharves, and all the appliances at work without a larger increase of capital than you have had up to the present time. (Hear, hear.) I have pleasure in seconding the adoption of the report and accounts.

Mr. BULLIVANT : What is the average value of the land? You have 30,000 acres, and a good portion of it is in town lots.

The CHAIRMAN : Some of the town lots realised over 500*l.* an acre, and the average is about 400*l.* We have about 300 acres left of the town lots out of the original 500. We have been selling until we have only that left, and I take it that each acre is worth about 400*l.* It is a limited area.

Mr. BULLIVANT : I gather that the value of the town lots is increasing every year.

The CHAIRMAN : Yes ; and the longer we hold them the more valuable they become.

The report was unanimously adopted.

Mr. BULLIVANT : The reason you gave us for not paying larger dividends was a very good one.

MR. ROBINS THANKED.

Mr. TENDRON : I am sure it is whilst so much of our profit has to be devoted to capital outlay. I have now to propose : "That the thanks of the meeting be presented to Mr. Robins, the superintendent, for his continued ability in the management of the company's affairs during the past half-year." You must have all been very pleased to have learnt from the chairman that Mr. Robins is now, I may almost speak positively and say, in better health than he has been for years. His visit to San Francisco has done him an immense amount of good. It was not only a complete change of scene and rest, but he found himself in the presence of as true friends as ever man had the good fortune to possess ; that is to say, he has been with Mr. John Rosenfeld and his sons—(cheers)—and I am sure I never came across such men, for they seem to have a regard for Mr. Robins that I cannot well describe. They have the highest respect for him and I may even say affection. I shall not say more on the subject at the present time, because Mr. John Galsworthy, jun., was out there a short time ago, and I hope he will second this resolution and have something more to say on the subject.

MR. ROBINS AS SEEN ON THE SPOT.

Mr. JOHN GALSWORTHY, junr. : Mr. Chairman and Gentlemen, I have great pleasure in seconding the motion which Mr. Tendron has just proposed. I was out at Nanaimo only two months ago for several weeks, and during that time received the greatest kindness and hospitality from Mr. Robins. No one could possibly have been kinder, and so warm and cordial was his welcome that it almost makes me tremble to think of the fate that awaits anyone else connected with the management who has to pass through the same ordeal of kindness ; but Mr. Tendron has done it, and has survived. (Laughter.) Nothing would please Mr. Robins more than to receive a visit from the chairman or any other member of the board. Mr. Robins was not in the enjoyment of excellent health while I was there—in fact, he was considerably overworked, and I would impress upon the board that it is almost a necessity that he should take at least one holiday in the year. Up to the time he went to San Francisco, a short time ago, he had never had a holiday for the whole eight years he has been out there, simply for the reason that he would not allow himself one, and that the affairs of the company were not in a position to enable him to give himself a rest. Now, it stands to reason that no man can go on working in that way without taking rest at least once a year. His position is rather unique. In the first place, he is prime mover in everything in Nanaimo. Everybody looks up to him in every possible way, and he can never depend upon having a single minute of the day to himself. From the first thing in the morning to the last at night, even in his own house he will have people running in asking him to do little things for them—especially the miners, who are not an easy lot to deal with. In fact, they are properly described by the

British Columbian expression "tough," which suits them down to the ground. They require a lot of dealing with, but if you were to

ASK THEM THEIR OPINION OF MR. ROBINS,

and they were to express it in Oriental language, they would say, "he is our father and our mother," and if they were to add the truth, they would say also "he is our nurse ;" and that would about describe the relationship he bears to them, for he looks after them in every possible way. (Cheers and laughter.) I have had a great deal of talk with Mr. Robins while there, and it seems to me no one could have a firmer belief in the future capabilities of the company than he has ; and from what I have learned of the general aspect of affairs, and from what I saw in my visits to the various mines and works I think his belief is eminently well grounded, for owing mainly to his exertions during the eight years he has been out there the company has been placed in an excellent position. (Cheers.)

The motion was carried unanimously.

THE MESSRS. ROSENFELD NOT FORGOTTEN.

The CHAIRMAN : I have great pleasure in moving—"That the thanks of the meeting be given to Messrs. John Rosenfeld and Sons, the company's agents in San Francisco, for their services to the company during the last half-year." (Cheers.) I need not enlarge on the services the Messrs. Rosenfeld have rendered to this company from first to last. It is one of the greatest pleasures that I have to propose this vote on occasions like the present, for I am perfectly satisfied that the interest they feel in this concern is similar to our own, and that they are at all times ready to do all they can to forward the company's prosperity. I beg to move the resolution.

Mr. FELL seconded the motion, which was carried by acclamation.

Mr. FELL also proposed a hearty vote of thanks to chairman and directors, to whom, he said, the shareholders were greatly indebted for their services.

Mr. BULLIVANT seconded the motion, and thanked the chairman for his lucid address on the position of the company.

The CHAIRMAN, in reply, said : There is a certain amount of reticence which is inevitable in every company of this sort. We should like to be more explicit, and endeavour to be as explicit as we can within the limits of prudence, but I may say this, that if there is any point upon which any shareholder wishes information he has only to come and see Mr. Ramsden, our secretary, and he will get it.

LOCH LAIRD ESTATE AND MINERAL CO.

30*s.* PER £1 SHARE RETURNED TO THE SHAREHOLDERS WITH TWO SHARES IN A LARGER COMPANY.

The first annual meeting of the shareholders of the Loch Laird Estate and Mineral Co., Limited, was held on Thursday at the Cannon-street Hotel.

Lord Henry Brudenell Bruce

presided.

The SECRETARY (Mr. C. Cavolet), having read the notice convening the meeting,

The CHAIRMAN said : Gentlemen, it is particularly gratifying to me to feel that I am not only in a position to lay before you a full statement of the course and progress of our business, but to give you some substantial proofs of such progress. As very often happens, especially when mining matters are combined with other industries, some of the vaticinations in which I indulged at our statutory meeting have materially altered in character, and the practical working of the estate has caused us to modify or defer expectations of immediate large returns in one direction, happily only to find substantial compensations in some other. I held out to you on what I considered the best authority the prospect which our rich manganese deposits gave us of speedy and large profits, but the admirably full and clear report recently furnished by our managing director (Col. Dunlap), which is in your hands, will show you that a want of continuity in our strikes of that mineral has existed up to quite recently, and that after a large outlay we are now apparently only on the eve of realising supplies sufficient to help us in dividend-earning power. Our managing director gives an exact description of

A GOOD VEIN OF FINE CRYSTALLISED MANGANESE.

and on that vein we are now at work. I may also add that the value of crude manganese being so much lower than a year ago considerably damped our ardour in the quest of the mineral. However, we appear to have hit upon a good supply, and furthermore we have taken steps to counteract the disappointment occasioned by the lower price of the crude manganese by establishing a mill for grinding that product. I find that for ground manganese we shall obtain \$30 or \$40 more per ton than for unground. It seems pretty certain that a good sound lucrative industry is on the point of realisation from the working of the manganese on our estates. Our managing director's report will explain to you, in the fullest possible manner, the terms on which we have inaugurated a brick company to utilise the valuable deposits of clays on our estates. These clays we know to be of the most varied and extensive character, and extremely valuable. We are making a brick from them of a pinkish hue, which seems to be in great demand in the United States. We also make a hard vitrified paving brick—in fact, bricks of nearly every known description. Our works are complete, and furnished with a Boyd's patent brick press machine and a down-draft kiln, and, what is very much to the purpose, we have made a large quantity of bricks, which are delivered to users and highly approved. We have made also some good sales for forward delivery, and expect to realise a substantial profit from this brick making in aid of dividend for years to come. You are aware that when we entered into possession of the Loch Laird Estate we had a heavy task before us. We knew pretty well that success would eventually crown our efforts, and that with care we could carry out all or more than the fair promises conveyed in our prospectus, but as you know, we had, like many other new enterprises not much money to work with, and I can assure you that not only have your chairman and directors had to work very hard and look very far ahead, but they have had more than once to dip into their own pockets for funds to carry out the scheme in which we were all

embarked, and which we were resolved to do our utmost to make a success. Well, gentlemen, I may tell you that we laid out

A TOWNSHIP

which was christened Savernake, and we allotted out about a thousand residential and business lots. Of these lots we sold 700 to an American gentleman (a Mr. Taylor), representing, I think, a syndicate of American buyers. He, Mr. Taylor, agreed to pay us a round sum of about 23,000*l.* sterling for these lots, plus 5,000 unallotted shares in the Loch Laird Co. In passing, I must tell you that of the 35,000 shares forming the capital of our company only 27,150 shares have been issued up to now, and 7,850 shares still remain in our hands. Well, out of this 23,000*l.*, Mr. Taylor only paid us 12,000*l.* or thereabouts, and for that we gave him an equivalent in land, and kept our 5,000 shares. Of course, we might have tried to enforce the contract, but your directors did not care about going to law, and Mr. Taylor had really acted fairly well and done the best he could, and perhaps we were a little gratified to think he had not taken all the lots he contracted for, as they might easily be worth more money. I for one was very glad he did not take our 5,000 shares, as I always look upon shares in Loch Laird Estate and Mineral Co. as likely to be of very considerable ultimate value. After getting into funds on Mr. Taylor's payments, we proceeded to clear the estate of time payments, and develop it with vigour. We also purchased an adjoining property, called Hogan, of 600 acres, which we have reason to believe will prove of very considerable value, as it contains lime, stone, brick, fireclays, and possibly manganese, and a prospective value in sites for industries, after Loch Laird gets filled up. At this juncture the quietude that followed Baring's failure very greatly hampered our movements and completely stopped for a time all sales of town lots and every species of enterprise. Happily, all that is passing away, and we now find ourselves again in a position to take advantage of the trade revival which is making such rapid progress in America, more especially in the Southern States. The Hogan estate had been acquired by us on triennial payments system, and the first instalment was duly paid out of Loch Laird funds, the second being advanced by your directors, and what is still unpaid remains a charge upon the estates. I will now proceed to summarise the position in which we stand to-day. The Loch Laird Estate and Mineral Co. is fully and completely paid for, and the freehold title in our hands; we have the township of Savernake surveyed and lotted up, and about 750 lots unsold. We have the manganese deposits well opened up and promising a moderate fair yield. The manganese grinding mill is owned by a small separate company which takes the mineral raised by the Loch Laird Estate and Mineral Co., and pays for it at market rates, and in return for site, &c., allocates one-third of its profits to the Loch Laird Estates and Mineral Co. The brick works are carried on by an independent company, which found all the capital required except \$7,000. I shall now propose that you accept the accounts and proceed by extraordinary meeting to discuss the question of amalgamation as laid before you in our able managing director's ample report. The directors are compelled to present an approximate statement of accounts to-day, prepared up to Sept., 1891, and regret that they are not more complete; but we were in this dilemma; we were required by those who wish to amalgamate with our property to meet you and obtain your authority to negotiate with them at the very earliest opportunity, and owing to the brief period between the receipt of the proposition and the date this meeting was necessarily fixed for, that time was insufficient to prepare a duly audited account. The chairman then formally moved "That the approximate accounts as rendered be received but not adopted."

Mr. SADDINGTON seconded the motion, which was carried. The retiring directors and auditors having been re-elected,

THE MEETING WAS MADE SPECIAL

for the purpose of considering the amalgamation of the company with certain existing American companies.

The CHAIRMAN said: Gentlemen, we have now to consider the question of amalgamation of the Loch Laird Estate and Mineral Co. with other properties as mentioned in Col. Dunlap's report. There is no doubt that we possess a most valuable asset in the Loch Laird Estate and Mineral Co. If we accept the offer of our American friends and amalgamate, we shall at once receive a cash payment of upwards of 100 per cent. on our subscribed capital, which is not by any means bad work for so short a period as has elapsed since we took over the Loch Laird Estate. Furthermore, we are offered in addition two shares for one, or nearly so, against our present holdings in Loch Laird. We must now consider what prospects of future good returns are offered by the company in its amalgamated form, and I must say that the statement laid before us by Col. Dunlap, acting in this on behalf of the other American gentlemen connected with the various estates, looks very promising. In the first place we have the James River Steel Co., which I am informed possesses a fully-paid-up capital, and is certainly in the hands of a good, sound, and highly-placed body of men on its directorate. Col. Dunlap vouches for its value, and I have no reason to doubt the accuracy of his knowledge. The Cumberland Steel Co., with its plant, seems of great possible value to us, and does not, so far as your board can tell, appear to be too highly priced. Of the tin-fields I confess I know nothing personally. The Tin Plate Co. ought to be a success if taken in hand by persons who know how to go to work at such business. No doubt the Americans will commence under difficulties, and have some trouble in getting together the requisite skilled labour. On the other hand, they will have the advantage of abundant capital and the undoubted skill in labour-saving and up-to-date all-round appliances, which are notoriously deficient in some of our tin-plate works at home. It would certainly appear that with such adjuncts to the Loch Laird Estate, and with

AN AMALGAMATION

board on that side of the water of the highest calibre, embracing as it does all the different interests concerned, especially having the direct support of a great railroad like the Chesapeake and Ohio Railway Co., which runs through our property; that I am not far wrong in anticipating a prosperous, if not brilliant, future to the new Savernake Steel and Tin Plate Co., if carefully, ably, and economically managed. The offer of so great a percentage on our investment in Loch Laird is very tempting to your board. It is, as you will perceive, essentially a cash basis one, viz., \$200,000 (40,000*l.*) in cash being distinctly offered to us, and without which we do not part with

our property. In addition to this is the substantial holding of two shares, or nearly so, in the greater company for your one holding in Loch Laird. I do not think you will consider me, therefore, over sanguine when I say it looks good business, and justifies the shareholders in entering into negotiations for amalgamation and arranging minor points of detail. Perhaps you will allow me to point out to you that if we allow this opportunity to slip, it may never recur again. It is because I believe the supreme moment has arrived in your affairs when you must decide for yourselves whether to advance or remain isolated, that I appeal to you to-day to come to a definite decision either to accept or reject the offer now made to us by our transatlantic friends, who invite us right royally to join hands with them in developing a vast commercial enterprise, in which they are sanguine of ultimate success. I have now to propose that your directors be authorised to negotiate the suggested amalgamation, and that, if necessary, myself and one other director, as desired by the provisional board in America, have power to go across and carry out all necessary arrangements.

Mr. SADDINGTON, in seconding the chairman's proposition, said the properties with which they proposed amalgamating were the James River Steel and Iron Co., with a capital of \$200,000, the Loch Laird Co., with \$200,000, the Crown and Cumberland Co., \$100,000, the Tin Ore Lands, \$100,000. The Tin Ore Lands' works at mines, \$50,000, the tinplate works at Savernake, \$250,000, and working capital \$100,000, making a total of \$1,000,000. To this was to be added a subscribed capital of \$1,000,000, making \$2,000,000. The Loch Laird property would be valued at \$500,000, or a fourth of the whole. Col. Dunlap, their managing director in America, had written to him stating that the advantages they would derive from the amalgamation would be that it would give them \$200,000 in cash, or more than 100 per cent. on their investment, and \$300,000 in fully paid shares, which would give the shareholders a larger share in a property many times more valuable than their own. At the same time the properties would be worked with a large capital, and would do 10 times more than the Loch Laird could hope to accomplish. Then there were the

VALUABLE TIN MINES,

which were worked by a syndicate of Boston gentlemen, and these would, according to present results, prove advantageous. Beyond this, the cash subscriptions were secured, as besides the contributions from various sources, a New York gentleman had undertaken to subscribe any deficiency that might be left. These facts would enable them to form some idea of the value of the connection. In Virginia there was no further liability attaching to the holders of shares. The new company would be chartered by the Government, which would free any subscriber from any liability beyond the amount of his shares. The directors of this company would be fairly represented on the board of the new company, but as to the actual representation, that was a point of detail which would have to be settled later on. He was sure Lord Henry Brudenell Bruce took a great interest in the company, and would do all he could to secure the 100 per cent. and as much more as possible.

DISCUSSION.

Mr. COOPER: I understood that we were not only going to get back the money we had paid, but get a return of 10*s.* besides.

Mr. WILSON: It is only

A QUESTION OF ARITHMETIC,

Mr. COOPER. There are 27,150 shares, and we are to have 40,000*l.* given us in cash, which, I make it, will at least give us 30*s.* per share, perhaps more.

Mr. SADDINGTON: We did not want to tell the shareholders that they would get more than 20*s.* in the £ in case they should be only disappointed, although we all believe that you will get more. (Applause.)

Mr. HENRY: Do I understand that the whole of the companies you have mentioned are to be put into one "pot," and worked together.

Mr. SADDINGTON: That is exactly the position.

The CHAIRMAN said that in matters of that description it must be done on a fair give and take principle. If he went to America—and he would be ready to go in the interests of the shareholders if it were necessary—he could open his mouth as wide as anyone, only he did not want to get into the mistake of opening it too wide. The chief points of the agreement had been considered, but there were now still a few minor points to be gone into, the discussion of which, however, could not be gone into at that meeting.

A SHAREHOLDER: Will there be any liability of the shares which we will have given us?

Mr. SADDINGTON: None whatever. They will be fully-paid shares, and the limited liability laws of Virginia are exactly the same as the Companies' Acts in England.

In reply to a further remark,

Mr. SADDINGTON said that there might be some minor amounts which would have to be deducted, but he repeated that he believed that they would get about 20*s.* per share. He added that he had received a letter from the managing director, Col. Dunlap, who was a director of the James River Co., and officially represented that company. He had told him (the speaker) that the agreement was certain to go through, as many gentlemen in the United States had promised to make up the cash required by the new company. Those gentlemen were very enthusiastic about the matter in the United States, and one gentleman in New York had promised to make up the whole deficiency should there be any. (Applause.)

Mr. WILSON: Who will there be to look after our interests in the new company?

Mr. SADDINGTON: We shall always have Col. Dunlap.

Mr. WILSON: Only him?

Mr. SADDINGTON: We shall have the whole of the new directors, who will have the interest of the shareholders of the new company to look after, and that will be our own interest, as we shall then be shareholders in the new company. The board, however, will try and get you well represented on the directorate of the new company.

Mr. ROBERTS: Are there any further liabilities in connection with our own company?

Mr. SADDINGTON: The only liabilities are in connection with the purchase of the new estate, and this amounts to a sum of 3,000*l.* to 4,000*l.*

The CHAIRMAN: We have paid about half of the total amount already.

Mr. SADDINGTON: Yes; 3,000% to 4,000% is what remains, and we shall try and get that liquidated by the amalgamating companies.

Mr. HENRY: Will there be any further issue of shares?

Mr. WILSON: There will be, of course, an issue of shares, but there will not be a new issue in the ordinary sense of the word, as they will be issued by the company formed for the purpose of providing the necessary cost to buy our property. Each of the companies amalgamating will put in their property and so much in cash.

A SHAREHOLDER: Shall we be able to obtain any of these shares?

Mr. WILSON: I should think not, as they will be taken up in America.

The SOLICITOR: I should think a shareholder could get some, if he liked to apply. He had better let the chairman know, and he would get them for him.

Mr. HENRY: Will any be offered for subscription in London?

The CHAIRMAN: Certainly not.

The resolution for amalgamation was then put, and carried unanimously.

The CHAIRMAN then moved "That the thanks of the company be given to Col. Dunlap for his able management of the property of the company. (Hear, hear.)

Mr. COOPER: I beg to second it.

The motion was carried.

A vote of thanks was accorded to the chairman for his services.

The CHAIRMAN, in reply, said that at the present time of the year

"A LIFE ON THE OCEAN WAVE"

was not a pleasant one, but should it be to the interests of the shareholders that he should cross the Atlantic, he would be ready to do so. (Cheers.)

The meeting then separated.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

THE MYSORE GOLD MINE.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—An attempt has been made to depreciate the value of the Mysore Mine.

Will you allow me to place before your readers a few facts, which they can easily verify from the reports.

The reserves in Feb. last were 80,100 tons. The amount of gold extracted from Feb. 1 to the end of Oct. was 29,978 tons. Thus there remains of these reserves 50,122 tons.

We now come to the new ground opened out. Since Feb. last nearly 200 ft. have been driven on the 700-ft. level in one of the widest and richest lodes ever found in this great mine. The 780-ft. level reached this shoot 184 ft. north of Rowse's, and 216 ft. were driven through a lode generally 3 ft. to 4 ft. wide, worth from 4 ozs. to nearly 6 ozs. to the ton.

Stoping below the 700 ft. only commenced about Aug. last, so that nearly 100,000 tons of the richest ore ever found has been opened out by these levels. At the end of the 780-ft. level a winze was sunk for 70 ft. through the same rich lode without a break. The south level from the bottom continued in the lode for 42 ft., and the north level is still in the lode, of which the last assay was 2 ozs. to the ton.

The reserves, therefore, are more than doubled since the date of the last annual report.

It is plain that, considering that the whole amount of ore extracted in 1890 was only 38,812 tons, value 229,966%, and that stoping the new ground opened out since Feb. last has scarcely commenced, there is enough now to pay 75 per cent. for more than three years, if not an ounce of gold was found in addition to what is ready for removal.

This, however, is far from being the case. Rowse's shaft will soon be again in rich ore. Glen shaft, 1,000 ft. further north, has just come into payable ground at a depth of only 250 ft., while Tennant's shaft promises well to surpass the richness of the Ooregum and Nundydroog to the north of it.

The Mysore Mine never looked more promising than now. We have one continuous record of magnificent progress.

In 1890 the total amount realised by gold sales was 229,966%. Up to the end of Sept. this year the amount received is 195,998%, and the total for the year 1891 will be more than 260,000%, which, after a divi-

dend of 75 per cent. is paid, will leave more than 90,000% for expenses against 74,775% in 1890.

The return for Oct. was the largest ever made, and, with the enormously increasing reserves, there must be enough of ore to supply the new battery of 30 stamps, which will soon be at work.

At 5% a share this is a safe 15 per cent. investment for years to come. Shareholders should judge for themselves, and not listen to empty talk.—I am, &c.,

A PERMANENT SHAREHOLDER.

YURUARI.

SIR,—As the meeting of this company is to be held on such an inconvenient day, a larger number of the shareholders than is usual will have to rely on the newspaper reports for their information of the proceedings. I trust, therefore, that the MINING WORLD will have a full account of the proceedings, so that we may not be entirely in the hands of the directors, who have no doubt had special reasons for calling the meeting on a day on which they know a great many of the shareholders cannot be present.—I am, &c.

ABSENTEE.

REVIEWS.

HOW TO USE THE ANEROID BAROMETER. By Edward Whymper. London: John Murray, Albermarle Street.

This work deals with (1) comparisons in the field, (2) experiments in the workshop, (3) upon the use of the aneroid barometer in determination of altitudes, and, finally, recapitulates the whole. It ought to be of considerable service to a wide circle of students.

LEAD ORE SALE.

Date.	Name.	Tons.	Rlsd. per Ton.	Purchaser.
Nov. 14.—	Van	50	8 8 6	Sheldon, Bush & P.S. Co.

DEATH OF A WELL-KNOWN MINE AGENT.—The news of the death of Capt. William Vivian, of St. Agnes, was received in the Mining Exchange, Redruth, on Saturday afternoon with regret. Capt. Vivian has been connected with Cornish mining for a long series of years, and his decease removes from St. Agnes one who knew that district, perhaps, better than any other man living. He was in charge of the Wheal Friendly, Polberro, Trevaunance, and West Kitty mines. Capt. Joseph Vivian is to be nominated as his late brother's successor.

HOLLOWAY'S PILLS.—This medicine has resisted every test which time, prejudice, and vested interest could impose upon it, and it at length stands forth triumphant as the most reliable remedy for those derangements of the system so common at the change of seasons. When the air grows cooler, and the functions of the skin are retarded, an occasional dose of Holloway's Pills will call on the liver and kidneys for greater activity, and compensate the system for diminished cutaneous action. As alteratives, aperients, and tonics these Pills have no equal. To every aged and delicate person whose appetite is defective, digestion infirm, and tone of health low, this medicine will be a precious boon, conferring both ease and strength.

RUBY.—Report for week ending Oct. 31:—Dunderberg: We have six men on day's pay and three tributers at work here. On the 800-ft. level we have about 3 ft. by 6 ft. of fair ore, and have now about 45 tons extracted from it, which will be shipped during this week; the ore is evidently the continuation of the main Dunderberg ore followed from the surface, and this enables me to telegraph an improvement. Lord Byron: We have four men on day's pay and six tributers at work here. We have discontinued working the pipe of ore in the back of the cave, and we are now cleaning out the bottom so as to follow the ore down. We have about 30 tons ready for shipment.—A. FRASER.

Telegram:—"65 tons tribute ore shipped, 30 tons tribute ore smelted, producing to company \$60; 16 tons company's ore shipped, 46 tons company's ore smelted, producing \$1,034."

WHEAL GRENVILLE (Nov. 18).—The continued rain has made greatly against all our surface work. The masons building the house for the 90 in. pumping engine are getting on fairly well with their work, considering the weather we have been having, and should it continue dry the house will be completed in about a fortnight hence, when we shall without delay commence to take out the 90 in. engine from Tresavean and get it on the mine. The work of taking out this engine and putting it in at this mine we shall set as a contract, as desired by you when last on the mine. We shall ticket our parcel of tin on Friday next, the 20th inst., which we hope will be about 22 tons. If the weather continues dry we shall all push on the surface work with all possible speed.—C. F. BISHOP, J. HOSKING, S. WILLIAMS.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

THE PESTARENA UNITED GOLD MINING CO., LIMITED.

A PROFITABLE YEAR—DEBTS GREATLY REDUCED—MR. ROBERT AND MR. EDGAR TAYLOR VISIT THE MINE—MR. SWAFFIELD ELECTED A DIRECTOR.

THE ordinary general meeting was held at No. 6, Queen Street Place, on Monday, "to receive the accounts and balance-sheet to June 30, 1891, together with the reports of the directors, superintendent, and chief mine agent, and for the transaction of the general business of the company."

The Hon. Hubert Hanbury-Tracy (a director) presided.

Mr. RICHARD GARLAND (secretary) read the notice of meeting.

A PROFIT ON THE YEAR'S WORKING.

The CHAIRMAN: Gentlemen, the report and accounts have been circulated, and as they are very full, I will ask you to allow them to be taken as read. (Hear, hear.) In the first place I have to apologise for the absence of the chairman, Lieut-Col. Perceval, who is abroad for the benefit of his health. In proposing the resolution, "That the reports now presented, with the accounts and balance-sheet to June 30, 1891, be received and adopted," I am glad to point out that we have again made a profit this year. For the last 13 years we have only on two occasions shown a loss on the working of the mine, so that our financial position is gradually improving. At the end of last year the debt to the Bank of Alessandria, which originally was 16,000*l.*, was reduced to 2,450*l.* Besides that, during these years the sum of 7,200*l.* has been paid as interest on the second mortgage debentures. This last year we have paid 1,800*l.* in three coupons on these debentures, and during the last four months we have had very satisfactory results from the mines, so that the bank debt has now been reduced to 800*l.*, including 600*l.* which has just been remitted for the payment of a further coupon. With regard to the working of the mine, the Pestarena has, I think, given satisfactory returns.

THE GRADE OF ORE HAS IMPROVED THIS YEAR,

as compared with last. This year it amounted to 1 oz. 16½ grs., which is an improvement of about 2 dwts. over last year. The quantity of ore extracted has, unfortunately, been rather less—to the amount of 674 tons, but that was due entirely to the very severe winter which we had last year, which made the water supply run short. I think that at present, from the reports we have had both from our agents out there and the Messrs. Taylor, who have visited the mines, the prospects are decidedly favourable. Val Toppa has been for the last few years gradually reducing its output, and it seems evident that most of the ore ground there has been exhausted. There is one point, however, in the concession from which our agents seem to think a good amount of ore will be extracted. We have instructed our chief manager to make a survey of the company's possessions in both districts to see what further points can be worked upon. There is already one on which the company's men have been set to work, namely, Val Rossa, where the mining agent expects we may work with favourable results. I am sorry to say that during the last year we have

LOST THE HELP OF OUR CHIEF MINING AGENT,

Capt. Roberts. He has been with this company for a great number of years, and has rendered it most faithful service, so that we regret very much his retirement. (Hear, hear.) Our managers have recommended us to appoint Capt. Trelease, who has been at the mines for a number of years, and in whom they have every confidence as an able manager. I will ask Messrs. Robert and Edgar Taylor to give an account of the mine, which they have lately visited, and they will be able to tell the shareholders what they consider will be the future of the property. I beg, in conclusion, to move the resolution. (Hear, hear.)

Mr. THOMAS W. SYKES (director): I second the motion.

VIEWS OF MR. ROBERT TAYLOR.

Mr. ROBERT TAYLOR: Gentlemen, in the remarks I made to you at the last annual meeting I laid special stress upon the works we were carrying on in what is known as the Caunter lode, and it has been very satisfactory to us that those works have resulted so well, for without the discovery of that Caunter lode our returns must have been considerably less. We should have had to rely upon the No. 1 lode only, and drawn our supplies from that. As it now is, we have practically been working upon two distinct lodes. They appear to be distinct, but it is a question now whether the Caunter lode is really not a branch of the No. 1 lode, and the further development work which the company is vigorously carrying on will go to prove this. We have milled 4,959 tons, and this amount would have been considerably greater but for the River Anza having been

frozen over three months of last winter. However, this drawback has been somewhat mitigated by the quartz, as the chairman has told you, having been of a somewhat higher grade, and also the excellent duty which has been done by the mills. Over 80 per cent. of the gold contained in the ore has again been saved. We are not quite satisfied, however, even with that, and have tried upon a considerable scale, concentration of the tailings by means of buddles, and I think I am justified in saying that those trials as far as they have gone are very satisfactory, so that we hope to save still more of the gold, and at but a very little extracost. Mr. Powell, in his carefully drawn report, gives special details of the amount of work carried on underground. I do not think it will be necessary for me now to add to those he has given, but it is satisfactory to me to be able to say that the

RESERVES STILL STAND AT THE SUBSTANTIAL FIGURE OF 13,711 TONS

—that is, in the Pestarena Mine—Peschiera as it is called in Italy. Your mine agent has been much occupied during recent months in carrying out a survey of the large concessions which belong to the company. Capt. Roberts is succeeded by a younger agent, Capt. Trelease, who is very energetic, and is also an able miner. He has been already on your property some years, and has acquired a thorough knowledge of the Italian language; and your directors have done wisely in appointing him as successor to Capt. Roberts. It is, perhaps, a difficult post for a young man to occupy following Capt. Roberts, who has been, off and on,

CONNECTED WITH THE COMPANY SINCE ITS FORMATION.

We foresaw that it was probable he would wish to leave, and, therefore, have been at special pains for the last three or four years to consider how we could replace him when the time arrived. Our prospects at Val Toppa are somewhat discouraging, but we are not without hope. The fact that the work there has been disappointing has made us the more anxious to press on with this very important survey to which I have referred, and we have already met with one point which we think is well worthy of development. A moderate outlay is being incurred there, and we are hopeful in the early spring, when the works can be vigorously resumed, that some discovery may be made. Since the date of this report, which you have in your hands, good results have been obtained.

RESULTS.

In the four months we have treated at Pestarena 1,774 tons, giving 1,862 ozs.; at Val Toppa 404 tons, giving 241 ozs.—together, a total in four months of 2,100 ozs., which, I think, will be satisfactory to all of you. In consequence of this, our debts have been still further reduced, and we are hopeful that if only the weather will continue favourable we can go on making

GOOD RETURNS THROUGH THE WINTER MONTHS.

Of course, we are entirely dependent upon the water supply. On several occasions the costs of this mine have been criticised, and rightly so, by the shareholders, and we have taken special pains to watch all matters in connection with the outlay upon labour and materials. We have seen that every article that is purchased is obtained in the cheapest way and in the best market, and it is important for the shareholders to know that we are arriving at a time when we shall actually have

A ROAD BROUGHT INTO THE MINE.

It may not be completed for a year or 18 months, but it has been commenced. Up to the present time all we have had has been a bridle path, and some of the goods have actually been carried on the backs of women along a difficult path. It has been a matter of great satisfaction to us that our auditor, Mr. Swaffield, who has been connected with us so many years, and has taken such particular interest in the company's welfare, has again lately visited the mines, and has had an opportunity of going carefully into all accounts with our superintendent at Pallanza, and at the mines, and I have a letter in my hand from him which he wrote on Aug. 28, just after having completed his visit, in which he speaks in the highest praise of the system in which the accounts are kept, and the way in which everything is attended to. I must be allowed to say

ONE WORD WITH REFERENCE TO CAPT. ROBERTS,

that we much regret his retirement. He has faithfully served this company for 24 years. My brother and I visited Italy about the middle of Oct., and had the fullest opportunity of discussing all points with our agents and superintendent, and my brother, Mr. Edgar Taylor, again made a careful inspection of the mine. I have no doubt it will be of interest to you all to hear a few words from him as to his impressions of our immediate prospects. I shall be glad to answer any further questions that may be put. (Cheers.)

POSITION UNDERGROUND.

Mr. EDGAR TAYLOR: Gentlemen, I will refer particularly to the mining department, for the reason that when I have paid my visits

to your mine, that has always been my particular branch. During last month, when I visited Italy with my brother, I had an opportunity of making a thorough inspection of the works, both underground and at surface. At Peschiera Mine, which is the most important working, although, as the reports have shown you, the deeper levels are not at the present time developing any very good ore ground—I may say that at no period at which I have visited the mine (I think I have been there on and off for 10 years) have the upper levels looked more encouraging than they do at present. We are, of course, in the deeper levels not without the hope of making fresh discoveries, but it is to the upper levels we at the present time look for our returns. At the 70-fm. level on the No. 1 lode, as my brother has partially explained, we are now finding that the No. 1 lode and caunter lodes are really divisions one of the other, and will eventually become united at some point to which we have not yet explored. In this 70-fm. level we have a fine lode, both in size and quality. Its present value is estimated at 6 tons of ore per fm.,

WORTH 1 OZ. TO THE TON.

This drirage has before it the whole length of the ore shoot, from which we have extracted a considerable quantity of gold in the level underneath. It has still the whole length of this shoot to pass through, and will undoubtedly open up considerable reserves during the coming year to replace the ore that is being taken away. This is the more important, as the level is going into virgin ground, and we have here some 140 metres, or 76 fms., of unexplored ground—no workings being above this point. The north end in this level is apparently being driven through a new shoot of good ore, for, according to the ground seen in the level below, the lode should have become poorer; whereas it is becoming richer, and still continues to do so, and is now worth 8 tons, worth $1\frac{1}{2}$ ozs. of gold per fm. The agent, in his latest report, says it is a strong lode, and has every appearance of continuing, and may prove a valuable discovery. Our last report also speaks of the improvement in the 55-fm. level, so that these few remarks will show you that we are opening some good ore ground in the old mine. The late Mr. Bell Davies referred to several new lodes which had been seen at surface, and I may tell you that now we are undertaking a considerable amount of work on those known as Val Rossa and Stabioli, and we look during the next year to these works developing some altogether new lodes. I can report that all the machinery continues in working order, and that it has been arranged to remove a larger and better hauling gear, which belongs to our company, which has for some years been idle at the Crodo Mine, to the Peschiera Mine, so as to facilitate the hauling of the ore from the shaft there, in the hope that we may have to deal with still larger quantities than hitherto. I think these few remarks, gentlemen, will show you that

MY VISIT WAS SATISFACTORY,

inasmuch as it showed me that there is plenty of life left in the old mine yet. (Cheers.)

Mr. H. SWAFFIELD: I shall come to think that I am becoming a patriarch in Pestarena, for now that Capt. Roberts has retired I find that I am the oldest servant the company possesses. I have been connected officially with this company as auditor from the commencement of the undertaking, and was auditor of the companies out of which this company was formed. It has been very gratifying for me to see what the chairman has stated in regard to

THE IMPROVEMENT IN OUR POSITION DURING THE PAST 13 YEARS.

That is just about the time when the management came under the Messrs. Taylor. It seems to me that the progress during the last five years has been even better than that. I find that whereas five years ago there stood at the debit of our profit and loss account 12,221l., there only stands to that debit to-day 5,963l., so that now the position is better than it was to the extent of 6,258l., and during those five years we have paid out of profits 6,000l. in interest to our debenture-holders, hence altogether the improvement in five years can be measured by a total sum of 12,258l. (Hear, hear.) We know how the company floundered in the years prior to the 13 mentioned by the chairman, and, therefore, the improvement that has taken place is most gratifying. I received a communication from our superintendent, Mr. Harper Powell, asking me to

GO OUT TO ITALY TO EXAMINE THE ACCOUNTS

on the spot. I, therefore, proceeded there about three months ago, and made an exhaustive examination of our accounts at Pallanza and the mines, not only for the past year, but for four years prior to that. I very carefully examined all the vouchers, and must honestly say that after a considerable experience as an auditor I never found any accounts more accurately and ably kept than those of the Pestarena Co., which I think is highly satisfactory. We have in Mr. Harper Powell a most able superintendent. He seems to have a thorough grasp of everything connected with the company's affairs, and the directors must find that his considerable legal knowledge is of great service to the company, for I am sure he saves us a great deal in lawyers' bills, and manages to keep us in a right position as regards Italian law. Reference has been made to our other agents—Capt. Trelease and Capt. Messa. They seem to me most valuable servants, and great credit is due to the Messrs. Taylor for having appointed them. Capt. Trelease seems full of energy and go, and he is untiring in his work. I think Mr. Edgar Taylor must have formed the same opinion in regard to him as I did. He is now engaged in making

A SURVEY OF THE CONCESSIONS.

By this time I have no doubt he has nearly completed it. It will be of great value to the company, and will assist very materially in its future management and profitable working. We have been a bit under a cloud during the past year, but I think the causes have been sufficiently explained. There was a falling off in the quantity of gold sold from Val Toppa, and the previous winter was most unfavourable; a great deal of exploratory work too was done, an increased amount as compared with the previous year. Mr. Robert Taylor has described how greatly improved the results have been since June 30 last showing that the results of the exploratory work done has been encouraging. It will be necessary to increase our

discoveries of ore during the next two or three years if our profits are to be maintained, but I am quite sure there will be no lack of enterprise, push, and determination on the part of our agents towards bringing about that state of things. Altogether

I WAS GREATLY PLEASED WITH MY VISIT.

I may tell you I went into the mine also—in fact, down to the 70-fm. level, and had everything pointed out to me, but, as Mr. Edgar Taylor said, it seems to me that our prospects for the moment are better upwards, but we want the mine to improve downwards as well. (Cheers.)

Mr. C. J. HILLS: Is the survey of Val Toppa only?

The CHAIRMAN: Of all the company's possessions.

Mr. SWAFFIELD: It is a fresh dialling of the lode.

Mr. HILL: I have had the advantage of seeing Mr. Powell later than you (Mr. Swaffield), and I know that the audit you made was a very close one, for Mr. Powell told me so. The three points he particularly dwelt upon I think he mentions in his report, namely, the new road, which has been attacked from different sections, and in Italy it is something to have begun, as he truly said. It will, however, be a year or 18 months before the road is completed. Then there are the old workings at Val Rossa. They are supposed to be old Roman workings, and Mr. Powell is anxious to prove them, and to see whether they are worth opening up again. He said it would be impossible to do anything in the way of making fresh explorations, because the old plans are without date, but with the new survey they will be able to conduct operations with greater certainty. Nothing has been said with regard to Battiglio.

The CHAIRMAN: As yet nothing has been discovered in the way of a satisfactory development of ore, but we still continue to pay rent on the minimum amount.

The report was unanimously adopted.

Mr. SYKES proposed, and Mr. OLDFIELD seconded, the re-election of the chairman as a director, which was agreed to unanimously.

MR. SWAFFIELD AS A DIRECTOR.

Mr. OLDFIELD: It would be desirable if the board could be strengthened by the addition of Mr. Swaffield to its number. There are now only three directors, and we have but the pleasure of seeing two of them to-day, owing to the temporary illness of the regular chairman. I do not know that we could do better than offer a seat to our late auditor. He has been our auditor for 25 years, and has visited Italy to examine the accounts on the spot. Some years ago it was important that capital should be provided for the company, and he was, I may say, almost entirely instrumental in raising 12,000l. at that time. Now, if he be added it will only be an act of justice to him and to his colleagues to slightly increase the directors' remuneration. The fees in the articles stand at 1,000l. a year, but as the company was not prosperous they were reduced to 500l., and on the appointment of the Messrs. Taylor they were reduced still further to 200l. Now, I think it would be in the interest of the company that Mr. Swaffield should take his seat, and that 100l. should be added to the directors' remuneration. (Hear, hear.) I know that Mr. Swaffield has rendered service to many companies in which he has interested himself, which has had the effect on the one hand of reducing expenses, and on the other of increasing the market value of the properties. I therefore propose that he be elected a director, and that the remuneration of the board be raised from 200l. to 300l.

Mr. COLEE seconded the motion, which was carried unanimously.

Mr. SWAFFIELD, in returning thanks, said he had a considerable amount of knowledge of this company's affairs, which he would be glad to place at the disposal of his colleagues. He would like to propose as auditor Mr. Richard Donagan, one of the trustees to the debenture-holders, and no more suitable appointment could be made. (Hear, hear.) The remuneration suggested was smaller than he (the speaker) had received, because his was a continuous audit, but he did not think that would now be necessary. He proposed the election of Mr. Donagan as auditor at a remuneration of 25 guineas instead of 35 guineas as formerly.

Mr. HILL seconded the motion, which was carried, and

Mr. DONAGAN, in returning thanks, said he hoped to perform his duty as efficiently as Mr. Swaffield had done.

Mr. OLDFIELD proposed a vote of thanks to the chairman, who had been called upon to take the chair at comparatively short notice.

Mr. DONAGAN seconded the motion, which was carried unanimously, and, with the brief reply of the chairman, the meeting was brought to a close.

THE NEW PIERREFITTE MINING CO., LIMITED.

THE PROPOSALS OF MR. BULLIVANT CARRIED WITH ABSOLUTE UNANIMITY—PROSPECT OF THE SHARES OF A VALUABLE MINE BEING MADE MARKETABLE.

AN extraordinary general meeting of this company was held at the Offices, 154 and 155, Palmerston Buildings, on Wednesday, "to consider a scheme which has been proposed by Mr. W. M. Bullivant, the holder of 7,614 shares in the company, and which has received the approval of the board of directors, for providing further capital for the development of the company's property, and making the interests of the shareholders more marketable, and, if thought desirable, of authorising the directors to take the necessary steps for carrying such scheme into effect."

Mr. William Grover Ashby

(chairman of the company) presided.

Mr. J. R. COOMBS (secretary) read the notice of meeting.

ATTITUDE OF THE BOARD.

The CHAIRMAN: Gentlemen, the directors thought it well to call a special meeting on this important subject. It will be unnecessary for me to go into details, inasmuch as I believe everyone present has received a long letter from Mr. Bullivant, who has proposed this scheme. In that letter he has fully set out our wishes and intentions.

I may say that after the directors gave his plan full and deliberate thought they came almost unanimously to the decision to present it to a meeting of shareholders. Those of our body who are in favour of this scheme held 23,948 shares, but one of our number, holding 700 shares, did not agree with us that the scheme at any rate should be carried out for the present. I do not know it is necessary for me to waste any further time. As I have already said, you know what you have come for, as you have had it all before you in a letter sent you by Mr. Bullivant, and, moreover, Mr. Bullivant will have the opportunity of making remarks in moving the resolution, which I now invite him to do.

IMPORTANT SPEECH.

Mr. W. M. BULLIVANT, who was heartily received, said: Gentlemen, I think it is right I should tell you why I have made this proposal, and in doing so I wish to refer to the property we own, and to speak of what it has done in the past, rather than to make prophecies of what we are going to do in the future. I have our last report before me, that is the fourth annual report, and I will just remind you, as I daresay you do not carry all the points in your recollection, of a few of the essential ones to show you what a very valuable property we own in the mine we have now been working, and then I shall proceed to tell you what I think we have in the other 46 lodes which are not worked, and, finally, will move the resolution.

REMARKABLE PROGRESS.

If you remember, in the last report there was a table which was drawn up to show the progress we have made from year to year; and just to put the figures in your mind, which perhaps you may have forgotten, and to put them so that you can easily grasp them, I would say that in 1887 (our first year), with the present company, the value of the produce we raised was 9,900*l.*, or say 10,000*l.* In the next year it was 19,329*l.*, or roughly 20,000*l.* Thus we jumped from 10,000*l.* to 20,000*l.* odd. The next year it was 31,700*l.*, or roughly 30,000*l.*, and the next year it was 40,660*l.*; so that you will note how we progress as we go on. You will also note the mining profits we have made are in just as great progression, that is, the actual mining profits we made were altogether 3,800*l.* for the first year, 10,000*l.* for the second year, and for the third year 19,000*l.* odd, whilst last year we made a mining profit equal to 26,000*l.*—all, you will observe, progressive. Then you will also notice that the ore we raised was in like manner progressive. The first year it was 8,500 tons; the second, 14,000 tons; the third, 19,000 tons; and then 21,000 tons. It is also satisfactory to note the yield of our ores, which is very good. These ores have all progressed in value. The lead goes up in the respective years from 61 to 64 and 65 per cent., and the silver (which is the most valuable product we have) has progressed from 31 ozs. to

46 OZS. TO THE TON,

so that you see we have a big property to work. We also paid dividend on our working capital—1888, 15 per cent.; 1889, 55 per cent.; 1890, 80 per cent. Up to Sept. of this year we have already divided 30 per cent., and I may tell you the mine was never looking so well as it does at the present time. (Cheers.) During this year, as I stated in my circular, we have lost our old captain, and a new one has been appointed. We had a very large quantity of blende, which seemed really to be in our way. We looked upon it as rubbish that we could do nothing with, and we only wanted to get rid of it.

VALUABLE ADJUNCT TO EXISTING PROFITS.

Now, our new captain has discovered, or has adapted, a means by which we can make that ore (some thousands of tons lying on the ground) worth about 5*l.* per ton. It is a blende ore which is mixed with iron, and he uses a magnetic separator—that is he passes the ore over a large drum that is magnetised; the iron is attracted by magnetism as it falls over one side of the drum, and the blende which we want to save drops down the other, so that from this ore which we looked upon as worthless and would have paid money to have had it taken out of our way, we shall make a substantial extra profit. (Cheers.) As far as our present mine is concerned, we cut last year in the No. 4 level a very large lode which assayed better than anything we have had there yet—that was up to 69 ozs. to the ton. We could not work that until we got under it in the No. 5 level. We have now just got under it, and in the course of a week or so we shall be able to put 30 or 40 men at work there, and shall be producing some of this very rich ore, so that our property there never was in a better position than it is at the present time. Having such a valuable property, I have thought it desirable, and indeed have spoken of it before, to

PROSPECT SOME OF OUR OTHER 46 LODES

—they having only hitherto worked one out of 47 lodes we have on our concession, extending over 27 square miles, and for that purpose we sent out a gentleman to inspect and report upon them. That gentleman is now in the room—Mr. A. G. Charleton, who is a man of considerable eminence as a mining engineer, and who has been spending six months on the spot. He has reported upon our property, and his reports are now on the table and are open for the inspection of shareholders. He says that we have other properties which he considers equally if not more valuable, judging from their appearance, than the property we are now working upon. I may say that a telegram has arrived this morning from our manager. He knew we were to have this meeting, and we asked him to telegraph the latest news as to the position. He says:—"Old and new lodes in North Mine—good ore westward and downward." To explain that, it is, what is most important of all, that he has opened the ore in the No. 5 level, and says we have a large supply there. From the No. 4, the ore holds downward. He says also in the first level of the South Mine, which is another part of it, that we have 35 metres before we come to the lode. Then he says, "We have large returns of blende ore on the surface and underground." He also says,

"The new blende works (the works we are now putting up) are making rapid progress." When finished, he estimates they will produce 20 tons a day, and he also averages for next year 48 tons of silver-lead per week. On a rough estimate, if he does what he proposes to do, I calculate that will produce at least 100 tons of blende per working week, and with the usual produce of lead our returns ought to be, instead of 40,000*l.* as last year, 57,000*l.* (Cheers.) Thus you see exactly the position at the present time, but what we really want to do is that which Mr. Charleton recommends—work some of the other properties. We really stand in this position now, from what we hear, that we have certain valuable properties, in a sense, hidden away. We have a certain amount of

TREASURE LOCKED UP IN 46 DIFFERENT BOXES,

and all we want is the master key to unlock them—in other words, the capital to develop them. (Hear, hear.) Hence the proposition I have conceived for raising further capital. We can raise it in different ways. There is no doubt we might wait and develop these properties out of the resources of the present one, but my idea is that a quicker method could be adopted, for the other would mean that we should have to go without dividends for a time; but my feeling is this, that it would be as well to continue to pay our dividends out of our profits as at present, and develop these properties by other means, and that is the basis of my scheme. If we do that it would be as well to

ISSUE SOME FURTHER SHARES,

or rather to establish the company, as I proposed to do, on a fresh basis. What I have proposed in my letter is to transfer the 35,000 shares in this company to another company. In passing, I may remark that at present those 35,000 shares are totally unmarketable. If you want to sell them there is no market, and as long as they remain at this small number you will never be able to make a market for them. People do not care to give 4*l.* or 5*l.* a share for a 1*l.* share, and our shares are certainly worth 5*l.* each; but if we put them in the larger number, and put our property in shares representing somewhat near the value of it, we can easily make a market. I propose then to transfer our 35,000 shares to another company, taking in such other company four and a half shares for each share in the present company, equal to 157,500 shares in the new company—this new company to be formed with a power to issue 250,000 1*l.* shares. I want to modify that. I have been speaking to our solicitor about it, and I do so for this reason, that after we have distributed those shares amongst ourselves, making our interest four and a half times more than it is, we shall then have about

92,500 SHARES TO ISSUE FOR WORKING CAPITAL,

which will go a long way towards doing what we want to do, and which will enable us to develop certain of the properties (not all at once) as may be thought most expedient. The object is to discover their real value, and having done so, it will then be for us to determine whether we will work those properties ourselves, or whether we will form separate companies for that purpose. Therefore, I think 200,000*l.* will be sufficient, and our solicitor tells me in the articles we can always take power to issue more capital if we want it. I, therefore, propose to make the capital 200,000 shares of 1*l.* each, and at once to issue 157,500 fully-paid for distribution among our present shareholders, calling up said 22,500 shares for working capital, equal to 180,000*l.* That is the proposition that I wish to place before you to-day, so that we transfer for that the whole of our concession and the mines we have at present, and we reserve to ourselves the cash and other assets available. We have some little trouble in carrying out these matters, this being an English company in France. We know how we can do it in England, but it is difficult to know exactly how to do it in France, as there is a difference as to the duties we have to pay there. I want you to give the directors discretionary power as to giving and taking in the arrangements proposed. Our lawyers will find how it is to be done, and we may want to modify, to some little extent, the proposal I have given you. This is the resolution I have to move: "That the following proposition, which has been made with the object of raising further capital for the development of the company's properties, and making the interests of the shareholders more marketable, which has been approved by the directors at a board meeting, be and the same is hereby approved;—that the concessions, freehold, machinery and plant, and all undressed ores of this company, be transferred to a new company, to be formed with a capital of 200,000*l.*, divided into 200,000 shares of 1*l.* each in the new company, allotting to the shareholders of this company four and a half shares in the new company for every share held by them in this company, and that the directors be and are hereby requested to take steps to carry this proposition into effect, and with such modifications as may be desirable." If that will be seconded by one of our shareholders I shall be glad. (Cheers.)

Dr. WILLIAMS: I second the motion, but should like to hear the engineer's report.

The CHAIRMAN: It is a most elaborate and excellent report, and lies on the table for you to read.

A SHAREHOLDER: Perhaps Mr. Charleton will give us a few minutes. Will there be the same directorate in the new company?

Mr. BULLIVANT: That is not quite certain. We have one director who does not work quite so amicably with us as we should wish, and I think it would be advisable in forming a new company to make a little change.

The SHAREHOLDER: Is there any chance of the French Government taking advantage of this alteration in our constitution?

The CHAIRMAN: That is a thing we should carefully have to watch, and we should not commit ourselves to any unnecessary or unwarrantable charge. Rather than do that we had better keep on as we are, and as we, on the direction, are interested to the extent of nearly 24,000*l.* out of the 35,000 shares, I think I may say you will be perfectly safe in the hands of the directors, who will not run you into unnecessary or improper expense.

Mr. BULLIVANT: We have previously transferred from one company to another without the slightest difficulty. Our solicitor (Mr. Sprent) is here, who has been advised and assisted by a very able French notary, who acts for the French Embassy, so that I do not think there is any fear of that, but we shall be very guarded.

VIEWS OF MR. CHARLETON.

Mr. CHARLETON: I do not know that I can do better than quote a portion of the *résumé* and recommendations that I give at the end of my report. It must be evident to anyone who has investigated the facts I have placed before "the directors," in that report, in detail, that there is a large distribution of argentiferous galena and blende throughout the district in which your concessions are situated, and there is also unmistakable evidence that some of the lodes belong to a system of regular veins, which, presumably, will live to great depths. The fact that payable bodies of ore have been *already proved* to exist by *successfully* working them, points to the conclusion that when the surface indications are promising, other mines may just as well yield equally remunerative returns, with careful management. In most mining districts one generally finds, however, one or more "master-veins," which offer superior inducements to work. The point is, therefore, to determine which these are. The various lodes I have more particularly described, no doubt contain payable ore in more or less quantity, but there are no means of ascertaining in what quantity, *without doing development work* to prove each one. All I can say is I feel confident that if the various points I have recommended are carefully tested and energetically developed on the lines suggested, though some of them may turn out blanks, others will turn out prizes, which will amply recoup the cost of testing them all. There can be little doubt, in fact, that these concessions contain a number of promising "surface indications" at points where desultory work has been done. In several cases the old men seem to have lost the veins they attempted to follow through ignorance, and where they have worked them you can scarcely expect to find that they left behind pay ore. Hence

YOU MUST EXPLORE IN DEPTH,

or leave prospectively valuable property lying idle. I have examined all the concessions of the company, and the chief one—the Pierrefitte—is situated on a belt of Devonian strata running through this part of the Pyrenées. There are various outcrops showing there, which I have fully described in my report, that offer extremely encouraging indications at surface in many places. If, indeed, anyone had examined these properties years ago, when no work had been done at Pierrefitte, and had compared the outcrop there with the others, an expert would, in all probability, have recommended the working of other mines. No one can predict with certainty what there is 100 ft. in front of "the miner's pick" underground, but certain deductions can often be drawn one way or other by a careful comparison of the various surroundings, and the indications in this case are as good at one point as at the other. If these mines were in a country like America, open to "prospectors," they would be taken up and tried. You have four great advantages—the property is within 36 hours of London, and possesses good climate, good and cheap labour, and excellent water power, which all conduce to make mining cheap. It is not like Australia, where you have to pay 10s. a day for the commonest labour.

ESTAING MINE.

Mr. BULLIVANT: There is the Estaing Mine we are developing now as to which a telegram says:—

"Reef at Estaing 2 metres wide; average assay, 45 ozs. of silver." That is better than we have at Pierrefitte as an average, and it looks like the better mine of the two. We have been asked as to a Stock Exchange quotation, but

A MARKET QUOTATION IS EQUALLY GOOD,

and that is what we shall have. We shall be in the hands of the best people in this as in other matters.

A SHAREHOLDER: Will the cash in hand be distributed?

Mr. BULLIVANT: We do not know whether in cash or shares, but that is a matter we must leave to the directors. The directors will come before you at the next meeting with a definite scheme, and if approved it will afterwards have to be confirmed, and then we can go to work. We shall call up the capital quickly, so as to have only one class of shares.

Dr. RUTTER: I regard it as more important than a market for the shares to be able to work Estaing vigorously, for the mine will soon have a sufficient amount of ore to make it desirable to start dressing work, and unless we follow out some such scheme as this, we shall have to sell this mine, or, better still, to work it ourselves. That, to my mind, is the most important reason for carrying out this scheme.

The resolution was carried unanimously.

A SHAREHOLDER: How do you propose to issue the shares?

GENERAL ASSENT.

Mr. BULLIVANT: Proportionately to the holding of each individual. I have letters from Sir Thomas Sutherland, Mr. Nash (of Brussels), and other shareholders present and absent, all giving this scheme their hearty support, so that we may say that we are practically unanimous in carrying it out. What we have been doing this year at Pierrefitte is developing the property, and not working up our blende ores, because the mode that Mr. Lawrence now has of dressing those ores will improve the rest of the produce that comes from the mine. He is now re-organising the floors entirely, and is putting up new machinery, new rolls (which are being shipped today) and concentrators, so that what we have been doing this year is to a great extent without making use of the blende at all. (Hear, hear.)

Mr. SHILLITOE (director): The developments of lead ore have not kept pace with those of the early part of the year, in consequence of the illness of the late manager. There is a little deficiency in the output, which in the future will, in all probability, be made up.

Mr. BULLIVANT: Mr. Shillitoe spent over three weeks at the mines this summer, and has mastered all the details. The manager, in a letter dated Nov. 3 says, "All working expenses are reduced to the lowest possible figure, but the new construction will cost the estimated amount (that is, about 2,000%), but I think I may confidently say that the production of the mine will pay all expenses, and leave at least 10 per cent. per quarter for this year, after which I am very confident of doubling, if not more, the profits for a considerable time to come."

A cordial vote of thanks to the chairman, directors, and Mr. Bullivant closed the meeting.

THE VENEZUELAN AUSTIN GOLD MINING CO., LIMITED.

RESOLUTIONS CONFIRMED.

AN extraordinary general meeting was held at Winchester House, 50, Old Broad Street, on Monday, when the re-construction resolutions, which have already appeared in the MINING WORLD, which were passed at the extraordinary general meeting, held on Oct. 26, were submitted for confirmation as special resolutions.

Mr. J. C. F. Lee

(chairman of the company) presided.

Mr. F. O. SMITHERS (secretary) read the notice of meeting.

THE LIQUIDATION WILL BE CHEAP.

The CHAIRMAN moved the confirmation of the resolutions.

Mr. A. W. BIGGS (director) seconded the motion.

Mr. COOKE enquired who would be the auditor, and what would be his remuneration.

The CHAIRMAN replied that this would be the subject of the next resolution. Their object in appointing Mr. Millar was to save expense, as the last liquidation had cost a considerable sum. Mr. Millar would do everything he was required to do under the Act, for the protection of the shareholders, and the proper distribution of the assets.

Mr. RUDALL said it was usual to name the remuneration of the liquidator, and he supposed that would be done later on.

The CHAIRMAN replied in the affirmative, and then put the resolutions, which were carried unanimously.

The CHAIRMAN then proposed, "That Mr. Henry Alexander Millar, of Dashwood House, No. 9, New Broad Street, be and he is hereby appointed the liquidator for such winding-up, and that his remuneration shall not exceed the sum of 100 guineas."

Mr. SECHIARI seconded the motion, which was carried unanimously.

The CHAIRMAN: It only remains for me to express the hope that we may be more fortunate with the new company than we have been with the old. It is a very large property, and it will be strange if something is not found upon it worthy of development. We have great confidence in the agent now in charge of our works. He has been highly trained, and carries out our instructions to the letter. For some months he has not drawn upon us, but has managed by his tentative operations to make both ends meet.

Mr. COOKE proposed the cordial vote of thanks to the chairman, with which the proceedings closed.

D'ERESBY AND GWYDYR MINE.

IMPORTANT SALE OF THE WHOLE OF THE VALUABLE MACHINERY AND PLANT.

MESSRS. W. DEW AND SON are instructed to OFFER FOR SALE BY PUBLIC AUCTION at the Mine as above (about 1 mile distant from Llanrwst), on FRIDAY, the 4th day of DECEMBER, 1891, at ELEVEN a.m., the whole of the VALUABLE PLANT AND MACHINERY, including Hammers, Drills, a quantity of best Olive, Machine, and Cylinder Oil, the contents of Smithy, Shafting, Pulleys, Bevel Wheels, Couplings, a FIFTEEN HORSE-POWER FIXED ROBEY ENGINE, as good as new, TEN HORSE-POWER SEMI-PORTABLE ROBEY ENGINE, with Spur Gearing and Winding Drum attached, 70 fms. 3 in. Steel Wire Rope, NEW PIT HEAD 24 ft. high, with Pulley and Pedestals, PIT HEAD with 4 ft. Pulley and Pedestals, 70 yds. Tramway of T rails, 14 lbs. to the yard, Three Tramways 115 yds., with Bridge Rails, Tram Waggon, Barrows, 84 yds. of Tramway of Bridge Rails, New 30 ft. DIAMETER WATER WHEEL, 3 ft. breast: 65 fms. of 6 in. Pumps, 150 fms. of Underground Tramroad laid with T and Bridge rails, Blake's Stone-breaker, 30 - ft. DIAMETER WATER WHEEL, 3 ft. breast, CRUSHING MILL, 9-in. CYLINDER PORTABLE ENGINE, 2 ft. stroke, with Tubular Boiler, VERTICAL BOILER, three Plunger Jiggers, Chat Mill, 9 ft. Water Wheel, erection of several Wooden Sheds with Corrugated Roofs, and a quantity of Tools, &c., &c.

NOTE.—The whole of the Plant and Machinery will, in the first instance, be offered in one lot, and if so sold, Lord Willoughby D'Eresby has intimated his willingness to grant the Purchasers a new lease of the Mine, on similar terms to the old one should they so desire.

Sale to commence 11 o'clock sharp.

Catalogues may be obtained of Mr. E. Ashmead, Liquidator, 2, Drapers' Gardens, London; of Messrs. Stackpoole, Batters and Co., Solicitors, Pinner's Hall, Old Broad Street, E.C.; of Capt. Nottingham, at the Mine; or of the Auctioneers, Wellfield, Bangor.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that at a Meeting of the Directors of this Company held to-day, it was Resolved: "That a dividend of 1s. per share, free of Income Tax, be and is hereby declared, payable on the 10th day of December, 1891, to the shareholders on the books of the Company on the 25th day of November, 1891, and that the Transfer Books be closed during the said 25th day of November."

No. 12 Coupons will be paid at the above rate of 1s. per share, free of Income Tax, on presentation at the Company's office.

By order of the Board,
J. C. LEAVER,
Secretary.

CAMBORNE SCHOOL OF MINES.

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.

JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for giving instruction in subjects specially applicable to mining students, and in a district where the practice of mining may be observed at the same time.

The subjects taught include Mining, Ore-dressing, Vanning, Assaying, Chemistry, Geology, Mineralogy, Steam, Metallurgy, Plan Drawing, Engineering, &c.

The managers of the principal mines in the neighbourhood will afford facilities to students of the School for studying practical mining.

Prospectuses, and any further information, may be obtained of the PRINCIPAL or SECRETARY.

The Session commenced on Monday,
21st September.

ROBEY & CO.,

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

N.B.—ROBEY & CO. are also manufacturers of Portable Engines, Semi-Portable Engines, Robey Engines and Locomotive Boilers combined (both Compound and Simple), Vertical Engines, High Speed Engines, Horizontal Fixed Engines (Simple and Compound), Sugar Mills, Locomotive, Cornish and Vertical Boilers, Winding Engines, Head Gears, Mine Pumps, Centrifugal Pumps, and every description of machinery for Builders and Contractors.

GLO

Gates Rock and Ore Breaker

TO BE SEEN IN OPERATION AT LONDON OFFICE.

The Head
does not
Revolve
when
Breaking.

Capacity in Tons of 2,000 Pounds.

Size 0	2 to 4	tons per hour
" 1	4 to 8	" "
" 2	6 to 12	" "
" 3	10 to 20	" "
" 4	15 to 30	" "
" 5	25 to 40	" "
" 6	30 to 60	" "
" 7	40 to 75	" "
" 8	100 to 150	" "

Passing 2½-in. ring according to character and hardness of material.

GREAT SAVING IN POWER.

Adjustable to any degree of fineness.

The principle involved in this Breaker acknowledged to be the greatest success ever introduced into Stone Breaking Machinery.

Send for Catalogue, containing over 500 References to Contractors, Miners, Railway Co.'s, Cement Makers, &c.

GATES IRON WORKS. C
73a, QUEEN VICTORIA STREET E.C.,

50, South Clinton Street, Chicago, U.S.A.

AGENTS FOR

GATES CORNISH ROLLS PULVERISER.

Simple, Durable, Compact, Dustless.

Giving a finished product direct from the machine.

The best Ore Granulator for leaching and concentrating in the world.

SIZE 00 FOR CHEMISTS' SAMPLING, OR THE LABORATORY, £25 COMPLETE.

THE INGERSOLL-DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,

MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ¼ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

PELTON WATER WHEEL CO.'S MOTORS. A MARVEL OF ENERGY AND POWER.

No. 2 DRILL.

OTTO'S AERIAL ROPEWAYS.

SUITABLE FOR THE TRANSPORT
OF ALL KINDS OF MATERIAL.

CAPACITY
50 TO 500 TONS
PER DAY UP
ANY GRADIENT.

450 NOW AT WORK.

ADOPTED BY
THE SHEBA, THE
EDWIN BRAY, THE
ORIENTAL, and many
other Mining Companies.

SIMPLEST AND BEST MEANS OF TRANSPORT.

COMMAN & CO., 52, GRACECHURCH STREET,
LONDON, E.C

TONITE

IS RECOMMENDED TO CONTRACTORS, MINERS, PIT SINKERS, QUARRYMEN, AND OTHERS, AS BEING THE
SAFEST OF ALL EXPLOSIVES.

TONITE is a most efficient and economical blasting agent, and is largely in demand
It does not contain any Nitro-glycerine, and, is, therefore, exempt from the dangers of
exudation, or of freezing and its attendant process of thawing.

THE COMPANY MANUFACTURE

PATENT DETONATORS FOR USE WITH TONITE.

Also supply Safety Fuse and Electric Firing Appliances of best description.

Address: **THE COTTON POWDER COMPANY (Limited),**
116, QUEEN VICTORIA STREET, E.C.

WORKS: FAVERSHAM, KENT.

*GOLD MEDAL AT THE CRYSTAL PALACE MINING EXHIBITION, 1890, and
THE ONLY GOLD MEDAL AWARDED AT THE LEEDS MINING EXHIBITION, 1890
HIGHEST AWARDS:—SILVER MEDAL, SYDNEY, 1879. SILVER MEDAL, PARIS, 1878.*

FIRST SILVER MEDAL, MINING INSTITUTE OF CORNWALL, 1881 and 1883.

*Awarded the FIRST PRIZE at the ROCK DRILL BORING COMPETITION, at East Pool Mine, Cornwall, Sept., 1883
INVENTIONS EXHIBITION OF 1885; and the GOLD MEDAL AT LIVERPOOL OF 1886 WINNER.*

AND ECLIPSING ALL OTHER MACHINES IN THE TRIPPOO COMPETITION AT THE MINING EXHIBITION, CRYSTAL PALACE, 1890.

THE PATENT "ECLIPSE" ROCK DRILL and RELIANCE AIR COMPRESSOR

now supplied to the English, Foreign, and Colonial Governments,
and are also in use in a number of the large Mines, Railways,
Quarries, and Harbour Works in Great Britain and Abroad, and
largely used in the United States of America.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

DUTIES OF A MINING BROKER—DIFFICULTIES OF HIS POSITION—TEMPORARY RETIREMENT OF MR. SAMUEL JAMES—COURSE OF THE MARKETS—REVIVAL OF PRICES TO-DAY.

LET not our readers suppose for one moment that the lot of the Mining Stock and Share dealer is easy, or that the lines have fallen unto him in exceptionally pleasant places. A broker who is anxious to do his best for his clients has something more to do than merely saunter to the market to enquire the prices, do his business, get his lunch, pass an hour or two in pleasant conversation, or in the writing of vague replies to specific questions, saunter to the market again in the afternoon to get the latest prices, and finally adjourn to the railway train which takes him to the domestic oasis he calls his home.

We know full well that with many brokers the business day is not so spent. To reply to the correspondence that is sometimes addressed to him, not in the roughshod method above described, but categorically, and to give to clients the latest information, requires a considerable amount of daily attention, personal enquiry, and minute research. Sometimes questions are put respecting investments of which he never previously heard, and which are wholly unknown on the market. He must (if he considers his duty in its proper light and does it) make enquiries, if possible, at the fountain head, and then compare the information received with the opinion of those on the market, who happen to know something about the position of the particular concerns. From this mass of information he has to deduce a common-sense and precise exposition of the whole of the circumstances, and recommend his client to proceed with a proposed investment or let it alone.

It is peculiarly the case of mining shares that the nature of the security they offer is changing from week to week—it would be almost correct to say, from day to day. It is difficult with some two or three hundred companies in the share list, in which there are more or less active dealings, to keep pace with the ever-varying circumstances that happen to each of them. We have sometimes said, perhaps in haste, but feel disposed now to repeat it at leisure, that no one can get a thorough grasp of a company's position unless he attends its periodical meetings, and has a pretty shrewd idea as to the character and ability of those connected with the management, and some knowledge of the antecedents, both of the company itself and its officials. It is too much to expect brokers to do their ordinary business and acquire information in this way, and yet in many cases it is vital to a proper grasp of the position. Failing this, he must read the fullest reports of the meeting he can find,

and if he be a man of system he will make a few notes of the impression that the perusal has made upon him, and keep such notes classified for reference as occasion may require.

The strain of all this is very great, and we are not surprised that under it the health of brokers sometimes gives way.

A case in point is that of Mr. Samuel James, whose health we regret to say is in such a state that he has felt it wise to relinquish his business engagements—at all events for a time. Mr. James is one of the most respected brokers on the market; he is a member of the Mining Exchange, and one of the committee of that body. He proposes to take a voyage in the hope of re-establishing his health, and we sincerely trust that the purpose of that voyage will be fulfilled, and that he will return from it with renewed strength and vigour. We judge that his retirement will be of a very temporary character, from the fact that the circular announcing it, dated Nov. 24, "invites correspondence from buyers and sellers," calls attention to the advantages he presents in the "forward delivery" system, offers to "supply prices of unquoted mining shares" (clever man!), and generally to take the mining investor by the hand. The circular is just a little contradictory, and this leaves room to hope that Mr. James will not long desert us. To that hope we cling.

In regard to the meetings of companies not noticed in our leader columns, we may mention that to-day the resolution increasing the capital of the Balaghat Co. to 200,000*l.* was unanimously confirmed. At Golden Leaf meeting, held to make a trifling alteration in the articles, Mr. Stewart Wallace stated that the news from the mines continued to be of a most reassuring and satisfactory character, that the 20-stamp mill would be fully ready for work about Feb. next, and that there is already 12 months' supply of ore on hand. At Yuruari meeting there was a poll on the question of liquidator, which resulted in the appointment of Mr. Alfred Good. This, it is believed, the opposition will endeavour to upset by an appeal to the courts. The resolution to wind up Monte del Oro has been confirmed. The title of the Swaziland Concessions has been confirmed by a court of that district. Devon United is dependent upon the cutting of a bunch of ore which has gone down from the 132-fm. level.

The record of the week was poor until to-day, when numerous shares took an upward turn. For example, Montana advanced 3*s.*, on the rumour of more favourable news from the mine, and were bought eagerly. Elkhorns have been in strong demand throughout the week, owing to the favourable cablegram, which we publish in the usual place; 3*s.* marks the rise on these shares during the last few days. New Gustons are also up, and Yankee Girls and American Belles show somewhat more firmness. Golden Feathers are better, on the receipt of favourable news from Mr. Harvey (secretary), and Mr. Kirkpatrick (director), confirming the statements of Col. McLaughlin. Golden Leafs advanced fractionally on the meeting, and Palmarejos close firm at quoted prices. Glenrocks fell upon an unsatisfactory cablegram, which the directors admit their inability to understand. There has been a good return from Callao Bis, which did not materially alter the shares, but Frontinos are somewhat weaker. Jay Hawk shares are coming into notice, consequent upon favourable news from the property.

In the Indian section there has been a recovery in Mysore and Oorgum shares, but Champion Reefs are lower. The movements in Indian shares this week have not been noteworthy.

In regard to Australian shares, a reference to a letter which appears in our correspondence columns, will show that the colonists know how to keep the best mines to themselves. At the same time, a favourable telegram from Anstralian Broken Hills sent these shares up 3*s.* The news in question is the best that the company has received for many weeks past, and those who have reckoned that its mine is played out are leaving sundry facts out of their calculations. In regard to other shares, there has been an advance in Wentworth Proprietary and Mosman, and a decline in Kangarilla and Bonnie Dundee. In regard to Kangarilla, there has been some steady selling, and the rumour has gone forth that re-construction will be required. The meeting held a few weeks ago we certainly read in a very favourable light, and cannot think that the fall in the shares which has signalled this week's business is justified.

In the copper section, shares have been on the downgrade, notably Rio Tintos and Capes.

The Colombian reports as a whole are satisfactory. The profit at Tolima for October is reported as 5,800%, against 5,000% as advised by cable. The shares closed unchanged at 9*l*. 10*s*. to 10*l*. Colombian Hydraulic and Orita are again working with a full head of water, and may consequently be expected to increase their returns. Colombian Hydraulics close at 22*s*. to 23*s*., and Oritas at 12*s*. 6*d*. to 13*s*. 6*d*. Colon has lost no time in getting to work after the decision given in its favour, and advices of the next clean up are expected shortly. The mine has great prospects. Loma is also at work. Advices of a return from here are likewise expected. Tesoro has commenced hydraulicking, and under these circumstances the shares, in view of the antecedents of the mine, should be worth buying at quoted prices. Gravel Golds close at 10*s*. 6*d*., 10*s*. 9*d*. The report merely advises the difficulties already mentioned in the recent cable, but the ditch is being repaired where required in substantial manner, so that hydraulicking and good returns appear only a matter of time.

In the African section, diamond shares have moved unevenly. In the land department there has been a general fall, though not of a pronounced character, that of Goldfields of Africa being due to the passing of the dividend. A fractional rise has occurred in Oceanas. Gold shares are chiefly notable for the rise in Robinsons. It is a melancholy reflection that notwithstanding the enormous output of this mine no dividend is paid to the shareholders. A reference to our article last week, in which the position of Kaffir companies was fully set forth, will put the reader in possession of many instructive facts. Generally speaking, African shares have been firm, though there are exceptions to this otherwise general rule.

At last there seems a turn in Home mines, Dolcoath leading the way with a rise of 4*l*., and Wheal Agar, South Crofty, South Frances, West Frances, and Wheal Basset following at a respectful distance. At South Frances the call was 2*s*. 6*d*. The West Kitty dividend (11*s*.) did not alter prices, but the South Condurrow meeting knocked the shares down 5*s*. Wheal Friendly made a call of 6*d*. The Home market has generally been more lively than for some time past.

The outlook was gloomy during the early part of the week, but to-day it has brightened considerably, and there is a prospect of more business next week.

KAFFIRS.

Remarks.—There has been more business since the account, when several stocks were shown to be scarce. Robinsons, Simmers, and Jumpers have had fairly good rises, and several others have followed in a lesser degree. There are no falls to call for notice.

Business.—A rise is shown in Bantjes of 6*d*.; City and Suburban, $\frac{1}{8}$; Crown Reef, $\frac{1}{8}$; Forbes Reef, 6*d*.; Geldenhuis, $\frac{3}{8}$; Jumpers, $\frac{1}{4}$; Langlaagte, $\frac{1}{8}$; Main Reef, 1*s*.; Randfontein, 6*d*.; Robinsons, $\frac{1}{8}$; and Simmer and Jack, $\frac{3}{8}$. The only falls are in Joe's Luck of 1*s*.; and Stanhope, $\frac{1}{8}$.

AFRICAN LANDS.

Remarks.—There has been a little more life in this class, but the alterations have been very few. Explorings have fallen about 10*s*., while Oceanas have risen slightly.

Business.—A rise is shown in Oceana of $\frac{1}{8}$; and Zoutpansberg, 6*d*.; whilst a fall has taken place in Exploring of $\frac{1}{2}$; Goldfields of South Africa, $\frac{1}{8}$; Goldfields of South Africa, new, $\frac{1}{8}$; Sutherland Reef, $\frac{1}{8}$; and Transvaal Gold, 3*d*.

DIAMONDS.

Remarks.—North-Eastern Bultfonteins have been freely sold, resulting in a fall. De Beers have had a fairly good rise. Gordon Diamonds appear to be going better. Other shares call for no attention.

Business.—A rise is shown in Consolidated Bultfontein of 6*d*.; and De Beers, $\frac{3}{8}$; whilst the only fall is in North-Eastern Bultfontein of $\frac{1}{4}$.

Making-up Prices, Nov. 25.	DIAMOND SHARES.	To-night's Prices.

1 $\frac{1}{2}$	Burma Ruby Mines 15 <i>s</i> . paid ..	1 $\frac{1}{2}$ — 1 $\frac{3}{4}$

INDIANS.

Remarks.—There has not been much business in these shares, although the settlement showed a scarcity of stock. In fact, in one or two instances shares were carried over at evens, and in most cases charges were lighter than last account. Prices generally do not close so firm as they have been during the week, although in the case of Mysore and Ooregums a rise is shown.

Business.—A rise is shown in Mysore of $\frac{1}{8}$ and Ooregum

Preference $\frac{1}{4}$; whilst a fall has taken place in Champion Reef, $\frac{1}{8}$; Glenrock, $\frac{1}{8}$; Mysore Harnhalli, 3d.; Mysore Reefs, 3d.; and New Devala-Moyar, 6d.

AUSTRALIANS.

Remarks.—Australian Broken Hill shares have been in considerable demand. It is rumoured that important alterations are taking place at the mine, which, if true, should cause the shares to go higher. They close better than last week, and leave off strong. Day Dawn P.C. has this week declared another 6d. dividend, and to-day the shares are quoted *xd.*, so that sellers at to-night's prices receive the dividend. Etheridge shares at the moment are a drug on the market, and it is quite impossible to dispose of them even at 3d.

Business.—A rise is shown in Australian Broken Hills of 3s.; Gympie Great Eastern, 3d.; Mosman, 1s.; New Livingstone, 3d.; New Queen, 3d.; and Wentworth Proprietary, $\frac{1}{8}$. The falls are in Bonnie Dundee of 9d.; Cumberland, 3d.; and Kangarilla, 4s.

COPPER.

Remarks.—The market has not been of a very encouraging nature during the week from an investor's point of view. Rio Tintos, which have as usual been the touchstone of the whole market, have again gone down. The market at the close, however, has every appearance of going better.

Business.—A rise is shown in Libiola of $\frac{1}{8}$; Mason and Barry, $\frac{1}{8}$; and Tharsis, $\frac{1}{8}$; whilst Capes have fallen $\frac{1}{8}$, and Rio Tinto, $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

Remarks.—Montana shares are again coming into public favour, and there has been considerable buying during the week, prices leaving off at best. Jay Hawk shares have been in demand at higher prices in consequence of a favourable telegram, but they are not likely to go higher on the merits of the mine at present. Golden Feathers improved on a favourable cablegram, but have since receded. Elkhorn, New Guston, and Tolima have been in demand, and show a fair improvement, but Frontino are lower.

Business.—A rise is shown in Colon of 3d.; Elkhorn, 3s.; Golden Feather, $\frac{1}{8}$; Golden Leaf, 3d.; Loma, 3d.; Montana, 3s.; New California, 3d.; New Guston, $\frac{1}{4}$; Palmarejo, 9d.; and Tolima B, $\frac{1}{8}$. The following have fallen:—Barrett's, 3d.; Callao Bis, 6d.; Edwin Bray, 1s.; Flagstaff, 3d.; Frontino, 1s. 6d.; Gravel Gold, 3d.; New Gold Hill, 3d.; Otto's Kopje, 3d.; Pinos Altos, 6d.; Tesoro, 3d.; United Mexican, 6d.; and Zaruma, 6d.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

INDIANS.

NERBUDDA COAL AND IRON.—The sales of coal for the month of Oct. amount to 1,037 tons.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The following telegram has been received from the managing director, resident at Broken Hill, dated Nov. 27:—"Incline level from 280-level west raised 6 cwt. rich ore, containing 1,950 ozs. of silver, including $\frac{1}{4}$ cwt. native silver."

BLUE SPUR AND GABRIEL'S GULLY.—The manager cables the return of gold for the four weeks ending 21st inst. as 80 ozs.; partial clean up only.

BROKEN HILL PROPRIETARY.—During the week ending 26th inst. 4,422 tons of ore were treated, yielding 531 tons of lead, containing 176,880 ozs. silver; surplus silver on hand, 278,725 ozs. The cable also states that the shares are 6l. 17s. 6d. The company also report that the usual dividend of 2s. per share, amounting to 96,000l., has been declared, and will be payable in London and Melbourne on Dec. 16.

CROMWELL.—Cablegram from the managing director, Nov. 26:—"Report favourable; recommends extending levels; crushed 160 tons, obtained 143 ozs. of gold; still crushing."

DAY DAWN BLOCK AND WYNDHAM.—A cablegram from the general manager at Charters Towers gives the result of the crushing for fortnight ending the 21st inst.:—"Tons crushed 660; yield of gold, 861 ozs.; approximate value, 2,970l.; fortnight's expenses, 1,210l."

DAY DAWN P.C.—An interim dividend of 6d. per share (free of dividend and income tax) is declared, payable on and after Monday, Dec. 14, to all shareholders on the register on Tuesday, the 24th inst. A cablegram received from the manager at Charters Towers gives the result of crushing for the fortnight ending Nov. 21, viz: "1,100 tons, 1,178 ozs." (Estimated value, 4,123l.) The directors have sold, through Messrs. Johnson, Matthey and Co., the gold ex s.s. India, which realised 3,405l. 6s. 9d.

EAST BROKEN HILL CONSOLS.—Telegram from the managing director, Nov. 26:—"Cutting into cross lode No. 1 150 ft. below the surface, we have struck chloride of silver and carbonate of lead."

GOLDEN GATE (Charters Towers).—Cleaned up for 12 days; crushing 299 tons for 581 ozs.; value, 2,180l.; crushing continues.

KAPANGA.—The directors have received the following telegram from the manager:—"Since last message we have crushed 65 tons; the yield has been 230 ozs. of gold."

MIDAS.—Cable from the mine:—"Yield for week ending Nov. 21, 51 ozs." The registered office of the company, formerly at 101, Leadenhall Street, E.C., is now at 32, Poultry, E.C.

MILL'S DAY DAWN UNITED.—25th inst. Shaft 125 ft. below lowest level; average thickness of quartz, 14 ft.; good quality; lowest level extended 100 ft. east; average thickness of reef, 9 ft.; to the west 110 ft.; average, 6 ft.; good quality; reef at its greatest width, 18 ft.

MOUNT LEYSHON.—A cablegram, dated 23rd inst., from the manager at Charters Towers, gives the fortnightly crushing:—"680 tons crushed, 230 ozs. gold; 20 stamps mill ran 240 hours. Gold sale covered expenses for fortnight."

VICTORIA.—Result from final crushing, 529 tons for 2,038 ozs.; value, 7,800l.

WENTWORTH PROPRIETARY.—Cablegram from Mr. W. H. Irwin, the general manager:—"The cross-cut at bottom of winze below the 300-ft. level, Shamrock shaft, has reached the Crinoline vein, which is composed of rich arsenical pyrites, giving 160 ozs. gold to the ton. We will continue sinking in order to develop the vein at a lower depth. We have struck a seam of rich ore containing free gold, near the winze, Phoenix shaft, No. 1 vein. The winze below the 200-ft. level, north-west Phoenix, is looking well. We have got the water out of the Reform shaft. We are continuing crushing."

FOREIGN MINES.

ANTIOQUIA.—Advices from the mines for Sept. state:—"Produce, 536l.; cost, 580l. 8s.; estimated loss, 44l. 8s.; spent on capital account, 55l. 3s. 10d.

CALLAO BIS.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained during the month of Oct., viz.:—504 ozs., for which the sum of 1,953l. 2s. 4d. has been realised.

COLORADO BOY.—The manager reports by cable on the 23rd inst.:—"Shaft has reached a depth of 156 ft.; shall commence drifting Dec. 1. Winze in No. 2 shoot coming into good ore."

ELKHORN.—Important information from the mine:—"The 1,250-ft. south level has now been driven 467 ft.; the length of the ore body at present developed is 97 ft. In the face of the drift there is a good breast of ore. For the last 21 ft. the ore assays 100 ozs. to the ton, for 4 ft. in width, and 300 ozs. to the ton for 12 ins. in width. Plummer is here. The estimated value of the bullion produced for week ending Nov. 21, \$10,420.

ESMERALDA.—The manager (Nov. 25) cables as follows:—

"Esmeralda Mine: We have cut through the ledge, and are now drifting north on the streak of ore."

GOLDEN FEATHER.—The following has been received from Mr. T. S. G. Kirkpatrick, a director of the company, and Mr. E. Harvey, the secretary of the company, who arrived on the company's property a day or two ago:—"Find works splendid condition. Head-dam and walls practically indestructible. Elevator fixed, and works perfectly. Now building bed-rock-slides to connect with elevator. Upper gravel prospects exceedingly rich. Yesterday five rockers produced \$215, averaging 50 cents per bucket, 20 lbs. Personal panning gave same result. Have not slightest doubt of great success this season, provided weather holds good. Every appearance of present weather continuing.—**KIRKPATRICK, HARVEY.**"

GUADALCAZAR.—The following cable was received on the 23rd inst., from Mr. James Mactear, F.R.S.E., F.I.C., F.C.S., who has been sent out by the Guadalcasar Quicksilver Mines, Limited, to superintend the final completion and starting of the furnaces:—"Have been in the mine to-day. The mine looks splendid. Furnace work being pushed ahead, and I estimate the furnaces will be completed before Jan. 14."

JAY HAWK AND LONE PINE.—The directors have received the following telegram from the manager, viz.:—"Have cut lode with 250 cross-cut. Estimate yield at 6,000 ozs. profit one week, \$4,000. Mine is looking well."

LA PLATA.—The manager reports by cable on the 23rd inst.:—"Whitecloud (Red Mountain): Have commenced driving the 300-ft. level on the vein."

MAID OF ERIN.—The warrants for the third interim dividend have been posted. The following cablegram has been received from the mines:—"Gross yield for the week ending Nov. 21, 1,400 tons; estimated value, \$25,000."

HOME MINES.

LOVELL.—At the meeting in London the accounts for the 20 weeks ending Sept. 26 showed a balance available for dividend of 496%, and it was resolved that a dividend of 1s. 3d. per share be declared. The payments amounted to 1,103%; including labour cost, 928%, and merchants' bills, 163%. On the other hand, 28 tons of tin had been sold at an average price of 59l. 2s. per ton, realising 1,682. A dividend of 1s. 6d. per 7,165th share was declared June 24 (537l.). They had cash at bankers, 625l., and owed rent, lords' dues, &c., 91l.; and interest on balance of purchase-money, Combellack shaft, 37l. The mine continues to open out exceedingly well, especially in the bottom level.

WEST KITTY.—A profit of 3,339l. was shown in the past four months' working. The tin sold—108 tons—realised an average price of 58l. 2s. 4d. a ton. A dividend of 11s. a share was declared, and this left a balance in hand of 688l.—48l. in excess of the amount carried forward in July last. Reference was made to the great loss which the mine had sustained by the deaths of Capt. William Vivian and Joseph Vivian. The sum of 100l. was voted to the widow of Capt. Joseph Vivian.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

NEW PRIMROSE.—Dividend warrants for second dividend of 5 per cent. in this company have been posted to European shareholders.

MOODIES GOLD.—The transfer books will be closed during the month of December in compliance with the requirements of the Natal law.

NORTH-EASTERN BULTFOUNTEIN.—Telegraphic advice for last week announces:—"9,800 loads of top ground, yielding 1,150 carats of diamonds. Increase of blue ground on floors, 5,100 loads."

CITY AND SUBURBAN.—The company has purchased the pre-emptive rights of Doornfontein, and the freehold of the portion of Turfontein, formerly leased by the company. The company, therefore, now owns the freehold of the whole of their ground, 454 acres in extent.

TRANSVAAL MORTGAGE, LOAN AND FINANCE.—The company has received a cablegram from the head office of the Simmer and Jack Gold Mining Co. at Johannesburg, intimating that a dividend of 10 per cent. has been declared for the quarter ending on the 30th inst. The company's books will be closed for seven days from Dec. 1.

DELAGOA BAY AND SELATIE RAILWAY.—The Harmony Proprietary Co.'s manager reports by this mail the arrival of the contractors and surveyors of the new line of railway from Komati to Leydsdorp, who are well pleased with the route, and in May next will start the construction at both ends, and at several points between. They are all Englishmen and intend pushing the work ahead.

PIGG'S PEAK ESTATE.—Mine report for week ending Oct. 24:—"Devil's reef—Prospecting drives: Drove for week, 40 ft. Two white men and two boys prospecting; found a few colours. Battery: Working at roof frame; ready to start putting on iron. Engine: Have now done almost as much as possible until we get pistons. Boiler ready to be lagged. Dam: All piles now in (36). Level of clay, 4 ft. 6 ins. from top."

NEW AURORA WEST.—Managing director's report for Sept.:—"Mine: A total of 637 ft. of sinking and driving has been done during the month at the cost of 1l. 5s. 1½d., being 13s. 7½d. for actual mining, 7s. 3d. for pumping and hauling, and 4s. 3d. for management and

general expenses. This includes 152 of rises for stope preparation, and this work is being actively advanced, so that no delay may occur when milling is commenced."

TRANSVAAL GOLD EXPLORATION.—General manager's advices Oct. 26:—"Mining: Theta vein: Ore extracted 10 tons; assay value, 3 ozs. 1 dwt. per ton. Brown's Hill, Nu reef: Ore extracted at No. 1,209, 25 tons; assay value, 14 ozs. 17 dwts. per ton; and at No. 1,211, &c., 8 tons; assay value, 2 ozs. 14 dwts. per ton. Brown's Hill, Sigma reef: Ore extracted, 25 tons; assay value, 2 ozs. 2 dwts. per ton. Edin Hill, Rho reef: Ore extracted 19 tons; assay value, 1 oz. 18 dwts. per ton. Colombian Hill, Tau reef: Ore extracted, 25 tons; assay value, 1 oz. 10 dwts. per ton."

CERRO DE PASCO.—The directors have received the following advices dated Barberton, Oct. 26:—"Block F extension: South-east cross-cut: We re-commenced this work on Oct. 19, which has been driven 9 ft., making total distance, 375 ft.; this cross-cut is still in hard slate. Drive south on 10 ft. reef: At 173 ft. we commenced to cross-cut east to prove the 4 ft. reef at this point; this work has been driven 13 ft. Drive north on 10 ft. reef has been driven 8 ft., making total distance, 75 ft.; ore extracted, 16 tons. Drive south on 4 ft. reef: In accordance with your request I stopped this work on Oct. 17. Air shaft, No. 1 south, has been sunk 11 ft., making total distance, 81 ft. Block 12, north-east cross-cut: We commenced this work again on Oct. 19, and has been driven 4 ft., making total distance, 251 ft. (working daytime only.)"

COMMERCIAL NOTES.

METALS.

THE Metal Market has been quiet during the current week.

Bank rate remains 4 per cent. Bar silver eased to 43½d., and closes 43½ per oz.

COPPER has been fairly steady. G.M.B. warrants sold from 45l. 5s. to 44l. 7s. 6d. cash, and from 46l. to 45l. 2s. 6d. three months. To-day's prices are 44l. 5s. cash, and 45l. three months. We quote English tough, 48l. to 50l.; best selected, 49l. to 51l.; strong sheets, 58l. 10s. to 59l. 10s.; India sheets, 55l. 10s. to 56l. 10s.; yellow metal sheets, 5½ to 5½; sheathing, 5½ to ¾; ore, 8s. 3d. to 9s. 6d.

TIN has been steady with good demand. Straits on the spot, after easing to 91l. 12s. 6d. quickly recovered to 92l., at which a fair business has been done. Three months' prompt has been comparatively neglected, the premium being reduced to 5s. per ton over spot parcels. To-day's price is 91l. 17s. 6d. in all positions, spot and three months. The Dutch Market is steady. The Banca sale of 28,842 slabs yesterday went at an average of f55½, or parity of about 92l. 12s. 6d. per ton. Billiton quoted f55. English Ingots, 95l. to 95l. 10s.

TINPLATES are quiet, and ordinary coke quoted 13s. Liverpool.

SPELTER has been easier, and is now quoted about 22l. 10s. ex ship here.

LEAD steady. We quote soft Spanish, 11l. 13s. 9d. to 11l. 15s.; soft English, 11l. 17s. 6d. to 12l. L.B., 12l. 10s.; sheets, 12l. 15s. to 13l.

QUICKSILVER dull. Rothschild's price is still 8l., but from second hands it offers at 7l. 14s. to 7l. 15s.

ANTIMONY firm. Hallett's price for delivery this year is 60l.; G.M. brands quoted 56l. to 57l.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING NOV. 28.

ESMERALDA, LIMITED.

IMPORTANT CIRCULAR TO THE SHAREHOLDERS.

Nov. 21.—I am instructed to say that, as intimated in a former circular, this company has now acquired one-fourth interest in the Grand Central Silver Mines, Limited, being 5,000 prior dividend shares and 45,000 ordinary shares, all of which are fully paid, and form part of the nominal capital of the company, viz., 200,000l. Work is in active progress on the property. The manager reports that in the first place where they have commenced breaking ore there is a good face of ore in front of them and under foot. Men are now engaged in extracting ore, and a large quantity will be ready for sale to the smelters as soon as the road is completed. The survey was finished last week, and the manager reports that the road will be ready in 60 days. The cost of making the road is likely to be one-third less than was originally estimated. Weekly reports will be published by the Grand Central Silver Mines, Limited. Esmeralda property: The manager reports that he has extended the west cross-cut from the shaft on Esmeralda vein 18 ft., and the drift is all in quartz, looking well, and that he has passed through a streak of ore.—F. FULLER, Secretary.

BRITISH MINING INTELLIGENCE.

CWMYSTWYTH.—Report for November :—The 13-fm. level cross-cut north is being forwarded as best we can with the number of men we are able to employ. The rock is a blue slate, and somewhat harder at present for breaking. The 15-fm. level west is suspended, as we consider the ground in this direction is now sufficiently proved. We do not purpose just yet to drive on the Comet lode, it being small and poor at the point of intersection, but start a rise in the back of the 15 west on the new lode in wholly untried and deserving ground. The 15 west on the new lode is wholly untried and deserving ground. A rise in the back of the 15 west on the new lode. The lode is at present pinched, but may and will, we expect, soon open out again; present value, saving work. The 30-fm. level east on the new lode continues to yield $2\frac{1}{2}$ tons of blende per fm., and the ground is much of the same appearance as last month. A stope in the back of the 30 east on the new lode is further improved to $2\frac{1}{2}$ tons of blende per fm. A stope in the back of the 30 west on the new lode will yield 2 tons of blende per fm. A stope in the back of the 15 east on the new lode is somewhat less productive this month; yield $1\frac{1}{2}$ tons of blende per fm. A stope in the back of the 15 west in the Comet lode will yield 7 cwt. of lead and 1 ton of blende per fm. A stope in the back of the 30 on the Comet lode is now again secure and a fresh stope started from the end of ground yield $\frac{1}{2}$ ton of lead, and about $\frac{3}{4}$ ton of blende per fm. The raisings of lead and blende last month are estimated at 4 tons and 30 tons respectively. Surface work is going on regularly, and all the machinery is in good condition and working well, with a sufficiency of water.

DRAKEWALLS (Nov. 25).—There is nothing new to report in our underground department during the past month. Ground has been cut for a bob plat at the 80-fm. level, and we purpose to fix the balance bob shortly. The stope in the bottom of the 132 level is yielding 5 tons mundic per fm., and good stones of copper ore. The fires were lit in all the calciners on Monday evening last, and we are burning some mundic stuff broken in the bottom of the 132-fm. level. I am pleased to inform you that the water is forking very satisfactorily, and by Friday morning I hope to get the 160-fm. level drained, so as to put all the men to work and haul up some of the best mundic already broken. We sold to Cornish Smelting Co. yesterday computed 5 $\frac{1}{2}$ tons tin at 49 $\frac{1}{2}$ 10s. per ton. This will be weighed to-morrow.

EAST BLUE HILLS (Nov. 25).—The 30 end west on south section is worth for tin 12 $\frac{1}{2}$ per fm. by last assays. We have driven through 15 fms. on this end, worth on an average fully 12 $\frac{1}{2}$ per fm. I saw fine stones of tin there this week. We have ventilated the 10-fm. level by holding the rise in back of the 20, and have since set two tribute pitches in the ends of rise. The cross-cut driving south from north section has been neglected, while the men have been in the adit and doing sundry work, and several days air to bad too work. We have a new tin dresser, and by his experience with water stamps and the dressing we expect to do much better.—J. WHITE.

EAST GRASSINGTON (Nov. 25).—Report from the mine manager :—Hammond shaft: In the 47-fm. level west the lode continues small, carrying a leader of rider spar mixed with spots of lead ore; the country rock is hard and spare for progress. Next week we purpose rising between the cross joints to prove the lode in the upper measures. No. 1 stope, in back of level, in a lode 2 ft. wide, and producing 12 cwt. of lead ore per fm. No. 2 stope in a lode 20 ins. wide, and producing 10 cwt. of lead ore per fm. No. 3 sump: In the eastern end the lode is 2 ft. wide, carrying spar and barytes, with good branches of lead ore, worth 12 cwt. per fm. Two stopes east and west, worth together 20 cwt. of lead ore per fm. The new shaft to command the western ground is in regular course of sinking. Harris main engine shaft: In the 60-fm. level east we have a strong, masterly and well-defined lode, the filling matter being limespar, sulphate of barytes, intermixed with patches of good quality lead ore. In the same level west, the lode is 2 ft. wide, carrying spar, gossan, and lead ore, worth 12 cwt. per fm. and daily improving. We have just delivery a good sample of ore stuff from this point at the dressing floors. As soon as the ends are sufficiently advanced we shall rise, for the double purpose of improving ventilation and opening out stoping ground, and prepare for deepening the mine to the 75. The 47 east is still blocked. Stope in back of level, in a lode 2 ft. wide, producing 10 cwt. of lead ore per fm. In the 37 east the lode is rather wider, and showing nice cubes of lead ore. Stope in back, in a lode 2 ft. wide, producing 10 cwt. of lead ore per fm. In the 27 east good progress is being made towards tapping the cavity. The new pitwork has been placed in position to the 60. Our pumping and hoisting engines will be overhauled and new connections attached as soon as the weather permits. Dressing and surface operations in full swing.

KINGSIDE.—Report for Nov.: Cutting ground over the 44-fm. level east and west of cross-cut north of Taylor's shaft. Sufficient ground having been cut here, the men are now placed to continue the 44-fm. level westward. The 44-fm. level to drive west of cross-cut north of Taylor's shaft on Kingside lode: The portion of lode carried here contains a mixture of lead ore, and a good deal of water issuing therefrom. The 44-fm. level east of cross-cut north of Taylor's shaft on Kingside lode: Suspended, and men put to cross-cut south through the lode. A cross-cut to drive south at the 44-fm. level east of Taylor's shaft: The lode here is hard interspersed with lead ore, worth, so far as proved, 12 cwt. per fm., and we hope a more productive part will be found standing in this direction. A stope over the 22-fm. level north of rise on branch or counter lode: This stope will produce $\frac{1}{2}$ ton of lead ore per fm. A stope over the 22-fm. level east of rise on Pengueilan north lode: Lode here 4 ft. wide, worth 10 to 12 cwt. of lead ore per fm. A stope over the 11-fm. level east of Taylor's shaft on Pengueilan north lode: Lode 3 ft. wide, and will yield 10 cwt. of lead ore per fm. Estimated produce of lead last month, 9 tons.

LEADHILLS (Nov. 23).—Brown's vein: The 145-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, charged with nice-looking spar, but only spots of ore. The two stopes above the 145 north of Jeffrey's shaft are worth 25 cwt. and 20 cwt. of ore per fm. respectively. The stope above the 145 south of Wilson's shaft is worth 80 cwt. of ore per fm. The two stopes above the 130 north of Jeffrey's shaft are worth 20 cwt. and 25 cwt. of ore per fm. respectively. The rise above the 130 north of Jeffrey's shaft shows a vein $\frac{1}{2}$ ft. wide, well mixed with quartz and better stones of ore, but not to value. The 115-fm. level north of Jeffrey's shaft is in a promising vein, above 4 ft. wide, mostly spar mixed with ore, worth 30 cwt. of ore per fm. The stope above the

115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The 115-fm. level south of Wilson's shaft is in a vein about 4 ft. wide, mixed with kindly spar, and showing a nice dampness, but keeps without ore. The winze below the 100 north of Jeffrey's shaft is in a vein 4 ft. wide, mixed with spar and ore, worth 10 cwt. per fm. The drift below the 100 south of Wilson's shaft is worth 10 cwt. of ore. The two stopes above the 35 south of flat-rod shaft are worth 40 cwt. and 20 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein $\frac{1}{2}$ ft. wide, showing a nice rib of spar, but without ore.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending Nov. 20 :—Dressing: 923 tons blende and 233 tons lead ore have been dressed and sold up to date. The weather still bad, but the new floors are being put up as quickly as possible. A store for explosives has been built, and is licensed to hold 2,000 lbs. of gelatine dynamite.

PRINCE OF WALES (Nov. 25).—The men in the 180-fm. level are driving by the side of the lode both east and west, and will continue to do so to the end of this week. From indications seen in this level west we believe we have a very good lode. We have taken down the lode in the 166 west, which fully maintains its character and value, being 4 ft. wide, and worth 10 $\frac{1}{2}$ per fm. There is no material change to notice in the cross-cut south, which is still in very stiff killas ground of a very congenial character.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Nov. 26).—The 155-fm. level south-east on caunter lode has now been driven 34 fms. $3\frac{1}{2}$ ft.; the lode here, which has improved since last week, is 4 ft. wide, and worth 2 tons lead ore and blende per fm.; we are sorry to say that we have had to suspend the very promising forebreast to-day, as it is now up to the boundary between this sett and the East Roman's sett. The 155-fm. level north of main shaft on Roman lode has been driven 35 fms. 2 ft., and is on a lode 3 ft. wide, containing very good stones of lead ore and blende. The 140-fm. level south-east on caunter lode has been driven 29 fms. $3\frac{1}{2}$ ft. from Roman lode; this forebreast has also improved, and is to-day worth $1\frac{1}{2}$ tons per fm. for lead ore. Two stopes in back of this level are together worth 3 tons lead ore per fm. The 140 south on Roman lode has been driven 31 fms. $5\frac{1}{2}$ ft. south of No. 1 winze, but we are unable to value it. The winze below the 140 north is now 7 fms. 4 ft. deep, and worth 1 ton per fm. for lead ore and blende. Two stopes in back of 140 north are together worth $3\frac{1}{2}$ tons lead ore per fm. The winze below the 125 south-east on caunter lode is improving as we get deeper; it is now 4 fms. deep, and worth $1\frac{1}{2}$ tons lead ore per fm. The winze below the 125 south on Roman lode is now 8 fms. deep; we have cut into a bunch of ore here to-day, but cannot yet estimate the value per fm.; we hope to be able to report to you very favourably on this point next week. The 125 south on main shaft is in a lode 2 ft. wide, worth 1 ton lead ore per fm. A stope in back of this level is worth 1 ton lead ore per fm. Three stopes in back of 110 south are together worth $3\frac{1}{2}$ tons lead ore per fm. A stope south of shaft is worth 1 ton lead ore per fm. Two stopes in back of 80 south of Jones' winze south of main shaft are together worth three tons lead ore per fm. A stope in back of 80 on east lode north of main shaft is worth 1 ton lead ore per fm.—A. WATERS.

SOUTH DARREN (Nov. 26).—The 154-fm. levels continue to open out well. The east end is worth 17 cwt. of silver-lead ore per fm., and is not through the lode. The west end is worth 25 cwt. of silver-lead ore per fm. This only refers to the south branch. The good branch of copper in the north side is not being carried; it will be cut into afterwards, when I have no doubt it will turn out good lead as well as copper. We do not often find the copper continuous. The stope in the 142 west has fallen off a little. The winze in the 130 west is without change. There is 9 ft. of ground between the winze and the stope.—J. MITCHELL.

VAN (Nov. 26).—The stopes throughout the mine maintain the average yield of 1 ton of lead ore per fm., as for some time past. Western division of the mine: At the cross-cut south from the 150-fm. level good progress is being made, considering the rock we have to drive through. Over 5 fms. have been driven in the last four weeks with the Eclipse drill, and we anticipate intersecting the south lode in a few more fathoms. Eastern part of the mine: The 150-fm. level has been driven 20 fms. east of Seaham's winze, and at this point believing that much of the lode was standing on the north side of the level, we have cross-cut north 17 ft. in lode all the way, the last 6 ft. being composed of the right kind of rock with quartz and stones of lead ore; much water is issuing from the forebreast, and altogether the appearances are good. We anticipate a further improvement as the lode is opened upon here. The blende which has been accumulating for several months past is now being dressed for market as fast as possible, and when finished we shall push on with another 50 tons of lead ore for sale.—J. PAULL.

WEARDALE.—Report on Weardale Co.'s mines for week ending Nov. 21 :—Ore raised for week, 50 tons; ore dressed for week, 108 tons; ore and slag smelted for week, 139 tons, producing 71 tons of pig lead.

— Report on Weardale Co.'s mines for week ending Nov. 14 : Ore raised for week, 58 tons; ore dressed for week, 90 tons; ore slag fume smelted for week, 141 tons, producing 71 tons of pig lead.

WHEAL CREBOR (Nov. 24).—The lode in the 156 east end is yielding 5 tons of mundic per fm. The lode in the west end at the same level is worth 3 tons of mundic and a little copper per fm. Very good progress has been made in driving each end during the past week, but we expect these ends will be idle for two or three days; owing to a small obstruction to the water in the main lobby it has accumulated in the mine. This matter has been put right, and the pumps started, and in a short time we hope to have the mine again well drained. There is no change in the value of our stopes to report. The tributaries are busy cleaning their ore, and getting it ready for the next sampling.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Nov. 24).—During the past week the lode in the 27 end has been intersected by a slide, which has heaved it, but under the slide the lode is from 2 to 3 ft. wide of a promising nature. No other change.—S. P. CURTIS.

WHEAL UNY (Nov. 26).—We are pleased to say our engine is keeping the water and forking a little; but for the last fall of rain we should have redeemed the 214-fm. level; we are now getting near the back of this level; we anticipate greater speed when we get below the 214. The 203 end east and stope in 203 west are without change to note, looking at our present position we expect to keep up our 12 tons per month without the bottom levels.—J. WHITE, D. W. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA.—The following is the statement of profit and loss for Sept.—231 tons produced 184 ozs. gold (average 137.10 dwts. Estimated value of the gold, 5367.; cost at the mines, Medellin and in London, 5807. 8s.; estimated losses, 446. 8s. Spent on capital account, included in above cost, 557. 3s. 10d.

ARGENTELLA (Nov. 19).—No. 2 marine driving east of south : The ground during the early part of the week has become more favourable for driving, the killas being much softer. Yesterday a block of harder ground was cut in the roof. I do not think it will interfere with the wall we are driving on. Indications are still kindly and satisfactory. Quartz reef, cross-cut south : During the past week more quartz has been met with in the forebreast, also a deal of iron pyrites. Having some distance yet to drive, it is possible small veins or leaders may be met with before reaching the reef, and may form a connection with the same. No. 3 Rowe's workings, driving east : The forebreast is now following up a good joint running east. This has helped us to push forward. I hope to reach the point referred to in my former reports about the end of December.—Capt. J. B. ROBERTS.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ended Oct. 15 :—Block 96—Engine shaft : 280-level west driven 16 ft. ; total, 567 ft. ; formation rather larger ; water increasing. Stopos 280-level west : Galena continues, and a further small quantity has been broken. Incline from 280-level west sunk 17 ft. ; total, 195 ft. 6 ins. ; formation larger, and dipping faster. The lode consists of carbonate of iron, containing galena, a little fahlerz, and native silver, and is accompanied by a brown clayey gossan, similar to that met with above, where the rich ore was first struck ; water increasing. Intermediate level No. 2 west from rise : Stopping continued, and a further quantity of ironstone, containing a little iodide of silver, broken. Stopos off main rise : Stopping has been continued. The rich sulphide of silver mentioned in last report has cut out, giving place to a little high grade galena. Intermediate level No. 2 east from incline : Driven 5 ft. 6 ins. ; total, 93 ft. 6 ins. This level has been stopped for the present, and a rise is being put up nearer the incline, and to which the men have been transferred. Rise from intermediate level No. 2 east from incline : Risen 12 ft. ; total, 12 ft. Formation here about 4 ft. thick, containing a little galena, and occasionally native silver. Rise from 280-level east risen 10 ft. ; total, 41 ft. ; no change. The 180 stopos : No change. No. 4 shaft : Cleaned out and repaired preparatory to sinking. Ore shipped, 20 tons of ore, assaying 114 ozs. silver to the ton, and 35½ per cent. of lead has been shipped to Port Adelaide.

BIG CREEK.—Monthly report : Production for month of Oct., 100 tons. Am now stopping vigorously in accordance with advice of London directors, as to advancing prices. You can reckon on 150 tons per month from this date. As work progresses I find the ledge widens greatly, and the ore is abundant and rich. We continue to reserve some fine specimen blocks of ore taken whole from ledge, weighing from 2,000 lbs. down, which will be shown at Chicago Exhibition.—Supt. BRAY.

BRATSBURG.—Report for week ending Nov. 14.—Hoffnung Mine: No. 2 adit level is still improving, now yielding about ½ ton per fm. No. 1 rise in the back is worth 1 ton per fm., but No. 2 rise is unproductive. The winze in the bottom is showing a very good appearance, the lode being about 3 ft. wide, and producing fully ½ ton per fm. The mid level driving east in the back of No. 2 adit has not improved in value. At No. 3 adit level we have broken some good ore during the week, but it appears to make irregularly ; present value, ½ ton per fm. The rise continues to yield about ¾ ton per fm. We have commenced to excavate ground to start a winze in the bottom of No. 3 level. The winze in the bottom of No. 4 level will shortly be resumed, as will also the driving of this level. The workings in Murchison's section remain unchanged. Johannes Miue : The eastern level on Howard lode is yielding ½ ton per fm., but whilst it has improved somewhat in appearance the lode is still without value in the western end. The main rise is producing fully 1 ton per fm. For convenience of working we have started to sink from the stopos above the eastern rise where the lode is worth ¾ ton per fm. The rise is now suspended. 95 miners employed during the past week. Surface work and remarks : Dressing is progressing with regularity, and we are making good headway with the cutting for the new waste tip tramway at the sorting-house.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING WORKS.—Report for week ending Nov. 14 :—Smelting works : The works are still standing for want of coke, so there is nothing new to report under this head. Electro deposition is proceeding with regularity, and we have sent off to you this week 349 copper plates, of the nett weight of 5,453 kilos, or 5 tons 7 cwt. 1 qr. 10 lbs. ; and six cases battery mud, weighing nett 842 kilos, or equal to 16 cwt. 2 qrs. 8 lbs., which we hope will arrive safely and realise a good price.—T. F. SMITH.

BRITISH BROKEN HILL (Oct. 14).—Owing to the water from the mill being used for the furnaces, some of the slime has accumulated in the jackets. The water supply being limited we had to stop the mill on the 12th inst. Furnace started running badly on the 13th, and on the morning of the 14th it was found necessary to shut down for examination when a leak was discovered in the top jacket. Repairs are now being effected, and will be completed as soon as possible.

COLOMBIAN HYDRAULIC (Oct. 19).—New pipe line : We are hurrying the pipes up from Honda, and are busy at three rivetting stations putting them together, and to-day we shall begin laying the large taper pipe. We have many obstacles to contend with, which makes it very difficult for me to fix a time for the completion of this work.—A. E. OAKES.

COLON.—The secretary reports that he has received advices from the manager at the mines confirming the cablegram already published, that a decision had been made in the company's favour ; and that he has also received a cablegram from the manager that mining operations have been resumed, and that work is proceeding day and night.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for the fortnight ended Oct. 15 :—Block 98—Main engine shaft : Sunk 11 ft. ; total, 145 ft. No change, country very hard. Air compressor has been bedded, and connections are being made with receiver. South engine shaft : Chamber driven 7 ft. ; total, 7 ft. The tenders received for cutting chamber not being considered satisfactory, started the work on wages, and the men are making good progress. Opening set will probably be put in to-morrow. Foundation for air

compressor finished. The putting together of receiver nearly completed. Block 99—No. 3 shaft : Driven 3 ft. ; total, 27 ft. Work here has been suspended.

EMMA (Nov. 6).—In handing you my report of work carried on at the mine for the week just past, I am glad to note the ground being developed from Bay City tunnel continues improving. The drift south-east on No. 3 fissure advanced 7 ft. ; total, 78 ft. ; worked one man. The cross seam on the north side of fissure, mentioned in my report last week, continues, is now some 10 ft. long and from ½ in. to 2 ins. in width, and running with the fissure dipping to the north-east at an angle of about 40 degs. from horizontal ; this seam carries ore, iron, and quartz, is a most favourable outlook, and will no doubt lead to ore in quantity either ahead or below. The drift north-west on this same No. 3 fissure advanced 12 ft. ; worked 2 men ; total, 77 ft. The vein here is about 3 ft. wide, carrying iron pyrites, manganese, quartz, and decomposed limestone, with small particles of ore intermixed, the rock very much broken, and should make ore. Level No. 3 south-east advanced 8 ft. ; total, 63 ft. ; worked one man. The ground here shows no material change the past week ; face is very seamy, much mineral stained, and a considerable iron oxide occurs in small pockets quite often. On the Illinois tunnel level we worked four men, prospecting the vein of iron silver ore ; this vein continues from 6 to 8 ft. wide, with seams of good ore running through it. We did 20 ft. of work here ; am now cross-cutting in hopes of finding the ore in quantity. On the Emma tunnel we worked two men sinking the shaft from footwall drift ; sunk 7 ft. ; total, 52 ft. The fissure we are sinking in is still close, but the rock shows signs of becoming broken and softer. We closed the concentrating mill on the 30th ult. because of cold weather setting in, and also the scarcity of water. Have reduced the force to 25 men, and in a few days, or soon as our outside work is done, such as shedding tracks, getting timber, lumber, and supplies under cover, will reduce still more. We also worked five men on Emma tunnel level towards the hanging-wall, drifting and timbering. Ore sales are : Lot 13, concentrates, 35,951 lbs. net ore, at \$85.05 per ton, equal to \$1,528.81. Lot 14, crude ore, 5,017 lbs. net, at \$120.80 per ton, equal to \$603.03 ; total amount, \$1,831.84. In mentioning the work on Bay City level I omitted to say that in the drift south-east on No. 3 fissure we have this last week cut porphyry in the fissure, now some 8 to 12 ins. wide, which is almost certain to bring ore. The improvement now going on in the mine is certainly encouraging, and I feel very sanguine that we will yet make a paying mine of the Emma, reports to the contrary notwithstanding.—H. C. WALLACE.

GRAVEL (Oct. 21).—Repairs to syphon and new ditch : This work was concluded on Friday last, and we intended turning the water into the Reposo syphon on Monday, but unfortunately on Saturday it commenced to rain, and rained all that night and Sunday morning till 10 a.m., and the rain brought down 11 slides of ground, which I need hardly say was very trying, and these will take several days to clear, and in the meantime we are putting in some stone work in some of the bad ground in the new ditch, to prevent, if possible, any further accidents, and I am also having the Mondecco ditch thoroughly over-hauled.—W. ST. D. GRIFFITH.

GYMPIE GOLDEN CROWN.—Report for fortnight ending Oct. 8 :—I have to report that all work on the Peter and Paul reef was discontinued on Sept. 26 ; there is about 30 tons of stone raised, which will be crushed shortly. Bailing water from the shaft on All Serene reef was commenced on Sept. 27, and sinking was commenced on Monday, the 28th, since which date the shaft has been sunk 16 ft. ; total depth from surface, 202 ft. The sinking is through grey conglomerate rock ; the reef is fully 2 ft. thick, and is going down on a well-defined wall. The machinery and everything about the mine and the mill is in good order.—T. RAMAGE.

JAY HAWK AND LONE PINE (Nov. 11).—My last report was dated the 3rd inst. The shaft below the 700 ft. level is sunk 30 ft. in good ore. The 700 ft. south level has a vein its full size, the ore being about the same value as the bottom of the shaft, assaying 60 ozs. of silver per ton. The stopos on the lower levels are not at work ; we are at present taking away the ore from the upper levels, the assay value of which is from 35 to 44 ozs. per ton. The surface tunnel going under the hill is also in pay ore. We have during the week raised from the mine 550 car-loads of ore ; our shipment to the mills in Oct. month was 244½ tons. The Lone Pine mill is in full working order, and we shall melt our first lot of bullion this week ; we are crushing about 20 tons daily, the assay value of which is from 35 to 44 ozs. silver per ton. We are now starting up the Jay Hawk mill, and shall be in full working order during the present week ; this mill will also crush 20 tons daily, making 40 tons for both mills. I have used all possible dispatch in starting up the mills and mines, and I anticipate a prosperous future for the company.—H. PRIDEAUX.

LEEDS COPPER (Nov. 11).—Kent's shaft : The 20-fm. level driving west of this shaft is in bed vein 5 ft. wide, and producing 2½ tons 12 per cent. ore. No. 1 stopo bottom of this level is in a bed vein 4 ft. wide, and producing 10 per cent. per fm. No. 1 stopo in the back of this level is in a good bed vein 6 ft. wide, and producing 3½ tons 15 per cent. per fm. No. 2 stopo in back of this level is in a very good bed and quartz vein mixed, 7 ft. wide, and producing 5 tons 20 per cent. per fm. The 15-fm. level driving west of shaft is still the same as when last reported. No. 1 stopo in the back of this level is in bed vein 4 ft. wide, and producing 2½ tons 10 per cent. per fm. No. 2 stopo in the back of this level is in bed vein ranging from 4 ft. to 6 ft. wide, and producing 2½ tons 12 per cent. per fm. No. 3 stopo in the back of this level is still stopped. The men are following rich quartz vein, and is producing 3 tons 20 per cent. per fm. No. 4 stopo in the back of this level is in a large bed vein 6 ft. wide, and with good quartz ore patches mixed throughout, producing 4½ tons of 12 per cent. per fm.—T. R. DAVEY.

LOMA (Oct. 19).—I am glad to say we have change in weather, and rain water to run four or six hours a day. We have cut out all old ditches to help increase their capacity. We have also given more grade to tunnels, and all round hope to get more water during rain-storms for work at mine. The new reservoir has been filled, and stands well. Ditch-work continues at a good speed from Guarumo, and the ground is very good.—PRENDER.

MOUNT ZEEHAN.—The manager writes for week ending Oct. 9 :—Argent section—Blocks 1 and 2, No. 4 lode, south drive, 72-ft. level : Extended further 16 ft. ; total from cross-cut, 116 ft. ; lode formation 3 ft. wide, composed of siderite, graphite slate, and little second-class ore. It looks much better in this end than it has done

for some time past, and there seems to be a counter lode coming across from the hanging-wall side to-day, with a large quantity of water coming in the face; 2 tons of second-class ore raised. North drive, 72-ft. level: Extended further 13 ft.; total from cross-cut, 145 ft.; lode formation 8 ft. wide, very much broken up and contorted, with horses of graphite slate between the two walls. A small vein of second-class ore on the hanging-wall side, but not good enough to drive (this any further; it is not settled enough country, too open and porous. As I have already stated, we lose backs after we leave the air shaft going north, but we gain backs going south. This drive is discontinued; we are not deep enough; 1 ton second-class ore raised. North Air shaft, 88 ft. from cross-cut, holed through. South Air shaft sunk further 1½ ft.; total from surface brace, 14 ft.; timbered 3 ft.; total timbered, 12 ft.; lode formation 3 ft. wide, composed of siderite and second-class ore. I thought we should have had the shoot of ore south of the shaft by this time at this depth, but we must go deeper to get the solid ore; 1 ton second-class ore raised. Rise back of 72-ft. level north of cross-cut: Further height of 4 ft.; total height from back of level, 11 ft.; lode formation 4 ft. wide, composed of good second-class ore and siderite. I have discontinued the rise, and put the two men to drive south end of same to get into the shoot of ore we had under; 2 cwt. first-class ore raised and bagged, and 4 tons of second-class ore raised. Queen Extended section, block 5, Air shaft on No. 2 lode: Driven and stoped 10 ft. by 8 ft. on 24-ft. level; total driven and stoped, 18 ft.; lode formation 5 ft. wide, 1 ft. of which is solid galena ore, the other part being very poor seconds, mixed with hard light slate; 8 tons of first-class ore raised and bagged, 1 ton of second-class raised. Main engine shaft: Sunk further 3½ ft.; total depth from plat, 45½ ft.; from surface brace, 155½ ft., country rock still in hard graphite slate; much more ground would have been sunk but for the frame set being put in. Montana section, block 9: Winze on No. 3 lode at 20-ft. level, south end extended 8 ft.; total from end of winze, 11 ft.; lode formation 5 ft. wide, composed of first and second class ore, mixed with graphite slate. The stope over this will be much better next week; 1 ton of first-class ore raised and bagged, and 3 tons of second class raised. North end of winze, 20-ft. level: Driven 6 ft. from end of winze; lode formation 4½ ft. wide, composed of first and second-class ore. I am of opinion the output will be much greater next week; 3 tons of first-class ore raised and bagged; 6 tons of second-class ore raised. Total first-class ore raised and bagged during the week, 12 tons 2 cwt., and 18 tons of second-class raised.

MYSOORE (Nov. 4).—Mining operations for the month ending Oct. 31:—The progress with the rock-drills, and also in the various other bargains throughout the mine continues to be very satisfactory. The 890 south of the winze north of Rowse's shaft has been driven 27 ft. 8 ins.; total distance, 47 ft. 8 ins.; the lode is yielding occasional stones of good quartz, but still broken up and disordered. This level has also been driven north of the winze 10 ft. in a lode 2 ft. wide, and assaying 1 oz. 0 dwts. 21 grs. The 620 south of incline shaft on the west lode has been driven 41 ft. 7 ins.; total distance, 233 ft. 7 ins.; the lode is 3½ ft. wide, and assaying 1 dwt. 7 grs. The 550 south of incline shaft on the west lode has been driven 26 ft.; total distance, 263 ft. 6 ins.; the lode is 4 ft. wide, and assaying 5 dwts.; this level is communicated to Taylor's shaft. Glen shaft: The 250 north of shaft has been driven 64 ft. 1 in.; total distance, 559 ft. 9 ins.; the lode is 1½ ft. wide, and estimated to be worth 10 dwts. Tennant's shaft: The 360 north of shaft has been driven 28 ft. 2 ins.; total distance, 693 ft. 7 ins.; the lode is 1 ft. wide, and yielding milling quartz of low quality; the water was in this level during the time the men were fixing the plunger lift at Tennant's shaft. The 290 south of the cross-cut has been driven 52 ft.; total distance, 89 ft.; the lode has been 3½ ft. wide until the last few days, when it suddenly pinched up to about 1 ft. wide, and assaying 3 dwts. The 235 north of winze north of Tennant's shaft has been driven 9 ft. 6 ins.; total distance, 119 ft., in a lode 3 ft. wide, and estimated to be worth 15 dwts.; this level is communicated to Gilbert's shaft, and we have commenced to hoist quartz from this part of the mine. Schaw's shaft: The 450 cross-cut north of shaft has been driven east 47 ft. 6 ins.; total distance, 70 ft.; there is about 30 ft. further to drive to come under the quartz near McTaggart's shaft in the shallow levels. The 450 south of shaft has been driven 12 ft. 6 ins.; total distance, 144 ft.; the lode is 1 ft. wide, and assaying 2 dwts. The 320 north of shaft has been driven 5 ft. 6 ins.; total distance, 199 ft. 6 ins.; the lode is small and unproductive. The 320 south of shaft has been driven 10 ft. 6 ins.; total distance, 273 ft. 6 ins.; the lode is 1 ft. wide, and assaying 2 dwts. Stopes: The lode in stope in back of the 780 north of Rowse's shaft is 2 ft. 6 ins. wide, and assaying 3 ozs. 17 dwts. 6 grs. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 2 ozs. 5 dwts. The lode in stope in back of the 700 north of Rowse's shaft is 3 ft. wide, and assaying 1 oz. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 16 dwts. 7 grs. The lode in stope in back of the 700 south of incline shaft is 2 ft. 6 ins. wide, and assaying 3 ozs. 2 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, and assaying 3 dwts. The lode in stope in back of the 620 north of Rowse's shaft is 2 ft. wide, and assaying 2 ozs. 3 dwts. The lode in No. 2 stope in back of this level is 2 ft. 6 ins. wide, and assaying 1 oz. 3 dwts. The lode in stope in bottom of the 620 west of shaft (on wide lode) is 2 ft. wide, and assaying 1 oz. 6 dwts. 3 grs. The lode in stope in back of the 550 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 5 dwts. 6 grs. The lode in stope in back of the level on the west lode is 2½ ft. wide, and assaying 4 dwts. The lode in stope in back of the 550 north of Rowse's is 2 ft. wide, and estimated to be worth 1 oz. The lode in stope in bottom of the 466 north of Taylor's shaft on the wide lode is 4 ft. wide, and assaying 2 dwts. The lode in stope in back of the 466 north of Rowse's shaft is 2 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 400 south of Taylor's is 3 ft. wide, and assaying 2 dwts. The lode in stope in back of the 400 north of Taylor's is 1 ft. 3 ins. wide, and assaying 5 dwts. The lode in stope in back of this level north of Rowse's shaft is 2 ft. wide, and assaying 3 dwts. 22 grs. The lode in stope in back of the 400 south of Plummer's is 2 ft. 6 ins. wide, and estimated to be worth 8 dwts. The lode in the back of the 360 south of Plummer's is 3 ft. wide, and assaying 6 dwts. 12 grs. The lode in stope in back of the 296 north of Rowse's is 2 ft. wide, and assaying 7 dwts. 19 grs. The stope in back of the 296 north of Plummer's is 2 ft. wide, and estimated to be worth 5 dwts. The lode in stope in back of the 236 north of Rowse's is 3 ft. 6 ins. wide, and assaying 3 dwts. The lode in No. 2 stope in back of this level is

2 ft. wide, and assaying 11 dwts. 17 grs. The lode in stope in back of the 360 north of Tennant's shaft is 1 ft. wide, and assaying 2 ozs. 0 dwts. 2 grs. The lode in stope in back of the 290 north of shaft is 2 ft. wide, and assaying 15 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 7 dwts. 6 grs. The lode in stope in back of the 180 north of shaft is 4 ft. wide, and assaying 1 oz. 12 dwts. The lode in stope in bottom of this level is 2½ ft. wide, and assaying 2 ozs. 5 dwts. 8 grs. The lode in stope in back of the 235 south of Gilbert's shaft is 3 ft. wide, and assaying 9 dwts. Rising: The rise in back of the 890 west of Rowse's shaft has been put up 20 ft.; total distance, 23 ft. 6 ins.; the ground is mixed with strings of quartz and carbonate of lime, but very spare for progress. The rise in back of the 290 for Gilbert's shaft has been put up 14 ft.; total, 21 ft.; the lode is 2½ ft. wide, and assaying 6 dwts. 12 grs. Sinking: Rowse's shaft has been sunk 20 ft.; total distance, 73 ft. 4 ins.; below the 890 the ground has recently been mixed with large patches of quartz pertaining to lode matter, but nothing regular or defined. Our speed here has not been quite so good as usual, in consequence of a slight breakage to the pitwork, which is put all right again. Gilbert's shaft has been sunk 30 ft.; total distance, 222 ft. from surface; it has passed through the old workings into a lode 2½ ft. wide, and assaying 3 dwts. This shaft has also been sunk 32 ft. 6 ins. below the 290, in a lode 2 ft. wide, and assaying 3 dwts. 6 grs. We have had some good showers of rain, which greatly helped us this month in our dressing operations, but the supply is getting short, and without rain there will be a scarcity of water for the tailings again very soon. The health of the camp is very good, and all our new surface works are in active operation.—J. GILBERT.

MYSOORE REEFS (Nov. 4).—Fortnightly report.—Harvey's shaft: The plat at the 520-ft. level is completed, and we have to-day resumed the sinking of the shaft, and shall do our utmost to reach the 600-ft. level as early as possible. The 520-ft. level south of cross-cut has been advanced 9 ft. 6 ins.; now 83 ft. from cross-cut. The lode in the present end is disturbed by a hard bar of black rock. Rise above the 520-ft. level north has been put up 8 ft., now 13 ft. above the level. The rise is mostly in quartz, worth, according to assay, 4 dwts. of gold to the ton. Work in these two places has been retarded owing to the air pipes being constantly cut down by blasting in the plot near the shaft. Winze below the 460-ft. level has been sunk 3 ft., which now makes a depth of 38 ft. 3 ins. below the level. The lode is of greater width than the winze, and is composed of quartz and a little pyrites, assaying 2 dwts. 12 grs. of gold to the ton. I hope in two or three days to communicate this winze with the rise above the 520-ft. level. The 400-ft. level south: Total distance from shaft 228 ft., showing an advance of 8 ft. 6 ins. during the past fortnight. There is a hard bar of rock crossing the present end, which has disturbed the lode for the present. I trust we shall soon get through it. The 400-ft. level north has been advanced 14 ft. 6 ins., now 300 ft. 1 in. from shaft. There are a few stringers of quartz in the present end, but of no value. I am under the impression that the quartz is thrown to the east, and have therefore commenced a cross-cut in this direction.—M. SCANTLEBURY.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Oct. 29: 186-ft. level, drive west, driven 6 ft.; total, 105 ft.; 116-ft. level, No. 4 winze, sunk 4 ft.; total, 62½ ft. In these workings the hanging-wall continues regular, and the quartz of the same black vitreous kind described last week. 186-ft. level, drive east, driven 3 ft.; total, 37 ft.

NEW GOLD HILL (Nov. 10).—New mill: The past week we have put in the oak foundation for stamps. This consists of square oak timber, 16 ft. long, stood on end into the ground. This is now ready, and we expect to haul the mortars on Tuesday, and bolt them thereon. The framework for the mill-house is nearly ready, and we hope to raise it next week; have excavated 1,500 yds. of old dump for site of new mill. All the timber for house and stamp frame will be hauled in this week. Mine: We are still upraising on ore above the winze, 160-ft. level, and am pleased to report that the ore is holding in quality and quantity. Have four men here, and they have made upward progress of 2 ft. for the length of 23 ft., besides placing stull timbers, &c. Miller: Two men have made 4 ft. in the drive north east of Miller shaft on 100-ft. level; total beyond shaft, 46 ft. The vein still holds good, and is full of mineral, but does not improve in its gold value.—R. EAMES, jun.

—(Nov. 14).—New work: The past week we have put up most of the frame for new mill. Hauled the mortars and placed them on the foundations. All the work is progressing satisfactorily, so that we shall be in shape to start the new mill by Jan. 1, 1892. Mine: Six men only are engaged underground, and they are breaking a good quantity of ore as well as developing new ground, which looks favourable. Millershaft—160-ft. level north-east: Two men have made 5 ft. for the week, making a total of 51 ft. from the shaft. The vein is still holding good, and the only wonder is that the ore does not improve in its gold value. The vein is 2½ ft. in width, and filled with heavy sulphurets of such a character as have been rich in other parts of the mine. Upraise: In this working above the winze on the 160-ft. level four men have made 3 ft. The ore is low grade, but shows some free gold all the time. The Miller north-east drive looks better ore, but does not show any free gold. Everything is working well, and we are devoting all our energies to the new mill. Hoping to have important news from the Miller north-east drive next week.—R. EAMES, jun.

NEW HOOVER HILL (Nov. 10).—Briol's shaft: Driving south at the 130 the end is looking well for quartz, but there is no improvement in the grade; the ground is very hard. Sinking south of Provost shaft: The vein of quartz is about 3 ins. thick; the length of the chimney is about 10 ft.; there is about 3 ft. of good ore, the other part being low grade.

NEW VISO (Nov. 16).—Manager's report:—Since my last report our surface operations have been very much interrupted by bad weather. The alluvial washing in Mi Amor, being situate on the side of a bleak mountain and incapable of protection, has especially suffered in this respect, and notwithstanding our having made the best arrangements we could, and availed ourselves of every little spell of dry weather, I consider we have lost nearly one-half of the last fortnight. This is the more to be regretted, at present it is our principal tin-producing work, and but for it we would now have had a parcel of tin ready for the market. The weather now looks better, and if it continues, I expect to clean up and send off the tin at the end of the present week. There is no change to note in our underground department.

NUNDYDROOG (Nov. 4).—Report of work done for the month of Oct. :—Taylor's shaft : Depth sunk, 21 ft. 6 ins., by one Italian with a rock-drill ; total depth, 647 ft. 6 ins. ; the ground is very hard, and for the last few days we have been working two machines here so as to push down to the next level as quickly as possible. The 600 south : Driven 63 ft. 6 ins., by one Italian with a rock-drill ; length of level, 139 ft. 6 ins. ; the lode is still a very strong one, $4\frac{1}{2}$ ft. in width, and the quartz assays 1 oz. 7 dwts. 6 grs. per ton. The 600 north : Driven 54 ft., by one Italian with a rock-drill ; the lode at present is about 2 ft. in width, but the average for the month has been over 4 ft. ; the quartz is worth 1 oz. 18 dwts. per ton. The 520 north : Driven 43 ft. 6 ins., by one Italian with a rock-drill ; total length, 328 ft. 6 ins. ; the end is looking very much better, the lode being now 2 ft. wide, and worth 1 oz. 11 dwts. 12 grs. per ton. The 450 south, stope in bottom : Ground stoped, 15 fms., by one Italian with a rock-drill ; the lode is about 2 ft. wide at present, and the assay value 2 ozs. 1 dwt. 6 grs. per ton. The 370 north : Driven 39 ft. 6 ins., by one Englishman with a rock-drill ; total length, 464 ft. 6 ins. ; there are a few strings of quartz in the end, which is still very hard. Webb's shaft : 520 north : This was driven 15 ft. in the first few days in the month, when we holed to the 520 south from Taylor's. Since then we have been cutting ground for plat and for bringing down the skip-road, &c. We hope to complete this work shortly. The hand-labour stopes are as follows :—The 520 north, No. 1 stope in back : Ground cut, 25 ft. ; lode, $1\frac{1}{2}$ ft. wide ; assay, 3 ozs. 1 dwt. 18 grs. The 520 south, No. 2 stope in back : Ground cut, 24 ft. ; lode, 4 ft. wide ; assay, 2 ozs. 8 dwts. 12 grs. The 450 north, No. 1 stope north : Ground cut, 27 ft. ; lode, 2 ft. ; assay, 2 ozs. 4 dwts. 12 grs. The 450 north, No. 1 stope south : Ground cut 11 ft. ; lode $1\frac{1}{2}$ ft. ; assay, 3 ozs. 10 dwts. 12 grs. The 450 north, No. 2 stope north : Ground cut, 20 ft. ; lode, 3 ft. ; assay, 16 dwts. 6 grs. The 370 south, stope in bottom : Ground cut, 15 ft. ; lode, 2 ft. ; assay, 2 ozs. 11 dwts. The 370 north, stope in bottom : Ground cut, 23 ft. ; lode, 2 ft. ; assay, 1 oz. 5 dwts. The 370 north, stope in back : Ground cut, 12 ft. ; lode, $1\frac{1}{2}$ ft. wide ; assay, 2 ozs. 15 dwts. The 300 north, stope in back : Ground cut, 20 ft. ; lode, $1\frac{1}{2}$ ft. ; assay, 1 oz. 6 dwts. 18 grs. New shaft north of Taylor's : This has been sunk 35 ft. since we started on the 12th, and we have timbered about 20 ft. of it ; we are just getting down to the hard rock. Kennedy's shaft : Sunk 12 ft., by two Italians with a rock-drill ; total depth, 186 ft. ; the water still follows us down, making the sinking very difficult ; the rock is still jointy, and requires timbering. The 160 north : Distance driven, 12 ft. 3 ins., by 18 coolies ; total length of level, 18 ft. The lode is at present rather small, being 6 ins. only in width, but the quartz looks very well, and assays 1 oz. 3 dwts. 18 grs. per ton. The 160 south : Distance driven, 11 ft., by 18 coolies ; the lode is 1 ft. wide, and assays 15 dwts. 6 grs. per ton. Health : I am glad to say the camp is quite free from sickness. Mill samples : Small quartz, 2 ozs. 11 dwts. ; blanket sand, 1 oz. 7 dwts. 6 grs.—F. W. GRAY.

ORITA (Oct. 18).—The following are the details of the operations during the month of Sept. :—Mine : Since Sept. 26 we have had water to run the monitors here and at Malpaso. At present Medina is carrying an excess of over 3,000 ins. above the wants of each mine, so we count from now to have our full water supply. We have been washing in the channel and in the north rim of the mine, but, owing to the great amount of pipeclay and sandstone, our washing has not been by any means constant. I regret to say both pipe-clay and sandstone are increasing very much. We are now almost beyond the old Spanish works and into the virgin ground, and it is quite plain that the old works stopped here owing to the appearance of pipe-clay, &c., which made the working more expensive and less productive. There is no doubt that our only resource is to push on through this hard and difficult ground till we find a decrease in pipe-clay. This I have every hope of finding ahead, as of late I made examinations of ground ahead in the same ridge, and see but little pipe-clay. This ground must come out through our deep cut and main sluice, and to get at it I am about to run up a narrow cut in the direction of the ridge. I will keep you fully informed what the ground looks like in this direction. It is hardly necessary to say that I see, and constantly bear in mind, our position, which must be difficult to explain to the shareholders, and, although disappointing to them, it is more so to me, after carrying out the work we have, to get a good outlet to the whole deposit, to be then prevented from turning over the ground by an excess of boulders, sandstone, and pipe-clay, it is, to say the least, disheartening to me. My consolation is that I believe we will yet, owing to better times, forget our present troubles.—H. J. PRENDER.

OSCAR (Nov. 20).—Calling attention to our last report, we find that at 320 ft. from surface a disturbance has taken place, which has been the cause of forming what promises to be two distinct fissures or lodes. At the point where the disturbance is first seen we have broken into the rock, about 14 ft., which contains a good deal of quartz, some of which shows visible gold. An assay of three samples which did not contain any visible gold, and only a small quantity of pyrites, gave following result :—No. 1, 7 dwts. 20 grs. ; No. 2, 11 dwts. 1 gr. ; No. 3, 13 dwts. 1 gr. To prove whether there are two lodes instead of one, we have put the sinkers to cross-cut 50 ft. below the disturbance, and hope in a fortnight to cut the lode.—J. DAW, Jun.

OURO PRETO (Oct. 21).—Yesterday I went through and carefully inspected the mine, and herewith beg to report to date. The 120 level north-east : The lode at this point fully maintains its promising appearance, though occasionally small branches of quartzite appear, but invariably of short duration. The lode is well spotted with pyrites, and at times small lines of tourmaline ore. The 120 cross-cut north-east : This is on good lode quartz, with tourmaline ore and pyrites, and as it is cross-cutting the lode, it will lay open the large body of tourmaline ore, which is seen upward in the old excavations. Stopes under the 120 level, No. 1 stope : More pyrites and tourmaline appearing in the quartz. No. 2 stope : The lode is somewhat contracted at present. Stopes north-east of No. 2 shaft : The lode in these stopes is looking well, very large, and carrying a good quantity of pyrites, particularly the bottom lode, which looks very kindly indeed. The 265 end north-east : Lode in this end is fully maintaining its size and appearance, being well spotted with pyrites. No. 2 shaft : Is nearly cleared, and the sinking will, I hope, be resumed in the beginning of Nov. This shaft should be kept on smart if possible, and it will in all probability be a prominent point in the future development of the mine. The 315 end north-east : A small line of quartz in roof, beneath which is barren quartzite. The 315 cross-cut north-east : This has passed beyond the top lode, and is now in the strata of quartzite

above the lower lode. No. 1 stope south-west, side of No. 2 shaft : Lode here is pinched and only wrought on at intervals. Stope 215, near No. 2 shaft : Lode small and poor. The 400 level north-east : Lode in forebreast continues good ; its size cannot be determined, as the entire heading is in lode, which also forms back and floor of level ; composed of quartz well spotted with pyrites. The 400 cross-cut north-east : This continues in good strong lode, towards the bottom meeting more tourmaline ore branches and pyrites. The 400 level south-west : Lode 1 metre in roof, below which is quartzite. The 400 cross-cut south-west : Heading entirely in killas. Stopes 365 south-west : In the No. 1 stope the lode is somewhat disordered by quartzite. The lode in No. 2 stope is large and strong-looking quartz, well spotted with pyrites and lines of tourmaline ore. The 25 rise : Ground in both forebreast and in the bottom being taken up, is quartzite and schist. Stopes over 315 : Are not looking well, the lode being a good deal interspersed with lines of schist. Stopes from 22 rise : Shows a good body of lode on the south side, whilst the north-east side is not so kindly. Pillars over 215 : All possible with safety is being taken away before filling the excavation with *débris* ; the lode being taken away is of very good appearance, well spotted with pyrites. Cut in bottom of No. 8 rise : A small line of tourmaline and quartz, but at present poor. No. 2 stope over 175 : Lode here of good quality, reddish quartz and tourmaline, with spots of decomposed iron, &c. No. 1 stope over 175 : Lode looking well on the south-west side, but the north-east side of stope is at present disordered by schist. No. 1 shaft : The quartzite effectually cut the lode for a short distance, but latterly the lode is appearing from the back, and will, we hope, soon assume its proper position and size. Ore shoots : Three new and well-constructed ore shoots have been put in last month, and a great deal of repair made to the others in use for facilitating the egress of ore—hence, the large consumption of plank and small timber last month.

PESTARENA (Nov. 16).—No. 1 lode : The 55 south carries a small branch, but produces no ore. In the 70 south the lode is 1 metre wide, and continues to improve ; estimated to produce 8 tons per fm., at 1 oz. per ton. In the north end it has become wider, and produces 8 tons per fm., at 1 oz. 5 dwts. The 90 south is yielding no ore at present. In the 130 north the lode is 50 centimetres wide, and looking more promising. The 55 east on caunter lode is yielding 6 tons per fm., at 13 dwts. ; the lode is 1 metre wide, and fairly charged with pyrites. A mass of quartzite has been passed through in the 90 cross-cut, but no regular branch as yet. A slight improvement has taken place in the stopes. Val Rossa : Another division has been passed through in the cross-cut, but no pyrites has been met with. An old adit, from which water is issuing, and which is supposed to lead to the old Roman workings, is being re-opened. Stabioli Mine : Two men are also employed here re-opening an old adit supposed to have been driven to intersect a lode that passes through the Ruina Mine. This will in future be called the Ruina adit. The Stabioli level has been cleared to the end and a cross-cut found there, extending 10 metres south, will be continued until the lode on which the Anza level was driven has been intersected—a distance of about 10 metres. The Anza level is situated above the Anza river about 15 metres, and about 60 metres below the Stabioli level. The two lodes are in junction at this point, and both carry pyrites, but not in any payable quantity. Stones have given by assay 4 dwts. 2 grs. of gold and 10 dwts. 10 grs. of silver per ton. Before driving it is proposed to cross-cut through the Anza lode to decide which part is best. Val Toppa : A slight improvement has taken place in the stope over Zero level on eastern lode, and the estimated yield is now 4 tons, at 10 dwts. ore per fm. The ore in the arch under No. 2 level has become poorer, and is estimated at 3 tons per fm., at 6 dwts. All the machinery in both districts continues to work satisfactorily. At Pestarena a little snow has fallen. The gold return will probably be about the same as for last month.—W. H. TRELEASE.

POTOSI CONSOLS (Oct. 21).—I consider the mine very promising. We undoubtedly have a considerable body of quartz between our present workings and the shaft, and by sinking this 60 ft. and driving under it will be available for extraction and give us a 100-ft. stope. The Potosi Viejo diagonal incline shaft has, since my last report, been sunk a further distance of 13 ft., making a total distance from the starting point to bottom of stope of 86 ft. In my latest reports I have mentioned a cross-vein which can be most distinctly traced on the footwall of the lode on which our present works are situated as exercising a disturbing influence on it. Our diagonal incline has been sunk under this with a less angle of dip, and so the cross-vein has been gradually converging with our shaft, and during the last fortnight we have passed through it, where it formed a junction with another considerable body of quartz, and a number of stringers altogether from 4 ft. to 5 ft. in width, having a parallel strike to the cross-vein, but apparently dipping in an opposite direction. This discovery may prove of importance, and I have commenced opening on the same, continuing at the same time down the incline. I hope to determine the value of this discovery before long. If it turns out to be a true east and west lode dipping south, and parallel to the principal lodes of the district, the vein will probably be found standing intact to surface about 240 ft. vertical. You may rely on the work being carried out in a thorough and miner-like manner, and no step will be taken without careful consideration. With the machinery generally in better order, and the air drills near at hand, I expect to make considerable progress in the next three months in proving this part of the mine.—Rowse.

—Mr. de Lemos, the company's agent at Ciudad Bolivar, writes under date Nov. 3 : I have had a visit from Mr. Rowse, who returns to Peru to-day. We have thoroughly gone into matters connected with the enterprise, and I have clearly explained to Mr. Rowse the views of the board. By this mail's mine report you will notice the discovery of an independent and previously unknown body of quartz in Potosi Viejo Mine. Mr. Rowse considers it premature to express any opinion on this discovery as yet, or to telegraph on the subject. The next month or two should enable Mr. Rowse to form an opinion. I may state that I have been thoroughly pleased in every respect with Mr. Rowse's conduct of affairs. During the next two or three months he will no doubt be able to push forward work at a far more rapid rate than hitherto.

RUBY.—Report for week ending Nov. 7 :—Dunderberg : We have six men on day's pay, and three tributaries at work here. On the 800-ft. level the ore has made into three pipes or shoots, going ahead and down, and one pipe going up. The ore in the bottom is making

more lead and looking better, it is quite soft and easily worked, but it is so damp it will not run through the ore shoot, so that we have to dump it and sack it on the waste dump, which takes labour. We have now about 30 tons extracted. Lord Byron: We have four men on day's pay, and six tributers at work. We have been following the ore in the bottom of the cave, which does not show any material change. Have about 16 tons extracted. Bullwhacker: We have five men at work here. The mine does not show any change.—A. FRASER.

Telegram from Eureka: "No tribute ore shipped; 14 tons tribute ore smelted, producing to company \$36. 44 tons ore on company's account shipped."

SOUTH-EAST MYSORE (Nov. 4).—Fortnightly report: During the past two weeks we have been driving north from the bottom of winze. The total length driven is 20 ft. 3 ins. The lode for the entire length has been rather small, the quartz assaying 6 dwts. 12 grs. of gold to the ton. I am pleased to say it is now opening. The quartz yesterday was over a foot in width.—M. SCANTLEBURY.

TESORO (Oct. 15).—Manager's report: I am glad to be able to report that we have commenced washing, as rain fell on Sept. 27, and at intervals since, but up to now we have only had water to work one monitor on an average of slightly less than three hours per day. Aracá Ditch: The work on this has gone on well; three-fourths of the flume is laid, and the water will probably be turned on early next month. The tunnel is now being driven by the company's men, as no contractor seems able to work at the same price.

TOLIMA.—Advices by mail to Nov. 25 from the mines are as follows:—Frias, Sept. returns, 8,924l. 3s. 8d.; Frias, Sept. cost, 3,035l. 12s. 8d.; Frias, Sept. profit, 5,888l. 11s. The underground agent reports 72 fms. 4 ft. 3 ins. of ground expended, of which 44 fms. 2 ft. were productive, leaving of unproductive ground 28 fms. 2 ft. 3 ins. The superintendent reports that owing to a deficiency in the rainfall in Sept., no work had been done in the shaft during that month, but at the date of his advices (Oct. 17) rain had fallen, and sinking had been resumed in the shaft. The principal points of interest at the date of this report were the 110 west of engine shaft, where a magnificent lode, worth 6 tons per fm., was being driven upon, and the 110 east from Sankey's winze, where the lode has improved since the last report, and was producing 2½ tons per fm. The various stopes are reported to be yielding as usual.

CORRESPONDENCE.

AUSTRALIAN MINING RESULTS.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—We have received the following returns of crushings from Charters Towers, Queensland, by last mail, for Aug. and Sept.:

	Tons.	Ozs.		Tons.	Ozs.	Increase.
1891	Aug. ...	15,043 ...	16,811	1890	Aug. ...	10,260 ...
	Sept. ...	17,217 ...	20,696		Sept. ...	11,040 ...
						14,671
Total 2 months 1891	32,260 ...	37,507		Total 2 months 1890	21,300 ...	26,336
						10,960 ...
						11,171

Nine months' crushings to end of Sept., 1891	130,677	161,556
Nine months' crushings to end of Sept., 1890	86,976	108,157

Increase for nine months 1891 43,701 53,399

The following are the returns for some of the principal mines crushings for Sept. 1891:—Brilliant, 2,044 tons, 3,459 ozs.; Mills United, 2,788 tons, 2,479 ozs.; Golden Gate, 912 tons, 2,027 ozs.; Day Dawn Block and Wyndham, 1,465 tons, 1,963 ozs.; Victory, 841 tons, 1,899 ozs.; Day Dawn P.C., 1,730 tons, 1,847 ozs.; New Queen, 1,100 tons, 1,358 ozs.; No. 7 N.E. Queen, 1,085 tons, 1,309 ozs.

The following dividends were declared in Sept.:—Brilliant, 2s. per share; 25th dividend; Victoria, 1s. per share; Victory, 1s. per share; Golden Gate, 1s. per share; Brilliant, 2s. per share; 26th dividend.—We are, &c.,

A. DURANT AND CO.

32, Gresham Street, London, E.C.

Nov. 25.

REPORTS WANTED.

SIR,—I should be glad if some fellow-shareholder in Mount Morgan Extended could inform me why we have had no reports from the mine since the meeting. They used to be pretty regular. It seems worth while to enquire, too, if the directors of this mine, of Devala Moyar, New Russell, and some others, have ever heard of Alaska-Treadwell, or seen its recent report of profit at the rate of 100,000l. per annum, "from mining and reducing hard and refractory quartz, yielding (including the returns from chlorination) only 3½ dwts. per ton, the total expense being about 1½ dwts. per ton."—I am, &c.

G.

[The meeting of Mount Morgan Extended was held on Oct. 7, and a report from the manager appeared in our columns on Oct. 24.—Ed. M. W.]

YURUARI.

SIR,—I attended the Yuruari on Saturday, though I cannot say I fairly heard all that took place. I heard one remark which fell from a shareholder (Mr. Fry, I believe) with which I was quite in accord—that I regard the price I paid for my shares as entitling me to be present at the periodical Yuruari entertainments. My interest is a small one, so that I very much fear that what may be a laughing matter to me is a very serious one to those particularly who have been shareholders from the commencement. I understand that some of them have paid up to 30s. per share for holdings, which at the present time are unrealisable. I have no particular feeling either way for Mr. Sneath or Mr. Good, as liquidator, but thought it unfavourable to the first-named gentleman that he should not in all this time, as alleged, have rendered an account of his

stewardship in the case of the New Chile liquidation. That influenced my vote in favour of Mr. Good, and I was also influenced by another circumstance, that the gentleman supporting Mr. Sneath, and who is antagonistic to the board, is a solicitor, who has already received 120l. in costs. I by no means in all respects approve of the management of Mr. Hugh Watt and his co-directors; but I infinitely prefer it to placing the company in the hands of legal gentlemen, because my experience of what that means is by no means of a pleasant kind. On the whole, I incline to the opinion that Mr. Good is, for present purposes at least, the better liquidator of the two, though I should be chiefly in favour of an official enquiry into the whole matter. So many charges have been thrown broadcast one way and the other, that I think the board should welcome such an enquiry—as, in fact, by the mouth of their chairman they plainly said they did.—I am, &c.,

SMALL HOLDER.

PAHANG CORPORATION.

SIR,—I left Thursday's meeting with the impression that if the above company has fair play it will, under its improved management, develop into a considerable success. I am glad we have cut adrift from the Cornish element in the management of this company. I have been connected with several Cornish mines, and never yet knew the predictions of any of these experts to come to pass. If what they have said had been interpreted right about face I should have been a richer man to-day than I am. I do not say that they have erred wilfully, or through ignorance, but they may choose for themselves which horn of the dilemma they will impale themselves upon. Cornishmen may be very good miners, but they are alarmingly bad prophets; and I am glad, in the person of Mr. Neild, we have cut adrift from Cornish traditions, and are going to work through a fresh channel. I hope Mr. Stack will be satisfied with the rebuff he experienced at the meeting, and not any further renew for him what is a useless struggle, and worse than a forlorn hope.—I am, &c.,

SILEX.

Nov. 27.

REPORT OF MEETING.

THE BALAGHAT MYSORE GOLD MINES, LIMITED.

RESOLUTION UNANIMOUSLY CONFIRMED.

AN extraordinary general meeting was held at the Offices of the Company, 6, Queen Street Place, yesterday, when the subjoined resolution, which was passed at the extraordinary general meeting of the company, held on Nov. 4, 1891, was submitted for confirmation as a special resolution:—

"That the capital of the company be increased to 200,000l. by the creation of 50,000 new shares of 1l. each."

The Right Hon. the Lord Ribblesdale

(chairman of the company) presided.

Mr. I. CROCKER (secretary) read the notice of meeting.

THE POSITION RE-STATE.

The CHAIRMAN: Gentlemen, I will now put the resolution that you have just read. Before doing so, I am afraid that although I tried to explain as clearly as possible about this new issue of shares, and the consequent increase of the capital of the company to 200,000l., there must have been some little vagueness about that explanation. What we have received authority to issue is 10,000 shares for part payment to the Goldfields of Mysore Co. Then we have kept 5,000 shares, which we propose to hold in reserve. I said in my speech that we thought that was the best thing for the company, but this was a matter in which I only indicated the best course to be adopted, and said that it was more or less in the hands of the shareholders themselves. As no objection was raised to that, I presume our shareholders are perfectly willing that the board should hold those 5,000 shares in reserve. Beyond that we require 35,000 shares to cover the exchange of the debentures. At present, of course, the only shares that can be issued are 15,000, the 35,000 shares being exchangeable against debentures after Dec. 31, 1893, that is, two years hence. I will now put the resolution to the meeting—"That the capital of the company be increased to 200,000l. by the creation of 50,000 new shares of 1l. each."

Col. TENNANT (director): I second the motion.

The CHAIRMAN put the motion to the meeting and it was carried unanimously.

A SHAREHOLDER: It is quite plain that these debentures will not be exchanged for shares until Dec. 31, 1893.

The CHAIRMAN: That is so.

The SHAREHOLDER: When do you expect to be able to invite subscriptions for debentures?

The CHAIRMAN: We shall have to register the new capital, and see that everything is first of all thoroughly in order, and I have pledged the board that the matter shall be carried out satisfactorily. It is probable that we shall not invite subscriptions till after the new year.

VIEWS OF THE STOCK EXCHANGE.

The SHAREHOLDER: Your proposal is generally looked upon with favour on the Stock Exchange, and has strengthened the market. They are pleased to know that the market will not be flooded with a quantity of shares.

The CHAIRMAN: There will only be 165,000 marketable shares until Dec. 31, 1893.

DEATH OF ANOTHER MINE AGENT.—It is our painful duty to have to record the death of Capt. Joseph Vivian of St. Agnes, which occurred a few days after that of his brother, Capt. Wm. Vivian, which we announced last week. Capt. Joseph Vivian who was well known and much respected in Cornwall, was to have succeeded his brother in the management of West Kitty and Wheal Friendly.

REPORTS OF MEETINGS.

MONTE DEL ORO MINING CO.

WINDING-UP RESOLUTION CONFIRMED, AND A LIQUIDATOR APPOINTED.

AN extraordinary general meeting of the above-named company was held at No. 6, Queen Street Place, London, E.C., on Tuesday, to confirm the following resolution which was passed at the extraordinary general meeting on Oct. 23 last:—

"That in the opinion of this meeting it is undesirable to continue operations at this mine, and that the company be wound up voluntarily, under the provisions of the Companies' Acts, 1862 and 1867."

Mr. Malcolm Low, M.P.

(chairman of the company), presided.

The notice convening the meeting was read by the SECRETARY.

The CHAIRMAN: Gentlemen, I suppose we may conclude that we are met this morning for the purpose of merely formally confirming the resolution which was passed with practical unanimity at the last meeting. Any speech from me is, of course, perfectly unnecessary after the thorough way in which the situation and circumstances of the company were discussed, and the reasons for winding it up were thoroughly thrashed out, at that meeting. The chairman then formally moved the resolution as above.

Mr. JOHN TAYLOR seconded the motion, which was carried unanimously.

LIQUIDATOR.

The CHAIRMAN: Now, gentlemen, we have the resolution, if the shareholders are pleased to approve of it:—"That Mr. John Garland, the secretary of the company, be and he is hereby appointed liquidator for the purposes of such winding-up, and that his remuneration be fixed at 100 guineas, exclusive of all costs, charges, and expenses incurred by him in and about such winding-up." I may say at once, with regard to the question of the liquidator, that Mr. John Garland does not feel in the least degree keen about it. One hundred guineas remuneration would, in my opinion, very inadequately compensate a man for the trouble, vexation, and worry of winding up a company like this. The reason that we recommend him is this, that we honestly believe he will do the best that possibly can be done to realise the value of the estate. We believe that under his administration, and in his hands, the estate of the company will be realised, and the debts called in more efficiently, more economi-

cally, and more for the interests of the shareholders than by any outside liquidator.

Mr. TAYLOR seconded the motion, which was carried unanimously, and the proceedings then closed.

SOUTH FRANCES.

CALL OF 2s. 6d. PER SHARE—THE WATER QUESTION.

A SIXTEEN-WEEKLY meeting of the adventurers in South Frances was held on the mine on Thursday.

Mr. Cornelius Bawden

(the purser) presiding.

The accounts showed:—Debits—Labour costs, 4,363*l.*; merchants' bills, 2,599*l.*; stannary assessment, rent, dues, &c., 242*l.*; total debits, 7,316*l.* Credits—Black tin sold, 6,148*l.*; extra carriage of tin, 5*l.*; old iron, &c., sold, 90*l.*; discount allowed by merchant, 68*l.*; total credits, 6,614*l.* There was therefore a loss in the 16 weeks of 702*l.*, which, when a balance in favour of the mine of 177*l.* on Aug. 6 was taken into account, left a balance against the mine of 525*l.*

Capt. HOOPEE, in supplementing the report, said the heavy floods of six weeks ago increased the water to such an extent at West Basset that an overflow came from there at the rate of 3 ft. every eight hours. They could not at South Frances contend with all the water in the district. Water that fell from a shallow point in one mine came to a deep point in another mine, and he thought it was a piece of folly to allow it to enter the second set.

Mr. LANYON said there was no law to compel a mine to pump all its own water. Seeing, however, that the shareholders in the two mines were almost entirely the same, no difficulty ought to be experienced in coming to a mutual understanding. He should be very sorry to believe that there was any estrangement between the executives of the two mines. He proposed that the purser be requested to convene a meeting of the committees of the two mines at the earliest possible moment to consider how the water should be dealt with, that the principal shareholders should confer with the executive of both mines, and formulate recommendations for submission to the general bodies of adventurers. There was no necessity for them to spend thousands of pounds uselessly. (Hear, hear.) Capt. Hooper had done all that could be done, and was entitled to their sympathy.

On being put the motion was carried.

The accounts and report were adopted on the motion of Mr. LIDGEY, seconded by Mr. WICKETT, and, on the proposition of Mr. D. W. BAIN, seconded by Mr. BRAY, it was decided to make a call of 2s. 6d. per share.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,

And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

MINING SHARE CO-OPERATIVE SOCIETY,

15, COPTHALL AVENUE, E.C.

TELEGRAPHIC ADDRESS: "SIGHTSEER."

BANKERS: LONDON AND NORTH-WESTERN.

MINING AND MISCELLANEOUS SHARES are somewhat in
demand for new account; prices have improved to-day, and heavy
buying was perceived by shrewd operators, who as usual make it a
speciality to accumulate shares standing at low prices before the
termination of the year, and it would be prudent for the speculative
public to take advantage of present prices.

Special price list will be forwarded on application, also terms of
business and advantages offered.

MINING SHARE CO-OPERATIVE SOCIETY.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Regular Subscriber (Nottingham).—No. 1: Under the circumstances, Ooregum.
No. 2: All three are safe speculative shares, but no comparison can be drawn
between Bank shares and Mining shares. You must see that the conditions are
totally different. For a speculation of the first-class we should prefer the
former, which have no liability. So far as we can remember, all the banks of
good standing have an infinitely larger liability than that you name.

Invincible.—All are passable; but we could mention others of a more promising
nature.

Omega.—You would be wise to take the profit shown, rather than wait.

W. A. (Penzance).—For a substantial rise, we consider all named worth
purchasing, except No. 4.

Disgusted Holder.—The mine is shut down, and there is no market for the
shares.

Argus.—We are of the same opinion. They should be held for better prices.

Operator (W. T.).—Nos. 3, 6, 7 and 9 are of the speculative order, but for Nos.
1 and 4 there is no market. No. 8 as an investment should prove profitable.

Constance S. D..—We do not anticipate a rise for some time.

Ereuctor.—The bait is very tempting, we must admit, but cannot recommend
you to take it.

Woodlark.—The tendency is to rise, and we advise you to hold.

Plymouth Reader.—It is a re-construction of the Carlisle and Empire. Shares
should prove a good speculation.

R. Thompkins.—Hold. They have fallen in sympathy with others.

J. D. (Essex).—Unfounded rumour. It was stated at meeting last month that
they had 13,000*l.* in hand.

B. E. Terry.—Can hardly be expected to improve just yet. Do not sell.

Deliberation.—You will lose more by holding. Sell at once.

Kinsale.—Yes. Spoken of in good quarters as likely to improve. Hold.

S. Blyth (Ware).—Do not increase your holding, but retain those you have.

Eager.—We hear on good authority there is nothing wrong at the mine. Shares
have fallen, owing, no doubt, to weak holders realising and the general
depression.

C. H. B. (Calais).—Sound investments. We have persistently recommended
them, and still advise their purchase.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, Nov. 28, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

HELPS AND HINDRANCES TO AUSTRALIAN MINING.

THE prospects of mining enterprise in Australia at present are
undoubtedly prejudiced by the rash speculation of the recent past,
and by the scarcely favourable reception with which colonial loans
have of late been met in the money market. The chairman of an
Australian bank was constrained to admit, at the annual meeting the
other day, that the mining industry of the colonies did not occupy
the same favourable position which he ascribed to their other staple
interests. If, however, English capital is likely to "fight shy" until
the next revival in speculation of Australian gold and silver mines,
there is plenty of evidence that the mineral resources of the colonies
are by no means exhausted. Not only are there numerous deposits
of the precious metals still unworked, but the industrial development
of the colonies and the growth of population are opening up sources
of mineral wealth which have hitherto been rather neglected. Coal
is now being sought for as assiduously as gold in earlier days, and it
is clear that colonial resources in this respect are large, and widely
distributed. Victoria is the only colony in which geological investiga-
tions have failed to result in the discovery of carboniferous strata.
In New South Wales the nature of the deposit permits of extraction
at very small cost, and the annual output already reaches nearly
four million tons. In Western Australia, a colony of which the
enormous mineral wealth is as yet almost entirely undeveloped, two
promising seams of coal are now in experimental working. In both
Queensland and New Zealand the deposits are enormous. Of course,
a great deal depends upon the quality of the coal, as to which Govern-
ment geologists and other authorities generally say little; but there
can, nevertheless, be little doubt but that with the development of
the internal resources of our Antipodean possessions the utilisation of
their fuel supplies will be vigorously undertaken.

One matter which unquestionably checks the development of the
mineral, in common with the other natural wealth, of Australasia
is the enormity of the areas over which the individual Governments
hold sway. As such development must to a large extent depend
upon the liberal policy of a Government in providing facilities of
transport, and facilitating the granting of claims, it is evident that a
mineral territory ruled by a legislature hundreds and even thousands

of miles away is placed at a considerable disadvantage. This fact in a considerable degree explains the superior progress which comparatively small territories like Victoria and New South Wales have made over the other colonies. The long consideration which the Victorian Government has just given to the simplifying of legal forms, and the improvement of technical processes in the mining industry, serve to show how direct an influence the public authority is felt to exercise upon material development in a comparatively new country. It would be hardly possible that the South Australian Legislature, sitting at Brisbane, should afford the same assistance to the mining interests of the Northern Territory 2,000 miles off. The difference in climatic conditions is in itself almost an insuperable difficulty to proper recognition of the needs of the tropical dependency. For instance, the severe laws against Chinese and Asiatic immigration enacted by the South Australian Government have practically rendered mining impossible in a climate where European labour is incapable of sustained effort. Similarly, it is hardly to be expected that the Legislature in the southern half of the colony should undertake the burden of constructing the thousand miles of trans-continental railway, which are needed to develop the resources of the northern portion. The mining resources of the Northern Territory are, however, considerable; and the belt of auriferous country situated near the existing railway is described by the Government Inspector of Mines as one of the richest in Australia. The same district in particular, and other parts of the colony in lesser degree, are stated to contain silver, copper, tin, and other metals in great variety. It seems, therefore, eminently desirable that this enormous area should be placed upon its own responsibility, and the Secretary of State for the Colonies has recently been influentially petitioned in favour of this course. In Queensland a similar state of things is in existence, and the same remedy is suggested.

The labour agitation in Australia has introduced a serious element into the aspect of mining development, and must necessarily check the investment of new capital in this channel. In New South Wales the Government has resigned office sooner than yield to the demands of the labour representatives for an eight hours' day, and in New Zealand the miners have demanded the enforcement by Government of an eight hours' day, and the forbidding of mine owners to "lock out" their men on any consideration. In New Zealand the provisions of the Bill have been referred to a conference between the opposing parties, and it is to be hoped, therefore, that the violent measures proposed by the operatives will not be persisted in. Nevertheless, the attitude of labour in the colonies threatens to interpose a serious obstacle to the full development of their splendid mineral resources. In New South Wales, in particular, it is obvious that the labour demands must largely influence the calculations upon which English capitalists were willing to undertake the task of establishing an iron and steel industry. It was estimated some time ago that pig iron could be made with native ores and fuel as cheaply as in England, but it is doubtful whether this conclusion will hold good if the cost of mining is continually to be augmented, as it has been within the past year or so in the coal trade. Though it may be hoped that the present disquiet among the miners in Australasia will shortly be superseded by a more moderate feeling, it must be admitted that it is not conducive at present to the investment of fresh money in Antipodean mining. Capital will naturally flow in preference into undertakings in other parts of the world, where labour charges can be reckoned upon as a reasonable and stable item of working expenses.

PAHANG CORPORATION AND ITS TROUBLERS.

THE frame of mind in which Mr. Stack approaches a consideration of Pahang Corporation affairs, in which he has the weighty interest represented by 20 shares, renders it almost futile to hope that he will take as final the renewed defeat he experienced on Thursday last. He was allowed every latitude to state his case, but any shareholder who heard him must have concluded there was nothing in it. With vague charges against the directors in general, and Mr. Pontifex in particular, he could inflate the biggest balloon that ever went up on a fête day, but his specific allegations could not push a soap bubble into the air. He was wholly unable to show that the directors had mis-managed the property, and he left a poor impression that he could have managed it better. When shareholders hear the style of argument which Mr. Stack is in the habit of addressing to them, it is no wonder that, to use his own expression, "they speak eloquently with their feet." When they hear directors who hold 25,000 shares in the company, or one-eighth of its capital, stigmatised as persons "utterly devoid of shame," and in similar language, from Mr. Stack's peculiar vocabulary, it is no wonder that they manifest their disapproval, particularly when they remember the small interest in the company of that gentleman himself, combined with the fact that his seconder did not receive a copy of the report, for the sufficient reason that he had not been 10 days on the register. If at the bidding of such persons as these the shareholders had voted otherwise than they did on Thursday, common sense would have been slapped in the face, and the condition of the company would have been pitiful indeed. As it is they voted their unanimous confidence in Mr. Pontifex, and left the meeting with the impression that will be shared by every reasonable man who reads

our *verbatim* report of the speeches, that the company is being well managed, and that after overcoming almost unheard-of difficulties it is rapidly working its way towards a substantial success. This statement, it will be seen, is fully justified by the facts and figures that fell from the chairman in his opening speech.

GOLD AND SILVER IN THE UNITED STATES.

EDWARD O. LEECH, the Director of the Mint, has submitted to the Secretary of the Treasury a report of the operations of the Mints and Assay Offices, for the last fiscal year, a summary of which cannot fail to be of interest to our readers.

The value of the gold deposited at the Mints and Assay Offices during the fiscal year, 1891, was \$59,625,678.08, against \$49,228,823.56 in the preceding year, an increase of \$10,396,854.52.

The deposits and purchases of silver aggregated 71,869,663.92 standard ozs., of the coining value of \$83,630,154.31, against \$43,565,135.15 in the preceding year, an increase of \$40,065,019.16.

The coinage executed at the Mints was the largest in the history of the Mint in this country, aggregating 119,547,877 pieces, valued as follows:—Gold, \$24,172,202.50; silver dollars, \$36,232,802.00; subsidiary silver, \$2,039,218.35; minor coins, \$1,166,936.50; total, \$63,611,159.35. In addition to the coinage, gold bars were manufactured during the last fiscal year of the value of \$31,165,541.77, and silver bars of the value of \$8,437,657.65, a total of \$39,603,199.42.

The amount of silver purchased under the Act of 1873, from July 1, 1890, to Aug. 13, 1890, aggregated 3,108,199.17 standard ozs., costing \$3,049,426.46, an average cost of \$1.09 per fine oz. The total amount of silver bullion purchased under the Act of Feb. 28, 1873, from the commencement, Mar. 1, 1878, to the end, Aug. 13, 1890, was 323,635,576.19 standard ozs., costing \$308,199,260.71, an average cost of \$1.058 per fine oz. The amount of silver bullion purchased under the Act of July 14, 1890, from Aug. 13, 1890, to June 30, 1891, aggregated 53,770,125.61 standard ozs., costing \$50,577,498.44, an average cost of \$1.045 per fine oz.

The total amount of silver purchased during the last fiscal year under both Acts was 56,878,325.08 standard ozs., costing \$53,626,924.90, an average cost of \$1.04½ per fine oz. The total amount of silver purchased under the Act of July 14, 1890, from Aug. 13 to Nov. 1, 1891, has been 66,588,536 fine ozs., costing \$68,626,565, an average cost of \$1.03 per fine oz. The price of silver during the last fiscal year fluctuated from \$0.964 to \$1.21 per fine oz., a fluctuation greater than in any previous year of which we have knowledge. At the commencement of the fiscal year the price of silver in New York was \$1.05 an oz. The price had advanced Aug. 19, 1890, to \$1.21 per fine oz., which was the highest point reached. The closing price, June 30, 1891, was \$1.01½ per fine oz. The price on Nov. 1, 1891, was \$0.96. The average price of silver during the year, based upon London quotations, was \$1.04½ a fine oz., and upon New York quotations, \$1.05½ a fine oz.

The exports of silver from London to India during the first nine months of the present year show a falling off of over one-half, as compared with the same months of the previous year. The nett loss of gold by export during the fiscal year was \$67,946,768, while there was a gain of silver, by excess of imports over exports, amounting to \$2,745,365. The loss of gold by export was materially larger during the last year than in any recent year. The heavy movement commenced in Feb. of the present year, and did not cease until the close of July. The total amount exported during that period from the port of New York was \$70,223,494.31. The Director treats in detail of the movement, and points out some of the causes operating to produce it. It is gratifying to report that a return movement of gold is well under way, which has aggregated since July 1 up to Nov. 1, 1891, \$21,580,448, and which, it is believed, will continue for some months. The total earnings of the Mints and Assay Offices from all sources was \$7,650,529.62, and the total expenditures and losses of all kinds, \$1,661,139.83, a nett profit of earnings over expenditures of \$5,989,389.79. Other interesting points in Mr. Leech's report will be summarised in a later issue.

THE BATTLE OF DEVON CONSOLS.

It is with a feeling akin to melancholy that one approaches the discussion of Devon Consols affairs. Though beaten on a poll, yet owing to a catch vote, obtained largely by means of persons who are said to have quite recently become shareholders, the opposition to Mr. Peter Watson and his colleagues has perhaps been sufficiently encouraged to renew the conflict at the next meeting. It is difficult to predict what will be the ultimate fate of a company if it has the misfortune to be continually rent by such dissensions as these. Mr. Sloper and his friends may trouble the peace of the company, but they cannot change its management, because the majority of the shareholders, taking a business view of the position, know to which side in this case financial safety inclines. The long amendment to the report which that gentleman moved may be summarised in two or three words—the appointment of a committee of investigation. To this no board with the least spirit could submit. A committee of investigation implies, and is always received as, a vote of censure. In this light Mr. Watson and his colleagues regarded it, and with a substantial majority of the shareholders at their back, defeated it.

Such a motion was particularly uncalled for in the case of Mr. Roberts and Mr. Glen, who have but recently joined the direction,

They are scarcely in office six months when they find themselves confronted with a proposed vote of censure. Mr. Sloper, with a candour that does him credit, and that did his case, such as it was, no harm, "owned up," as the Yankees say, to several errors in his circular, and he might, with advantage to accuracy, have lengthened still further the skirts of his penitential robe. For example, he might have owned up to this, that he made a mistake in saying that the company was in a worse position by 50% than six months ago—at least, he should have done so after Mr. Freese, the auditor (who rather inclines to his side), had stated that the accounts were invulnerable. He also might have owned that the statement was unwarrantable—that Mr. Watson had contributed paragraphs in his own defence to the public Press. This assertion, so far as this journal is concerned, is absolutely without foundation, and beneath contempt. A great feature was made by Mr. Sloper of the discharge of old servants, but, as a man of business, he must know that if directors cannot get their policy carried out by old servants they must obtain new ones, and that is what has been done in this case. If old servants are to have the control and directors simply the responsibility—chaos has come again. It is always painful to part with old servants, but sometimes it becomes a necessity, for those who ride the whirlwind ought to direct the storm. Mr. Sloper waxed very eloquent over the woes of the long-suffering shareholders; but he is not one of them, seeing that he only seems to have become a shareholder in May last, and paid the moderate sum of 57l. 10s. for his interest. We venture to predict that that interest will become considerably enhanced if he will allow the undivided attention of the directors to be devoted to their duties. It was the voice of true wisdom which came from Mr. Akers when he said that "committees do not produce much good." We have no wish to question the *bonâ fides* of Mr. Sloper in making this suggestion, but our experience of committees is that they almost invariably lead companies into the mire, and for this reason several fine mining properties we could easily name, which might to-day be paying dividends, are slowly dragging their way through the Winding-up Court—for the benefit of lawyers, it is true, but to the utter loss of the shareholders.

The weak point of the board's case was that of "perquisites," raised by Capt. Isaac Richards, who appears, according to the statements made, to have had the lion's share of them himself. Fancy a mining captain with his house free, his light free, his coals free, his carriage free, his horse free, and his man-servant free! Who would not be a mining captain? Who would not sigh for the fleshpots of such an Egypt as that? Other agents, including Mr. Bawden, have also participated—moderately as compared with Capt. Richards—in the good things that the shareholders have allowed them. We have no words of condemnation sufficiently strong for a system like this. It is utterly indefensible, but we know that it prevails. It is like the tipping system—it is an abominable imposition, but it has to be submitted to. Throughout the whole of Cornwall and Devon it is the custom to give light and fire to the agents of mines, but not to exceptionally bless them, like Capt. Richards, with a carriage and a valet. The agents of mines get light, because their duties compel them to be up at all hours of the night and the early morning, and they get fire, because usually they live in houses on the mines remote from centres of population and commerce. Be it well understood that if these things were not allowed, agents must of necessity be paid larger salaries than at present. The reader with this explanation will understand a practice, which, we repeat, has no sufficient defence.

Since the struggle of a year ago, and particularly since the directors have appointed officials who will fall in with their views, great improvements and economies have been effected, the results of which are likely to be seen in the accounts to be presented in May next. More than one shareholder has expressed the opinion that even in the last six months the accounts are better than have been presented by Devon Consols for some years, and this notwithstanding the fall in the prices of arsenic and copper, and also the reduced make of the former commodity. The directors only ask for fair play for the new *régime* during the ensuing six months, and most of the shareholders will agree with us in thinking that they should have it.

WASSAU GOLD COAST MINING CO.

WASSAU GOLD COAST may claim to be one of the most carefully and inexpensively managed companies in London; but no amount of care and economy will enable directors to overcome those difficulties through which mines have to pass as they approach the goal of success. This goal Wassau Gold Coast is in a fair way of reaching, and it has *en route* given some earnest of the inherent wealth that is in it, by a production under unfavourable circumstances of 50,000l. of gold, or at the rate of about 5,000l. a year. The experience in working this mine is not dissimilar from that in others—viz., that the deeper the explorations go the greater the value of the quartz becomes. At present the workings are being carried out upon a lode averaging 15 dwts. to the ton, and there is every evidence that there will presently be a steadily yielding lode of one oz. to the ton, and that the output will be raised to between 700 and 800 tons a month. In such a case, Wassau will make large profits. This is a company which has pursued the even tenour of its way without having recourse to

preference shares, debentures, or re-construction. It has greatly to thank its constant friends, the Messrs. Swanzy, for this, who are ever ready to come to its help in time of need. The latest example of their kindness has been the provision of over 2,000l. to pay for the extra machinery that is now required. Capt. Plummer, through the action of Mr. Walter James, has been appointed consulting engineer, whilst Mr. Sam, the present manager, will conduct operations on the spot. The success of the company appears to be not far off.

EMMA CO., LIMITED.

THE report of the directors of this company, though certainly not up to the expectations held out at the last meeting, is not without encouraging features. The directors state that though the anticipations expressed at the first ordinary general meeting of the company, which were founded on promises held out by the management at the mine, have not been fulfilled, the result of the 14 months' working shows a decided improvement on that of previous years. A thorough inspection of the mine has been made by Prof. W. S. Keyes and Mr. O. A. Palmer, and their reports, it is believed, will be of the greatest value in deciding the future development of the mine below the Bay City Tunnel. These gentlemen speak very favourably of the company's prospects, especially in the lower levels. The sales of ore up to June 30 last, to which date the accounts are made up, amounted to 3,280l. 13s. 6d., and the sales since that date have realised \$7,708.86. The meeting is called for Dec. 7.

LISBON-BERLYN.

SOME of the salient points in Mr. Wylie's recent reports from the Lisbon-Berlyn property have been embodied in a circular issued to the shareholders this week. It appears that there are at the present moment several interesting and important features connected with the mine. In the first place, Bevitt's reef is being systematically developed, and it is satisfactory to learn from Mr. Rickard that the results are "quite up to expectation." The assays continue to be very good, and clearly demonstrate the milling value of this reef. Furthermore, the new reef, which, as our readers are aware, was discovered on the Frankfort property in August last, is opening out well. The formation is said to be very soft overhead, and consequently it will require a considerable amount of timbering. The average of three assays shows 2 ozs. 11 dwts. to the ton; but the gold is mixed with silver to a great extent. It is early yet to say much about this discovery, and knowing the previous history of Lisbon-Berlyn, and the many hopes that have been raised from time to time, only to vanish into thin air, the present management should be reluctant to lay too much stress upon it. Appearances, however, are fairly hopeful. After all, the Frankfort property may prove to be the salvation of the company. The drainage of the pool has been unavoidably delayed, but trial pannings of the upper portion of it have been very encouraging, and seem to indicate the possibility of a heavy deposit being found at the bottom when the pool is drained.

FRONTINO AND BOLIVIA.

THE directors' report states that the returns from the mines during the half-year ended June 30 were 7,023 tons of mineral, producing 10,397 ozs. of gold, whilst the returns from the tributaries have been 3,935 ozs. A special return has been derived from the auriferous copper obtained by melting down the disused amalgamating copper plates, resulting in a nett profit of 4,541l. 19s. 4d., in respect of which a bonus of 6d. per share was paid in June last. The amount realised for the produce of the six months, other than the auriferous copper, was 35,740l. 15s. 6d., as against 36,503l. for the previous six months, being a decrease of 762l. 4s. 6d. Including the produce of the auriferous copper the total produce was 40,492l., being the largest amount ever realised in half a year. During the three months of the current half-year, regarding which advices have been received, the number of tons crushed has been 4,911, the number of ounces of bar gold therefrom has been 5,418, and the average yield per ton has been 1 oz. 2 dwts. and a fraction. The yield of sulphurets for the three months has been 6 tons. The returns from the tributaries' mines during such three months have been 1,704 ozs. The total estimated value of the bar gold and sulphurets during the three months was 17,267l. 10s. 6d. At the meeting to be held on Dec. 9, the directors will recommend a dividend of 6d. per share, which, after putting 300l. to reserve fund, will leave a balance of 6,068l. 15s. 8d. to be carried forward to next account.

NEW WELSH SLATE CO.

THE success of the New Welsh Slate Co., whose meeting we report in our present issue, appears to depend upon a question of output. The slate is there, almost in limitless quantities, but further expenditure is necessary ere it can be brought to market. To provide this was the chief object of the meeting, and to this point the practical speeches delivered, particularly by Mr. N. F. Roberts, were largely directed. The latter gentleman has devoted a great deal of time and attention to visiting the property, and has made himself perfectly acquainted with all the details of working. He was able to tell the meeting that work had proceeded con-

tinuously throughout the year, and that the make had been increased to 600 tons a month from 457 last year. Nearly the whole of the machinery has been renewed, and the slates are turned out better and more cheaply than heretofore. This is also, in measure, due to other improvements that have been made at the quarry, with the result that the value of the slate has steadily increased, whilst the demand is greater than the supply. Some trouble was caused by a strike, but the manager reports that he has now a first-class set of men. The new capital is to be raised by an issue of 2,000 shares of 5*l.* each, the holders being entitled to a fixed cumulative preference dividend of 8 per cent.

The general position of the slate trade, as shown by Mr. Roberts in the statistics he gave, is most encouraging, and justifies the belief that shares in a well-managed slate company like this are a desirable acquisition. Mr. Roberts showed that whilst the demand is increasing the supply is decreasing. Almost all the quarries are full of orders, and sold up to Christmas. This company has even had to resort to outside purchases in order to complete its contracts.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

VARIOUS causes have apparently combined to clear the Money Market of the surplus supply of capital, which has been such an incubus for so long a period, and made it difficult for the Bank to control the market when necessary for the protection of its bullion reserve. There are fears of Russian withdrawals of gold, and a revival of the American demand, and, apart, however, from the borrowing of the Bank broker, the banks have been exercising more reserve, and withdrawing loans from the market and the Stock Exchange, with a view, it is asserted, of showing a larger percentage of cash to liabilities in their next monthly balance sheets. However this may be, the fact that money is now practically scarce will to some extent militate against the demoralising effect of the release of the County Council money in Dec., which might have a dangerous influence upon the exchanges at a time when the Bank might need their favourable support. As it is, with discount dearer at 3½, ½ per cent., and money worth 3½ to 4 per cent., the exchanges are turning more in our favour, and the current week's Bank return shows, with 358,000*l.* from abroad, an addition of 882,000*l.* to the reserve, which now stands at 15,255,000*l.* against 16,500,000*l.* last year, or 45½ per cent. of the liabilities.

At the Stock Exchange the settlement has followed a great revolution of feeling—from grave to gay. Last week the markets were at the depths of depression in consequence of the serious and even threatening position of financial affairs in Paris and Berlin. Representations were doubtless made to the Russian Government as to the difficulty the syndicate who took the new loan found themselves in, and rather than allow their credit to suffer than, perhaps, for any feeling for their new friends, they came to their temporary relief, taking the partly-paid scrip left on the hands of the syndicate, and lending the syndicate the money against it for a period, and not with any view to release them from their engagements. This, coupled with judicious buying of roubles in Paris and Berlin, and pressing the "bears," has caused a great recovery in prices, not only of Russian securities, but all other Foreign stocks, and strengthened the markets in general besides. The great feature, however, has been the recovery in Brazilian stocks which followed the welcome news of Tuesday morning that the Dictator had been deposed, and that a peaceful revolution had settled the difficulty which threatened to have disastrous results for the country. This, while making the position still hotter for the "bears," had a most favourable effect upon values. Taking the Four per Cent. Loan, which rose 12 per cent., touching 64½ buyers, after some reaction, is still a clear 10 per cent. higher. The arrangement of the account with loans dearer, at 4 to 4½ per cent., had little effect, for, with a general scarcity of stock, rates were light with many "backs." Russian were carried over at 1 per cent. "back," and Portuguese, Spanish and others "even," and the re-purchases of bears carried prices rapidly up, from which there has only been some slight reaction. Consols have relapsed ½ on dearer money, but Foreign stocks are mostly ½ to 1 higher; rails, ½ to 1½, with 2½ in Brighton "A" and American have advanced in many cases 1 to over 2 per cent. Trunks have rallied 1 to 3 per cent., but Mexican have exceptionally fallen ¾ to 1½ on the bad traffic.

Money to-day has been in strong demand owing to the settlement and the Consol account on Tuesday next. During the morning the current rate for money at call, or short loans, was 4 to 4½ per cent., but with the higher rate having brought in a free supply the quotation fell of again to about 4 per cent., closing 3½, 4. Discount remained firm at 3½ per cent. for three month's bills, but fell away to 3½ in the afternoon.

At the Bank 11,000*l.* in sovereigns was received from Lisbon. Bar silver was easier at 43½*d.*, and Rupee paper was likewise weaker at 73½, 74 and 72½, 73 for the 4 and 4½ per cent. respectively.

The Stock markets to-day have been rather better supported, although business has been restricted, especially during the morning, when prices in most departments were dull. The Funds, however, have improved ¼; Consols closing 95½, ¾ for money and the present account. India Stocks also rose ½ to ¾, and Colonial were steadier under continued small investments. Foreign stocks, after being flat, recovered in sympathy with more firmness on the Continental Bourses, but the chief fluctuation was again in Brazilian Bouds, which had another heavy fall, but closed 2 per cent. above the lowest quotations, the 4 per cent. from 59 being finally ½ higher at 61, 62 and the 1888 bonds, lower at 63, 65. Argentine were heavy, and ¼ to ½ lower on an advance in the gold premium to 278 per cent. Turkish and Greek were a little flatter, but other Internationals were all ½ to ¾ better. Home Rails continued firmly disposed, with the exception of some

weakness in Chatham. Brighton "A" further rose 2 per cent., to 147½, 148, helped by a good traffic (430*l.* increase), while Midland rose ½, North-Eastern, North-Western ¾, and others ¼. The American market was neglected until the afternoon, when some improvement followed, but prices closed dull, and below the best, New York quotations not being encouraging. Union Pacific rose ½, and some half-dozen others ¼, while an equal number were that much lower, including ½ in Atchison. Trunks rose steady, but Mexican and Nitrate Railway issues improved ¼. Elmore's Copper Depositing were decidedly strong.

Annexed are the final quotations to-day:—Consols Account, 95½, 95½; Egyptian Preference, 87½, 87½; Egyptian Unified, 93½, 93½; French Four-and-a-Half per Cents., 103, 104; Hungarian, 88, 88½; Italian, 87½, 87½; Mexican, 82½, 83½; Peru Five per Cents., 8½, 9½; Peru Six per Cents., 26½, 26½; Russian 1889, 92, 92½; Portuguese, 33½, 33½; Spanish, 65½, 65½; Turkish 1871, 89½, 90½; Turkish Defence, 86½, 87; Caledonian Railway, 119½, 119½; Great Eastern, 87½, 88½; Great Western, 158½, 159; Brighton "A," 147½, 148; North Western, 171½, 172; Metropolitan, 89½, 89½; Metropolitan District, 31, 31½; Midland, 162½, 162½; North British, 44½, 44½; North Eastern, 157½, 157½; South Eastern "A," 83½, 83½; Mexican Ordinary, 28½, 28½; Grand Trunk, 10, 10½; Grand Trunk First Preference, 69½, 69½; Grand Trunk Second, 50, 50½; Grand Trunk Third, 26½, 26½; Canadian Pacific, 90½, 90½; Denver Preference, 44½, 44½; Erie, 30½, 31; Milwaukee, 78½, 79½; Lake Shore, 128, 128½; Louisville, 80½, 80½; Atlantic First, 37½, 37½; Ontario, 20½, 20½; Ohio, 21½, 21½; Norfolk and Western, 52½, 52½; Reading, 20½, 20½; Reading Bonds, 86½, 87½; Union Pacific, 43½, 43½; Wabash Preference, 28½, 28½; Ottoman Bank, 11, 11½; Anglo-Telegraph, 48½, 49½; National Telephone, 4½, 5½; Hudson's Bay, 15½, 16; Suez Canal, 107½, 107½; Guinness, 319, 321; Allsopp's Ordinary, 24, 26; Bryant and May, 13½, 14; Eastman's Ordinary, 4½, 4½; Elmore's Copper, 34, 34½.

THE GLENROCK CO., LIMITED.

A CRUSHING DIRECTORS CANNOT UNDERSTAND.

THE directors beg to convey contents of cablegram received from Mr. W. J. Farrell, dated Nov. 25, from Dunedin:—"70 ozs. 275 tons." This the directors presume is the result of the first clean-up, and they communicate it as received. Until receipt of letters from Mr. Farrell the directors cannot understand such a result in the light of recent advices, extracts of which were communicated to you in the circular of Sept. 24. But what the directors desire to emphasise is the fact that the reefs in the low level adit have not yet been intersected at depth, and it is confidently expected that when this is done ore bodies of a greater value than any obtainable from the upper level will be revealed, and the directors, therefore, have reason to hope for much more satisfactory results as soon as this important engineering work shall have been accomplished, which the board have been led to expect might occur before Christmas. It is quite possible that all the gold obtainable may not have been got in this first running, as the directors already know from recent letters that the frost was interfering with operations in the early stage. Mr. Farrell having asked for further moneys to be remitted to him, and as it is in the interests of the company that the work in the low level adit should be pushed, your directors are compelled to make a call of 3*d.* per share upon the share capital of the company. Call notice is enclosed herewith, payable at the bankers of the Company on or before Monday, the 21st day of December next.—W. P. OWEN, Secretary.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

A REPORT WHICH SHOWS A CREDIT TO PROFIT AND LOSS OF 62,152*l.*

THE work of the British South Africa Co. continues to make steady progress. During the year fresh goldfields and many hitherto undiscovered gold-bearing reefs have been disclosed, and the work of developing the various properties has been entered upon. According to the latest advices 10,041 claims have been applied for and registered by the Chartered Co., and the white population in the country now exceeds 3,000 persons. Of the new capital, which was offered *pro rata* to the shareholders at 1*l.* premium, 52,761 shares were subscribed, and the directors have since placed a further 10,000 shares at the same price, and negotiations are in progress which the directors trust will result in the disposal of the remaining shares. The company still hold 10,000 De Beers shares, and the appended accounts of that company together with the director's report show (in spite of the present depressed market price of its shares) how good are its prospects. The remaining diamond investments is 50,000 Consolidated Bultfontein 7½ per cent. shares, the dividends upon which are guaranteed by the De Beers Co. The company's gold ventures in Zoutpansberg, Malmani, and Potchefstroom, continue to receive the attention of the board, together with the various investments in the Witwatersrand district, the total of which latter amounts to 54,600*l.* In addition the company holds fully-paid shares at no cost in other companies, including 57,134 shares in the Luipaard's Vlei Estate and Gold Mining Co., Limited, in the ultimate prospects of which the directors have every confidence. It will be seen from the foregoing remarks that the principal attention of the board has been directed to acquiring interests in Mashonaland. After providing for working expenses there remains to the credit of revenue on the year's working a profit of 16,075*l.* 17*s.* 1*d.*, which, added to the balance brought forward from last year, leaves a sum to the credit of profit and loss of 62,152*l.* 3*s.* 10*d.* This sum the board recommend should be carried forward to the credit of the current year.—H. D. BOYLE, Secretary.

THE Fifehire Main Collieries, Limited, are making great progress in developing their property. The company took possession seven months ago, and are now raising coal from their No. 1 pit, and a second shaft is rapidly being sunk. The buildings and plant are in course of erection, and will shortly be completed. We hear also that the North British Railway Co. is actively constructing a branch line to connect the pits with their main line near Oakley Station.

REPORTS OF MEETINGS.

PAHANG CORPORATION, LIMITED.

A TWO HOURS MEETING RESULTS IN THE DEFEAT OF MR. STACK, AND A UNANIMOUS VOTE OF CONFIDENCE IN MR. PONTIFEX.

THE ordinary general meeting of this company was held on Thursday at Winchester House.

Mr. Edmund A. Pontifex

(chairman of the company) presided.

Mr. ARTHUR GIFFARD (secretary) read the notice of meeting.

MORE ORE RAISED.

The CHAIRMAN, who was received with cheers, said: The second paragraph in the report of the directors points to the fact that there has been a considerable increase in the quantity of ore raised during the past year over that of the previous one. The quantity raised during the 12 months ending Apl. 30, 1891, amounted to 138 tons of clean ore, worth about 8,000*l.*, and being the produce of a little over 9,000 tons of lode stuff passed through the stamps. This rather low produce was mainly due to our having stamped considerable quantities of Chinese leavings, which, though poor in assay, were worth stamping, as the expense of mining them had already been defrayed. The produce of the previous year ending Apl. 30, 1890, was stated by Capt. James Hosking, the then superintendent, to amount to 71 tons. I call this the produce of the year, because we had been mining during the whole of that time, but the stamps had only been at work for about seven months, their erection having been completed in Oct., 1889. In giving this figure of 71 tons, I must add that the facts since brought to our knowledge show clearly that Capt. Hosking considerably over-estimated the quantity produced. His mistake probably arose in over-estimating the quantity of ore on the dressing floors. Later information shows that only about 70 tons had been raised up to Sept., 1890 (a date five months later than that in Capt. Hosking's statement), and during those five months he represented that 53 tons of ore additional had been raised. Deducting these 53 tons from the 71, it would appear that only 18 tons had been mined and milled prior to Apl. 30, 1890, but if we divide the error over the whole of the period with which Capt. Hosking had to deal, we may, I think, take it that not more than 35 tons, at the most, had been raised and dressed in the year ending Apl. 30, 1890, against 138 tons in the succeeding year. The following comparison shows the gradual progressive increase in the output of black tin:—For the 11 months from Nov. 1, 1889, to Sept., 1890, when Capt. Hosking left, the output averaged 6 tons 3 cwt. per month. In the succeeding seven months to Apl. 30, 1891, which is the end of our financial year, it averaged a little over 12 tons per month. And if the comparison be pursued into the present year the result will be still more satisfactory, as in the five months from Apl. 30, 1891, the average has been 20 tons 7 cwt. per month, including the first month of that period, which was exceptionally low. They would have been still higher but for the temporary absence in China of the Chinaman, who had previously been working on tribute, who had been raising from 3 tons to 4 tons per month, and who had gone to China to select some more coolies. You will observe that the expenses at the mines have been considerably reduced, notwithstanding that the output has been increased. The monthly expenses at the mines and in Singapore averaged 2,250*l.* during the year 1889-90, and they have now been reduced, in the months May to Sept., 1891, to an average of 1,300*l.* monthly, notwithstanding the increase in returns to which I have called attention.

THE MONTH OF SEPT. SHOWS THE BEST RESULT YET OBTAINED.

The returns have amounted to 22 tons, and the mining costs have been reduced to 930*l.*, which would show a profit on the actual mining costs and apart from general charges of about 300*l.* for the month. The costs of a single month cannot, however, be taken as a fair average, as many items of expenditure may not fall to be paid in it. In this comparison I have taken, in both cases, all expenses of mining, dressing, transport, royalties, assaying, surveying, hospital, travelling, salaries, office expenses, repairs, bad debts, etc.; excluding only the initial capital outlay on buildings, machinery, &c., London and Singapore charges, and also the outside costs of explorations on the Rumpen river, and of the alluvial workings in the Blat district. As much of this latter expenditure is not now being incurred, especially that on the Rumpen district, it would not be fair to the former period to have included it in the comparison. It must be remembered, too, that some portion of the expenses included in this comparison consists of the royalties which we have to pay to the Government, upon the value of the tin exported. Of course, the more tin there is produced the larger is the amount paid for royalty.

GOVERNMENT CHARGES.

When we were exporting only 6 tons of black tin per month we were paying about 25*l.* per month for royalties, whereas, at the present rate of a little over 20 tons a month, we are paying about 85*l.* per month, and, of course, it will continue to increase with the increase in our production. The royalty which the Government exacts is unquestionably a very onerous one, amounting as it does to 8 per cent. on the total output. We have endeavoured to get this charge reduced, but without success. If the Government did anything for us in the shape of making or assisting to make roads, or facilitating transport, or postal communications, we should have the less reason to complain of the heaviness of this impost, but seeing that they do absolutely nothing for us, except providing six or eight Sikh policemen for the whole district, it certainly seems excessive, and certainly is burdensome. It is in effect a heavy tax upon exports, which is admittedly the worst conceivable form of taxation. You will observe from Mr. Neild's report that he and Mr. McKenzie (the chief mine agent) are of opinion, as indeed would be any other practical miner, that in order to obtain a large and permanent output of ore, we must prosecute mining at greater depths than hitherto. At the bottom of page 16 of

the report you will see that Mr. McKenzie says:—"Up to the present all work has been above water level, *where the country is much disturbed*, and I am confident that the lode will increase in size and richness when we get down into settled country." You will readily understand that where you have to deal, so to speak, with a superficial efflorescence, which is the result of a geological disturbance, the ordinary deposits are of necessity bunchy, and laterally are non-continuous. This is the case with the tin lodes in our part of Pahang. They present themselves in numerous places, over the surface of small hills, which hills are in places comparatively quickly driven through. This is very clearly shown in the drawing attached to the report, which gives a section of the workings upon what are called Pollock's and Campbell's lodes, but which probably form one deposit, though, as it was opened upon from the opposite sides of the hill, they were named separately. This is one of our richest deposits, and the uppermost level had only to be driven for a distance of about 200 yds. before the hill was entirely pierced through.

ORES CONTINUOUS IN DEPTH.

The chimneys, or shoots, of ore mostly seem to continue in depth, and, according to mining experience, they would probably either extend in width when they come into the settled ground beneath these small surface elevations, or we should find other and similar chimneys, or shoots, a little further along the course of the lode. The recent larger returns of ore to which I called attention, and the diminished cost of getting them, have been in a great measure arrived at by following the policy which I advocated in the remarks I made so long ago as at the general meeting held in July, 1889, where I said:—"In my judgment it would perhaps have been more judicious to confine the mining work at first to a fewer number of works, and to have driven more energetically at these selected points." Reference is made in the directors' report to work done in the Blat and Gambang districts. Blat district is situated some two or three days journey by river from Sungei Lembing, where the mines which we are working are situated. When Mr. Bell was in Pahang, he had placed Mr. Nauta in charge of these workings, and as Mr. Nauta was (under certain eventualities) to have had a share of the profits, it was necessary that Mr. Neild should not interfere with his control of the operations. Our present superintendent, therefore, is in no way responsible for any mistakes which may have been made by Mr. Nauta. The result of that gentleman's operations was not satisfactory, and when he became ill and resigned his appointment, Mr. Neild took charge of the district, and re-organised the working, which thenceforward went on in a much more satisfactory manner. On Sept. 8, Mr. Neild writes:—

"I have just seen Von Tungulu" (the foreman placed by him in charge of Blat). He had been most successful with the Chinese coolies. He had no deaths to report, and there were 18 men working well in the mine, whereas when I first went to Blat the average number turning out was three to five, and they did next to nothing." Unhappily Von Tungulu has since died, and Mr. Neild purposes, as soon as the tin from the parts already stripped has been removed, to stop work until he can let it on tribute. General experience has shown, almost all over the Malay Peninsula, that alluvial tin working, conducted as it must of necessity be by Chinese labour, and being intermittent in its character, can only be successfully carried on by Chinamen working upon tribute. I should add that Von Tungulu died from dysentery, from which Mr. Neild is of opinion he would have recovered had he consented to go to Singapore on sick leave, but his heart was so much in his work that he refused to take this necessary precaution. The small experiment which has been made in tobacco planting has so far achieved very satisfactory results.

TOBACCO.

It has proved that the soil and climate are eminently adapted to that produce, and it is to be hoped that the result of the experiment will enable us to obtain a revenue from our planting rights by letting them out to planters on royalty or lease. A considerable saving has been effected during the past year by selling the black tin to the smelting companies in Singapore, instead of bringing it home to England. Not only is the freight saved, but the loss in exchange in remitting from England to the Straits Settlements is also avoided, and, besides, actually higher prices are obtained from the colonial smelters than we can obtain from the English ones. This circumstance is interesting, as we are informed it is partly due to the effect of the McKinley tariff, which has opened a market other than that of England for this metal. It may be noted, with some satisfaction, that the Acting British Resident in Pahang states:—

"The Pahang Corporation in Kuantan is now doing good and vigorous work, as also are its two sub-companies, but the former alone has yet exported tin."

THIS AND OTHER COMPANIES CONTRASTED.

That these two companies, which have now been at work for a considerable time, have as yet been unable to export *any* tin, is some measure of the difficulties that we have also had to encounter, and which we have now, to some considerable extent, surmounted. It is stated in the report that the value of the present returns of ore is more than sufficient to cover our working expenses. Only 500*l.* has been remitted from England to Singapore since July last; 2,000*l.*, however, had been remitted on the 1st of that month, and these sums, in addition to the amounts realised from the tin ore sold, have been sufficient to carry them on up to the present time. A little larger output would suffice to defray the general charges also. Mr. Neild, in his report, points out that, to work the mines to any advantage, a considerable outlay of capital must now be made for pumping and lifting machinery, and for the labour involved in sinking below water level, but as that is a matter which we shall have to deal with more fully at the extraordinary general meeting which will follow this, I need not allude to this matter at the present moment at any length. The progress that has been made during the past year will, I think, be considered satisfactory to all those who are practically conversant with mining matters, and who know what a length of time it takes to open out metalliferous mines, even under the most favourable circumstances, so as to produce sufficiently large returns to pay interest on such a capital as ours. A tin mine is considered to be remunerative when the stuff raised from the mines yields from 30 to 40 lbs. of black tin to the ton of lode stuff, or, say, 2 per cent. From this it follows that, in order to get a large quantity of metallic tin, an enormous quantity of stuff has to be raised from the mines, which

can only be done when long lengths of levels have been driven, and large areas of stopes have been laid open. This, of necessity, is a matter of time, and it was because of this that I have persistently endeavoured to moderate the unreasonable expectations which were formed as to the early period in which it was hoped these mines might be brought into a position to pay large dividends.

DIFFICULTIES.

In the circumstances in which we are placed, the difficulties which ordinarily present themselves were magnified ten-fold; the unhealthiness of the climate, at least in the preliminary stages of jungle clearing, is alone a sad drawback; and difficulties of communication, absence of roads, or other means of transport, and of all resident population, and, indeed, of all the ordinary appliances of civilization, form obstacles which can only be overcome by great energy and perseverance, and by the patient application of much intelligence and practical knowledge. I cannot bear too warm a tribute to Mr. Neild, our present superintendent, in this respect. It is in the good local management of such an enterprise, and especially so in a situation such as ours, that success can alone be hoped for, even in the richest mineral districts. You will remember that, at our last meeting, I stated that we had not been fortunate in our former superintendents, but I do not wish to say more than is necessary upon that point. We were warned by our friends on the other side that, in this respect, a crisis in our affairs had arrived, and that unless a very capable and energetic manager could be found, disaster would be the result. I may add that we were expressly advised to avoid Cornishmen, and to select someone having Australian experiences.

THE MANAGER.

To manage such a concern as ours, vast in its extent, and complicated in its operations, requires the highest qualities of an administrator. To obtain the services of such a person, in such a climate, and with such wretched surroundings, would ordinarily entail the payment of a much larger amount of remuneration than this corporation could afford. Circumstances, however, most fortunately enabled me to place my hand on a gentleman, whose family I had known for many years, and who was the only man that occurred to me that would be competent for the post whom we could obtain for anything like the amount of remuneration that we could afford to give. As I mentioned at the last meeting, he was a young man, a graduate of Cambridge University, who had been employed for about three years in Queensland at a mine with which I am connected.

HOW MR. NEILD FOUND THINGS.

Almost as a personal favour to myself I induced him to resign his then engagement and to accept the appointment of your superintendent. When he arrived at his post he found things in such confusion, and the whole of the appearances so discouraging, that he was on the point of asking us to accept his resignation, and probably would have done so but for his friendship with myself. He has now succeeded in producing order out of chaos. I advisedly use the word chaos, for if I were to describe the confusion in which he found many things—the machinery sent out for erection lying about uncared for, with grass growing over it, so that it had to be searched for, and could only be found with difficulty, and other things in a similar state—you would say that the term I use is fully warranted. Everyone whom we have heard from speaks in the highest terms of Mr. Neild, and he has been the means of changing the whole aspect of affairs. Our staff, instead of being at sixes and sevens, are now working harmoniously and efficiently, and so considerable is the reputation which he has achieved in this short time, that the directors of the Kabang and Semiliang Companies requested us to permit him to undertake the management of their affairs as well as of ours. Mr. Neild, who, fortunately, seems to be as hard in constitution as he is able and energetic, was willing to undertake this task, as also was Mr. McKenzie, our chief mine agent, and as this arrangement would relieve us of a portion of their salaries without, as they thought, detracting from the efficiency of their services to the corporation, we consented tentatively to the arrangement. A further proof of the esteem in which Mr. Neild is held is evidenced by a letter, dated Sept. 29, 1891, from Messrs. Paterson, Simons and Co., of Singapore. They say:—

"We think it only right to mention that the Governor distinctly stated that he would be prepared to do more for the corporation under its present superintendent than he would have felt inclined to do under ordinary circumstances."

I have alluded to this matter at greater length than I otherwise would have done, because, at the last general meeting the appointment was ridiculed by one or two shareholders, on the ground of Mr. Neild's comparative inexperience in mining matters, and especially in tin mining. But a long experience of nearly 30 years in connection with mines has convinced me that as a rule, and especially when a large organisation is required, a technical miner is not the most competent superintendent. He takes too narrow a view of matters, sees everything from a mere miner's point of view, and looks but little beyond it. We wanted a superintendent who could negotiate with the Governor and the acting British resident, and could meet them socially on something approaching to an equal footing, and who could take a broad and comprehensive view of the whole requirements of the corporation.

NEAR SUCCESS.

This Mr. Neild has done, and it is with his assistance that we have been enabled to bring your affairs within a measurable distance of success. Before I sit down I perhaps ought to inform you that we have received two letters from a shareholder—Mr. Stack, a registered holder of 20 shares in the corporation. He is the gentleman who, you may be aware, brought an action against me for defamation in respect of what passed at the last general meeting, in which action, however, he had but a qualified success. In the first of these letters he gives notice of a resolution which he intends to propose to you, making charges against me, and asking you to remove me from the board, and he appears to have sent a copy of this resolution to all the financial newspapers. The resolution of which he has thus given notice can only be moved as an extraordinary resolution, requiring a two-thirds majority in order to give it validity. But I refuse to shelter myself behind technicality, and if any considerable proportion of the shareholders, for any reason, wish me to vacate my seat, I shall do so, although it will, I am aware, not be possible for Mr. Stack to carry his motion. The second letter

which he has sent to us conveys a request that "all persons not directly interested in the corporation should be excluded from the meeting." As this can apparently only refer to the reporters, we have not thought it right to comply with the request. We have nothing to hide, and if Mr. Stack desires to exclude the Press he must take the sense of the meeting on the point. After the conclusion of the ordinary business, for the consideration of which we have met here to-day, Mr. Stack will be afforded an opportunity to move the resolution of which he has given notice. I now beg to move "That the report and accounts, which have been presented, be received and adopted." (Cheers.)

Mr. WARD (director): I second the motion.

A FAMILIAR VOICE.

Mr. T. NEVILLE STACK, who was cheered by his supporters, said: We have heard the usual stereotyped speech of the chairman. He has given us a few lessons in the topography and geography of Pahang by pointing to the map behind him, but, as some of the shareholders have pointed out in letters to me, there is nothing whatsoever in the report that deserves reference except the map. I will not waste your time in analysing it, but my remarks shall be brief, though in the course of them I shall be compelled to introduce into them the names of two ladies—(A VOICE: Don't!—) who have been playing an important part in connection with the bulling and bearing of these shares in relation to Mr. Pontifex. I have some proxies which, of themselves, might be the most eloquent condemnation of the board, for their own proxy forms have been returned to me with the names thereon obliterated and mine substituted—hundreds of them. (Laughter.)

The CHAIRMAN: How many hundreds?

Mr. STACK: I did not count them. (Laughter.) Allow me to go on, for I did not interrupt you.

The CHAIRMAN: But I made no misstatements.

Mr. STACK: I have letters from gentlemen holding from 1,000 shares down to 20, and must ask you to permit me to read extracts from them. The son of Sir John Preston (who appeared here two years ago) writes from Belfast Club:—

"I have 1,055 shares, and shall not be able to attend the meeting. I write to inform you that I, as well as every other shareholder here, am willing to support the resolution that the present chairman, Mr. Pontifex, be ejected. (Laughter.) In fact, I think the existing board should be removed, as I consider the affairs of the company have been grossly mismanaged and the shareholders kept completely in the dark as to what is going on. I am surprised the chairman is a director of so many other companies as he cannot give the necessary time to the business of the corporation."

Mr. Davis, of Colchester, writes:—

"It was my intention to attend the meeting and to prevent the re-election of directors. I hold 250 shares. I enclose you my proxy, and trust you may be successful in ousting the board." Mr. Preston also writes that he can obtain the votes of all the Belfast shareholders in my favour. A holder of 100 shares says, "I hope you will be successful in your attempt to oust the board."

A VOICE: Never mind the letters—come to the charges. (Cheers.)

LAUGHTER FOR THE HOUSE OF LORDS.

Mr. STACK (holding it up): This is a letter from the House of Lords. (Peals of laughter.)

The CHAIRMAN: I have no wish to interrupt you, but, in all friendliness, I would say are you not speaking now to the resolution?

Mr. STACK: I am not. I am speaking to the report. Is there no consideration for absent shareholders? (Hear, hear.)

The CHAIRMAN: Every consideration—we have their proxies. (Cheers.)

A SHAREHOLDER: Mr. Stack has brought charges against the board, which so far he has not sought to substantiate at all.

Mr. STACK: I ask permission to read letters; may I be allowed to do so? (Yes and No.) A gentleman writes from Leamington with 250 shares. (Cries of "House of Lords letter," and laughter.) I wrote the letter the chairman mentioned, not with the object of excluding the Press, but of preventing persons being present who are not shareholders. I would not mention it now but for this clamour. Some men are more eloquent with their feet than with their tongues. I know that men are admitted by permission of the board who are not shareholders. ("Turn them out," and "Name them." Mr. Shaw is not a shareholder of this company, and I have already seen him

SPEAKING ELOQUENTLY WITH HIS FEET.

(Laughter.) The CHAIRMAN: The only knowledge I have of any persons being present who are not shareholders is that we have received a request from the directors of our subsidiary companies to be allowed to be present, and we have consented because they are so largely interested, but, of course, not being shareholders they will not vote.

BASIS OF THE COMPANY.

Mr. STACK: I think I have read sufficient from the letters. This company was started, practically, only two and a-half years ago, and with a working capital of 50,000*l.* 100,000*l.* was paid in cash and shares to us from the Pahang Kabang Co., and another 100,000*l.* in cash and shares was paid by the Semiliang Co. Therefore the amount of cash spent on this property has been 250,000*l.*—"What about the shares?"—in two and a half years, with the result of only 5,000*l.* returns.

A REMINDER.

The CHAIRMAN: You had 30,000*l.* distributed in bonus dividends.

Mr. STACK: Deduct that 30,000*l.*, and you have had 250,000*l.* in shares and money. If these figures do not speak in condemnation of this property I do not know what does. These gentlemen have condemned themselves out of their own mouths, and by their reports, and they have been hoodwinking us, and endeavouring to make us believe that by supplying them with another 50,000*l.* they will bring about results which they have not been able to achieve with an expenditure of 250,000*l.* It cannot be done. (Nonsense.) These gentlemen sent out not expert engineers, not men largely experienced in mining, for the chairman admitted that one of them had only three days' experience of mining, but men were

SENT OUT AS LIVINGSTONES AND STANLEYS

to view the property from the tops of mountains instead of working it. They have been simply surveying it. We have ample evidence

there is plenty of tin, but what is the use of bringing it home if no results are given to the shareholders. I say it is shameful, and I consider if there were any sense of shame in these directors—I respect them in their individual capacity—but I say

THEY ARE UTTERLY DEVOID OF SHAME.

(Loud laughter and Cries of "Order.") They are utterly unscrupulous, and they will go on with this sort of thing until this company will be put in liquidation. Mr. Maskelyne was an expert and a professional geologist, but Mr. Maskelyne, in turn, confessed that Mr. Pontifex was the greatest expert of all, and he had to leave the board. One would suppose that these gentlemen were conjurers, and I do trust some of them are not typical Englishmen. (Oh.) I know for a fact, and I say so with great hesitancy, that Mrs. Pontifex has been used by Mr. Pontifex as a bear of these shares. (Laughter.)

The CHAIRMAN: That is absolutely untrue.

Mr. STACK: There were three blocks of shares sold, one of 2,000, another of 2,000 and another of 1,000 in the name of Mrs. Pontifex, and we have obtained the information at Somerset House.

AMENDMENT.

I move as a *finale* to this brief statement, that the report be not adopted, and I think I have sufficient support to carry that, and that a committee of shareholders be appointed to make a thorough investigation into the affairs of the corporation, and it would not surprise me if we could place those directors in such a position as that we would get back some of our money. I will not say worse than that, but you can infer what you like. (Cries of "Oh;" a VOICE: "The dock.") "The dock" some gentleman says, but I do not say it, though, perhaps, there is reason for their saying it. I conclude by moving the amendment.

Mr. PEDDAR: Mr. Stack said he had listened to the usual stereotyped speech of the chairman, but we have listened to his usual stereotyped attack on the directors, which seems more acrimonious than usual, and

THE REASONS ARE NOT FAR TO SEEK.

We have heard from the chairman that there has been an action brought against him by Mr. Stack, in which the latter gentleman came off second best. (Cheers.)

Mr. STACK: No, no; I got a verdict.

Mr. PEDDAR: You got a verdict of one farthing damages, and you had to pay your own costs. (Cheers.)

Mr. STACK: What matter about that? (Laughter.) Are you a shareholder?

The CHAIRMAN: You must divide your amendment, because part of it refers to another resolution.

Mr. S. J. WILDE: It has been held that an amendment cannot be moved in the nature of a direct negative. (Hear, hear.)

The CHAIRMAN: Mr. Wilde is a barrister of considerable experience, and I have no doubt what he says is correct.

Mr. STACK: I am not accepting his authority.

Mr. WILDE: You have simply to vote against it.

Mr. STACK: The usual course adopted (it certainly was at the last meeting) was to take the sense of the absent shareholders by an adjournment, and I got 30,000 votes against you.

The CHAIRMAN (astonished): 30,000! No such thing. Do state facts.

Mr. FITZGERALD: I second the amendment, and, in doing so, am following the course usually adopted.

The SOLICITOR: I entirely support the view of Mr. Wilde that it is not competent to move an amendment, but the same end is gained by voting against the resolution.

The CHAIRMAN: We wish things done decently and in order, and it will therefore be better to vote for or against the adoption of the report in accordance with what we are told is the correct course.

A SHAREHOLDER: Loss on Exchange in remittances—how is that incurred?

The CHAIRMAN: We have no control over it, as it varies with the price of silver. We started with a certain number of silver dollars to the £, and the exchange was then about 2s. 11½d. Since then it has fluctuated more or less, which makes a paper loss on exchange, but it is only that.

A SHAREHOLDER: Upon the price of dollars ruling to-day we ought to make a profit.

The CHAIRMAN: When we commenced operations the dollar was 3s., and since that it has been at 3s. 10d., and that is the cause of what is called loss on exchange, which is really no loss.

The SHAREHOLDER: I contend it should be profit. Never since this company has been in existence has the dollar been at par, which is to our advantage, because we are buying and not selling dollars.

A SHAREHOLDER: It should have been "difference on exchange, and not loss." (Hear, hear.)

VIEWS OF THE LATE SUPERINTENDENT.

Mr. HOSKING: I was superintendent of these mines for 18 months, and rise to correct the chairman a little with reference to the quantities of tin produced in the early stages, which, he says, to Apl. 30 were 18 tons.

The CHAIRMAN: No; I said that if you treated them in a certain manner they would be 18 tons, but I gave you credits for 35 tons.

Mr. HOSKING: I will treat them as a matter of fact. On Apl. 30, 71 tons of tin had passed through the stamps. You have at all times a large quantity of stuff in various degrees of concentration, which it is necessary to hold in a considerable number of tons, and to speak of 18 tons is absurd. Dr. Philpotts inspected and reported on this property just immediately before my arrival, and described the whole place as having about 30 per cent. of tin. I collected all the tin that could be found in the places he described, and then to the end of Nov. it was all concentrated in the black tin, amounting, I think, to 30 tons 16 cwt. That alone would nearly have amounted to 18 tons, but up to Sept. 30, when I left, I reported that 68 tons had been sent away, and I will quote from Mr. Neild's report (page 10) where he says, "From the time the mill first commenced crushing to the end of Sept., 60 tons of oxide had been despatched." At that time there were 8 or 10 tons in sacks or otherwise ready to be despatched, besides about 30 tons in various courses of dressing, which, as I have described, is always necessary, and is always on the tin floors. Up to Apl. 30 that tin had not all been despatched, and the chairman, who

has given me credit for 35 tons only, should, as you see in the profit and loss account, have credited me with 57½ tons not despatched. I do not wish to say anything to discredit the board or the management, but if a property is put before a public as a thing it is not, the manager who manages it comes to be regarded as a fool, or an idiot, or a rogue; or the property must have its true value given to it. From beginning to end there has been in this case the most

TREACHEROUS AND VILE TREATMENT OF YOUR EMPLOYÉES.

If what Mr. Neild says is true, he is altogether at sea and opposed to all that Mr. McKenzie, your mining superintendent, does. That, I presume, is not the fact, and I do not suggest that there is the slightest thing in which the shareholders should feel the least opposed to Mr. Neild. I consider that Mr. Neild is a very respectable man, and that generally he is trying to tell the truth, but in this report he says a great many things which I contend are written, first, with a view to throw discredit upon those who have gone before him, and partly to back up the idea that in consequence of their failings additional capital must be provided.

I WILL GIVE YOU A DESCRIPTION OF THIS PROPERTY,

which I found in this position. It had been worked by Malays and by the Sultan of Pahang, who had the power to levy most unlimited *corvées*, and whilst labour could be obtained thus, the product would pay for the rice these people consumed. They worked it to death's door, and then came the Chinamen, not without tools, but with 50 heads of stamps, capable of crushing 6 to 8 cwt. per day; whereas a Cornish stamp crushes a ton per day. These people worked it up to the point that the Pahang Corporation took it, with the result that if Mr. Stack's motion (I disagree with much that he says, and the manner in which he says it) is carried and a committee appointed to investigate the corporation's affairs—I think you will not have a cause to regret it. I will defer saying how you became possessed of the property, because I wish to pass to other matters. Some people say there has been nothing done, but the maps and reports show you that 795 ft. of levels and winzes have been made where there should be tin, and work has also been done in the mines which you have sold. In this report it says, "The fact is conclusively proved that the tin occurs in shoots. When the shoot is driven through, our policy is not to drive wildly along the lode, in the chance of something turning up, but to follow that shoot down, and for that we require machinery," and this brings you to the point that more capital is required. A glance at the amount spent upon development will show that a vast quantity of unprofitable work has been done. The whole of the tin shoots driven through by Mr. Neild and Mr. McKenzie (who is a thoroughly practical and good man according to his reports) have found a bit of tin in the bottom level at Pollock's lode. This we have seen in the level above, and knew there would be a little in the level below, and the day I left, in my last report I stated that this level was nearly into the tin. Although this working beyond the shoot is so condemned in the period in question, our friends have driven 1,656 ft., out of which

ONLY 150 FT. HAS BEEN IN TIN GROUND,

showing that the rest has still been driven beyond the shoot. We find Mr. McKenzie saying that in the top level they have driven 100 ft. beyond the shoot, and in the bottom drive 40 ft. beyond it, and that they are going to continue the drive to make sure.

Sir ALFRED HASLAM: We are here to-day to consider whether the directors shall be entrusted with further capital, but if you discuss the merits of different experts, I think we stand a fair chance of being here all night, and certainly we shall get away from the business we have met to transact.

Mr. HOSKING: Have I spoken to anything not in the report? (No.) I have said nothing contrary to Mr. Neild's or Mr. McKenzie's opinions, but as an expert and shareholder I claim to put you on a right footing, and to show you whether the insinuations that there has been a change, or a pretended change, when the thing is being

CARRIED ON PRECISELY AS BEFORE,

and that it has been so much for the better, as has been represented. If in each lode you have one shoot of tin you have nothing, because so far we have met with nothing but pockets. So far every bunch of tin which has for the time been productive in the bottom level—its western side is dipping east, and the eastern side is going dipping down also, so that it is a "V-shaped" bunch, and the bulk of it in all probability has already been extracted. I seriously recommend an investigation.

The CHAIRMAN: With reference to what Mr. Hosking has told you with regard to the tin cutting out in Pollock's lode, the latest information we have from Mr. McKenzie (to whom he pays a proper and generous tribute) states:—"Bottom drive: During the month we have had a very good vein," &c. (see full text of this report at end of meeting). This will support my opinion that the shoot, after dipping to the east, was improving, so that Mr. Hosking's theory that it is cutting out is not correct.

IN SUPPORT OF THE BOARD.

Sir ALFRED HASLAM: I have come here to-day to support the directors, and I will tell you why. In the first place, I am of opinion that we engaged in a very large enterprise without having sufficient capital for our purposes. It has been said by Mr. Hosking that the Malays and Chinese have done some work, but is any gentleman going to suppose that their labour is to be compared with that of the Anglo-Saxon race? (Cheers.) Mr. Hosking may think it a reflection upon him that the results have not been more satisfactory, but if he will tell the meeting there is no tin on the property, then I think we may be inclined to question whether we should put more money into it, but how does he know? If we have only 1 square mile of tin on that property it is quite sufficient to send our shares to 20% or more. (Hear, hear, and cheers.) If they do come across tin, as I believe they will, in payable quantities, I hope to be a shareholder at that time. It is quite possible in mining enterprises sometimes to hit and sometimes to miss ore, but up to the present time we have largely missed it. (Laughter.) It is of no use, however, to abuse the directors, because things have not turned out as successfully as we could have wished. If they had met us here to distribute a dividend of 20 per cent, your feelings would have been different. (Cries of "They would.") Nothing succeeds like success, and I hope we shall not lose

our heads, but give these gentlemen credit for what they have done. (Cheers.) I think

YOU HAVE A MAN IN MR. PONTIFEX,

at the head of your affairs who will do his duty, and I think it is well worth our while to raise more money in order that the resources of this valuable property may be developed. I shall be prepared to take my share. (Cheers.)

The CHAIRMAN: That belongs to the extraordinary meeting.

Sir A. HASLAM: In my opinion, this is the best report we have yet received, for it decidedly marks progress. (Cheers.)

Mr. FITZGERALD: I propose to speak to the report. I have listened with great care to the chairman's speech, because I feel we have reached a critical period in our history. You have heard the roseate periods of the chairman year after year—(The CHAIRMAN: Never, sir)—but you know that "Hope deferred maketh the heart sick," and the hearts of the shareholders in this case are very sick indeed as they see the value of their shares going down day by day, and as they behold you now asking for more capital. If the directors had exercised strict economy, and foregone the enormous fees they are taking, reduced to a proper level the expenses in London, and exercised proper supervision over the estate, you would have been in a better position than you are to-day. You know that an old parson divides his sermon into three sections, and so would I my speech. It is, firstly, extravagance; secondly, waste; and thirdly, mismanagement; and that is all you can deduce from their report. The shareholders ask for bread, and they get a stone. They have looked for a dividend, and they have got a big book, with a map in it which contains matter published in London contradicted by persons who are writing from the spot. I have not had a copy of that report.

WHY MR. FITZGERALD DID NOT GET A REPORT

The CHAIRMAN: For a very good reason. This gentleman has only been a shareholder for 10 days, and that accounts for his not having had a report. (Loud laughter.) In the midst of which Mr. Fitzgerald resumed his seat.

Mr. WILDE: I have been a shareholder from the commencement, and it has been my feeling for a long time that we have not had sufficient capital. I know the difficulties of exploring a country covered with jungle, in a climate which is bad and without roads. In these cases you cannot avoid a great deal of waste though one man will waste more than another. It has always struck me that we have not had enough money to open out the property, and as to the fall of the shares, that is quite a common experience. Those of the rich Mysore Co. were down to 5s., and they are now 5 $\frac{1}{2}$., because

IT TAKES TIME TO DEVELOP A MINE.

I never yet knew of any mine out of which much could be got in less than five or six years, and, added to ordinary difficulties, you have here the special ones to which I have alluded. It is no wonder that we have come to the end of our tether, but it will be a great pity not to go on working, for there is no reason why we should not be as successful as the Mysore Co.

A SHAREHOLDER: Twelve months ago I came here, having travelled nearly 100 miles for the purpose of supporting the directors, as I always like to do, but I cannot help saying that since then my feelings have turned in an opposite direction. I cannot help feeling that the board are in some degree responsible for the misrepresentations made in connection with this company, for what we have heard to-day puts an entirely different complexion upon the prospects. Eighteen months ago Dr. Philpotts was introduced to a meeting with a great flourish of trumpets. I think he went out under the sanction of the board, and he made some of the most fabulous statements, probably, ever heard, saying that the money derived from this property would almost immediately amount to 365 $\frac{1}{2}$ per day. But not one word did the board utter to moderate those statements. Mr. Maskelyne was one of its members, and it was through my great confidence in him that I became a shareholder, but I think he has now

ACTED THE PART OF THE KNOWING RAT,

who, finding the corn giving out in the granary, has left it.

The CHAIRMAN: He is in very bad health.

The SHAREHOLDER: The reason given for leaving is that he finds his Parliamentary and other duties require his whole attention. He is a man of high honour and integrity, and I am not surprised at his wishing to have nothing more to do with this company.

The CHAIRMAN: I am extremely glad that Mr. Maskelyne is in the room, and I shall be obliged to him if he will state his reasons for leaving the board.

WHY MR. MASKELYNE LEFT THE BOARD.

Mr. STORY-MASKELYNE, M.P.: I left the board with great regret. I left it as I have relinquished other duties—under the command of medical men. I have lost one of my eyes within the last few months and am prohibited entirely from having too much to do. For no reason on earth would I leave the board but that. I should be proud to be sitting behind that table with my colleagues if the circumstances were happier for me. (Loud cheers.) As a board, we have made mistakes—I have never been on one that did not—but to say that we willingly misinform the public is a thing I repudiate from the bottom of my soul. I have believed in this company from the beginning, and I believe in it now. It is said that in all probability the lodes peter out in depth. That is the only thing I have heard that would appear to make this company a failure, but I have never believed a word of it. I have said from the beginning "you have the strongest system of tin lodes to be found anywhere outside Cornwall," and mineralogy has been one of the chief studies of my life. I do not remember such a system of lodes existing anywhere outside Cornwall, and that is what made me keen about this scheme. We sent out the best men, but it is not easy nowadays to get a good Cornishman, for most of them have been snapped up for other gold mines. I had not much to do with the selection of the gentleman we sent out, but was told that he was as good as we could then find in Cornwall. He gave such an account of what he had seen that it took my breath away, but what he said others have confirmed. As to Dr. Philpotts, I believe him to be rather an enthusiast, and he came back with such an account that I said, "I believe what I believed at first, and no more."

LET US LOOK THE THING IN THE FACE.

We made mistakes, and I will tell you one. We were told that quantities of tin were lying about the country, but I believe they were very much exaggerated, because the persons who saw them thought that more existed than really did. It is difficult in a country covered with jungle for one accustomed thereto to take accurate bearings, and give a large and reliable view of the whole thing; but all the accounts we have since had have been confirmatory. They have come to this, that the Chinamen have got out all the tin that could be secured by their methods. But when you have 10 or 12 lodes running parallel, north-east and south-west, and all showing evidence of large quantities of tin having been taken from them, any man will tell you that they would hold down. Now, wherever, we have properly examined these lodes they have confirmed all that has been said, and when you attain depth you will get as fine a sett of tin lodes as is to be found anywhere—similar to what we have in Cornwall. Another mistake we have made is that we have not followed the lodes persistently in depth. If their exploration had been properly conducted by the men we have sent out as they are being conducted now, I believe this company would be in a totally different position. It is true that we are in a position of depression, and that some of our money has been spent badly, and that much of it has been spent by those we could not control; but I believe that with a little more under the present management (thanks to the admirable selection by Mr. Pontifex of Mr. Neild), this company will work through into the success it promised to be sometime ago. I believe we have a solid property which, properly managed, will ultimately bring us to prosperity. I am still a large holder, and should the shares rise tomorrow, have not the slightest intention of parting with any of mine. I may be wrong, but I believe, conscientiously, that if we had the means we should have prosperity.

BOARD'S STRENGTH.

The CHAIRMAN: We have 46,586 shares represented by proxy, and 2,861 shares which were received late, and which we do not count. I wish to show Mr. Fitzgerald and Mr. Stack that the absent shareholders are with us in a great majority. Mr. Stack has not lodged any proxies, but if he wants to trouble the shareholders uselessly with a poll I will appoint that it be taken here, and at once. In the meantime, I shall put the resolution—it is carried by a large majority.

Mr. STACK: I demand a poll. Adjourn for a month.

The CHAIRMAN: No; we shall take the poll in half an hour from now, and in the meantime proceed with the other business.

A FUTILE APPEAL.

Sir A. HASLAM: Mr. Stack holds 20 shares, and the other gentleman has been on the register for 10 days. I appeal to them not to waste the time of the meeting by putting us to the trouble of a poll. (Cheers.)

Mr. STACK: I demand a poll, and I lodge the proxies I have. It is taking a mean advantage of me. (Laughter.)

The CHAIRMAN: You cannot lodge your proxies, because you know full well to be valid they must be in the office 48 hours before the meeting.

Mr. WILDE: It is against Mr. Stack's own interest to demand a poll.

A DIRECTOR WHO VISITS THE PROPERTY.

The CHAIRMAN: On the last occasion, when your proxies were lodged, they were for 7,000 shares, as compared with 78,000 shares for the board. (Cheers.) I move the re-election of the retiring directors, Mr. Ashton Bell and Mr. Richard Ward. Mr. Bell, at great sacrifice of health and time, went to visit the property, and refused even to receive his travelling expenses. (Loud cheers.) We are deeply indebted to him. He is a large shareholder, and in every way eligible. Mr. Ward is a barrister by profession, and very useful to us.

Col. NICHOLSON seconded the motion, which was carried by acclamation, as was also a motion for the re-appointment, as auditors, of Messrs. Hays, Akers and Hays.

MR. PONTIFEX.

The CHAIRMAN: Mr. Stack has given formal notice of my removal from the board. It requires a two-thirds majority to have effect, but I will not avail myself of that, for if any considerable proportion even of shareholders do not desire to have my services I will retire. (Cries of "No, no.")

Mr. STACK then read his resolution for the removal of Mr. Pontifex, in the terms already published.

Mr. H. V. ABRAHAM (60 shares): I second the motion.

Sir A. HASLAM: Mr. Stack reproaches you for mismanagement.

Mr. STACK: This gentleman has spoken four times.

Sir A. HASLAM: How many times have you spoken? (Laughter.)

Mr. STACK: I spoke to resolutions.

Sir A. HASLAM: And I am speaking to your resolution. The board have been charged with mismanagement, but specific instances have been wanting. In my opinion they have done their best, and shown themselves to be competent men. They have brought matters to such a point that in my opinion we shall have a vastly better report in 12 months hence than we have to day. I remember the chairman distinctly blaming the shareholders for dividing that bonus of 30,000 $\frac{1}{2}$ which he very properly said, and as the sequel now shows, should have been kept in the company's coffers for working capital.

JUSTICE TO THE CHAIRMAN.

Mr. SECKHAM (director): About 12 months ago I became the unfortunate possessor of some 7,000 shares in this company, and am responsible for about 4,000 or 5,000 shares more, which friends took on my recommendation. I have watched the downfall of the shares with mingled feelings, as you can imagine, and anxiously tried to ascertain the cause. The opportunity occurred, and I was offered a seat on the board. I had not previously met the chairman, or any of the other directors, but a few months after I had been associated with them I was very much impressed with the businesslike and careful manner in which your interests were watched, particularly by Mr. Pontifex. The directors are all deeply and sincerely interested in the success of this company, and it would be almost fatal to your interests if you were now to make a change, and especially so as regards the chairman. (Cheers.)

A SHAREHOLDER INQUIRES AND IS SATISFIED.

Mr. PEDDAR: After inquiry I can assure you that the result of what I have gathered has been most satisfactory to me. The chairman is always at his post, and never misses a board meeting. He is there to receive the correspondence, and to supervise the more important letters that are despatched. Altogether, he gives a great deal more time to the company than we could reasonably expect. It has been said that he is connected with other companies, but that is one reason why his experience is valuable to us. If he had not been an able man, would he have been asked by these companies to become their chairman. I never spoke to him in my life, but feel bound to give you the result of my inquiries. (Cheers.) There are

FOUR DIRECTORS WHO HOLD BETWEEN THEM 25,000 SHARES, or one-eighth of the capital. That is their original holding, which they have maintained all along, and two of them have been to Pahang. Do not swop horses when you are crossing the stream. You have heard Mr. Stack, and you have heard the chairman, and can you in reason want to replace the one by the other? (Cheers.)

Mr. DOW (director): After the attack made upon the chairman, I feel bound to crave your indulgence. I think Mr. Stack must be under a serious misrepresentation when he says that the chairman has not time to attend to the affairs of the corporation. My association with the board is only of recent date, and I am bound to say that whenever I have been to see the secretary I have found the chairman with him. He works with a zeal not to be surpassed, and I would not undertake his duties if my payment were 10 times what it is.

MR. STACK'S PROFESSED INTEREST

can hardly be sincere. He holds 20 shares, and his motive in bringing forward this resolution, and the language he has used to further it, I think, deprives it of all serious import. (Hear, hear.) I should not like to incur the risk of having to pay a "farthing" for expressing myself more strongly, but I am provided with the money to do so, if it be necessary. (Laughter.) If these scenes are to be of annual recurrence the shareholders will regret it. Personal recriminations do a company no good. Solomon tells us that "The voice of a fool is known by the multitude of his words," and as I have no wish to be ranked amongst that number I shall sit down. (Cheers.)

CHAIRMAN'S REPLY TO MR. STACK'S ATTACK.

The CHAIRMAN: I will come at once to the resolution which Mr. Stack has proposed. It is delightfully Hibernian that Mr. Stack should formulate his resolution, and make his charges, before the annual reports were issued, from which he must obtain his facts. And now let me deal with his charge of bad management by the board in England. What evidence does Mr. Stack bring forward to support such a charge? He has had abundant opportunity of finding materials for it, since he was not trammelled by facts, but having made the charge before he saw the reports, he had the inexhaustible fund of his own fervent imagination to draw upon. In what respect has the board mismanaged your affairs? We received from the shareholders a cash subscription of 58,000*l.* We have sold two small sections of your property for 88,000*l.* in cash, besides a large number of shares. Is that bad management? We obtained a premium of 8,794*l.* on shares not originally subscribed for. Is that bad management? We were thus enabled to divide among you some 30,000*l.* in bonus dividends, at a very early stage of our operations. Is that bad management? All the machinery which we have sent out has proved to be of admirable quality, and well adapted to its purposes; in that respect differing to some extent, as we are informed, from the experiences of our subsidiary companies. But I had some knowledge of what was wanted, and where to get it. Is that bad management? (Cheers.) There doubtless have, in the past, been some mistakes made in Pahang. For instance, in the mode of constructing the water-course, which has proved to be a nearly useless expense, but its faulty construction could only have been detected and rectified on the spot. It occurred, too, in Mr. Fraser's time. I fearlessly assert that your property is now as economically and efficiently managed as any property can be by a public company working under the Limited Liability Acts.

CHAIRMAN'S QUALIFICATIONS.

I cannot put more mineral into your property than it already contains, but unless you yourselves now upset the coach, whatever mineral there is will be sought for as diligently, and worked as economically and efficiently, as the means at our command will permit. As I have been personally attacked, I hope you will not think me egotistical if I say a few words in my personal defence. My qualifications for my position here are that I conducted for nearly 40 years a large and very well-known engineering and manufacturing business, from which I am now retired. My whole time is therefore available for the services of the public companies with which I am connected. I have the honour to be a Member of the Institution of Civil Engineers, and a Fellow of the Chemical Society, and for some 28 years I have been chairman of the Cape Copper Co., which has been one of the most continuously successful mining enterprises on record.

AN APPEAL TO FACTS.

Presumably, therefore, I possess some of the attainments requisite for your service. The time which I devote to your service is not so many hours occupied in routine work, which a clerk could do equally well, but I am giving you the benefit of the long and very varied experience of a lifetime. But Mr. Stack says that my other occupations are so absorbing, that I have not sufficient time left adequately to attend to your affairs. Where does he obtain his information? Gentlemen, his assertion is not true. I could appeal to my colleagues, I could appeal to the secretary to support my statement, that I spare neither time nor pains in your service, and that I take at least my full proportion of the work which devolves upon the board. The board meets regularly once a fortnight, and unless I have been ill, I have never missed a board meeting, and I am at the secretary's beck and call whenever he wants me. From the circumstance that I have retired from business, I have the more time to devote to work such as yours, and my long business training enables me to get through my work quicker than those could who have not had that advantage. Mr. Stack has commented on the fact that I am connected with several other companies, and especially that I have been selected to be chairman of them, but is it not the natural conclusion to be drawn

from that fact that I am chosen to be chairman because I *do* devote the necessary time and attention to my duties, and do *not* scramble through them in the perfunctory way that many directors do? The fact is that several of the companies to which my name is attached are of a nature, or are so circumstanced, that they take up very little of my time, some of them not more than an hour or two a month, and one or two of them hardly so much as that. Mr. Stack has most untruly asserted in his resolution that most of the companies with which I am connected are in financial difficulties, but were his statement as true as it is the reverse of true, that circumstance should surely have evoked his ardent sympathy. I have continued to perform the duties which I have undertaken, in the face of much obloquy, arising from circumstances in which I had no part, for which I was in no way responsible, and which I have always deprecated. I refer to the Stock Exchange operations which sent up the market price of our shares to a price so absurdly above anything which they could possibly be worth. The very natural disappointment of those who bought at such inflated prices was, I was well aware, certain to be visited upon the directors.

SOLACE FOR PERSONAL FAULTS.

It is so soothing to blame some other person for the follies which we ourselves have committed. I have felt this injustice so acutely that I have repeatedly contemplated resigning my seat on the board, and I have only been restrained from a sense of loyalty to you. The remuneration of 200*l.* a year which I receive as chairman of this board is an utterly inadequate compensation for the responsibility which I have to bear, and for the time and labour which I devote to your service, but I give that time and labour freely and ungrudgingly. From a mere pecuniary point of view, therefore, I should have no reason to regret being relieved of my duties, but having now brought your venture, as I believe, to the brink of success, and feeling as I do that my retirement would prejudice your interest, I will only throw up my trust at your bidding. I shall in no event continue to occupy it unless it is the general wish of the shareholders that I should do so. (Loud cheers.)

AN EFFECTIVE APPEAL TO MR. STACK.

Mr. GALSORTHY: I appeal to Mr. Stack to withdraw his motion. After the chairman's observations it would be a most ungracious thing to proceed with it.

Mr. WADE said he had written a letter to the Press against the board, but after what he had heard he withdrew all opposition. (Cheers.)

Mr. STACK: I could carry the resolution if I had one month to get in proxies.

The CHAIRMAN: Do you withdraw your demand for a poll?

Mr. STACK: Certainly. (Cheers and laughter.)

EXTRAORDINARY MEETING.

The notice was read by the SECRETARY (Mr. Giffard), which embodied the following resolution:—

RESOLUTION.

"1. That the capital of the corporation be, and the same is hereby increased by the creation of 50,000 new shares of 1*l.* each. 2. That such new shares shall be called preference shares, and shall carry a cumulative preferential dividend at the rate of 10 per cent. per annum, and shall, in addition to such cumulative preferential dividend, rank *pari passu* with the ordinary shares of the corporation, and in proportion to the amounts paid up thereon respectively, in respect of all further dividends or bonus dividends which may be paid by the corporation. 2A. That in the event of the corporation being wound up, and without prejudice to the provisions of Article 113, or to the rights thereby conferred to pay bonus dividends out of any profits arising from the sale of property as therein mentioned, the holders of the said preference shares shall be entitled to have the surplus assets of the corporation applied, in the first place, in repaying to them the amount paid up on the preference shares held by them respectively, and thereafter to participate ratably with the holders of the ordinary shares in the residue (if any) of any surplus assets which shall remain after paying off the capital of such ordinary shares. 3. The said preference shares shall, in the first instance, be offered to the existing members of the corporation in proportion to the amount of capital held by them, but any of the said preference shares not taken up by the existing shareholders shall be under the absolute control of the directors, who shall be at liberty to allot or otherwise dispose of the same to such persons, on such conditions, at such times, and in such manner as they shall think fit."

The CHAIRMAN: We have laid before you a proposal to raise 50,000*l.*, and the necessity for this additional capital is set forth in Mr. Neild's report, namely, that we must go in for deep mining. We have largely exhausted the superficial deposits, and we shall have to mine in more settled ground where all experience shows we are likely to find good tin lodes. Unless we can raise a large quantity of ore we can never make this property remunerative, but that we can do so I have no doubt. Had we not, as Sir A. Haslam has said, divided that 30,000*l.* we should not have needed more capital. Mr. Neild puts the minimum amount at 30,000*l.*, but we have taken power to issue 50,000*l.*

BOARD WILL SET AN EXAMPLE.

The board are large holders, and their proportion of the new capital will be 6,000*l.* This they are willing to take, and that is the best example I can offer you. The money will be expended carefully, and unless it be raised, we can do no good whatever. The appearances on the surface, as Mr. Hosking will say, are all that can be desired.

Mr. HOSKING: What I would suggest is the driving of a deep level at Jeram Batang, which will give you 50 fms. of backs and no water charges. You can do this with as much probability of results, and at one-fourth of the cost, as you can carry out the plan you propose.

The CHAIRMAN: That is the very thing we are proposing to do, and at the point mentioned, Jeram Batang. It is for those points below the water level that we require pumps. Our people in Pahang, in whom we have every confidence—and Capt. Hosking endorses our views of Mr. McKenzie—will carry out this policy, which offers the prospect of success. The point has been raised whether this new

capital should be preferential in the event (improbable, let us hope) of the company winding up.

Sir A. HASLAM: I think that 10 per cent. should be given to the preference shares, and then that afterwards all shares should rank equally for dividend. In this way I think you will get the capital easily. The Oregon Gold Co. did something of the same sort.

The CHAIRMAN: That company issued its capital on very different terms. It issued new shares at a discount of 15s. per share, and the legality of that act is now being tested in the House of Lords. We wish to make the terms sufficiently tempting to induce the shareholders to take up the capital. For my own part, I think that we should have the better ensured our obtaining the capital we require by going in for a re-construction, but we desired to avoid inflicting a hardship on those of the shareholders who might be unable to take up their proportion in a new company.

A SHAREHOLDER: If the concern is a good one, 10 per cent. is a sufficient inducement, and if it is not you would not get the money on more liberal terms.

SINGULAR COINCIDENCE.

The CHAIRMAN: It is very singular that everybody is willing to go into a concern at 8s. per share when money is not wanted, but that they will not go into one at 5s. when it is wanted. (Laughter.) The addition to the resolution will be one which gives the preference shareholders priority of claim in the event of winding-up. I certainly think we ought to be able to raise the capital, and I move the resolution.

Col. NICHOLSON seconded the motion, which was carried unanimously.

THANKS.

Sir A. HASLAM proposed a cordial vote of thanks to the chairman who had shown great forbearance throughout the meeting, and also to the directors and to Mr. Neild, the manager.

The motion was carried by acclamation.

The CHAIRMAN, in replying, said he thought the company had been very fortunate in securing Mr. Neild's services. He thought he would add considerably to his reputation by his connection with this company.

MINING REPORT FOR SEPT.

Pollock's drive east of valley: As nothing has been got in this drive during the month I have stopped it for a time. Bottom drive: During the month we had a very good vein, tin about 1 ft. wide and still good in the end of drive. The stopes are on fair tin. The stopes at the east end are looking very well indeed and promising for the future. Early in the month I started to drive on a north-east branch of the lode. We are now in 10 ft., and the lode improving in size. This, I think, will support the opinion I hold that the shoot of tin is dipping to the east. The middle drive is still being carried on with a little tin in the end. There is only one party now at work stoping in this drive. The lode has not been cut yet in the north drive, but we expect to cut it shortly. Top drive: During the month a vein of tin was found near the entrance to this drive, and I had men at work preparing to drive on it. I am also laying down rails round the side of the hill, where some good stone can be got by picking. It can be run into the top drive and down the passes to the main tram line. At Willink's the vein of tin-bearing stone has been cut out on west side of drive, and I have started the men to follow it on the east side, where there is a good vein, but progress is very slow, the rock being very hard. There is nothing fresh to report of Kolam Pahat, only that the rock is getting somewhat harder. At Jeram Batang work has been stopped. In Teague's cross-cut I am now preparing to start a cross-cut to cut the lode at a much greater depth.—R. MCKENZIE, Manager.

THE WASSAU (GOLD COAST) MINING CO., LIMITED.

THE MINE WORKING ITS WAY TOWARDS SUCCESS—INCREASED VALUE OF THE PRODUCE—FURTHER MACHINERY PROVIDED—GENEROUS CONDUCT OF THE VENDORS, THE MESSRS. SWANZY.

AN ordinary general meeting was held at the Cannon Street Hotel on Tuesday, "for the purpose of receiving the accounts, directors' report, and re-electing one director and auditor."

Dr. Bishop

(chairman of the company) presided.

Mr. JAMES CLEMENTS (secretary) read the notice of meeting.

POSITION EXPLAINED.

The CHAIRMAN: Gentlemen, however you may feel as to having to meet this board again without receiving a dividend on your shares, I can assure you with perfect sincerity that the members of your board feel it equally with yourselves. We have now had to appear before you for a good many years, but never yet with the power of declaring a dividend. I have not been in that unenviable position so often as my colleagues, but, nevertheless, for several years I have had to take my seat at the board without having the pleasure of declaring a dividend. Now, in consequence of your receiving, faithfully and punctually, what is really an epitome of our proceedings at the mine monthly, as you do in the amount of gold we received, it keeps you informed practically of the main fact of the position, namely, what we are doing at the mine and what gold we are getting from it. Therefore, it does not weigh quite so heavily upon me in having to bring to your notice the exact position when you again see a deficiency. Had it not been for the fact that

OUR KIND FRIENDS, THE MESSRS. SWANZY,

had acted, as I had to say to you last time, so generously in providing money for working capital to meet our deficiency, amounting, as you will see, to a considerable sum, we should be under the dire necessity of calling you together to provide funds. Now, it has been our pride and one of our main objects to keep this mine self-supporting, so that when our capital account was closed, as it was years ago, we should

not have to appeal to you for more. It may be necessary for your satisfaction, almost for your comfort, as well as ours, to learn from our lips (for I am speaking, I know, for my colleagues) that we have never lost confidence in this property, and we believe as firmly as ever in it, if not more, so that we shall be rewarded by waiting, I will not say patiently, because you have done so already, but contentedly, for the time until our plans developed into success. I may tell you one broad simple fact to show you we have a property there that we believe will ultimately give us a very good return.

WHAT THE MINE HAS PRODUCED.

We have had in gold from this property since it has been working 50,000%. Now, a property that can turn out about 5,000% a year, even although situated on the Gold Coast where there are many drawbacks to cheap working, and that will yield an amount of gold like that, is not likely to be abandoned, nor do we propose to do so. We hope we shall receive your support in that policy, and I feel sure we shall. The lode on which we are working, and of which we possess 1,700 or 1,800 yds., we believe to be the main lode of the company. At all events, it has never failed us there, and the deeper we go the more decided is the character of that lode, and the more gold it yields. Two or three years ago we were getting on an average 7 dwts. to the ton. In some countries, like California for instance, that would be a great deal of gold, and they would make a good thing of it, but it is different on the Gold Coast, where the expenses are so much larger. Now, at our latest development (we having sunk four shafts to different depths) we have

STRUCK A LODGE WORTH 15 DWTS. TO THE TON,

and have distinct and clear evidence that on the same lode, not far away, as much as an ounce to the ton has been obtained. But when we sink our shafts to a depth of 300 or 400 ft. we believe we shall have a steady well-formed lode, yielding an ounce to the ton. From those four shafts, when sunk, we expect to get a considerable amount of ore in advance of anything we have had yet, both in quality and quantity. We expect we shall be able (when other levels are put in connection with these lodes) to turn out 700 or 800 tons of ore per month—perhaps more; but I wish to put it in these moderate figures so as not to be excessive. You all know what the value of that gold is. You can see it is a very pure gold indeed, and the mine value is always exceeded when it comes to the assayers, Messrs. Johnson and Matthey, and we get considerably more for it. In presenting these accounts, you will see they are only made up to Dec. 31 last; therefore, as far as the figures go it is a matter somewhat of past history. I must refer, although very briefly, to the current year, nine months of which are past. The serious difficulty we experienced last year, with a long and excessive rainfall, has been repeated to some extent this year, and in sinking one or two of the shafts, connection has been made with a very strong spring of water, which prevented our working to a considerable extent, and we could not get to the mill as much ore as we wanted. Hence, our lessened receipts; but the work had been kept going pretty well with the Swanzy loan to us last year, which was 2,500% or 2,600%, and it is not more now except by about 150%, so that we have had a considerable output, and reduced it in the mill. But we have had another difficulty. You will remember that mill has been there for a number of years, but it has begun to fail us, and our manager says we must supplement it. I may mention that we should have had this meeting some months earlier had we not expected our manager, Mr. T. B. F. Sam, who is on a visit to England to consult physicians as to his health, but who hopes shortly to return. The mill will have to be supplemented, for as we get deeper we find that our ore, which was partly oxidised, crumbly, and soft, nearer the surface, is getting so hard that our present stamps do not crush it quickly or efficiently. Therefore, we must have the mill supplemented by a battery of 10 heads of stamps of a heavier character, and then we shall be able to do as our neighbours are doing—put a very much larger quantity of richer ore (it gets richer as we go deeper) through the mill day by day and week by week. I have a note by the secretary for our guidance to the effect that evidently the ore becomes richer in depth, and at the 400 ft., to which we propose to go, we may reasonably take it that ore of the value of 1 oz. to the ton may be obtained. If we can get ore like that in any quantity, and put it through the mill, as we believe we can do, we shall soon be able to clear off the Swanzy loan, to pay you a good large dividend, and I myself believe that that is about to be accomplished. Until a very recent period, I saw no help for us in our present financial position to meet this case except by calling you together and asking you to furnish money by way of debentures or preference shares.

A WELCOME SURPRISE.

Now, I have a little surprise for you, because we have given no hint of it in the report. In the most handsome manner—I really do not know how to speak of it so as to express my feelings—the vendors, the Messrs. Swanzy, have come forward and said—"We have confidence in the property; we will find you the money for the new machinery you want, and for developing the mine further." (Loud cheers.) That is a thing you will not often find coming from vendors, but in my intercourse with these gentlemen (the Messrs. Swanzy) they have always done the right thing in every way, and the handsome thing is generally the right thing. They are not bound to do it; it proceeded quite voluntarily from them; I never asked them to do it, and no one else asked them, but they have come forward with the proposition themselves. (Cheers.) Instead of asking you, therefore, to find more money to put this mine in a better condition, these gentlemen are going to find the money themselves. You will see a charge for interest, 56% 14s. 1d., up to Dec. 31. It is all we have had to pay them for interest. They only charge 5 per cent., and as we are continually paying them something, the interest is reckoned off what we pay, and a net account is made up. I have to conclude by proposing the reception and adoption of the report and accounts. (Cheers.)

Mr. CROCKER (director): After what the chairman has said there is little for me to add in seconding the proposition, but in addition to the stamping power, which he has mentioned as being necessary, we shall require a Cornish pump, which will drain the whole of the workings, so that at any time when we have very heavy rains again we shall not be subject to the complete stoppage we have had hitherto.

CAPT. PLUMMER AS CONSULTING ENGINEER.

The CHAIRMAN: I also wish to state, by way of supplement, that we have engaged the services of Capt. Plummer, late of the Mysore Mine, as our consulting engineer. I feel additionally pleased that we have adopted this course, because it may be considered as a little safety valve on account of the large sum the Messrs. Swanzy are going to pay. It seems in a measure to take care of their advance. We owe this appointment to the kind influence of Mr. Walter James, who I think may have had some difficulty in getting Mr. Plummer to assist us in this matter, and in the way he has done. It will be satisfactory to you to know that all the machinery that will be ordered, and all the work that will be done in the mine, will be under the ken of Mr. Plummer, and I feel very pleased to be able to announce that fact to you. (Cheers.)

MESSRS. SWANZY COMPLIMENTED.

Mr. WALTER JAMES: The commencement of your address, sir, sounded somewhat gloomy in tone, but I was pleased to observe that towards the latter part of it you brightened up. The liberality, or generosity, of Messrs. Swanzy is very much to be commended. It is well understood that they hold largely the shares of the company, but still, gentlemen in such a position are not often found putting forth their hands to give any assistance in such a case as this. The position of this company is by no means gloomy, nor are we any further removed from success than many mining companies in various parts of the world that have gone through financial throes in the way of re-construction, debentures, and the like, but are as far distant from dividends as ever. You have mentioned an advantage that we have from the services of Capt. Plummer, which I am extremely happy in having been instrumental in bringing about. I am no respecter of persons, but I do hold that he is without exception the foremost mining man of his generation. He has made Indian gold mining what it is, and were he a younger man he would go out to the Gold Coast of Africa and make that a similar mining centre too. There are difficulties there—greater than in most other places, but the matter of climate is not so great a bugbear as formerly, and we are hoping to get relief in the direction of transport, by Government assistance, or in other ways. I think it is understood that the Government are about to make a road from Axim to the mouth of the Ancobra, and I believe there is an idea of clearing the Ancobra River. Now, there is another river at the junction with the Bonsah. I am not at all clear that a great improvement may not be made there. You have a great deal of road carriage, and that road the Government will make, or assist in making, so that over it you may take wheel traffic. There is a point at the Bonsah River, at which a canal might be made. With regard to the accounts, and the great assistance the Messrs. Swanzy have rendered—I think I understood you to say that the indebtedness since the date of this account has not increased very much.

The CHAIRMAN: Very little.

Mr. JAMES: Capt. Plummer came to London the other day, and by the kind invitation of Mr. Crocker I was present at the meeting with him. He inspected the plans, and looked at everything available in the closest manner, and, in the end, gave us every encouragement. Originally, Capt. Plummer inspected these properties nine or 10 years ago. His reports were not used at the time, but it would be not amiss if these reports were again given to Capt. Plummer with all the later information available and the plans prepared by Mr. Sam, in which case I have no doubt he will have valuable material to assist him in the future advice he may give. Mr. Sam is going to return as soon as he is out of his doctor's hands, which will not be long, as he is rapidly approaching recovery. Having been one of the principal vendors of the property to the Gie Appantoo from the Essaman, I would say that the last return from Prestea Mine was 368 tons, which produced 635 ozs., or 1½ ozs. to the ton, and they are now down, I think, only 130 ft. All the Gold Coast wants is judicious management, and with the funds supplied by the Messrs. Swanzy, and under the general direction of Capt. Plummer, I think we shall get along very comfortably. The object of the directors has, first of all, been to make the mine self-supporting, and, therefore, as much has been taken out at a small depth as possible, in order to meet current expenses. (Hear, hear.)

Mr. CLARK: What will be the estimate of cost of the new machinery and pumps required?

The CHAIRMAN: I am afraid I shall frighten Mr. Crocker if I say. (Laughter.)

Mr. CROCKER: I do not think they will cost much more than 2,000l. in England, though I have not had the estimates yet.

The motion was carried unanimously.

MR. CROCKER RE-ELECTED.

The CHAIRMAN, in proposing the re-election of Mr. Crocker, as a director, said: It is not the first time I have had to propose this motion. I need not say a word in favour of Mr. Crocker being again a director of this company, for he is its life and soul. Moreover, he is a member of the firm that is disposed to do all it can to help us. He has been on the Coast, and received absolutely no remuneration, although the work he did was enormous, and of great use. Of all men I know he is the most fitted to be re-elected a director of this board.

Mr. JAMES LABOUCHERE seconded the motion, which was carried unanimously.

Mr. SAMSON proposed the election of the auditor, Mr. Norsworthy, at the same remuneration as before.

Mr. JAMES seconded the motion, which was carried.

THANKS TO MESSRS. SWANZY.

Mr. F. CLARK: I wish to propose the best thanks of the meeting to the Messrs. Swanzy for the generous way in which they have come forward, which is wholly exceptional, and it is only due that the shareholders should express their best thanks to them.

Mr. C. ROYAL DAWSON (director) seconded the motion, which was carried by acclamation.

DIRECTORS THANKED.

Mr. LEWIS, in proposing a vote of thanks to the chairman, said: It is a thankful duty for us to return thanks to the chairman and directors for the way in which they have conducted the business of the company. Had it not been for their careful management, no doubt

we should have had to find further capital, or our progress would have been stopped. They have evidently looked after our interest, and it is our duty to acknowledge their services.

The motion was seconded by Mr. SAYERS and carried unanimously. The CHAIRMAN: I must refer to one particular omission in the balance-sheet.

THERE ARE NO DIRECTORS' FEES,

and I may say that all the money paid by you for the direction of this company from the very beginning has been 250l. (Cheers.) There is also another feature to-day, in the presence of Mr. Sam. It is a new feature, and I am particularly interested in his being here, because it has been a hobby with us to see the property managed by native labour. A younger brother, who has been pursuing his education in England most diligently and successfully, has gone out and will enter our service. Therefore, we have taken care to place ourselves in this position, that should anything occur we have someone to succeed Mr. Sam, of the same honest stock of the Sams—a family that the Messrs. Swanzy have known for many years, and hold in the highest esteem. Mr. Sam, sen., is at present in charge of the mine.

Mr. WALTER JAMES: The two younger Messrs. Sam took as many prizes at the Crystal Palace School of Engineering as they had to bestow.

The meeting then closed.

NORTH TOLIMA SILVER MINES.

STATUTORY MEETING—A PROSPEROUS CAREER LOOKED FOR.

The statutory general meeting of this company was held at 10, Blomfield Street, E.C., yesterday.

Mr. C. O. Rogers

presided.

The SECRETARY read the notice calling the meeting.

THE RE-CONSTRUCTION

The CHAIRMAN: Gentlemen, this meeting is held, as you are aware, to comply with the Act of Parliament, which requires that a meeting shall be held within four months of the incorporation of the company. This company was registered on July 30 last; therefore it is necessary to hold the meeting to-day. We should have preferred to postpone it for a little longer, because Mr. Green, the superintendent, who was over here at the last meeting, left this country about six weeks ago, and had not arrived at the date of the last advices; and it would have been more satisfactory if we could have stated to-day what Mr. Green had to report as to the condition of the mine on his arrival, after having been absent for some six or nine months. The re-construction of the company was carried out very successfully considering the times. The whole of the debenture-holders agreed to transfer their debentures into the new company; and out of 40,000 shares, which were offered to the old shareholders, 31,587 were taken up. The balance of the shares is held principally by executors, trustees, and people that we cannot get at—they have no power to take up the shares, and consequently we can do nothing with them. We hope, however, that as the mine progresses, there will be no difficulty about placing the remainder of those shares. There will be about 7,000 shares with 10s. paid. In the prospectus that we sent out with the re-organisation scheme there was a statement of what would probably be the financial position of the company when those shares were taken up. The balance that we hoped to have as working capital was about 7,000l. Had those shares been taken up there would have been a balance to-day of 7,815l.; but all the shares not having been placed, that balance is considerably reduced. Still, we have something like

4,000l. WORKING CAPITAL

to open up the mine, as we have set forth in the prospectus; and, in addition to that, we have the guarantee of Mr. Powers, the agent, to whom we owe the principal amount of our liabilities, that he will make that amount up to the 5,000l., which we said would be required to open up one of our mines, by taking so much less against his debt. We owe him to-day 11,000l. We have a balance at the bank of 2,230l.; ore unrealised, 6,000l.; cash at the mine, 610l.; outstanding upon the last call, 2,746l.; and there still remains 2s. 6d. a share to be called up, which would realise 3,947l. That works out, as I say, that there will be a balance of about 4,000l. on capital over our liabilities. We regard that as very satisfactory, considering the position we were in a short time ago.

THE MINE.

Now, the most important thing, of course, is the mine. In the prospectus we issued we pointed to the only promising point of the mine—that was the No. 3 level, the last level but one from the bottom—as having a very good lode, worth about 25 cwt. to the fm. Subsequently, a very important discovery was made in the No. 4 level which comes underneath it. That came suddenly into a lode worth something like the No. 3 above. It has fluctuated considerably since then, but the last advice, received yesterday, dated Oct. 16, state that the ore had again come in, and was equal to what it was when the discovery was first reported. Mr. Green, just before he left, received a telegram referring to this lode, stating that the discovery had developed into something very important; they placed the value at something like 400l. a fm. We have had no confirmation of that telegram, and until we hear from Mr. Green we cannot understand how it took place. We believe there must have been a mistake in the cypher. We did not say much about it, for we had some doubt in regard to it, but in our monthly circular to the shareholders we stated that a telegram to that effect had been received. However, I think the shareholders will agree with me that the mine is certainly very much more promising now than it was when we met you a few months ago; and when you consider that in Mr. Green's annual report in valuing the reserves, he takes the whole body of ore standing at the different levels at about 15l. a fm., whereas the ore in these two levels would give from 30l. to 40l. a fm. each, I think it is very satisfactory.

ASSAY.

The assay of this lode at the bottom, according to the advices received yesterday, gave 163 ozs. of fine silver to the ton—which is very much better than we have had at any other of the levels. In an

ordinary silver mine this would be considered very good indeed, but compared with our neighbour, the Tolima Co., it is not very much. But, in addition to the silver, it contains a very strong trace of gold—about $\frac{1}{2}$ ozs. to the ton. These are the words in which our representative refers to the improvement in the lode:—"The lode (No. 4) has greatly improved during the week; it now contains a strong quartz lode from roof to sole of level"—that means that it comes up to the No. 3, which is very important—"containing mixtures and spots of solid mineral; samples taken out were very rich in red silver."

EXCHANGE.

I do not know that there is any other information I can give you. The exchange, which is a very material thing in our working, has gone up to nearly 100 per cent. again, which means a considerable profit to us each month—that is to say the amount that they draw against the ore yields so many more dollars, and we do not pay the workmen any higher wages, consequently it goes towards the reduction of the cost.

Mr. BATTYE proposed a vote of thanks to the chairman and directors, which was seconded and carried.

Mr. SANKEY (director): The chairman has allowed me to return thanks for the vote you have so kindly passed to him. I prefer to regard it as to him rather than the directors generally. I should like to say how we at the board, as well as the shareholders, especially appreciate the great technical knowledge our present chairman has of the business of the company. It is not very often that you will find that some of the directors have visited the mine, and thoroughly appreciated the working of it as Mr. Rogers has. He can tell us in a way we can all understand, knowing something of mining, how the mine is progressing. I, too, have been out to the property, and I would like you to bear in mind the

FAVOURABLE SITUATION

of the mine. It is situated on two slopes, so that the adits all come out to the slope, and the mine really drains itself. When, therefore, we get into good ore, we shall have none of the expense of pumping as in the Tolima Mine. Only three years ago the Tolima Mine was in extremely low water, and was making no profit at all, but a loss. Now we seem to have reached the turning point also in our mine. We seem to be getting on to rich ore, and I hope we shall have as good success as the Tolima Mine has.

The meeting then closed.

GOLDEN LEAF, LIMITED.

MR. STEWART WALLACE UTILISES A MEETING TO ALTER ARTICLES OF ASSOCIATION BY GIVING REASSURING NEWS AS TO THE STATE OF THE MINE.

AN extraordinary general meeting of the shareholders was held at the City Terminus Hotel, on Thursday, for the purpose of considering and, if thought fit, passing the following special resolutions, namely:—

"1. That article 12 of the articles of association be amended as follows:—By striking out the words 'not fully paid-up' in lines 2 and 9 thereof; by adding after the words 'from him' in line 3 thereof the words 'and in respect of every obligation and liability of such person to the company;' by adding after the words 'holders thereof' in line 8 the words, 'and in respect of every obligation and liability of all or any of such holders of the company;' and by adding after the word 'indebted' in line 11 thereof the words, 'or who, in the opinion of the directors, is, are, or may be, under any obligation or liability.'" "2. That article 25 of the articles of association be amended by adding at the end thereof the following words, 'except where, in the opinion of the directors, the company has a lien thereon under Article 12.'"

Mr. J. Stewart Wallace

(chairman of the company) presided.

Mr. H. CAMERON RICHARDSON (secretary) read the notice of meeting.

OBJECT OF THE CHANGE.

The CHAIRMAN: It devolves upon me to move the resolutions just read by the Secretary, and I may just be permitted to say one word while doing it. Unfortunately in our articles, as originally drawn, there has been no provision made by which the directors would have a lien upon shares held by persons who might be under obligations or have a contract with the company, and by which they could have some security for the fulfilment of their contract. It is usual to have it in articles, and we are desirous, with your permission, that it should be introduced into ours. It will not interfere with the transfer of shares by the ordinary holder, but by an oversight it was unfortunately omitted in the original articles, and we are now advised that it would be desirable to seek your permission to have it inserted, and without going fully into our particular reasons, I would ask you to accept my assurance and that of the directors that it is done in the interests of the shareholders. (Hear, hear.) I am told I should put the resolutions separately, and I will do so, for as I have previously said, I am a lover of "law and order." (Laughter.) I move the first resolution.

Mr. CLIPPERTON (director): I second it.

Carried unanimously.

The CHAIRMAN: I move the second resolution.

Mr. CLIPPERTON: I also second that.

Carried unanimously.

INFORMATION FROM THE MINE GOOD.

The CHAIRMAN: I am much obliged to you for the confidence you have been good enough to repose in us by doing what we have asked without asking for explanations. We have reasons at the moment for not entering into particulars. I should, however, not like to have brought you here in this way without being able to say something further to you. Our information from the mine is still of the same reassuring and satisfactory character. You will recollect at the last meeting it was our intention to put up 10 additional stamps when we felt that the quantity of ore in sight warranted it. In this respect our anticipations have been realised much more quickly than we had reason to suppose would be the case when I was at the mine

in Aug., and the result has shown that we were fully warranted in erecting the other 10 stamps, and you may take it that

WE HAVE 12 MONTHS' SUPPLY FOR OUR 20-STAMP MILL

when we set it going. (Cheers.) I thought I had been clear enough on the point in indicating that we had the outlay on these 10 stamps already provided for, and the stamps on the ground for simply an expenditure of 1,000*l.*, for which we have ample funds. Everything was paid for or the money is in the bank, and so there is

NO GROUND FOR THE STATEMENTS CIRCULATED BY "BEARS"

that we intend creating debentures or other forms of security for the purpose of raising additional capital. There is no such intention for the best of all reasons, that there is no necessity. We have all the money we require for the purposes of the company, and you may take it from me, I repeat, that there is no such intention because there is no such necessity. I can only repeat that our latest advices are quite as satisfactory as ever, and fully equal to those I had the pleasure of laying before you when we met here some four weeks ago.

A SHAREHOLDER: I should like to know if you have any information as to how long it will take to put up the 10 stamps.

WHEN THE MILL WILL BE READY.

The CHAIRMAN: I should think the 20-stamp mill will be at work by the end of Feb., if not before. The pans and settlers are the parts we have to get, and if we had them we should probably be ready in a month or six weeks. These are coming from Chicago, and will take a little time, although we have all the remainder of the goods. If they were on the ground it would not take us more than a month to start, but by the end of Feb. I think we shall have all the necessary additional machinery from Chicago erected, and in working order. If there is anything else you would like to know I shall be happy to give you information.

In reply to a question by Mr. SHORT,

The CHAIRMAN stated that the word "Bannack" in the last telegram was accidentally substituted in copying for the words "Golden Leaf," and he expressed the hope that this inadvertence had caused no inconvenience to the shareholders. It was their code word, and, though understood by the directors, might not be by the shareholders.

The meeting closed in the usual way.

SOUTH CONDURROW.

A SMALL PROFIT ON THE 16 WEEKS' WORKING—STEADY PROGRESS.

A MEETING of the adventurers in South Condurrow Mine was held at Windsor Chambers, Great St. Helen's, London, E.C., on Wednesday. Mr. Charles Clark

presided.

The notice convening the meeting having been read,

The CHAIRMAN said that the meeting was called in compliance with the 25th section of the Stannaries Act of 1887, which provided that every cost-book mine should hold a meeting of shareholders at least every 16 weeks for the purpose of transacting the ordinary business of the company, and at such meeting the accounts, should be open for the full and unrestricted inspection of any shareholder present. The accounts were there open for inspection.

ACCOUNTS.

The accounts showed as follows:—Labour costs, bills and dues for the four months to Oct. 24, 5,555*l.* 17*s.*; sales, 5,589*l.* 9*s.* 9*d.*; discounts on merchants' accounts, paid 3*l.* 3*s.* 2*d.*; carriage of tin, 3*l.* 9*s.* 1*d.*; total, 5,596*l.* 2*s.*; showing 40*l.* 5*s.* in excess of the costs. There had been a very perceptible rise in the returns month by month. At the last meeting the sum of 1,804*l.* 15*s.* was carried forward, and they were carrying forward to-day 1,845*l.* He thought the shareholders would consider that statement on the whole very satisfactory—at any rate, it was evident that they had turned the corner. (Hear, hear.)

LETTER FROM CAPT. RICH.

The CHAIRMAN then read the following letter, which had been received from Capt. Rich that morning:—

"Dear sir,—I returned yesterday from my trip to Spain. I find that you have the meeting to-morrow. We have cut through the large lode in the 133 cross-cut, north of Marshall's shaft. We shall begin to open on this lode in a few days to prove it away from the cross-course. In the meantime, we shall force on the cross-cut north to intersect the small perpendicular lode, which yielded rich tinstone in the 125-fm. level; and also to reach the main tin lode, and to communicate with the winze sinking on it below this level. We had an opinion that Marshall's lode had been thrown south by a cross lode we found in sinking below the 123. We have driven a cross-cut south at the 133, and intersected the lode referred to. As far as yet seen, it has

A VERY PROMISING APPEARANCE.

It is letting out water freely, and carries tin-stone of moderately good quality. We shall open out on this lode in a few days, as soon as it is fairly cut through.—I am, &c. (signed), W. RICH. P.S.—Our tin to-day realised 58*l.* per ton."

A SHAREHOLDER said he thought it a very satisfactory feature that the returns from the mine were improving. Was the price any better now than it had been during the year?

The CHAIRMAN said it was a trifle better, but was still a great deal too low. They could not, however, get the smelters to see it.

The meeting then closed.

LATEST REPORT.

Nov. 25.—We have cut through the large lode in the 133 cross-cut north of Marshall's, and intend to open out on it in a day or two. In the meantime we are urging on the cross-cut north by six men to intersect the perpendicular lode, and also to reach the main tin lode. We have intersected Marshall's lode in the 133 cross-cut south, but it is not yet cut through; the lode carries tinstone of moderate quality, and is letting out water freely. The flat lode appears to be regular and well defined in the winze sinking below the 123-fm. level. We

are not breaking the wall of the lode in sinking, as we are anxious to get the winze down by the time the 133 cross-cut is driven to intersect the lode. The stope in the bottom of the 123 east of the cross-cut is worth 12½ per fm. The stope in the back is worth 10½ per fm. Two stopes in the back of the 40 east of engine shaft are worth 11½ per fm. each. The stope below the 60 east of King's on the north section of the lode is worth 15½ per fm. — W. RICH, W. THOMAS.

THE SPES BONA GOLD MINING CO.

PROPOSED RE-CONSTRUCTION.

AN extraordinary general meeting of the Spes Bona Gold Mining Co. was held at Liverpool on Nov. 17, to submit for confirmation resolutions passed at an extraordinary general meeting of the company held on Oct. 29.

Mr. D. de Ybarrondo

presided.

The CHAIRMAN proposed the confirmation of the following resolutions:—"That it is desirable to re-construct the company, and that the company be wound up voluntarily under the provisions of the Companies Acts;" "That Mr. Henry Douglas Eshelby, chartered accountant, of 24, North John Street, Liverpool, be and is hereby appointed liquidator for the purpose of such winding-up;" and "That the liquidator be and he is hereby authorised to sell and transfer the business and property of the company, with all its liabilities, to a company about to be incorporated under the Companies Acts with the name of the New Spes Bona Gold Mining Co., Limited, and to receive in compensation for such sale and transfer 120,000 shares in such company of 1½ each, with a sum of 12s. 6d. per share credited or paid thereon, and on such terms and conditions as the liquidator may think fit." The chairman remarked that since the last meeting a great number of

SHAREHOLDERS HAD COME INTO THE ARRANGEMENT,

23,782 shares having been actually signed for, and promises had been received for 49,210. The absolute number of shares applied for at the bank and deposits paid on was to-day 16,928.

Mr. H. E. RENSBURG asked if every new share allotted must be represented by an old share.

The CHAIRMAN said so far as the company was concerned, they could not allot to anyone except on the old form, unless the new shareholder would be willing to pay 12s. 6d. for the new share; and the company would not allot to a shareholder a greater number of shares than those he held in the old company.

Mr. E. EDMONDSON seconded the proposition, which was carried.

Mr. R. JEVONS asked if it was contemplated sending anyone out to look after the interests of the new company.

MR. BRADSHAW WILL GO OUT.

The CHAIRMAN said the matter had been considered, and they had approached Mr. S. C. Bradshaw, who had been out before, and who would meet with the approval and receive the confidence of everyone in that room. (Hear, hear.) Mr. Bradshaw was not desirous of going

out, but he said if it was essential he would rather go out than that the mine should go wrong.

Mr. BRADSHAW said he would like to say he was prepared to go out, because he believed that the mine with patience and perseverance would prove a success. If the day never arrived when they could pay a dividend on the whole of the capital of 126,000£, which had been spent on the mine, they might still have confidence that the money which was now being put into the mine would have a handsome remuneration in the course of a year or a year and a half. The prospects of improvement were not visionary, and they argued they were entitled to look for better prospects from the rock, and as a result of their experience in sinking. He had a letter on the previous day from Mr. Leslie, one of their directors, informing him that excellent ore had been struck. Another thing which gave them confidence was that their manager at the mine was an able and honest man, and thoroughly devoted to his work.

A vote of thanks to the chairman for presiding concluded the proceedings.

THE AMERICAN ASSOCIATION, LIMITED, announce that the coupons of the First Mortgage Five Per Cent. Gold Bonds of the Knoxville, Cumberland Gap and Louisville Railroad, due Dec. 1 next, will be paid on and after that date at the office of Messrs. Cary and Whitridge, 59, Wall Street, New York.

CALLAO BIS (Oct. 25.)—Advices from the mines:—Independiente: Since the 12th inst. the shaft has been continued a further distance of 2 ft.; total from surface, 203 ft., or 13 ft. below the No. 4 cross-cut. We shall commence at once to fix our plunger lift; the timbers are already in their place. The No. 4 cross-cut has been advanced 8 ft., or 26 ft. from shaft; ground still very hard. The No. 3 level south has been advanced 20 ft., or 120 ft. from cross-cut; lode 3 ft. wide, of fair value. I am very pleased to say this is the continuation of the same shoot of ore which we are working on in the level above, as I told you in my last there was every hope of meeting it soon. Water is proceeding out of this level very freely. The No. 2 level south has been advanced 16 ft., or 210 ft. from shaft; lode 2 ft. wide, of good value. Communication is made to the raise from level driven in bottom of the No. 2 winze. This has opened out a very good piece of stopping ground. The continuation of this level south of raise has been advanced 12 ft.; lode showing 4 ft. wide, of good value. Raise in the back of this level has been advanced 6 ft.; lode showing 4 ft. wide, of good value.

HOLLOWAY'S PILLS.—This purifying and regulating medicine should occasionally be had recourse to during foggy, cold, and wet weather. These Pills are the best preventive of hoarseness, sore throat, diphtheria, pleurisy, and asthma, and are sure remedies for congestion, bronchitis and inflammation. A moderate attention to the directions folded round each box will enable every invalid to take the Pills in the most advantageous manner; they will be taught the proper doses, and the circumstances under which they must be increased or diminished. Holloway's Pills act as alteratives, aperients and tonics. Whenever these Pills have been taken as the last resource, the result has always been gratifying. Even when they fail to cure, they always assuage the severity of the symptoms and diminish the danger.

FOUNDED 1871.

BANKERS:—ALLIANCE.

"MINING WORLD" Stock and Share Agency.

CORRECT INFORMATION IS THE BASIS OF SUCCESSFUL DEALING IN MINING SHARES

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for Cash.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

DEVON GREAT CONSOLS CO., LIMITED.

A FOUR HOURS' BATTLE RESULTS IN A MAJORITY FOR THE BOARD ON A POLL.

THE ordinary general half-yearly meeting was held at Winchester House, on Wednesday.

Mr. Peter Watson, C.C.

(chairman of the company), presided.

Mr. GEORGE HADLEE (secretary) read the notice of meeting.

In order to give as much space as possible for the discussion on the management, we purposely limit the chairman's opening observations.

FACTS OF THE HALF-YEAR.

The CHAIRMAN began by pointing out that for the half-year ending Oct. 31, 1891, the sales of copper had realised 2,898*l.*, and the amount received for sales of arsenic was 15,658*l.* The accounts showed a credit balance of 2,974*l.*, whilst the loan account had been reduced from 6,500*l.* to 4,000*l.*, being a reduction of 2,500*l.*, and but for the lower price of arsenic this reduction would have been larger. The recent changes in the management had proved beneficial in every way, and under the direction of Capt. Clemo, the local agent, good deposits of mineral were being found. The Chairman next proceeded to call attention to the salient points in the accounts, and concluded as follows:—But for the fall in the prices of copper and arsenic we should have shown a much better account than we now do. I am not going to refer to the circulars which have emanated from Mr. Sloper, who has given notice of an amendment. I shall have to reserve my observations on that point until I hear what he has to say—merely premising that I shall give a sufficient answer to the satisfaction of every shareholder. In the spirit of fairness, I think it my duty first simply to move: "That the report and accounts be received and adopted."

VIEWS OF A NEW DIRECTOR.

Mr. THOMAS NICOLLS ROBERTS (director): I beg to second the motion for the adoption of the report and accounts, and in doing so I may perhaps be permitted to offer a few observations on two documents issued by Mr. Edwin Sloper, viz., a post-card, dated the 14th inst., and a circular, dated the 17th inst. On the post-card, he speaks of the "unsuccessful management of the mine." I hold, as every man of common sense must hold, that the statement of receipts and expenditure is a triumphant contradiction of this assertion, which Mr. Sloper—acute logician though he may be—will find it impossible to justify. I only wish that some other mines in which I am interested could show management of so successful a character. I met a shareholder on the 21st inst., whom I have not seen for several months—an accountant, who voluntarily said to me, "It is the best report I have received from Devon Great Consols for many years." He is an old shareholder, and I will give his name and address privately to anyone who doubts my statement. In the opening paragraph of Mr. Sloper's circular he says, "A certain portion of the large loan has been paid off, which may mean anything or nothing, as no figures are put before you of the liabilities of the company." The accounts set forth facts, which are tangible things, and how they can mean nothing, even Mr. Sloper, with all his great ability, will find it difficult to prove. As to the liabilities, they could not be put before you for the simple reason that none exist, beyond the remainder of the loan, which is put before you. Possibly Mr. Sloper, with his fertile mind, may create some; but we shall hear what he has to say. In the second paragraph Mr. Sloper says Mr. Watson was appointed managing director at 500*l.* a year. It is to be regretted that Mr. Sloper is not more accurate as to this and other facts, for he would throw discredit on any case, however good, by such misrepresentations as he has made in this circular.

"WISDOM AND WORK."

Mr. Watson's appointment was made by the board of directors at a board meeting on June 13, 1879; his salary to be 250*l.* per annum. At the meeting of shareholders, on May 26, 1880, the late Mr. H. C. Stewart said he "thought he had the meeting entirely with him in proposing that the services rendered to the company by the indefatigable chairman be more adequately remunerated. They had all recognised the worth of the chairman. From daily and constant intimacy he had found in that gentleman the happy union of wisdom and work, and he now ventured to move that the salary of the managing director should be doubled from henceforth." At a meeting of the board held immediately thereafter, on the same day, this recommendation of the shareholders was carried into effect, and Mr. Watson's salary was fixed at 500*l.* a year, which he reduced last year to 250*l.* Mr. Sloper then alludes to the "two calls of 10*s.* each," but probably he does not know, although he ought to have made himself acquainted with the fact, that they were rendered necessary by the requirements of the Duke of Bedford on his foregoing his royalties until dividends were

resumed, and I may here observe that if that boon had not been obtained by Mr. Watson, the mines must have been closed.

MR. SLOPER'S WRONG CONCLUSIONS.

Mr. Sloper says, "The company being largely indebted, without any shadow of prospects of a dividend, it is high time we should inquire into the management." We are told on the highest authority, "by their fruits shall ye know them," and as we have paid five-thirteenths of the loan off this half-year, we may be able to pay the remaining eight-thirteenths off in the next twelve months. But I do not suppose even Mr. Sloper is so unreasonable as to expect that we can do so if the price of copper and arsenic should be unduly depressed. I will indulge in no prophecies; but if the price of those commodities are maintained at a paying point, and if the mine continues in its present state of productiveness, we shall have a fair chance of both paying off the loan and paying a dividend within eighteen months from this time. Mr. Sloper says the original capital of the company was 1,000*l.*; it was 1,024*l.* He further says, "At the present time the Devon Great Consols is the laughing stock of the Cornish miners." I will ask him in the speech, which he will shortly make, to furnish the names and addresses of any responsible Cornish mining captains who indulge in this hilarity. He also says, "In our case the London board is very expensive; they have many occupations, quite a family arrangement as to sitting on the same boards, and they rarely visit the mine."

DIRECTORS DEFENDED.

I sit on this board and that of Devon United only, and have not "many occupations." Mr. Glen is associated with Mr. Watson on other boards, and as he always shows himself to be a thorough man of business, with a clear head, Mr. Watson is fortunate in having such a colleague. As to visiting the mine, we do so only when we think it is in the interests of the shareholders that we should go, as we do not think it right to waste their money and our time in useless visits. Then Mr. Sloper says that "Mr. Watson receives 126*l.* per annum for rent alone," the fact being that he receives 100*l.* per annum for rent of offices—which he furnishes—and for the use of clerks; and he also says the same office is let to the Mid-Devon Co., which is untrue; and he further says the gross rental of the whole is not 300*l.* a year; the fact being that the rental is 795*l.* a year. With reference to Mr. Sloper's remarks about Mr. Bawden, I think Mr. Bawden can take care of himself, but I strongly advise him to obtain the best legal opinion he can as to whether he has, or has not, a good ground of action against Mr. Sloper for malicious libel. Mr. Sloper states that Mr. Oxland "has recently sold all his shares." Mr. Oxland is still a shareholder. Mr. Sloper refers to a statement made by the late Mr. Stewart "that there was an alliance between Mr. Bawden and Mr. Watson that he could not fathom." The inference is that there was a clandestine alliance, which I believe to be wholly baseless, and, therefore, there was nothing to fathom. It is like the question of the liabilities which do not exist, and reminds me of the lines:—

"The Spanish fleet thou canst not see,
"Because it is not yet in sight."

Our liabilities are simply a coinage of Mr. Sloper's brain, and the occult alliance I have referred to was a similar coinage of the late Mr. Stewart. I have now shown the untrustworthiness of many of Mr. Sloper's allegations, and would remind him that in framing an indictment he should not indulge in vague generalities, but descend to particulars which he can prove, otherwise he cannot hope to obtain a conviction. And now a word in Mr. Sloper's ear, and in the ears of his confederates in the cabal.

A VERIFIED PREDICTION.

We gave the opposition a sound drubbing last year; we shall give them a sounder drubbing this, and if they choose to prolong this internecine war we will, on the next occasion, give them the soundest drubbing of all. If they are for war, so are we, and we will neither give nor ask for quarter. Personally, I feel very strongly that Mr. Glen and myself, who have only been in office for six months, and who have given honest and unremitting attention to our duties, should be the subject of an indictment, almost before we have had a chance of showing whether we have any administrative capacity; but yet, in conjunction with Mr. Watson, we have done good work. He and Mr. Bawden, however, are the men against whom the attack is levelled, and the more violently they are maligned, the more strenuously will I work on their behalf. It was not without reason that Job said, "O that mine enemy would write a book." Mr. Sloper has written not exactly a book, but a transcript of his mind, and his reputation is not likely to be greatly enhanced by his performance. Indeed, if he is well advised, he will let pen and ink severally alone in connection with Devon Great Consols, unless he can formulate something which will not sin against propriety. I hope the proceedings of this meeting will be extensively read in Taunton, so that the Tauntonians may see what "a gem of purest ray serene" sparkles in their midst. To those of you who follow him in his gropings through the thicket of his blunders, I would say, do not be surprised if you all fall into the ditch; the general fate of those who follow blind guides. At the close of this day's proceedings the cabal may consider themselves as

addressed in the words of the immortal Dick Swiveller after he had castigated Quilp: "Will you have a little more?—don't say no, if you'd rather not." (Cheers.)

The CHAIRMAN called upon Mr. Sloper to address the meeting.

MR. SLOPER STATES HIS CASE.

Mr. SLOPER: The amendment I have to propose is the following: "That the report and accounts be not adopted, but a committee of investigation be appointed, not to exceed four, to be named by the meeting, for the purpose of ascertaining the present position and future prospects of the Devon Great Consols Co., Limited, that they be and are hereby empowered to examine all the books, accounts, properties, *employés* of the said company, and any other persons they think desirable, and report the result of their investigation at an adjourned meeting to be held this day month. That their attention be specially directed as to how and in what way the company can be conducted in future for the benefit of the shareholders, and that the travelling expenses only of the said committee be paid out of the company's funds, and that this meeting be adjourned until this day month for the purpose of receiving the report of the said committee, and that in the meantime the transfer books remain closed until a day after such adjournment." If I make a mistake I am always willing to own it. I shall take very little notice of the remarks of Mr. Roberts, who has already been in one liquidation of a mine with which Mr. Watson was connected. (Oh.)

The CHAIRMAN: You must speak as to the report and accounts.

Mr. SLOPER: The chairman supported personalities when directed against me, but does not find it convenient to do so when directed against himself.

MR. SLOPER'S MISTAKES.

It appears I have made a mistake of one year in saying that Mr. Watson was appointed in 1879 at a salary of 500*l.*, for it appears to have been in 1880. Again, with regard to this company ceasing to pay dividends—you have not had one from 1880 to the present time. (Hear, hear.) That is 11 years, and during that time what have you drawn out of the company? Not only your salary as managing director and your directors' fees, but you have had the rental of offices, which I consider very expensive. There is another mistake I have made, namely, that Mr. Peter Watson receives 126*l.* per annum from the company's funds for rent alone. There is nothing in the accounts that will show you what the rent is. I took that 126*l.* from the full

REPORT APPEARING IN THE "MINING WORLD,"

and which was circulated amongst the shareholders. If that was scanned by you before it was put in print, I have it here, and if 126*l.* is wrong Mr. Watson is responsible for that mistake. (Oh!) There is another error in my circular with regard to the gross rental of the building (300*l.* a year), which should have been the rateable value. Now, what do you pay for your offices? You get 100*l.* a year from Devon Consols, and also a rental from Devon United. There are three offices on the ground floor at the back, and I object to that item on the ground of economy. You have splendid offices at the mine, and a board room, and that is the place where you should meet. (Cries of "No.") Now, as to the accounts. Before the accounts rendered last April, it was always "amount received for sales of arsenic." Now, you have added a new item, "advances against arsenic in course of delivery," and in the accounts now under discussion you have repeated the same item.

The CHAIRMAN: That is not correctly read—it should be "arsenic made."

Mr. SLOPER: "Made, and in course of delivery."

The CHAIRMAN: It is "amount received for sales of arsenic, and advances against arsenic made in course of delivery."

Mr. SLOPER: It was "sales" before. It would seem from the figures that

THE COMPANY IS IN A WEAKER POSITION;

but on the opposite side, in order to swell the balance, you have bills receivable 2,000*l.*, but you do not state whether these are for arsenic manufactured to the end of Oct. 31; neither do you state that you have arsenic on hand. Are the bills receivable for arsenic up to Oct. 31, or is any arsenic pledged that has to come from the mine beyond Oct. 31? Presuming the bills receivable are not for arsenic yet to be manufactured after that date, or to use the objectionable phrase which you have now introduced into two half-yearly balance-sheets, "advances against arsenic in course of delivery," you are in a worse position than you were six months ago. I criticised the accounts then, and you stated not only in the report, but at the meeting, that you had ample to cover the loans and 1,499*l.* due to sundry creditors. Now, what is the position? (Cheers.) You claim a balance of 2,974*l.* You have copper ore to receive, 567*l.*—together 3,541*l.*; against this you owe 4,000*l.* Therefore, according to your own showing, you are

500*l.* WORSE OFF THAN YOU WERE ON APL. 30

last, independent of any liability, such as due for staves at Plymouth and other debts, and yet you have tried, by circular and newspaper paragraphs, which no doubt you have written, or, at least, been instrumental in putting in—(oh)—tried to persuade the shareholders there are no liabilities. I say you have attempted to prejudice the question, and it is altogether unworthy of any respectable body of directors to do so. In your report (page 5) what do you do? You have—"loan account"—this, it will be observed, has been reduced from 6,500*l.* to 4,000*l.* I ask any man acquainted with the balance-sheet what he would take that 6,500*l.* to mean. It would mean that it had been brought forward from the last account. Instead of that, what was it? They have made 1,000*l.* of a mistake. You have borrowed 1,000*l.* during the half-year, taken credit for it in the loan account of this half-year, and then say you have paid off 2,500*l.* during the half-year, whereas you have only paid off 1,500*l.* Therefore, my point has been made good that you are worse off by 500*l.* than you were six months ago. You have alluded in your circular to my questioning the auditor's figures. We have no more worthy men in the City of London than our auditors, and I will take their certificate. You know well that Mr. Freese is one of them, and that he said at the last meeting, "This is a one-man board." What do you do? You dismiss Mr. Allen, the secretary, and pay him six months' salary. Was

that economy? Capt. Isaac Richards, one of the finest men in Devon, with a character you cannot sully, is also discharged, and you

SEND HIM OUT OF HIS HOUSE LIKE A DOG.

The CHAIRMAN: Shameful! No such thing. Capt. RICHARDS: It is quite true.

Mr. SLOPER: But for Capt. Richards you would not now be in that chair. It was he who originated the arsenic works; carried them out, did the assays, and has attended to his duties from early morn to late at night, but you discharged him ignominiously, and without a reason. During his time he has manufactured no less than 400,000*l.* worth of arsenic, and has spent 46 years in your service. I now come to Capt. Clemo. Not one word shall be uttered by me against him. He has been a wonderfully good underground man, but what does he know of arsenic works, and what does he know of assaying? Here is your circular of Nov. 18 which you issued to all the shareholders, but did not send one to me, or to any shareholder in Bristol neighbourhood. Capt. Richards telegraphed to me about it, and I could not understand what it meant. With regard to the articles which have appeared in the papers, what did you do—you or some of you? Not one single circular has been issued by me except to the shareholders until to-day, when the Press were good enough to ask me for copies.

A GRAVE CHARGE.

You incited those articles in the papers.

The CHAIRMAN: Are you alluding to me?

Mr. SLOPER: I say someone behind that board has done it. (Oh.) Whether you have interviewed these gentlemen or not, I do not care; I leave that to your judgment. Last year you attempted to cut out the remarks I had made.

The CHAIRMAN: I deny it. I give you back the lie to your face. (Cries of "Oh," and uproar.)

Mr. SLOPER: It is the custom, before the report is put in print, that it should be scrutinised by Mr. Watson; the manuscript is put in his hands, and is afterwards put into print. In several newspapers my protest against Mr. Bawden's appointment is recorded; and now I come to the reason. Mr. Bawden dishonoured a cheque which was drawn on Devon Consols account at the Tavistock Bank, and there is also a certain sum of money, 400*l.*, due to various funds associated with the company. Mr. Bawden should produce the account which was kept in the Tavistock Bank in the name of the company, and if I am wrong in that statement I will give 20 guineas to any hospital you may name. Mr. Watson states, "The re-instatement of Mr. Bawden was by desire of the shareholders." What? In the face of the protest, and in the face of its being left out of the official report that he was re-instated by the desire of the shareholders! Not one word was said with regard to it by any shareholder. It was stated in one paper that I dated my circular from Stuckey's Bank, and wonder was expressed why such a respectable concern could be connected with such a matter. I have the honour of being employed by one of the finest and best managed institutions in this country, with a board above suspicion, whose confidence I have held for 27 years.

A SHAREHOLDER: You have inspired the articles.

The CHAIRMAN: I deny it absolutely. (Cheers.)

The SHAREHOLDER: Somebody connected with your board then.

Mr. ROBERTS: That is a direct falsehood.

DANIEL IN TWO POSITIONS.

Mr. SLOPER: You may inspire leading articles in papers, and may so far forget your duty as to tell what certain persons have paid for their shares in your circulars. You have said that I paid 57*l.* 10*s.* for mine, and there was a funny remark as to "A Daniel come to judgment"—I forget the remark.

A VOICE: Daniel in the lion's den. (Loud laughter.)

Mr. SLOPER: You said my circular was "flabby"—a nice expression for a London board, but I am a simple countryman. I paid more for my shares than appears on the transfer, which is not always an indication of the real payment, and long before I had them I was interested in this company. Every honest man will think that statement is unworthy. (Laughter.) You may shield yourselves behind proxies obtained by cunning and misrepresentation. You may cut up reports of meetings and call them official, but if you do not bend to the stubborn facts with which you are assailed they will meet you none the less. You may attempt to discredit my endeavours to put this mine on a good footing. You may even so far forget yourself as to intrude upon my public duties, but from to-day you will meet with deserts which you have brought upon yourself alone, and I leave this meeting to judge whether the charge of unscrupulousness which you have made against me should not be put into your own mouth. (Cheers.)

Mr. CARR: I rise to second the amendment, as a shareholder of 12 or 14 years standing. I never met Mr. Sloper before, but think these accounts should not be passed,

BECAUSE THERE IS NO BALANCE-SHEET.

I am a chartered accountant, and cannot understand any auditor signing the accounts without a balance-sheet. We do not know the liabilities or assets, and the form of account is altogether peculiar—simply receipts and payments, which mean nothing. For the future we should have a proper trading account, showing stock on hand, and then charging it with all the expenses, credit being given for the sales that have taken place and stocks on hand, with a balance-sheet showing the total liabilities and assets. From this account we cannot gather our position. We have reduction works, 15,658*l.*, but on the other side, expenditure 9,553*l.*, but does not part of that expenditure go against the 15,658*l.*? Then you get credit for reduction works, 4,800*l.* only. Does that mean that this was expended, and that you received 15,658*l.* for it? If so, I say continue the reduction works, because they are profitable; but if you have the other item, then these works are not so satisfactory. I do not think any harm can be done by the proposed committee, and I think the board should not oppose it. I may point out that if the amendment is carried,

THE ADJOURNED MEETING WILL BE HELD ON CHRISTMAS DAY.

Mr. EDWARD STOUT: I support the amendment, and though I noticed from your speech, sir, that you said you would be impartial, you did not check Mr. Roberts in the remarks he made about cabals and cliques. Circulars have been sent to some shareholders, and not

to others. I hold 310 shares, which is no small stake, and the shares, I believe, are down owing to bad management. I see no harm in the amendment, because if your management is good you need have no objection to a committee. But why not sell up everything, and realise the 2½ a share of which you spoke in the May report? You have prophesied often, and on some occasions have been right, but now we find your judgment about arsenic and copper at fault.

Dr. ROBERT OXLAND: I rise to support the amendment as one who has been libelled as the member of a cabal by a director whom I have never seen before. I defy him to say that any such appellation applies to me. I believe there is still in this mine sufficient to warrant investment for a considerable number of years, and I speak from a knowledge of it from the commencement down to the present time. Year after year something like

30,000%. WORTH OF MINERAL HAS BEEN EXTRACTED,

but what has been done with the proceeds? The operations themselves are grand, for Devon Consols is known the world over as a distinguished mine for the manner in which it has been worked in the past, though it does not figure so well looked at from the dividend point of view. If this has been done for 11 years it will amount to 330,000% worth of mineral, but how much of that has come into the pockets of the shareholders? 17s. per share.

Mr. ROBERTS: No; 36s. per share.

Dr. OXLAND: Against that you have had two calls of 10s. each, and if my figure of 17s. is correct, you are 3s. to the bad. The cabal are inclined to do good to the old mine, and if possible to bring it into a dividend-paying condition.

Mr. CARR: Is it with the authority of the board no balance-sheet has been issued this half-year?

Mr. SLOPER: It is only published once every year. Was there any pay-sheet due on Nov. 2?

AN UNREALISED FORECAST.

Mr. SEAL: I support the amendment. It is about 18 months since you issued a circular in which you held out to the shareholders distinct promises as follows:—"Frankly, I may tell the shareholders my opinion, which is this—if each and all the shareholders will repose in me that kindness, consideration, and confidence which I have received at their hands for so many years, and if I have a free hand in the future as in the past, I think there is every probability, I may say bordering on a certainty, that there will be a sufficient profit made equal to at least a dividend or dividends amounting to 5s. or 6s. per share, or equal to 12½ or 15 per cent., if not more." Is there the smallest reference in the report, or in your speech to-day, to that promise, or any explanation why it has not been fulfilled. Only this, that the price of arsenic has not been what you had hoped. But you knew the speculative nature of the markets, and in view of Mr. Watson's great experience, it was for that reason we say to him, "To him whom much is given shall much be required." (Laughter.) I think the time for investigation has come. The report is not untrue; it is not misleading, but it is cloudy. You take credit for having reduced the loan by 2,500%, and yet Mr. SLOPER has shown that you did nothing of the kind. It was only due to shareholders that you should have drawn their attention to the 1,000% borrowed within the half-year, which you have paid off, leaving only 1,500% of the other part of the loan paid instead of 2,500% as claimed.

Mr. WITT: I want to know the amount received for sales of arsenic, 15,658%—how that big figure is made up? What have been the receipts, and how much represents the advances, and who has made them? How much arsenic has been sold and at what price?

The SHAREHOLDER: I do not think the price should be stated, (Cheers.)

Mr. WITT: Under what circumstances do the bills appear?

The CHAIRMAN: We have had all these questions before.

Mr. WITT: The chairman reports that the change of management has proved beneficial to the company. I paid 16% each for my shares 11 or 12 years ago, at the time Mr. Watson first took the management.

The CHAIRMAN: You know my reply to that.

Mr. WITT: I bought them from Mr. Watson, and at that time there was 9,000% to the credit of the company, and 10,000% in calls have been paid since, and a house has been sold for 3,000%, but the selling value of the property then was 163,840%, but it is now 3,840%, and the shares are at about 7s. 6d. each. Mr. Roberts speaks about a cabal, but I was asked for and gave my proxy, and that is the extent of my "caballing." The point before the meeting is, have the shareholders a right to information. I asked a lot of questions last time, and was told to go to the office, but I found the secretary, after 17 years' service, had been suddenly changed. No one has ever suggested that Mr. Allen has done anything unbecoming his position, and it is wrong on the part of the directors to have acted towards him as they have done. I think the

DIRECTORS OUGHT TO COURT THIS EXAMINATION,

because if they come through it triumphantly Mr. Watson would be so big that the room would not be able to hold him. (Cheers and laughter.)

Mr. J. H. COLLINS: I am a small and a new shareholder, but do not think those are reasons why I should not have a word to say. I may also assure you that I have no connection with any of the gentlemen who are supposed to belong to a cabal. I do know something about Devon Consols, and have watched it for years. It seems there is only one reason for not appointing this committee, and that is, that its triumphant result for the directors might make Mr. Watson too big for the room. (Laughter.) I hope that would not be the effect. I think the present board would gain as much by the investigation as the shareholders themselves. (Hear, hear.) I shall feel bound to support the amendment, upon the ground that I think the affairs of the mine should be looked into by those people who own it.

Mr. PAGE: I also support the amendment, and trust the directors will not oppose it. If we have a committee, let it be an impartial one.

Mr. GEORGE COLLINS: It is only fair to the directors that the committee should not be exclusively composed of those who have attacked them. Strong feeling has been exhibited on both sides.

EXPERIENCE OF COMMITTEES.

Mr. AKERS: My experience of committees is that they do not produce much good. I agree, as an accountant, with Mr. Carr, that the accounts want amendment in form. Cannot you add another director to the board?

Mr. BOYCE: I should like to have more practical information with regard to the amendment before the vote is taken, and to ask Mr. SLOPER what he thinks will be its practical outcome. A committee certainly casts censure upon the board (Hear, hear, and No, no.) It must have that effect. Everything in the accounts is correct, and every information can be obtained by direct questions to-day.

I CANNOT ADMIRE THE TASTE OF MR. SLOPER'S CIRCULAR, which seems to indicate that he has an idea of developing the mine in some other way than the company has done. He seems to think the directors should meet there, and that he himself would make an admirable managing director. (No.) On the face of it, it would bear that interpretation. (Cheers.)

Mr. GRIFFIN: I have 180 shares, and came here prepared to support the directors, but after what I have heard I think it would not be wise, on the part of the directors, to oppose the amendment. The inquiries should really be directed to ascertaining whether it is worth while carrying on the mine or not. We have had

40 YEARS OF CAPT. RICHARD'S MANAGEMENT,

who has now, for some reason, been discharged, and also the secretary, whilst Mr. Bawden has been re-appointed. There is also a question as to the form of accounts, which I must say we have hitherto always passed in their present form. We have also praised Mr. Richards, the secretary, and the directors at various times, but I now think that the views of all parties would be met by acceding to the amendment.

Mr. SLOPER, in reply to Mr. Boyce: I would say that from being a student of geology, and knowing somewhat of the killas and the granite, I have come to the conclusion that

THE MINE IS WORKED IN A WRONG WAY,

and that you should drive in the granite, from which at present you are more or less at least 400 fms. to the west. I think you will find this mine will turn out to be one of the best of investments. I have not the slightest idea of being managing director, and consider we can do without one. I am quite ready to be one of the committee, but leave that entirely with you.

Mr. BRADFORD: How long does Mr. SLOPER think it will take us to get into the granite?

Mr. SLOPER: It is a mere matter of speculation.

CHAIRMAN'S REPLY.

The CHAIRMAN: When I went into this undertaking the shares were not as Mr. Witt stated at 16%—I do not believe they were at 16s. The concern had got into a very bad state. The costs were something like 50,000% a year, and have now gone down from about 4,000% a month to about 2,000%, and are considerably less to-day. The shareholders after a time unanimously increased my remuneration, because of the services I had rendered. The

SHARES WHICH WERE AT 16s. WENT UP TO NEARLY 20%.

and we paid in dividends equal to something like 32s. a share. (Cheers.) Some time after that I reduced my remuneration to 450%, and 12 months ago to 250%, and the shareholders in public meeting declared their satisfaction. Mr. SLOPER was not then a shareholder. As to the rent and furniture of office and clerks—the costs were about 150% or 160% a year, and I reduced them also, and 12 months ago they were lowered from 126% to 100%. That is for a furnished office in the City of London and the use of clerks, the actual cost of which to me is more than I have charged the company. I now come to Mr. SLOPER's statement. He mentions several points in which he was wrong, and he might have added to them, for seven-eighths of his statements will not bear examination. The rental value of the whole house, where we have offices, is over 700%, and the company has three rooms on the ground floor. He says I have obtained proxies by mis-statements, and that I am responsible for what appears in the newspapers about the company. I gave that a flat denial, and must say I used strong language, but I felt that

THE REMARK WAS VERY OFFENSIVE,

and was grieved that any shareholder should think so ill of me as to make it. I believe it is customary for papers to send documents to the secretary for examination, so that if mistakes occur in figures they should be rectified, and that I believe has been done for many years. Frequently I do not see these documents, but if I had seen the one sent this year I should certainly have corrected the 126% to 100%—the correct amount. Mr. SLOPER would make you believe that the offices are in the back slums of Whitechapel, whereas they are in Finsbury Circus. In consequence of pulling down the house I previously occupied, where my rent was nearly 500% a year, and where the shareholders used to meet, I had to find fresh accommodation, but should have been in the old building still but for the fact I mentioned. Mr. SLOPER says we are 500% worse off to-day than we were six months ago, but this I utterly deny. The loan account is distinctly stated in the receipts and expenditure, which disposes of a remark that was made by Mr. Seal; and as for the form in which the accounts are presented, it is that which has been adopted for 45 years past. Every half-year the accounts are made up precisely the same, and audited in accordance with the articles, and a balance-sheet is issued at the meeting in May. The loan account is correctly shown as the auditors have certified. The 1,000% was borrowed from the bank so as to avoid disposing of the arsenic at an unsuitable time. Since then we have sold it.

Mr. SEAL: Why did you not mention it on page 5 of the report. (Cries of "Order.")

The CHAIRMAN: It is in the statement of accounts, where anyone can see it. (Cheers.) As to the appointment of Mr. Bawden and the dismissal of Mr. Allen and Capt. Richards—so far as the latter is concerned I never had an angry word with him, nor he with me, but you appointed two new directors who went to the mine with me and examined Capt. Richards with regard to the position of affairs, and on our return it was unanimously resolved to remove him from the management. Since that has been done

WE HAVE EFFECTED CONSIDERABLE IMPROVEMENTS.

Through the instrumentality of Mr. Bawden and that of Capt. Clemo we have made a great change for the better, and I ask the shareholders to support not only the new directors, but me, in furthering these improvements which we have entered upon and are effecting at the present time. We have had 25 board meetings in London, and have

visited the mine three times, whilst I have been there this year five times. We have taken such steps as will give you satisfaction at the next meeting, and you will then give us credit for what we have done. (Cheers.) I do not wish to speak offensively or unkindly, but

THERE HAS BEEN A CLOG UPON US,

which has now been removed, and if we do not give you in the next six months, and for the future, satisfaction, then do what you like with us and with the mine as well. (Cheers.) As to the price Mr. Sloper gave for his shares, it was stated on the transfer, and the first time his name appeared was just before the last meeting. Some people knew pretty well why he came to the last meeting, and how he supported a certain section. Mr. Sloper says he did not receive our circular, and we did not receive his post-card. None of the directors have received his communications. Mr. Sloper says I have obtained proxies unscrupulously and by cunning, but I repel the charge, though I cannot say the same with regard to Mr. Sloper. Seven-eighths of his statements are deliberately wrong, and go back many years, almost alluding to matters that took place before he was born. Yet he comes to a meeting just after becoming a shareholder, and criticises the accounts and our conduct. I do not think it right that the shareholders should be without that knowledge. (Cheers.) There are persons here who have only just been

MADE SHAREHOLDERS FOR THE PURPOSE OF THIS MEETING.

Dr. Oxland has had only his shares for a few days, and his son, who was once the largest shareholder, now only holds two shares. As to the balance-sheet, Mr. Sloper has answered that himself. It is presented at the May meeting, and shows assets and liabilities and everything, and will be given again next May. There are no liabilities beyond what you know, and I challenge a contrary statement. Mr. Bawden says: "I know of no liabilities. Everything has been put in the cost-sheet," and I challenge any company to show accounts made up to Oct. 31 when the shareholders are meeting in the middle of Nov.

Mr. SLOPER: Does this include the Oct. cost sheet?

The CHAIRMAN: We had a pay-day due on Nov. 4, and had to pay 700*l.*, but I beg to tell you that that amount was charged to this account. So also are merchants' bills paid close up. Mr. Freese has gone through every receipt and payment, and it is somewhat a reflection on our auditors to speak like this. As to the amount received for arsenic—it has been actually received. The arsenic is made and is warehoused, the customers taking it away as they choose, and having the risk of the fire assurance. We have received the amount, and the auditors have seen it in the bankers' books and also the 2,000*l.* in hand. Mr. Witt wants particulars with regard to the price of arsenic, to whom we have sold, the price, the bills and all particulars. (Cries of "No, no, do not give it.") Mr. Witt forced my hand in connection with that matter before, and I had to take your decision, when it was unanimously

IN FAVOUR OF NOT GIVING THE INFORMATION,

with the exception of Mr. Witt and one supporter. He asks the same questions now, although I have said that any shareholder who likes to come to the office can see me or the secretary on the subject and get every information. As Mr. Boyce said very properly at the last meeting: "I warn you that if you give that information you will be doing this company a great injury." Suppose a shareholder buys our arsenic for a year, and we give the public the price a few days after, how is he to profit by the transaction, and, not profiting, is he likely to become a buyer again? Although I offered that information not a single shareholder called to get it, and not a single complaint in all the six months has been made by the shareholders, though we have had communications to quite the contrary effect. If you knew the difficulties we had to contend with you would be surprised. Mr. Stout said that if this company were wound up it would, in all probability, yield 2*l.* a share, and I repeat the statement, but am only giving it as my opinion. The time has not come for that. I am not only managing director, and director, but trustee and lessee—positions I took when not another shareholder would come forward and do it. I think we have quite sufficient to pay off the 4,000*l.*

WE HAVE SUFFERED BY THE FALL OF PRICES

about 1,500*l.*, but am I accountable for that? If we had the same price as before, we should have not only paid off the liabilities, but should have a good balance in hand; but, notwithstanding that, we are 3,000*l.* to the good on account of the 4,000*l.*, and 500*l.* to the good as well. If there is any point in Mr. Oxland's remarks, it tells against Capt. Richards, for the shareholders cannot suppose that I am responsible for the extraction of mineral from the mine. Old shareholders will know clearly, what Mr. Sloper does not, why the two calls were made. One was to sink the shaft and get rid of the royalties. As to my forecast, read by Mr. Seal, I spoke at the time what I conscientiously believed to be right, and was justified in doing so by the state of the markets. But, unfortunately, prices have fallen, and

THE MAKE OF ARSENIC, WHICH WAS 275 BARRELS, FELL TO 200 BARRELS.

Capt. Richards warned you that those fluctuations might take place. If the full output of 275 barrels had been kept up we should have been 2,000*l.* better off, but I ask any reasonable shareholder—can he put that down against me?

Mr. SEAL: I put the promise down to your account.

The CHAIRMAN: That may be, and I had full justification for what I said by the circumstances of the time, and by what occurred even afterwards. I do not want to say anything with respect to the secretary, except that it was felt necessary to make a change, and that change was made. The present secretary now gets about half the amount that the late secretary did; and as to Capt. Richards, we have the facts and figures to show that the change of management has been for the better. I have a communication from Stuckey's Bank from a gentleman, in which he says he is sorry to see that Mr. Sloper makes these statements. That gentleman alluded to driving in the granite, but we have been driving in it, though we have not got much by it. The drivages are continuing, and in the several lodes we are making fairly good discoveries. The present disputes are nothing more than

A CONTINUATION OF THOSE WHICH TOOK PLACE A YEAR AGO.

The committee of investigation now proposed is simply a change of

front from what was proposed then. It is true Mr. Sloper has a good many proxies, but we have a far larger number. I never, in the whole course of my experience, saw such a circular as that which he issued, and am satisfied that when this meeting is over and the shareholders know the facts, Mr. Sloper will not get their proxies again. No managing director or chairman could have given more attention to the interests of a company than I have to this, and my colleagues with me. Nearly every day one or both of them has been with me in consultation at the office. The circular is

A GROSS REFLECTION ON US,

and particularly on the new members of the board who have not been in office six months, and yet a committee of investigation is proposed. It means nothing more than a want of confidence in the management, which I will never tolerate as long as I live. Mr. Sloper may know a lot about bank clerk business and the like—"order"—but he does not know with regard to the management of mines. As the mouth-piece of the shareholders, so long as I retain the position of managing director and chairman I will continue to do my duty, and so will my colleagues.

A SHAREHOLDER: Have you been down the mine?

The CHAIRMAN: That is not necessary, though it was on my recommendation that Watson's section, which is now turning out so well, was set to work. I have been down hundreds of mines.

VIEWS OF CAPT. RICHARDS.

Capt. RICHARDS: It is said the present management is an advantage, financially. (The CHAIRMAN: Yes.) Figures can be put as you please. Mr. Watson wrote to me in Mar. last to ask the stock of coal. I replied (Mar. 24) we had 850 tons, equal to two month's consumption, and advised no more should be bought for a month at least, instead of which stocks were pressed up to between 1,500 and 1,600 tons, when my services were dispensed with. What are the stocks now? You had 100*l.* more costs than you would have had, but now I am told the stocks are rather low. I received a bill for 40 tons of coal charged to the company, which I found were not delivered. I made enquiry into past bills, and found more than one or two of the same kind—one of 57 tons, said to be delivered, which never came to the mine. (A VOICE: Where did it go?) Investigation will show. On Monday week I saw the gentleman who presented that bill, and who said, "I suppose Mr. Bawden must have had the coals." I understood from this gentleman also that other quantities had been delivered to him, though he did not say so. ("What date?") I cannot give it.

VIEWS OF MR. BAWDEN.

Mr. BAWDEN: At last year's meeting a letter from Capt. Richards to the late Mr. H. C. Stewart was read containing charges which I repudiated, but which have been brought forward again. During the 12 months he did a portion of my work, and had locally the charge of the funds that I had, and he stated in his letter that I was supposed to have found the balance of those funds standing to his credit at the bank when he took the purser'ship, the fact being that some of those amounts are still standing in the name of Capt. Richards, *vide* his letter I can produce. When I left there were many accounts to be settled, and, as the books were made up, I discharged them, and Capt. Richards has done the same, except the doctor's accounts, for which the books are not made up. There remains at the Tavistock Bank 122*l.* 19*s.* 8*d.* on Devon Consols account, which belongs to the doctors of that mine, and no cheque has been given to transfer the account. Capt. Richards says that from time to time coals were charged which were never received—a statement I deny. Capt. Richards has put his initials to every bill charged. Insinuations have been thrown out, but it is well known that

CERTAIN OFFICERS RECEIVE CERTAIN PERQUISITES.

(Cries of "Oh.") Capt. Richards, for example, received his house, his coal, his candle light, a horse, a carriage, and a man servant free. (Loud laughter.) (A VOICE: No wonder the company does not pay.) Those are paid for by the company. I also received my coal from the company, and the coal that Capt. Richards refers to was house coal. (A VOICE: What, 40 tons!) It was supplied to me from time to time, and put in the accounts. I do not deny it. (Laughter.) (Cries of "Investigate.")

Capt. RICHARDS: The balance belonging to the doctors has been transferred by me in a letter to the managers.

Mr. BAWDEN: It is in your name, and cannot be transferred.

Capt. RICHARDS: Was ever the coal voted to Mr. Bawden?

A VOICE: Are the directors getting their coal for nothing? (Laughter.)

VIEWS OF THE LATE SECRETARY.

Mr. ALLEN (the late secretary): After the disgraceful measure meted out to me by the two gentlemen elected directors at the last meeting, I should like to say that having come to the office to attend the usual board meeting, Mr. Roberts, who had only a few months before bought his shares to qualify himself, and Mr. Glen, who had only been two or three months a shareholder, proposed a resolution that my services should be dispensed with, after I had served the company faithfully and honestly for 18 years, and my uncle for 44 years before me, and before Mr. Watson was a director, I do not want to be re-instated. I would not sit at the board again with such directors.

A SHAREHOLDER: What was the reason?

Mr. ALLEN: Economy! The resolution said I might have my money for a month, but they would give it for another month in consideration of my long services, but I replied that under my agreement I could press for payment for six months. (Hear, hear.)

Mr. ROBERTS: I have been a shareholder in this company for many years.

The CHAIRMAN: I have regretted to see the antagonism between Capt. Richards and Mr. Bawden. We buy some of our coals by tender and some otherwise, and we have now a stock of 1,200 tons. As to perquisites, it is well known in Cornwall and Devon that managers of mines have their coal free; and if we did not pay them in that way, we should have to give them increased salary. Mr. Bawden pays 50*l.* a year rent for his house, but Mr. Morris paid nothing. I hope you will support the directors.

RESULT.

The vote was then taken, when 23 were for the amendment, and 13 against.

The CHAIRMAN demanded a poll, and fixed it to be taken at once. Later on the result was declared—2,571 votes in person and by proxy for the amendment, and 3,763 for the directors—a majority of 1,192 for the board.

The CHAIRMAN thereupon declared that the report and accounts were passed.

Mr. FREESE, on being asked to state his views, said that as auditor he could say the accounts were invulnerable, and there were none better kept in the City of London, but he did not believe in a "one man board." If Mr. Watson had invited

SEVEN OF THE LARGEST SHAREHOLDERS TO MEET IN CONFERENCE,

those gentlemen would have found that probably, with the exception of some trifles at Tavistock, the board would have come triumphantly through the ordeal, and he still hoped Mr. Watson would take that view.

Mr. ROBERTS said that the statement of Mr. Freese implied that he and Mr. Glen had no minds of their own, which was directly opposed to fact.

Mr. SLOPER said that whilst accepting the poll as declared, he would repair to the office next day and verify the figures. He had gone to work upon an old list of shareholders.

The CHAIRMAN: Mr. Sloper has obtained proxies in a very discourteous way.

A vote of thanks to Mr. Peter Watson for presiding was moved by a SHAREHOLDER, and briefly acknowledged, whereupon a four hours meeting was brought to a close.

DEVON UNITED CO., LIMITED.

THE RICH BUNCH OF ORE NOT YET MET WITH—CONFIDENCE IN THE MINE.

The half-yearly meeting of this company took place at Winchester House on Wednesday.

Mr. Peter Watson, C.C.

(chairman of the company), presided.

Mr. GEORGE HADLEE (secretary) read the notice of meeting.

The CHAIRMAN: In moving the adoption of the report and accounts, I regret we have

NOT YET BEEN SUCCESSFUL IN MEETING WITH THE BUNCH OF ORE

that went down in the 132-fm. level west. We are driving the 144, and believe in a very short time we shall get into it, as has been explained in the directors' report. We did owe 800% to the bankers, but have paid off 300%, and, had the arrears of calls been paid, we should have been able to have cleared off more. Some of these calls have been paid, and we expect soon to receive more. Our sales of copper have suffered in consequence of the price of that metal, but our ore is of high produce—from 9 per cent. to 10 per cent., so that the present does seem to be a low price to receive compared with that paid last time. We must hope that in the coming year the price will be better, and, personally, I have by no means lost confidence in the mine. I move the adoption of the report and accounts.

Mr. ROBERTS (director) seconded the motion.

Mr. CLEMO (manager): We fully expected to have cut the bunch of ore in a winze ere this. The lode is still going down, and is better than we have yet seen it. We think it will take a westerly direction, and at present the 144 is looking very kindly indeed. The indications are such as we expect will shortly lead to good results. We are expecting to cut this bunch every day, and the end is improving.

Mr. BAWDEN: I was underground a little while ago, and was pleased with the appearance of the 144 west, and if this ore should go down, as we have reason to believe, seeing that it is lengthening in the bottom of the 132, we shall be pretty safe. If we could only have two courses of ore at one time—the one would pay the expenses and the other would leave a profit, but, unfortunately, we have only had one. Stopes east and west are looking very well indeed, and

I HAVE STILL FAITH IN THE CONCERN.

Bunches of ore in this mine have already turned out between 45,000% and 46,000% worth of ore.

A SHAREHOLDER: Has any action been taken with regard to the 709% calls unpaid?

The CHAIRMAN: Nearly 100% has been paid since.

Mr. WEST: I think those calls should be pressed for without delay.

The CHAIRMAN: We will take note of what you say.

The report was adopted, and the meeting terminated.

THE NEW WELSH SLATE CO., LIMITED.

A COMPANY THAT IS ON THE POINT OF SUCCESS IF A SMALL AMOUNT OF CAPITAL BE PROVIDED—IMPORTANT SPEECHES BY MR. ROBERTS AND MR. LLOYD—INCREASED MAKE OF SLATES, AND A GREATER DEMAND THAN THE COMPANY CAN NOW MEET.

AN extraordinary general meeting was held at Winchester House on Monday, "for the purpose of considering, and if thought fit, passing the subjoined resolution:—

'RESOLUTION.

'That the capital of the company be increased to 75,000% by the creation of 2,000% new shares of 5% each, to be called preference shares, and to confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 8 per cent. per annum on the amount for the time being paid up on such shares, and such preference shares to rank, both as regards capital and dividend, in priority to the other shares.'

Notice was also given of the third ordinary general meeting of the company, to transact the ordinary business.

The Rt. Hon. Evelyn Ashley

(chairman of the company) presided.

Mr. N. F. ROBERTS (manager) read the notice of meeting.

OBJECTS OF THE DUAL GATHERING.

The CHAIRMAN: Gentlemen, you have heard from the notice, read by Mr. Roberts, that this is not only an ordinary meeting at which our accounts are laid before you, but that we are also asking you to pass an extraordinary resolution increasing the capital of the company. I am very sorry that we have not a more prosperous report to lay before you. We have during the past 12 months been working constantly and economically, but have not reached those thicknesses of slate so soon as we expected, which will be of a sufficiently paying character. Of the 15,000% we said in the original prospectus, and repeated in our last report, it was necessary to expend upon development in order to reach an output of 1,000 tons a month, which is the point to which we wish to attain in order to pay a dividend on our ordinary shares—of that amount we have only spent about 11,000% on development. We have had to spend 2,000% on machinery, which makes it up to 13,000%, and of the remaining 2,000%, which will make the 15,000%, 1,000% was never allotted and the other 1,000% was really underwritten by a firm which failed to carry out its underwriting. Why I am impressing that upon your notice is because we said in our prospectus that if we had 15,000% to spend on development of the quarry we were informed, and believed, that we should be able to reach an output of 1,000 tons a month.

WE HAVE REACHED AN OUTPUT OF 600 TONS,

but that has been by an expenditure on development of only 11,000%. I may have some remarks to offer later on, but it will be better to call upon Mr. Roberts to give you an account of the state of the quarry, and the work that has been going on, and I shall also ask Mr. Lloyd to give you a statement as to the condition in which he found matters at the time of his visit.

POSITION FULLY STATED.

Mr. N. F. ROBERTS: Mr. Chairman and gentlemen, I should like to preface what I have to say by a word upon the accounts. The report shows that the loss on working for the year was 1,290%, exclusive of the 2,000% debenture interest, which compares with last year rather unfavourably, for the loss last year on working was 531%, instead of 1,290% now; but I want to show you how it has increased, because really we have been working far more cheaply this year than last. We have had a strike, which cost us in legal expenses 212%. We have charged against working, for depreciation 600% more, in all, 812% more this year than last year, which more than makes up for the difference of loss, whilst last year we had a gain of 400% upon our stock by the increased price of slates, and we also had a fine for renewal of a lease—100%—making 500% in all; so that really our working cost this year has been about 550% cheaper than last year, whilst our make has been about 300 tons less. We lost in make during the strike alone about 300 tons.

GREAT IMPROVEMENTS.

As regards the work done by the quarry during the 12 months, we have now renewed almost the whole of our machinery. The consequence is that our slates are being turned out better and more cheaply than a year ago. We have completed the floor E in the north vein, which we were opening a year ago, and have now six chambers there on the point of producing slates. We have carried the D floor on that vein further to the west. We have continued in the other vein the C floor, both east and west, and we have carried the A floor in the north vein two bargains further in the east. We have also opened some pillars in the upper quarry in the "fall," which are turning out very profitable. The result in figures is that whereas the value of our slate in the first half-year of 1890 was 3% 3s. 11d. by the card, this year's report shows it to be 3% 7s. 1d., and in the last two months it has been upwards of 3% 8s., showing an increase of 4s. per ton in value, whilst our cost is getting decidedly less.

DEMAND GREATER THAN SUPPLY.

With regard to selling, we have been able to dispose of a good deal more than we make. We have had at times to buy slates in order to complete our orders, our own quarry not turning out sufficient in certain sizes. I feel no doubt we shall be able to sell during the coming year any quantity we may be able to make. The present make of Portmadoc slates is decreasing, and I can tell you from the figures that the demand is increasing. The total tonnage of slates in 1889 was 421,681 tons; in 1890, 418,377; and this year the decrease will probably be considerably greater, because Carnarvonshire is not turning out so much, and Merionethshire is also turning out less. From Portmadoc the shipments in 1890 were 117,752 tons, but for the first nine months of 1891 they were 97,569, and the first nine months of this year 104,023, showing an increase of shipments of 6,500, whilst there have been a number of quarries that have gone into liquidation, and others that have left off making, whose joint make I estimate at 10,000 tons, so that the production of Portmadoc will be 10,000 less, and the increased shipments 7,000, or a difference of 17,000 tons, which is

HAVING ALREADY A GREAT EFFECT UPON THE TRADE.

Almost all the quarries are full of orders and sold up to Christmas, and it is likely the demand next year will be considerably in excess of the supply. With regard to the strike we had last year—that threw us back. There were some men in the quarry who did not like the change of management this company introduced two years ago, and as long as they were there we had difficulties. I am happy to say Mr. Owen reports that the men now are working exceedingly well, and that he has had no difficulty whatever—in fact, he says he could not have a better staff than he has now. He has

AS GOOD A SET OF MEN

as he had for 20 years previously in the adjoining Palmerston quarry. There is one point, with regard to the co-operative system we introduced, which should be mentioned. Having declared no dividend, and the workmen and buyers not being likely to have the benefit of that co-operative, or bonus system for some time, I think something should be done. A good many of the slate buyers took shares in our company in the hope of a benefit by the

bonus which they would get when dividends were declared, and a large number of workmen are shareholders. I feel sure this has had a considerable effect in giving us support, and that many buyers who hold shares send orders to us, which otherwise might go elsewhere. Personally, I should be glad if some arrangement were made by which the shareholders could give a bonus to the workmen and buyers who are shareholders if profits are earned, although the profits might not be divisible as dividends with the present debit shown on the accounts. I should like to move at the later meeting, simply as a shareholder, a resolution to that effect. I have not consulted the directors about it, but, personally, feel it would be to the advantage of the company. As to the future, I think the cost of working this year will be less than last.

THE VALUE OF OUR SLATES IS INCREASING,

and I think the price will increase also, because discounts are getting less than they were a few months ago, and after Christmas some of the companies that had lower prices than we have are going to adopt our card prices, which will be a rise of at least 5 per cent. on some sizes. I have no doubt we shall thereby gain, for we have had to sell to compete with them during the year. We are making about 600 tons a month against the average of 457 tons last year, and I estimate that during the current year, ending in July, we shall make about 8,000 tons, against 5,944 tons last year. This ought to reduce the loss on this year's working, which last year altogether was 3,290*l.*, by at least 2,000*l.*; and if we are fortunate in having no labour difficulties, or mining hindrances such as falls, I think that our balance-sheet ought to show about 2,500*l.* better this year than last. I find that by our cost sheet for the month just ended, when we made 600 tons, we were earning, after covering all expenses, at the rate of about 1,500*l.* per annum towards our mortgage interest. When we get a make of 650 tons we shall be in a position to meet it all. I take the responsibility of these statements, and not the directors, because the figures have been left very much with me. Last week I went through the work, which can be done during the next few months, with Mr. Robert Owen and our sub-manager, Mr. Roberts, and we have all three agreed that by the end of the half-year (July) we can open another 10 bargains, at a cost in capital of about 1,600*l.* These, with the six chambers on floor E, which at present have hardly begun to produce, should make our yield between 700 and 800 tons a month. I want to point out how it is that in this company we have not been able to make profits so quickly as some of our neighbours. Instead of paying a royalty of 2*s.* a ton, which most of the neighbouring quarries are paying, we have had to pay the mortgage interest of 2,000*l.* per annum—ours being freehold—the others being leaseholds. 2,000*l.* per annum is equal to a royalty of 4*s.* on 10,000 tons, and until we get to that make of 10,000 tons we cannot be earning profits for the shareholders in the way that neighbouring quarries are doing; but after that our profits should come much more quickly. We have, moreover, to consider that in joining the company it has a freehold, which is a very great advantage after we have reached a certain make, but whilst our make is small we are no doubt losers. That is the difficulty the company has had to overcome, and has still to overcome. (Cheers.)

MR. ROBERTS' SPEECH CONFIRMED.

Mr. LLOYD: I am happy to confirm the statement Mr. Roberts has just made on certain points from personal inspection recently of our quarry. I spent several days with our quarry manager there, and compared notes with him as to the present state of the quarry. When I was there before, a year ago, the south vein was the one that was giving us a great deal of trouble. We were then in irregular work, and many of the bargains were unsatisfactory, but now the position is entirely different, for almost all the bargains are remunerative. On the other hand, the north vein, which at that time looked the more favourable of the two, has not at present fully come up to the anticipations it held out. We have a floor below the one shown on the drawing, at E, from which we expected a very large return as soon as the chambers were opened. According to all ordinary calculations, that ought to have taken place six months ago, and if it had we should have met a large proportion, if not the whole, of our mortgage interest. Unfortunately, the chambers were opened somewhat further back in the vein than on the previous floor. On that floor we met with a large quantity of good rock, some of the best that has ever been met with in the quarry. We are now working to get the slate at a point just below it to which chambers have been opened at the back of the vein, and it takes time to work it out, and till we get to the good rock. It has taken us six months longer than we anticipated. We are now getting into the good rock in the north vein on floor E, and almost at any time the six chambers alluded to may become paying. You can imagine what a difference it would make to the returns of the quarry if five or six chambers, which are costing 20*l.* a month, were to bring in towards general expenses 40*l.* or 50*l.* It is almost certain that we are on the point of reaching such a position. It is difficult, however, in mining to be certain of anything. Frequently slight faults and difficulties occur of which we have no idea. I have a confident belief that if we are able to carry out our intentions, that in the course of a very few months, before the spring trade opens, this part of the vein, which is now a dead weight on the company, will be a very paying property, and even with our present work we should be meeting our debenture interest. It requires still more production to enable us to make a profit, but as far as I can see (though I am not an expert in slate mining), there is no reason to doubt Mr. Roberts' anticipations, that an expenditure of 2,000*l.* more will put the concern into a paying state, will be fully justified. I trust we shall not be discouraged by the unfortunate delay that has occurred in reaching this result. We must look upon it simply as a delay. It is true that the rock has not quite satisfied our anticipations. It is more irregular than I had thought, but the rock is there, and if a sufficient number of chambers are opened, there can be no reasonable doubt that the results, financially, as foreshadowed will be obtained. I do not think we are far from that point, if we have courage to proceed.

DRAWBACKS AND DIFFICULTIES OF THE PAST.

Mr. J. HOWARD, M.P.: I am glad, as one of the directors, to have the opportunity of explaining our position this year as contrasted with our anticipations last year. When we met last year we had arrived

at a point of production similar to that which we have reached at the present time—600 tons in the four weeks—and fully anticipated that the quarry would go on as it had been doing, and that by this time the production would be increased to 800 tons. The winter, however, proved very severe, and threw us back several months. Then we had a strike, and we also found that the rock throughout the quarry was not producing as well as we anticipated. The result has been that production has been thrown back, and we have been disappointed. We have now taken counsel with our quarry manager, who is very experienced—Mr. Robert Owen, and who had the working of the great Palmerston Quarry in his charge. We called him to London in June, and from what he told us we came to the conclusion that we should not be justified in doing otherwise than working the quarry. Since then in many points

IT HAS TAKEN A FAVOURABLE TURN.

Though I wish to speak cautiously, I do concur with my colleagues in thinking that if we go courageously forward at the present time we shall reap the reward of the work we have already done. If we do not, the only alternative is to see our money sunk in the mountain, and we have no desire that it should. We are prepared to go forward if supported by the shareholders. (Cheers.)

WHAT THE BOARD WILL DO.

The CHAIRMAN: We have had great difficulty owing to the smallness of the capital and the pressure of the mortgage interest. Some of the debenture-holders have helped us uncommonly generously by taking their interest in shares instead of money, but others have not been so kind. At the present moment there are two mortgage debenture-holders, who, for a very small sum (about 10*l.*)—because by a little clerical error their interest was paid two or three days late—are threatening to take legal proceedings under the deed to obtain the repayment of their capital. If they choose to wreck the company, I suppose we cannot help it; but the directors did not feel they were justified in giving the preference to those gentlemen, who were acting simply in the spirit of revenge, because they had had to take mortgage debentures against their will. The cheque for interest was sent to them, and they returned it only because the payment was made a few days late. The directors have done their best. They have undertaken personal responsibilities with reference to your finances to keep the concern going during the past six months. This is quite outside the province of directors. It is for you to say whether you will come forward by yourselves or friends and find this extra amount of capital which is requisite in order to give the company another year to realise the favourable prospects it has before it.

AN EXAMPLE TO SHAREHOLDERS.

The directors are prepared to take 1,000*l.* of the preference shares themselves. (Cheers.) We think that 5,000*l.* of preference shares is the minimum that we should be justified in allotting, and in going on with the work. If you pass the resolution it will be on this footing. We have considered every other means of raising the capital, but have come to the conclusion that this is the best way in which we can secure the 5,000*l.* we require. We, therefore, ask you to find 4,000*l.* and we are ready to provide 1,000*l.* The alternative of not doing so will be that the company will fail, and after all the raising of this money will only be complying with the promise that we held out in the original prospectus.

Mr. JUPE: What were the capabilities as to output when we came into possession?

Mr. ROBERTS: When we took over the property the make had been gradually falling. The previous company and its liquidator had not sufficient funds to keep it up, and the make had fallen in the month in which we took the concern over to about 450 tons. There were about 30 bargains working, only four of which are now in operation. Of the 32 bargains now working we have opened 28, each of which ought to last for about three and a half to four years, so that during the next two years we shall hardly have any bargains giving out, and if you can go on increasing as during the past, we ought in a couple of years to be able to turn out 1,000 tons a month. Our making is increasing, and even in the short days we shall be able to keep it up. We sell at the same price as the Oakeley Co., though its output is so much larger.

Mr. JUPE: It seems to me we have been working with insufficient capital from the beginning, but upon what opinion is the estimate put before us to-day based? Is it a safe and reliable calculation?

Mr. ROBERTS: The estimate of opening the further 10 chambers was made by Mr. Robert Owen and myself last week when I was at the quarry. If we can expend barely 200*l.* per month for the next eight months we ought to open up 10 fresh places. We have the new bargains, which may also considerably increase. I think we shall raise the make to between 700 and 800 tons.

The special resolution was then put to the meeting, and carried unanimously.

ROUTINE BUSINESS.

The CHAIRMAN moved the adoption of the report, which Mr. LLOYD seconded, and it was carried unanimously.

The CHAIRMAN proposed, and Mr. J. HOWARD, M.P., seconded, the re-election, as a director, of Mr. Lloyd, whose services were described as being valuable.

This was carried unanimously.

Mr. KING proposed, and Mr. JUPE seconded, the re-election of the auditors, Messrs. Theodore B. Jones and Co., and it was carried unanimously.

A FEELESS BOARD.

The CHAIRMAN: I wish to direct the attention of the shareholders to the fact that we have not taken any fees for our services.

Mr. JUPE: All the more does that entitle the directors to the cordial vote of thanks which I was about to propose to them, and I can only hope that they will be able to give us a better report next year.

Mr. KING: I second the resolution with great heartiness, and would point out to shareholders that it is not always that delay means disaster. I do hope at the end of the year that the anticipations, which appear to be based on reasonable grounds, as held forth to-day may be realised.

The CHAIRMAN returned thanks, and the meeting ended, after it had been decided to leave the proposal with reference to the workpeople and buyers who are shareholders to the consideration of the board.

THE YURUARI CO., LIMITED.

A BATTLE RAGES FIERCELY FOR MORE THAN AN HOUR ON SATURDAY—SHAREHOLDERS HOSTILE, AND DIRECTORS AT BAY—A LIVELY TIME FOR ALL CONCERNED, WHICH ENDS IN A POLL, AND THE APPOINTMENT OF MR. ALFRED GOOD AS LIQUIDATOR.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Saturday, when the subjoined resolution, which was passed at the extraordinary general meeting of the company held on Nov. 4, 1891, was submitted for confirmation as a special resolution, that is to say:—

"That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867."

The notice of meeting further stated that should the resolution be confirmed, a further resolution would be proposed at the same meeting for the appointment of Mr. George Sneath, of 44, Gresham Street, in the City of London, Chartered Accountant, to be liquidator for the purposes of such winding-up, and fixing his remuneration.

Mr. Hugh Watt, M.P.

(chairman of the company), presided.

Mr. SLADE (a director) read the notice of meeting.

ROOM TOO SMALL.

The meeting was opened with loud cries of "Adjourn to a larger room." Considerably more than half of those present were standing, some of them being quite outside the room and in the passage. It was stated that it was impossible to adjourn to another room, and that the present one had been taken on the assumption that the proceedings would only be formal, and with the consent of all parties concerned.

The CHAIRMAN: I beg to move the confirmation of the resolution as above.

Mr. NEVILLE seconded the resolution, which was carried.

The CHAIRMAN: The second resolution was on the last occasion proposed by Mr. Proffit, who, perhaps, will be good enough to move its confirmation now.

Mr. PROFFIT: I have great pleasure in proposing that Mr. Sneath be appointed liquidator. This is the resolution which was carried unanimously on Nov. 4. It would be impossible now to fix Mr. Sneath's remuneration, because if the projected re-construction which we have all in view is carried through, the remuneration will be very little. If not, he necessarily will incur further expenses that are not contemplated now, and so the subject had better stand over. I, therefore, propose, "That Mr. George Sneath, chartered accountant, of 44, Gresham Street, London, be appointed liquidator for the purpose of winding up, at a remuneration to be fixed hereafter."

Mr. GOODALL: I second the motion.

AN AMENDMENT.

Mr. THORN: I wish to move an amendment, in the hope of throwing oil upon the troubled waters. We have had two or three rather noisy meetings, and at the last one Mr. Watt was put forward as liquidator, and did not meet with general approval. After that, Mr. Sneath was put forward, but there are reasons why he should not be appointed. I have no personal motive; I am simply an unfortunate shareholder, like yourselves. If I remember rightly, Mr. Sneath was liquidator of the old or new Chile Co., which has been in liquidation something like three or four years, and I believe

NO ONE HAS HAD ANY REPORT FROM HIM

as to what he has done, or what expenses he has incurred, and, moreover, I think his dual position would rather clash. I propose, "That the name of Mr. George Sneath be excluded from the resolution, and that the name of Mr. Alfred Good, chartered accountant, of 57, Moor-gate Street, be substituted in his place, and that the following words be added to the resolution:—'and that the personal remuneration of Mr. Alfred Good be fixed at the sum of 50 guineas.'" If that be passed we know where we are, but if not, we shall be groping in the dark, for the reasons I have given. I should add that he should be allowed an additional commission of 5 per cent. upon the sum obtained for the sale of the property or part of it. We do not pay a sixpence unless he sells it, and that, in addition, the usual clerk's allowance, according to scale, be made.

The CHAIRMAN: As Mr. Thorn is perfectly independent, I think his views will meet those of the shareholders, and I hope there will be no strong feeling on either side. Personally I decline to be liquidator.

Mr. THORN: I have no feeling in the matter. I do not know Mr. Sneath, but Mr. Good has been known to me for 20 or 30 years as a gentleman of the highest position as an accountant. He will accept the fee if you pass the resolution.

Mr. VERNON: I second the amendment. I have known Mr. Good for 25 years as a member of a highly respectable firm of accountants.

Mr. PROFFIT: It is too obvious to anyone with intelligence that Mr. Good's name is

DRAWN ACROSS THE TRAIL AS A RED HERRING.

(Cheers.) It is too plain that Mr. Good is put forward either directly or indirectly as the nominee of the board. At the last meeting, Mr. Sneath was carried unanimously, and being satisfactory to the shareholders then, is it not to be assumed that the many gentlemen then present who are not present to-day would look with disfavour upon the interpolation of any other name? Indeed, they have regarded Mr. Sneath's appointment to-day as a pure formality. To pass over him, with the suggestion that he has not made a report to the shareholders of this company, is simply ludicrous. (Oh!) This company took over the assets of the old company, except the Eureka property, which was purchased by the chairman and sold to the company on increased terms. Let us then have an independent liquidator appointed, when, if there is anything wrong, there may be the opportunity of asking Mr. Watt and his colleagues for an explanation. I have not a word to say against Mr. Good, as I do not know him, but can only suggest that he is put forward as a cloak to cover the chairman and his colleagues, and I earnestly ask you to pause before you allow this to be done. Do not be misled by the suggestion that this gentleman will only receive 50 guineas. That is the bribe for you. (Oh!) Mr. Sneath is well known, and in

leaving his remuneration to be fixed by the shareholders hereafter, he will not call for one farthing more than his services are worth. Technically in his appointment you have an advantage, because he can transfer direct to the re-constructed company without it going through the liquidator. The company is not, according to Venezuelan law, in possession of its property, which is still with the liquidator of the old Chile, who in his dual capacity can kill two birds with one stone, and save a large amount of re-construction costs.

Mr. THORN: Mr. Good is totally unknown to the chairman and almost unknown to the rest of the board. He is not nominated by the board, but will be perfectly independent and act up to his duty.

Mr. FRY: As a person who has spent a little money in criticising the chairman's conduct on former occasions, and who has

NOT RECEIVED 120% FOR HIS COSTS, AS MR. PROFFIT HAS DONE

—(cheers and laughter)—I would say that Mr. Watt, as a member of the House of Commons, must know what happens when the two front benches conspire. Now, when I see you and Mr. Proffit, who has been very plain with us, and told us that his connection with the company means nothing to him personally but what his name, "proffit," implies, I look with grave suspicion upon this matter of Mr. Sneath's name being proposed by Mr. Proffit and accepted by you. (Cheers and laughter.)

The CHAIRMAN: There is no arrangement between the front benches.

Mr. FRY: I want to show there is no arrangement between you and me. When I find Mr. Proffit adopting your words, I say, "Imitation is the sincerest form of flattery." I have been in this company throughout, and as to an independent liquidator—last meeting we had not time to think of it. There was no time for reflection about Mr. Sneath, and no active opposition. On reflection I came to the conclusion that there are disadvantages in appointing Mr. Sneath, and

I PROPOSE ANOTHER AMENDMENT,

namely, "That this company be wound up voluntarily under supervision of the Court." The Court will assist us in finding out if anything has been done amiss, and making those who have participated in unjust gains disgorge. I was the greatest enemy of Mr. Watt until the last meeting, when he announced that he had taken the responsibility of

PAYING CALLS ON 100,000 SHARES.

That which condemned him in the eyes of some, to my mind put his conduct in a different light. I said, "Here is a man who himself subscribes 2s. per share on 100,000 shares," and you must look at facts. (Cheers.) I have always come to this meeting under the sense of an entertainment, at which my shares entitled me to be present. (Laughter.) I say Mr. Proffit is not a fit and worthy person to get the control of this company. A man who calls your directors this, that, and the other, should not receive our votes, and when I see his immediate followers calling the directors

"WHIPPED CURS" AND "WHIPPED HOUNDS,"

it is enough to make the blood of an Englishman boil. (Cheers; and a VOICE: "Right over.") We have Genl. Barwell on the board, and he was represented as being a general in the Salvation Army—a man who has shed his blood for his country, whereas Mr. Proffit has had 120% in costs. (Laughter.) I say his interest is too evident, and he has declared it, and for this reason I intend to move my amendment. I shall vote for an independent liquidator.

The CHAIRMAN: I hope gentlemen will curtail their observations as much as possible.

NO CURTAILMENT

Mr. NEWTON (excitedly): I object to curtailing my observations. (Laughter.) You are to blame for calling this meeting on Saturday at 12 o'clock. On the face of it it means burking the position.

The CHAIRMAN: I told you I fixed it for to-day by arrangement with the opposition.

Mr. PROFFIT: The secretary wrote to say that the meeting would only be formal, and I suggested a small room, so that to that extent the chairman is quite right in saying I concurred.

Mr. NEWTON: I am not bound by any arrangement made between you. It is well known that this is one of the smallest rooms in this large hotel, and why have you engaged it? It is impossible for the meeting to make such a change as is proposed at a confirmatory meeting. As for moving an amendment, there is not a lawyer here but will say it is impossible to carry such an amendment.

Mr. PULBROOK: I do not, as a lawyer, agree with you.

PUERILITIES.

Mr. NEWTON: I do not take Mr. Pulbrook's law. (Laughter.)

The CHAIRMAN: You must not be personal.

Mr. NEWTON: Mr. Pulbrook interrupted me.

The CHAIRMAN: We do not know anything about Mr. Pulbrook; we are here to discuss the business in the terms of this notice.

Mr. NEWTON: If you confirm the resolution, it is right; if not, it will be a question to settle whether you have carried the object of the meeting. Is it attempting to throw a slur upon the independence of Mr. Sneath? (No!) He is of the firm of Price, Waterhouse and Co.; and it is absolutely impossible to have a more independent man. (Laughter.) The very fact that he is liquidator of New Chile is a strong reason why he should be liquidator of this company. (A VOICE: A reason the other way.) This company has been in liquidation, notwithstanding the change of name from the commencement, and the transaction of excluding Eureka and its subsequent acquisition by this company by a purchase of shares, which has given Mr. Watt the control—I say all this makes it absolutely necessary, in the interest of independent shareholders, that a man of high standing and undoubted independence should be appointed liquidator, who has some knowledge of the position, and you cannot find a better man than Mr. Sneath. It would be most serious if the resolution for his appointment were not confirmed.

The CHAIRMAN: The proposal at the last meeting was objected to and an amendment was carried by Mr. Proffit. This amendment was never assented to by the board. It was drawn by the solicitors without reference to the board appointing Mr. George Sneath liquidator.

A VOICE: You said you accepted Mr. Sneath. (Hear, hear.)

The CHAIRMAN: The directors have no wish to interfere, and would not take upon themselves to dictate to the shareholders as to who should be appointed. You may appoint whomsoever you will—it is a

matter of no regard to the directors. I am glad that Mr. Fry, who has formerly been opposed to me, should have suggested a supervision order. At the last meeting I said I was desirous, owing to many statements having been made

ENTIRELY BENEATH MY NOTICE,

that the Court should wind up the company. But the Official Receiver will never interfere with regard to re-construction. We have no objection to the supervision of the Court—we court enquiry, impartial enquiry—Government enquiry best of all; but though feeling that, as it does not seem to be the wish of the meeting, I, speaking for the board, am quite prepared to agree to Mr. Fry's motion that it should be simply under the supervision of the Court. We do not consider that the present position is the result of our action, but claim the contrary. We have

A LETTER FROM MR. SNEATH,

which Mr. Proffit has seen, and which Mr. Slade will read to the meeting.

Mr. SLADE then read as follows:—"Nov. 19. Dear sir,—I have had handed to me a notice convening a meeting for Saturday next, at which it is proposed I should be appointed liquidator, and to fix my remuneration. I have agreed, at the request of representatives of the shareholders, to accept the office of liquidator, but I cannot agree that my remuneration should be fixed until I know what labour is involved in carrying out liquidation or re-construction, if the latter be ultimately arranged. I must, therefore, ask that the settlement of the remuneration be left over till the close of the liquidation, when the accounts will be submitted to the shareholders." (Several VOICES: "Quite right," and "A very proper letter.")

Dr. ALDRIDGE: Is the resolution passed at the last meeting not to be confirmed now?

The CHAIRMAN: I am glad that point has been raised. I took the opinion of counsel, and when the Messrs. Abraham drew the notice for the first meeting, in inserting my name I said it was contrary to my wish. I said a liquidation is not, *de facto*, a liquidation until confirmed. What took place at the last meeting was quite irregular. In the case of Overend and Gurney the judges held that, although the circular sent out did not say anything with regard to the appointment of a liquidator, yet it followed naturally and by regular sequence. If you put a company into liquidation you must appoint a liquidator.

Mr. PROFFIT: I think the chairman is right in his ruling.

The CHAIRMAN: I am bound to accept the amendment.

Dr. ALDRIDGE: Mr. Sneath has had no remuneration for winding-up the Chile, and there is no more respectable man for liquidator. I do not know Mr. Good. We want to save some of our money, and Mr. Thorn is a friend of the chairman.

The CHAIRMAN: Mr. Thorn has opposed me strongly in other matters.

DR. ALDRIDGE SETTLES HIS DISPUTE WITH DR. BARWELL.

Dr. ALDRIDGE: Mr. Good is not known sufficiently, and we are determined to go to the Court if this amendment be persevered with. Excepting the chairman, I am nearly the largest shareholder, and do not want to lose my money. I think that if Mr. Watt will help Mr. Sneath we shall be able to sell the property to El Callao, or re-construct. I have been in correspondence with Genl. Barwell, whom I believe to be a perfectly honourable gentleman. I did not charge him with being a general in the Salvation Army, but I said I did not know he was at the time. (Laughter.) We are friends now, but in the heat of debate we often say things we would wish afterwards we had not said.

MR. WATT SAYS "BONJOUR" TO YURUARI.

The CHAIRMAN: We only want to consider the interests of the company, and my name was put in as liquidator simply for the purposes of re-construction, and for no other. This meeting ends my official connection with the company. (Hear, hear.) I have no objection to your "hear, hear's." I am prepared to challenge any responsible individual to make any accusation against me, and I can prove in five minutes that what the shareholders agreed to pay in the New Chile for Austin No. 9, 80,000*l.*—50,000 shares and 30,000 sovereigns—was not paid, owing to the present board, and I am further prepared to show that the present board saved a great deal of money to the shareholders. Provided the information which has come to me through an independent channel is correct, it is a pleasure for me to be able to say that the agent for the original vendors, who received 425,000*l.* for the old Chile, is *en route* for Venezuela, and is going to buy the property. The original vendors, in place of losing by me, pocketed, I estimate, at the least 60,000*l.* by their sales of shares, which were as low as 6*d.*, but rose at one time to 13*s.* I came in from the New Chile with 60,000 shares, which cost 8*s.*, and I have paid 2*s.* 6*d.* since, and you can search the register and find if I have them now. (Cheers.) There are only two companies I have been connected with, and in both of them I have invested a large sum of money. If that money has been lost it is not through misdirection.

WE HAVE HAD AN IMPOSSIBILITY TO DEAL WITH,

with which every large financial firm, from the Rothschilds downwards, have been connected, namely, mining in the Caratal, and none of them have made a success of it. We have obtained more gold from this mine than has been secured by any other company, and have spent less money in getting it, and I challenge any responsible man to meet me with a contrary statement. When, however, I invest money in a mine, and lose it, I blame myself, and do not abuse directors. I am interested in some 50 companies, and try to aid directors in every case, and have never taken action against them, but in this case we are going to act as we think in the interests of the company, and I do not care for Mr. Sneath or anybody else. I had an interview with him on Thursday, and he told me that if he had seen me before he had seen the others he would not accept the liquidation. How the shareholders whose shares were forfeited and replaced are going to be made responsible without an expenditure of a large sum—heaven knows, I do not, and he further said he would fix no fee, and I do not blame him. He also said his firm had plenty of business, and did not want this, and added "In relation to New Chile, you know we have not had our costs." The result has been unfortunate, but we have done all we could. When we found, by a decision of Justice North, that the shareholders of New Chile might be held

to be liable for shares issued to them at a discount, I, without consulting them, formed the present company. Mr. Snell, the solicitor, took exception to this at a preliminary meeting, and I followed with my meeting, and smashed him and his party. What I say is this—the company was formed and

1*s.* 6*d.* OUT OF THE 2*s.* 6*d.* HAS GONE TO PAY DEBENTURES

and other charges, and not to work the mine. We had 30,000*l.* from the old proprietors, and with that money we have done our best. We hope there is yet a future before the company, and if it be true that Mr. Merino has gone to Venezuela in relation to this company, I am delighted to hear it. He will find the whole of the facts, and there is nothing I wish more than that they should be known. I do not mind being traduced by papers or by correspondence, because

I STAND UPON MY MERITS,

and when a man wants to assail me, let him write to me. I am now going to dry up. (Laughter.) We have no objection to Mr. Sneath, and we have no objection to Mr. Good—whose appointment at this meeting is competent. The proceedings at the last meeting in nominating a liquidator fell to the ground, for I have taken the opinion of counsel. The present notice is also wrong. We had no wish to thrust any liquidator down the throats of shareholders. I am going to vote for the cheapest man, and Mr. Good is the cheapest man. (Oh, oh, and laughter, and Cries of "That won't do.") I shall put it to the meeting. Those in favour of Mr. Sneath—hold up their hands; those in favour of Mr. Good—it is carried almost unanimously. (Great uproar.)

A WARM QUARTER OF AN HOUR TO FINISH WITH.

Mr. NEWTON (vehemently): That, Mr. Chairman, discloses the character of your speech to-day. If you insist upon a close division you will find that 20 in this room at least are not shareholders at all.

The CHAIRMAN: We are going to have a poll. The secretary will stand outside and take the names for the board, whilst Mr. Pulbrook will act as scrutineer. The opposition will have to appoint their own scrutineer. No one has a vote who has less than 100 shares, and we are supported by 300,000 shares.

Mr. NEWTON: Which you purchased in connection with the Eureka Mine.

The CHAIRMAN: It is not so.

Mr. FRY: I have been anxious to know whether my amendment, that this voluntary liquidation should be continued under the supervision of the Court, is legal.

The CHAIRMAN: It is quite competent.

Mr. FRY: I desire to move that amendment.

Mr. THORN: I accept "under supervision of the Court."

Mr. FRY: The liquidator will then have to go to the Court for approval of all he does. Some of us are independent of the board, and independent of the "gang" (indicating the corner in which the Proffit party were grouped).

Dr. ALDRIDGE: I move that the Court wind up the company.

Mr. ALBERT E. JAMES: I second it.

Dr. ALDRIDGE: If the amendment is lost, we can apply to the Court independently of all that is done here. We shall do one or the other.

The CHAIRMAN: The Court may not accept your views. On a show of hands I declare the amendment of Mr. Fry to be carried, and that of Dr. Aldridge to be rejected.

THE DISINTERESTED INTERRUPTION OF MR. SCOTT.

I observe Mr. Scott there causing great interruption. (Hear, hear; a VOICE: Yes, he is Mr. Proffit's partner.)

The CHAIRMAN: I know it; and if he exercised discretion he would hold his tongue. (Cheers.) The business of the meeting is now over.

Mr. FRY: I move a vote of thanks to the chairman.

The meeting then broke up in confusion, and about an hour later the result of the poll was declared as follows:—

For the appointment of Mr. Good ... 915 votes.

For the appointment of Mr. Sneath ... 333 votes.

Proxies also supported Mr. Good, carrying 1,811 votes.

ONCKEN PATENT STAVELESS BARRELS,

On view at 46, QUEEN VICTORIA STREET, E.C.

This remarkable invention enables barrels to be made in one piece by a new process, which has excited the greatest interest among engineers, coopers, and others. 25 per cent. economy in wood and 50 per cent. in labour. Barrels, tubs, and other articles can be seen daily on application above, between the hours of 10 and 5.

In the County Court of Devonshire, holden at East Stonehouse.

In the matter of the Companies' Acts, 1862 to 1890, and in the matter of The New Conglog Slate and Slab Company, Limited. No. 4 of 1891.

TO be SOLD by TENDER, the VALUABLE INTEREST of the above Company in the well-known Leasehold SLATE AND SLAB QUARRIES of CONGLOG and GLYN FESTINIOG, situate in the county of Merionethshire, and distant about 3 miles from Blaenau Festiniog, the terminus of the L. and N. W. R., the G. W. R. and the narrow gauge from Portmadoc, the nearest station of the narrow gauge being about 1½ miles from the property, together with the plant, machinery, and effects, as specified in the schedule thereto. The property covers an area of about 350 acres, held under an agreement for a lease for 21 years, from 25th March, 1889. The dead rent is £50 per annum, merging into a royalty of 2s. per ton on sales. It has been worked for about seven years, and a very large sum has been expended in driving tunnels, opening out the quarry, and constructing tramways and providing the necessary plant and appliances for the efficient working of the Quarries. The Rock formation is Silurian. Slates are produced of strong and lasting quality. The speciality is the production of slabs from 8 ft. to 10 ft. long, and 2 ft. to 3 ft. 6 ins. wide, which command a ready sale at good prices, and are used chiefly for hearth and tombstones, chimney-pieces, mantel-shelves, and ornamental purposes. The supply of water for driving machinery is abundant. Three cross-cut tunnels have been driven into the slate rock—No. 1, 76 yds.; No. 2, 197 yds.; and No. 3, 120 yds.; about 7 ft. high by 6 ft. wide. A ventilating shaft has been put through from the surface to No. 2, and in levels driven in Nos. 1 and 2 four chambers have been opened. The produce is carried down by an incline to the planing and sawing house, which is fitted with machinery driven by a 30 ft. diameter wheel 4 ft. breast. The Company has the right of way over about ½ mile and two inclines belonging to the New Welsh Slate Co., for which a royalty of one-fiftieth is payable. The cost of carriage to the L. and N. W. R. and the G. W. R. is 1s. 1d. per ton, including cost of loading and unloading; and the cost to Portmadoc is 2s. 7½d. per ton, carriage and loading and from Minffordd Junction the Cambrian Railway Co. grant a rebate of 1s. per ton. The veins of the "Lord Palmerston" Quarries, which have been making very large

profits, are believed to pass through the property now offered for sale.

The Vendor does not bind himself to accept the highest or any of the tenders received. Tenders must be sent to the undersigned Liquidator on or before 14th day of December, 1891.

For Forms and conditions of Tender, and further particulars, apply to Mr. J. K. ROWE, the Manager of the Quarries, Glasfyn Villa, Penrhynchdendath, N. Wales; or to

Mr. THOMAS WOLFERSTAN, Solicitor, Princess-square, Plymouth; Messrs. PAIGE and GRILLS, Solicitors, Redruth, Cornwall; or to Mr. F. W. DAWE, C.A. (the Liquidator), The Wilts and Dorset Bank Chambers, Plymouth.

THE SCHEDULE.

Water wheel, 30 ft. diameter, 4 ft. wide, with 150 ft. shafting and pulleys, complete; two planing machine dressers, one full size, one small handy; eight sawing tables, full size, complete; one iron slate dressing machine, one saw sharpening machine, one iron turn table, one travelling crane, damaged; two three-leg cranes for inside work, one weighing bridge, six trollies (and one broken) wheels, complete; 10 rubbish waggons, five of which are damaged; two incline drums, one with wheel break good; about 1½ miles of railway, double rail, with sleepers and chairs, say 50 tons, including two inclines, four incline wire ropes, steel hooks, &c., one massive iron block, with brass wheels, one dressing bench for squaring slates, 80 yds. of wooden water troughs, 2 ft. wide, nearly new; one grindstone, 30-in. diameter; one smith's vice, several turnout plates, one ladder, two wooden hammers for loading slabs, one wooden lever, 18 ft. long; three wooden oak crane legs, six beltings, about 30 ft. long; four oil cans, one oil bottle, one wheelbarrow, several quarry chains, hooks, &c., 74 old saws, 258 old files, a quantity of old iron, &c.

OFFICE UTENSILS.—Writing desk, containing three drawers and two cupboards, one letter press, stool, and small table, one chair, spirit level, one tape measure, capacious machine house, 150 ft. long by 40 ft. wide; oil cask, containing small quantity of oil; about 10 tons slate and slabs.

THE FRONTINO AND BOLIVIA (SOUTH AMERICAN) GOLD MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the ANNUAL MEETING of the Shareholders of this Company will be held at Winchester House, Old Broad Street, in the City of London, on WEDNESDAY, the 9th day of December, 1891, at Two o'clock p.m., for the following purposes:—To receive the Report of the Directors and the audited Statement of Accounts of the Company for the six months ending the 30th June, 1891; to declare a Dividend; to elect a Director; to elect an Auditor, and for other business.

The Transfer Books of the Company will be closed from Monday, the 7th day of December, until Saturday, the 12th day of December, 1891, both days inclusive.

By order of the Board,

J. JAMESON TRURAN, Secretary.

184, Gresham House, Old Broad Street, London, E.C.
25th November, 1891.

THE VAN RYN GOLD MINING COMPANY, LIMITED. (IN LIQUIDATION.)

Shareholders in the above Company who have not already done so are requested to send in the CERTIFICATES of their HOLDINGS to the undersigned in order that they may be exchanged in due course for Fully-Paid Shares in the Van Ryn Estate and Gold Mining Company, Limited.

The attention of Shareholders is also called to the fact that until the 7th December next they are entitled to subscribe for one new Share at par in respect of every Five Shares held by them.

For the South African Trust and Finance Company, Limited.

REMINGTON STANDARD TYPEWRITER.

A WORD TO BUSINESS MEN.

You cannot afford to do your writing in the old way. The work of our machines is plain and business-like, obviating all mistakes in reading. Several copies can be made at one writing by the use of carbon paper. Excellent letterpress copies can be taken.

Our New Model Machine has been adopted in all the Departments of the Government service, and is being very generally introduced by all leading business houses. Does not this argue that the Typewriter should be worth something to you? The machine can be furnished with special keyboards to suit any purchaser's line of business. Write for full information.

LEEDS, HULL, FOLKESTONE: Where we are shortly opening up.

NOVEMBER 23, 1891.

DEAR SIR,—Our last circular appeared on 10th inst., the fortnightly carrying-over day, and was immediately distributed by post to our active clientele. It further appeared in double-column and full-page advertisement form in the leading financial and society journals of the then current week. From the latter sources it is still, therefore, accessible to parties desirous of perusing it; but if any difficulty be thus experienced, we shall have pleasure in forwarding copies, post-free, on being applied to for them.

The complete and efficient network of telephonic intercommunication established between our various offices, as above, is affording the most satisfactory results to clients.

By means of the facilities available to them they are relieved of loss of time, as they have the privilege of opening bargains at any one of our addresses and closing them at any other in their more immediate vicinity of the moment. Thus they are enabled to secure their profits with the utmost promptitude, or to supplement their bargains if so disposed.

THE MONEY MARKET.—We pointed out a fortnight ago that the Bank's bullion resources had been drawn upon to an extent to bring the proportion of reserve to liability below the average at the corresponding period of four years, inclusive of the present one. We also gave reasons for our conclusion that by the present date the position would be very greatly strengthened. From the last weekly return it will be found to have improved from 36½ per cent. to 43½ per cent., the minimum rate still continuing at 4 per cent., with no appearance of a further upward movement during the remainder of this year.

As the course of money exercises a most powerful influence on that of the Stock Markets, we give here the usual tabulated figures for reference and comparison, say—

	Reserve.	Coin and Bullion.	Proportion Reserve to Liabilities.	Bank Rate.
1891 ...	£14,373,000	23,938,000	43½ per cent.	4 per cent.
1890 ...	14,552,000	22,858,000	35½ per cent.	6 per cent.
1889 ...	12,034,000	19,833,000	40½ per cent.	5 per cent.
1888 ...	10,999,000	18,666,000	39½ per cent.	5 per cent.

Supplies in the open market continue abundant for every legitimate purpose, and the arrival of further amounts is looked for, chiefly from South America.

Good three months bills are readily discounted at a fraction under 3 per cent. per annum.

THE STOCK MARKETS.

The influences at work to depress prices of even the sounder securities at the date of our last have continued to exist, although of a somewhat intermittent character.

On all hands it is agreed that continental financial difficulties have been much exaggerated, and that they do not injuriously affect home enterprises or the American and Canadian Railway market. Bear tactics have, however, chiefly prevailed, with the result that the account is greatly oversold.

There being less apprehension than ever of dear money, and the severity of the continental strain having passed, the moment seems highly favourable for a resumption of buying operations in nearly every department, but particularly in those which, from a study of the following figures, possess a title to and assurance of greatly enhanced value even before the termination of 1891, and certainly in an even increased degree with the advent of 1892.

HOME RAILWAYS

Have not been by any means an active market. Immediately after making-up on 10th inst. they exhibited some degree of improvement; but the generally lugubrious tone of dealers acted to their prejudice, and they again, in the interval, lost ground.

At the close to-day the tone is much more cheerful, and the improvement seems likely to enjoy some continuance, due mainly to the smallness of the account and the easy contango charges.

In some cases, notably Brighton "A," a backwardation has been exacted of sellers for the fall.

A perusal of the carrying-over just two years ago and to-day will prove interesting. Every factor, including improved traffic returns, is much more favourable to dividend prospects now than then, yet current quotations are, with a few special exceptions, materially lower.

	Nov. 10, 1891.	Nov. 25, 1891.	Nov. 26, 1891.
CALEDONIAN ...	1	1	189.
DO. DEFERRED ...	43	42	125
NORTH BRITISH PREFERRED ...	6	6	77½
DO. ORDINARY ...	3	3	61½
CHATHAM ORDINARY ...	2	18	23½
DO. PREFERRED ...	10½	14	111
MIDLAND ...	16	16	144½
GREAT WESTERN ...	15	15	169½
GREAT NORTHERN DEF. CONVERTED ...	72	71	—
DO. CONSOLIDATED "A" ...	73	73	103½
SHEFFIELD "A" ...	36	34	45½
GREAT EASTERN ...	8	8	81½
NORTH-EASTERN ...	156	157	173½
METROPOLITAN DISTRICT ...	30	30	34
BRIGHTON "A" ...	147	145	31

These authentic official figures speak for themselves, and will convince the reader of the absolute security for buyers to realise values on the scale of values now prevailing.

AMERICAN RAILROADS.

In last circular we dilated upon the superior prospect before buyers after the decline just then experienced, and our recommendation was promptly responded to, as will be seen on comparison of the making-up of both dates.

There is a perfect glut of traffic accumulated and to be carried on all the principal lines. Wealth is increasing, and with it general investing power. All these circumstances induce us to embrace the opinion that we are again on the eve of a general and important advance in prices, which bids fair to continue to the end of this year, and well into the ensuing one.

In order to afford facility for promptly forming a judgment of merits we give the quotations current in 1889, when prospects were only of an ordinary character compared with those now prevailing:—

	Nov. 10, 1891.	Nov. 25, 1891.	Nov. 26, 1891.
NEW YORK CENTRAL ...	114	118	109½
DENVER AND RIO GRANDE ...	16½	16½	17½
ONTARIO ...	18½	19½	22½
NORFOLK & WESTERN PREFERRED ...	50½	52	62½
ERIE ORDINARY ...	23	31	29
PENNSYLVANIA ...	56½	56½	54
ATLANTIC FIRST ...	35½	37	35½
DO. SECOND ...	—	5	—
NORTHERN PACIFIC PREFERRED ...	71½	73½	78½
MILWAUKEE ...	76½	79	73½
LOUISVILLE ...	79	80½	87½
ATCHISON INCOME BONDS ...	64½	66½	—

The recovery in the fortnight's interval has been such as to well reward the friends who acted upon our advice, and if they will continue action in the same direction they will a fortnight hence have still greater cause to congratulate themselves.

CANADIAN PACIFICS.—Following our prediction on 10th inst., these shares promptly recovered the three points which we reported them to have lost in the preceding fortnight. Their more recent course has been somewhat irregular; but every feature connected with traffic and prospects continues at least equally as favourable as anything hitherto reported by us. At the present quotation of 89½ they should be bought for an early 10 points advance.

GRAND TRUNK STOCKS.—Although rather sluggish in response to the improving tone of Americans, have yet made some headway in an upward direction.

The various issues compare as follows, including the prices current two years ago:—

	November 10, 1891.	November 25, 1891.	November 26, 1891.
ORDINARY ...	9½	9½	11½
FIRST PREFERRED ...	67½	68	74½
SECOND DO. ...	46½	47	52½
THIRD DO. ...	25	25	30

All are good for a substantial advance, and holders should be slow to part with an atom of stock, while the future of the traffic is so promising and money so cheap as at present.

MEXICAN RAILWAY (VERA CRUZ).—A comparison of the quotations now current with those of past times affords food for reflection, and it is difficult to reconcile one's belief that the present faithfully indicates the real value of these stocks. With the progress of Mexico and the gradual steadying of the silver market, an early improvement in the quotations is certainly to be reasonably calculated upon.

	Nov. 10, 1891.	Nov. 25, 1891.	Nov. 26, 1891.
ORDINARY ...	31	28½	45½
FIRST PREFERRED ...	107½	103½	121½
SECOND DO. ...	51	47½	83½

The moment is favourable for new purchases.

MINING AND LAND SHARES.

We continue recommendations of

OCEANA,	DE BEERS,
TRANVAAL LANDS,	RIO TINTO,
NORTHERN TRANVAAL LANDS,	CALLAO BIS,
SILATI RIVER.	

A boom which will favourably affect all these shares is not far distant. Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers. We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security. The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (250 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 12 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MARKET ACTIVE AT THE CLOSE — VIEWS OF "THE OLDEST BROKER" — HARD MEASURES — COURSE OF BUSINESS — FIRMNESS OF AMERICAN SHARES.

FOR some time past, a peculiarity of the Mining Market has been that dealings brighten up towards the close of the week. This was notably the case when last we wrote, and in a degree it was again the same this week. Monday opened—like the weather of that day—dull and cheerless, and with a very limited attendance on the Rialto. Tuesday was almost equally sombre, but with the clearing up of the weather on Wednesday, there was quite a genial flow of business, which much rejoiced the somewhat downcast hearts of brokers. Thursday's record was better, and that of Friday, as will be seen, was the best of all.

The oldest broker on the market, and those who have survived the biting blasts of the old Broad Street parade these many years, and are still to the fore, do not remember such a time for mining as that which we have had during the past few months. They speak of it as those who cannot understand it, or as those to whom an explanation is impossible. They attribute it to one cause and then to another, but, like the theological students of Queen Elizabeth's time, "they do as much show their ignorance by their answers as by their silence." Where the patriarchs of the market refuse to speak or cannot do so, where is he who will take up his parable? Perhaps our old friend, Mr. Samuel James, will think this out, and give us the benefit of his reflections when he returns from his cruise.

You may talk vaguely of the Baring crisis; you may be eloquent as to the sad results that followed; you may point out with apostolic truth that all shares and stocks are down, without exception, as well as those of mining; and you may with the voice of the Apocalypse state that if mining has suffered it has done so in good company; but all this brings no comfort to those who gave substantial prices for scrip, which is now either lamentably below their figure or are unrealisable at all. In these cases many clients adopt the practice of visiting their financial affliction upon their brokers, to whom they write severe things, saying, "Why did you put me into these shares?" But the brokers, poor men, could only reason after the manner of mortals. They could only judge the general

position of the companies from the fountains of eloquence which were turned on at all the periodical meetings, from the reports of those wicked gentlemen called the experts, and from the general antecedents of the respective concerns. Under these circumstances they have said "buy;" and now the penalty they have to pay is the receipt of letters "writ sarcastic," and the removal of clients from their books, whose unkindness they have not merited, but who have visited upon them the consequences of the untoward circumstances of the time. The world, however, is largely kept going by hope, and we think it is not a flattering tale we tell in its name when we express the belief that we have seen the worst, and that better times are not far off.

The liquidation of the affairs of the Société des Metaux, referred to in another column, has given a fillip to the price of copper, which is up fully 2½ per ton. The shares have risen in sympathy without an exception. Rio Tinto opened the ball, and has since been dancing up in company with such shares as Cape Copper, Mason and Barry, Paulcillo, Libiola, and Copiapo. Taking the latter company, it will be seen that the directors have issued a very good report.

In regard to Indian shares, various circumstances have contributed to enhance them still further in public favour though the tangible evidence in quotations is not so clear. In the first place, Oregon has begun dealing with its tailings. As this is referred to in our leader columns it need not be pursued further here. Champion Reef advanced on the issue of the directors' report, and it is surprising that Goldfields should remain so low in the face of the facts and figures published by the directors in a similar document. Some people seem to think that Goldfields have sold all their valuable land, but emphatically it is not so. Balaghat advanced on a good return, and that from Nundydroog was also read favourably by the market. Up to the hour of going to press the Mysore return has not been received. Indian Consolidated fell upon the issue of the directors' report, and though not closing at the worst prices touched, the week finds them fully 1s. a share less in price. The directors, judging from their report, feel acutely the comparative failure of operations, and though the shareholders must do the same, yet we feel sure they will not deny their sympathy and their support to a board that has done its best under great discouragements.

At the statutory meeting of the Mysore Nagar Co., held on Thursday, the chairman (Genl. Cole) announced that the property had been duly transferred to the company, and work was being prosecuted satisfactorily. The manager has reported the discovery of another reef, very rich, and running through the whole extent of the property. The Government of Mysore have agreed to take their 10 per cent. "fine" on the purchase-money in fully paid-up shares.

In the Australian market there has been a rise in Kangarillas on the official announcement by the directors of that which we stated unofficially the week before that there is no need for a re-construction. The rumour was the outcome of falsehood and all uncharitableness. Of the other Australian mines nothing need be said, except in regard to New Livingstone, which held a meeting this week and the shareholders listened to a tale of woe from the chairman. There seems nothing between this company and the Winding-up court.

In the American Market there has been considerable animation, and most of the shares have advanced—in some cases considerably. In this category are found Yaukee Girl, New Guston, American Belle, Jay Hawk, and Frontino, but Montana and Richmond have not quite sustained last week's prices.

It is with considerable pleasure we see the shareholders of Pahang Corporation stiffening their backs and keeping tightly to their shares. In the unhappy squabbles which take place at the periodical meetings, due to no fault of the management, the real interests of the company are somewhat apt to be forgotten. But the perusal of the opening speech of the chairman cannot fail to convince any reasonable man that the position of the company has greatly improved. This is seen in market quotations, for Pahang shares are 2s. 6d., but are still far below their intrinsic value.

In the Kaffir market the movements have been very uneven, but for the most part in the gold section they have been of the upward

kind, though not of a character to call for special remark. The land companies for the most part fell on the Goldfields of South Africa meeting, which was not read favourably by dealers. Diamond mines show firmness, notably De Beers.

In the Home market there has been considerable buying of Devon Consols shares, which have been bid for up to 10s. without many being forthcoming. This is attributed to the satisfactory statement presented to the last meeting as well as to the confidence felt that the present board will, in a fair fight, should that be forced upon them, put their antagonists to the rout. The shares have advanced half-a-crown on the week. The movements in Cornish shares have not been very remarkable, except in the case of Dolcoath, which shows a rise of 2%. South Condurrows have recovered the fall of last week.

The outlook for next week is decidedly more favourable than it was when last we wrote.

KAFFIRS.

Remarks.—More animation has been shown in these shares than for some time past, and in consequence of improved crushings, prices in a small degree have advanced. The approaching end of the year has, no doubt, restricted operations to some extent, or prices would have advanced more than they have done.

Business.—A rise is shown in Pigg's Peak of 6d.; Sheba, 6d.; Bankets, 3d.; Cræsus, 1s.; Durban Roodepoort, $\frac{1}{8}$; Forbes Reef, 6d.; Geldenhuis, $\frac{1}{4}$; Glencairn, 6d.; Great Gold Zone, 1s.; Henry Nourse, $\frac{1}{4}$; Heriot, $\frac{1}{8}$; Jubilee, $\frac{3}{8}$; Kimberley Roodepoort, $\frac{1}{4}$; Randfontein, 1s. 6d.; Salisbury, $\frac{1}{4}$; Stanhope, $\frac{1}{4}$; and Wemmer, $\frac{1}{8}$. The following have fallen:—Aurora, $\frac{1}{8}$; City and Suburban, $\frac{1}{8}$; Johannesburg Waterworks, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; and Robinsons, $\frac{1}{8}$.

AFRICAN LANDS.

Remarks.—There has been a very bad market for this class of shares, and prices are lower all round, the only exception being Transvaals, which have been purchased at an improved price.

Business.—A rise is shown in Transvaal Gold of 9d., and Transvaal Lands 1s.; whilst the following have fallen:—Bechuanaland, $\frac{1}{8}$; British South Africa Chartered, $\frac{1}{8}$; Exploration, $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{8}$; Johannesburg Estates, $\frac{1}{8}$; Moodie's, 1s.; Moodies, 15s. paid, 1s. 6d.; Ophir, 3d.; South African Gold Trust, $\frac{1}{8}$; Transvaal Estates, 6d.; and Zoutpansberg, 6d.

DIAMONDS.

Remarks.—Considerable business has been transacted in these shares, and De Beers have advanced somewhat. The markets, however, do not leave off at best.

Business.—A rise is shown in De Beers of $\frac{1}{8}$; and Gordon, 6d.; whilst a fall has taken place in Consolidated Bultfontein, 6d.; and New Jagersfontein, $\frac{1}{8}$. Others unchanged.

Making-up Prices, Nov. 25.	DIAMOND SHARES.	To-night's Prices.
19/6	Consolidated Bultfontein ...	19/3 — 19/9
12 $\frac{7}{16}$	De Beers Consolidated ...	13 $\frac{1}{8}$ — 13 $\frac{1}{4}$
7/6	Gordon ...	7/6 — 8/6
5	Griqualand West ...	4 $\frac{7}{8}$ — 5 $\frac{1}{8}$
5 $\frac{1}{8}$	New Jagersfontein ...	5 — 5 $\frac{1}{4}$
2 $\frac{1}{4}$	North-Eastern Bultfontein ...	2 — 2 $\frac{1}{8}$
$\frac{1}{2}$	Burma Ruby Mines 15s. paid ..	$\frac{1}{2}$ — $\frac{5}{8}$

INDIANS.

Remarks.—There is very little business to report in this department. Champion Reefs show a rise of $\frac{1}{8}$, while Indian Consolidated close 1s. lower; other shares are almost without alteration.

Business.—A rise is shown in Balaghat of 6d.; and Champion Reef, $\frac{1}{8}$; whilst a fall has taken place in Indian Consolidated, 1s.; Mysore Harnhalli, 6d.; Mysore Reefs and Wynaad, 3d. each; and Nine Reefs, 6d.

AUSTRALIANS.

Remarks.—Business has been somewhat restricted in this market. Kangarilla have risen $\frac{1}{8}$, but British Broken Hill have fallen to the same extent.

Business.—A rise is shown in Bonnie Dundee of 3d., and Kangarilla, $\frac{1}{8}$; whilst a fall has taken place in British Broken Hill of $\frac{1}{8}$; Day Dawn P.C., 6d.; and Mosman, 9d.

COPPER.

Remarks.—There has been a lively time the last few days in this class of shares. Rio Tintos have had a considerable rise. Chile Bars advanced 20s. on Thursday, and this helped to put up prices. It appears also that Paris has been caught short of shares, so the Bulls for the moment are having a merry time.

Business.—A rise is shown in Capes of $\frac{1}{4}$; Copiapo, $\frac{1}{4}$; and Rio Tinto, 1 $\frac{1}{8}$; whilst others remain unchanged.

GENERAL FOREIGN SHARES.

There has been slightly more confidence shown in these shares, and prices would have undoubtedly been firmer were it not for the approach of the end of the year. New Gustons have advanced, together with Pahangs and Yaukee Girls, while Richmonds have

fallen to a small extent. Yankee Girls have advanced on the week, but do not close at best.

Business.—A rise is shown in American Belle of 1s. 6d.; Frontino, 1s.; Jay Hawk, 1s.; New Guston, $\frac{1}{8}$; Pahang Corporation, 2s.; Palmarejo, 6d.; St. Augustine, 6d.; and Yankee Girl, 1s. 9d.

The falls are as follow: Balkis, 3d.; Flagstaff, 3d.; Golden Leaf, 3d.; Montana, 9d.; New California, 6d.; Ottos Kopje, 6d.; Richmond, $\frac{1}{8}$; and West Argentine, 6d.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—A telegram dated Dec. 2 gives last month's return of gold as follows:—"305 tons of quartz produced 635 ozs. of gold."

NUNDYDROOG.—A telegram, dated Dec. 4, gives last month's return of gold as follows:—"1,100 tons of quartz produced 2,309 ozs. of gold; also 78 ozs. were obtained from tailings, making a total of 2,387 ozs. of gold."

OOREGUM.—A telegram from the mine, dated Dec. 3, gives last month's return of gold as follows:—"1,370 tons of quartz produced 2,905 ozs. of gold; 354 tons tailings produced 124 ozs. of gold; total production, 3,029 ozs."

COLONIAL MINES.

BRITISH BROKEN HILL PROPRIETARY.—During the week ending 26th inst. 417 tons of ore were treated, including 11 tons iron ore, yielding 69 tons lead, containing 4,884 ozs. silver.

MIDAS.—Cable from the mine:—"Yield for week ending Nov. 28, 38 ozs."

MILL'S DAY DAWN UNITED.—Crushing for fortnight ending Nov. 28:—1,173 tons, 1,366 ozs. Approximate value, 4,710/.

MOUNT MORGAN.—Messrs. Laughland, Mackay, and Baker have received the following telegram:—"We pay 25,000/ on Tuesday, being dividend of 6d. per share (free of dividend-tax) for the month of Nov."

NEW QUEEN.—Cablegram (Nov. 28):—"340 tons, yielding 640 ozs. gold. We have shipped 590 ozs. Tara." The directors have declared an interim dividend of 6d. per share, payable on 15th inst.

FOREIGN MINES.

ALASKA TREADWELL.—The company had on hand, Oct. 31, \$198,995.69 in cash. The net profits available for dividends for the first five months of the company's current financial year (up to Oct. 31) have been \$186,707.87.

ARGENTELLA.—In consequence of some very favourable telegrams from Capt. Roberts, the manager of the Argentella mines, two of the directors left London on Saturday last for Corsica to personally inspect the operations on the company's property.

CALLAO BIS.—A telegram from the superintendent at the mines

states as follows: "680 tons; 860 ozs.; 26 days; 10 stamp mill.

DE LAMAR.—Cable from the mine: "Have entered the 77-ft. vein on the 7th level. The quartz contents are of comparatively low-grade ore, but the shipping ore is of very fine quality; have followed the latter for 13 ft., with an average width of 16 ins. of an average value of \$500 per ton, and assorted ore of the average of \$700 per ton. The Wahl tunnel lies under this point at a depth of 65 ft., vertically, and we hope to cut the 77-ft. vein in this tunnel at about a distance of 30 ft." Further cable information from the mine: "Six new pans and settlers will commence next Tuesday. The rest will be started when machinery is completed."

ELKHORN.—Cable from the mine: "Bullion produced for week ending Nov. 28, \$8,450. At the 1,250-ft. level the ore body has increased to 8 ft. wide, and assays 86 ozs. of silver per ton and 10 per cent. lead."

EMMA.—The following cablegram has been received from the mine:—"Drift north-west from Bay City tunnel on No. 3 fissure, and drift south-east from Bay City tunnel on No. 3 fissure, improving constantly. Shaft on tunnel in opening shows some ore."

ESMERALDA.—The manager reports by cable, Dec. 3, that the ore streak still continues in the Esmeralda vein, and that he is drifting on it. The width of the streak is 4 ins., and the value is equal to 2 $\frac{1}{2}$ ozs. of standard gold to the ton.

GOLDEN FEATHER CHANNEL.—Mr. T. S. G. Kirkpatrick, a director, and Mr. E. Harvey the secretary, of the company, cable:—"Rockers have yielded \$2,000 since our arrival. It is very probable canal will hold rainfall until about middle of Jan. Sluices completed. Elevator working perfectly satisfactorily. Intend to leave for England to-morrow."

GRAND CENTRAL.—The manager reports by cable, Dec. 3, that more than one-fourth of the road is finished, and that ore is being prepared, and contracts have been made for carting the ore for sale to the smelters as soon as the road is completed.

GRAVEL GOLD.—Cablegram:—"Water passed San José and Reposo syphons. Shall try Rica syphon to-morrow."

JAY HAWK AND LONE PINE CONSOLIDATED.—The directors have received the following telegram from the manager, viz.:—"Week's mill returns show 6,000 ozs. Clean up this week. No change in mine.—PRIDEAUX."

NEW RUSSELL.—Telegram: "Gold ores reduction process doing well; about 50 tons of quartz treated; saving 88 per cent."

NEW VISO.—The New Viso Tin Co. have sold a parcel of Spanish tin ore at 57/ 5s. per ton.

MAID OF ERIN.—Cable from the mines: "Gross yield for the week ending Nov. 28, 1,500 tons; estimated value, \$24,500."

PARKER.—Important telegram from manager Dec. 4: "Have struck a pocket of very rich ore.—JUDD."

RIO TINTO.—The company publish the numbers of their Five per cent. second mortgage Bonds, 1884, which have been drawn for payment at par on Jan. 1.

RUBY.—Telegram from Eureka: "No tribute ore transactions during the week; 45 tons ore on company's account smelted, realising \$630."

TOLIMA.—Notice is given that the directors of this company will pay, on Dec. 17 inst., the following dividend on the "A" shares as they stand on the register on the 7th inst., viz., 10s. per share on the "A" shares, being a dividend at the rate of 10 per cent. for the year 1888.

ZARUMA.—Telegram from the manager respecting the Oct. produce: "Mill working 17 days, crushed 430 tons of quartz, producing 200 ozs. of bullion."

HOME MINES.

DEVON CONSOLS.—It is currently reported that the opposition, encouraged by the "catch" vote at the last meeting, intends to resume the fight at the next meeting.

MID-DEVON COPPER.—The materials of this mine, situated near Okehampton, are all to be sold by auction.

NEW MINERA.—A successful meeting of this company was held to-day, of which we shall give a full report next week. Though started quite recently ore to the value of over 5,000/ has already been sold.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

NEW CHIMES.—784 tons crushed, yielded 703 ozs. 3 dwts. of gold.

JUMPERS.—Cable:—"Obtained 1,151 ozs. gold during month (Nov.)."

EDWIN BRAY.—During Nov. 675 tons crushed, yielding 270 ozs. of free gold.

SIMMER AND JACK.—"Tons crushed, 7,300; obtained 3,383 ozs. of gold during month."

SHEBA.—Telegram from the mine for Nov.:—"3,240 tons crushed at the mill; yield, 3,730 ozs. of gold."

JUMPERS.—Cablegram from Johannesburg, Dec. 1:—"Obtained 1,151 ozs. gold during month (Nov.)."

FORBES REEF.—A telegram, dated Dec. 3, gives results for Nov.:—"Crushed 930 tons (chiefly soil), obtained 130 ozs. gold."

GELDENHUIS.—Crushed 3,680 tons of ore last month, which yielded 3,929 ozs. of gold. The profit for the month was 9,250/.

Pigg's Peak.—Cable from Barberton:—"10-stamp mill works

well." This is understood to refer to the battery recently started at the Devil's reef.

NORTH-EASTERN BULTFONTEIN.—Telegraphic advices for four weeks ending Nov. 23 :—"No blue ground sufficiently ripe; washed top-ground 47,300 loads, yielding 5,700 carats. Increase of blue on floors 12,550 loads."

HORO CONCESSION.—A cablegram from the company's office at Barberton gives the result of the crushing for Nov. :—"1,800 tons, 186 ozs.; expenses, 700%. From want of water, crushing 18 days; the rainy season has now begun."

VIRGINIA (TRANSVAAL).—Manager's report, Nov. 2 :—"Dutchman's shaft: Found rich point going north; pannings to-day give fully 1 oz. per ton. Blignaut's shaft: Reef 3 ft., running right up to surface; pannings show considerably over 1 oz. per ton."

WASSAU (GOLD COAST).—During Sept. last the mill worked 18 days, and crushed 211 tons of lode ore, yielding 108½ ozs. of gold, standard weight, being equal to 10 dwts. per ton. Owing to sundry repairs being necessary to the mill, a larger percentage of low-grade ore was stamped this month, which accounts for the slightly decreased yield per ton.

FORBES REEF (Nov. 30).—A telegram has been received to-day from the mine manager as follows :—"A change for the better has taken place in Forbes' reef against the footwall. Prospects are encouraging at the Avalanche reef." The directors, by the advice of mine manager, have recently sanctioned the immediate erection of a 10-stamp mill with steam power at the Avalanche Hill, where payable quartz has been struck.

LANGLAAGTE ROYAL.—Manager's report for Oct. :—"Total expenditure from Oct. 1 to 31 (inclusive), 2,661l. 14s. 10d.; smelted gold returned, 1,562 ozs. 17 dwts., at 72s. 6d. per oz., 5,661l. 14s. 10d.; showing a nett profit for month of 3,000l. The return of gold is as follows :—From Sandycroft 25 stamps, 1,090 ozs. 11 dwts., equal to 218 ozs. 2 dwts. per five stamps; from Australian 10 stamps, 472 ozs. 6 dwts., equal to 236 ozs. 3 dwts. per five stamps; total, 1,562 ozs. 17 dwts."

SUTHERLAND REEF.—Manager's letter dated Nov. 1 :—"Vertical shaft, east drive: We have driven 3 ft. this week; total, 10 ft.; both leads look well; the north lead has widened a little. West drive we have also driven 3 ft.; total, 9 ft.; the south lead has widened to about 1 ft., the other is about the same, and pans as well as when first struck. Air shaft: We have sunk 2 ft. here; total, 118 ft. (The water has gone, but I suppose will come on again lower down). There is a reef 1 ft. 6 ins. wide in the shaft now as reported last week, the formation is still hard."

NEW AURORA WEST.—The past month has seen a considerable increase in the amount of work done, 1,119 ft. of sinking, rising, and driving having been completed. The costs are :—14s. 1d. actual mining, 3s. 9d. for pumping and hauling, and 1s. 7½d. for management and general expenses, making a total of 19s. 5½d., as against 25s. 1¼d. in Sept., a decrease of 5s. 8d. per ft. Development is now safely ahead of all possible mill requirements, and there is a certainty of constant crushing when the mill is started. The reefs (south and main reef leader) keep up their quality as the drives progress into hitherto untried ground.

CERRO DE PASCO.—The directors have received the following advices, dated Barberton, Nov. 2 :—"Block F extension: South-east cross-cut has been driven 13 ft., making total distance 388 ft.; this cross-cut is still in slate. Drive south on 10 ft. reef has been driven 6 ft., making total distance 29 ft.; ore extracted, 12 tons. South-east cross-cut No. 2 has been driven 16 ft., making total distance 29 ft., and proves lode known as 4 ft. reef to be 4 ft. 8 ins. wide at point cut. Drive north on 10 ft. reef: I stopped this work on Oct. 26, as requested by you. Air shaft, No. 1 south, has been sunk 9 ft., making total distance 90 ft. Block 12, north-east cross-cut, has been driven 14 ft., making total distance, 268 ft.; this cross-cut is still in mica schist."

TRANSVAAL GOLD EXPLORATION AND LAND.—Manager's advices Nov. 2 :—"Mining—Ophir Hill, Theta reef: Ore extracted, 30 tons; assay value, 3 ozs. 11 dwts. per ton. Brown's Hill, Nu reef: Ore extracted at No. 1,209, 25 tons; assay value, 5 ozs. 18 dwts. per ton; and at No. 1,211, &c., 16 tons; assay value, 1 oz. 17 dwts. per ton. Brown's Hill, Sigma reef: Ore extracted, 26 tons; assay value, 2 ozs. 5 dwts. per ton. Edin Hill, Rho reef: Ore extracted, 30 tons; assay value, 2 ozs. 9 dwts. per ton. In all the drives the vein continued to look strong, and was from 18 ins. to about 2 ft. in thickness. Colombian Hill, Tau reef: Ore extracted, 11 tons; assay value, 1 oz. 15 dwts. per ton. Prospecting—Driekop: Work continued, but no payable ore had been found. Mill: All machinery had worked well during week, and the monthly clean up was proceeding."

METROPOLITAN.—Oct. report: The driving, cross-cutting, and rising at the 100-ft. level for the month; total, 74 ft., or about one half the progress of the previous month. This is owing to the development of the level being completed, and explains the increased cost, 3l. 6s. 2d., against 2l. 17s. 8½d. The sinking of the main shaft has been completed to the 200-ft. level, and the main cross-cut north carried in 32 ft. At a distance of 14 ft. in the cross-cut, the south reef was cut, averaging, with interbedded quartzites, about 2 ft. wide, and showing much free gold in the pan. One sample of the hanging wall portion of the reef gave, by fire assay, 34 ozs. 15 dwts. fine gold. The mean of two fire assays of sections of the reef and quartzites, taken over a width of 2 ft., is 5 ozs. 6 dwts. 3 grs., the free milling assay being 1 oz. 15 dwts. 9 grs. Battery: A 20-head Sandycroft battery, similar in all respects to the company's present 20-head mill, has been purchased, and is in course of erection.

SHEBA.—The following report has been received from the general manager for the month of Oct. :—"Mine—Quarry: During the month No. 18 winze was holed through to No. 1 level; no further work will be done on this level at present. No. 1 level: The south stope has produced some fair quality ore during the month, but continues very patchy. In the north stope the ore body is not as rich as it was a short time ago. The north-west cross-cut has been extended, but shows no improvement. No. 2 level: In the west end of the underhand stope we have stopped work, and are now beating the stope away towards the back of No. 3 level in very fair quality of ore."

No. 3 level: The underhand stope is still yielding considerable ore for the mill, but not of as high a grade as it has been for some time. No. 4 level: No work being done on this level. No. 5 level: The west end of level has been driven a further 14 ft. through very fair-looking ground, though not rich. No. 17 winze: Sunk 6 ft. 6 ins. during the month, the indications being that we are close upon shoot ore. No. 15 winze: During the month this has been sunk a further 12 ft., and on Oct. 31, at 230 ft. below No. 5 level, or 655 below, where the gold was first struck in the quarry we came into very rich shoot ore, better than any we have seen since leaving No. 6 level, 150 ft. above. In my report for Sept. I stated having struck some good ore, which, however, was not to be compared with our present strike. The rich ore covers nearly the whole bottom of the winze, and is very heavily charged with pyrites, and shows visible gold freely. I send you a sample by this mail that you may see the nature of it at this depth. I consider this strike of greater importance than any hitherto made in the mine, as it shows us that the shoot ore has not cut out in depth; all it wants is developing, which shall be vigorously prosecuted as soon as our electrical hoisting plant is erected. No. 6 level: This level has only been advanced 2 ft. No change in face. No. 7 level: Driven 11 ft. through very changeable ground. We are daily expecting a change for the better."

REPORTS OF MEETINGS.

GENERAL MINING ASSOCIATION, LIMITED.

SIR CHARLES TUPPER ELECTED A DIRECTOR.

A GENERAL MEETING of the shareholders of this company was held recently at the Offices, Blomfield House, London, E.C.

Lieut.-Col. W. C. Western

presided, in the absence of the chairman of the company, Mr. James Duke Hill.

The notice convening the meeting having been read, the minutes of the previous meeting were confirmed.

AN INCREASING VOLUME OF BUSINESS.

The CHAIRMAN: Ladies and gentlemen, it is not usual for us to hold a half-yearly meeting at this time of the year, but it is absolutely necessary that we should elect a gentleman on the board in the place of Mr. Bishop. The works at the mine are all going on satisfactorily. We have a better supply of labour at Victoria, and a fair increase at Sydney. We have had a very good year at Sydney, but at Victoria the shipments at the end of Oct. show a substantial increase over 1890. The telegraphed advices up to yesterday show that shipments were continuing at a fair rate; on the total there is an increase compared with 1890, of 1,000 tons at Sydney and 14,000 tons at Victoria. The prices have been better than in the previous year, and our charters were also made on favourable terms. In common with our neighbours, however, we have had to pay increased wages to the miners. We are glad to inform you that Sir Charles Tupper, Bart., is willing to fill the vacant seat on this board, and there is no doubt that, from his knowledge and experience of Canada, he will prove a valuable acquisition to the directorate. We, therefore, trust that the meeting will unanimously elect him. The Chairman then formally proposed the election of Sir Charles Tupper.

Mr. CLARKE seconded the motion, which was carried unanimously, and the proceedings closed with a vote of thanks to the chairman and directors.

THE SWAZIELAND GOLD EXPLORATION AND LAND CO., LIMITED.

THE COMPANY'S TITLE TO ITS CONCESSION CONFIRMED BY THE COURT OF SWAZIELAND.

THE annual general meeting of the shareholders of the Swazieland Gold Exploration and Land Co., Limited, was held at Winchester House, Old Broad Street, E.C., on Nov. 24, at 12.30 p.m., for the purposes following, namely :—1. To receive the annual statement of accounts and balance-sheet, and the report of the directors. 2. To elect director and auditors, and to transact the ordinary business of the company.

Mr. E. A. Pontifex

presided.

Mr. H. HODGES (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said that the observations that he had to offer that day would be very brief. In accordance with the programme laid down by the shareholders at the last meeting, the directors had done practically nothing in the way of developing the property, but had

RESTED ON THEIR OARS,

awaiting better times. Their chief thing that they had to look forward to was railways opening up the country, and rendering thereby prospecting and working more easy. They had an enormous area of territory, 156 square miles in extent, of undoubted value. The Swazieland Government—or rather the protectorate of the Boer Republic and the British Government—had confirmed the company's title to the property. There had been some little doubt as to whether the grant of the late King of Swazieland would be confirmed by his successors, but this matter had now been set at rest, for, as they said in their report, "The High Court of Swazieland, sitting at Bremersdorp on Apl. 16, 1891, duly confirmed the concession originally made to this company by the late King Umbandine, thus making the company's title absolute and secure." The efforts of the directors had been, and would continue to be, devoted to the

REDUCTION OF EXPENSES.

The London expenses were kept very low, their secretary finding offices, clerical assistance, &c., for 10l. a month. The expenses on the other side had also been reduced, and were at the present moment under 400l. a year. The directors at the present time were drawing no fees, and would continue to give their services free until some better times for the company came. He did not think the directors would need to make any further call on the shareholders till the

advent of more prosperous times. He invited discussion, and moved that the report and accounts be received and adopted.

Mr. R. S. GLADSTONE seconded the motion, which was carried without discussion.

On the motion of the CHAIRMAN, seconded by Mr. FELDHIEM, the retiring director, Mr. C. F. Randolph, was re-elected.

Mr. JAMES moved, and Mr. FELDHIEM seconded the re-appointment of the auditors, Messrs. W. Wescott and Co., which was carried.

A vote of thanks to Mr. Pontifex for presiding closed the meeting.

DON PEDRO GOLD MINING CO., LIMITED.

GOLD RAISING TO COMMENCE FORTHWITH.

Oct. 31.—Maquina Mine monthly report:—Operations throughout the month have been continued very satisfactorily in the sinking of Gordon's shaft, and widening out the entrance of 50 cross-cut towards Gordon's shaft to enable the tramcars to go direct from the stopes to surfaces. This is now completed. Gordon's shaft: We have now fitted the last set of timber at the 50 horizon, and will continue sinking for two sets more so as to enable us to fix the new plunger cistern at the horizon of the bottom of the 50. Sunk for the month, 3 fms. 5 ft. New adit: Good progress has been made, as the drive continues through soft sandstone. In the early part of the month we drove through lues of jacotinga, mixed with quartz, which proved to be auriferous, though of a low grade, but being west of the flookan (soft clayey substance) it is encouraging, as we never met with any traces of gold west of the flookan. The old adit being driven a great deal south of the present one, and there not being any auriferous mineral found, this proves that there is gold west of the flookan, but no doubt better quality stuff will be found still north of the new adit later on, as, by appearance, the auriferous formation is dropping from the north. Adit driven for the month, 14 fms. 5 ft.; total distance driven, 36 fms. 3 ft. New lobby: This drive is now completed, and is in working order, having already been proved by some heavy rains which we have experienced. The distance driven for the month is 130 ft.; total distance driven and completed is 350 ft. Gordon's shaft repairs: Several sets of timber have been put in throughout, also back and side laths replaced where most required. Some repairs have been made to old P.P. incline. The building, with concrete for fixing the new gearwork at entrance of shaft, being carried on very satisfactorily. Running work: A new wood frame is in hand for the new tightening arrangement for top transmission of wire-rope. We have a force making new plunger lift cistern with all speed possible, also all work in connection with the fixing of new plunger is being vigorously carried on.

LATEST TELEGRAM.

"Gold raising will be commenced Nov. 30."

OTTOS KOPJE DIAMOND MINES, LIMITED.

LETTER FROM MR. LISLE.

MR. LISLE, in his letter of the 9th ult. to the directors, reports as follows:—"I have now taken charge, and when I visited the mine this morning with Mr. O'Leary, I found the yellow ground he had got in the bottom of the excavation he is making for the new Pole pit, is better in appearance than anything that has hitherto been turned out. This is encouraging, and I have, therefore, determined to proceed as follows:—I will get a small hand-washing machine and have the ground at the bottom of the Pole pit thoroughly tested, and should I find sufficient diamonds there to pay expenses, will commence the whole face of 30 ft., but should I not, will stop the clearing away of the reef and commence and drive tunnels till I reach the richest ground, and the ground produced by the tunnel-driving will be carefully washed in the hand-washing machine. I may say that, owing to several unforeseen difficulties, Mr. O'Leary has not got down 80 ft. as we reckoned, but he has got to a depth of 60 ft., and it is on that level I intend to commence the tunnels in the yellow ground."

The mine is fully equipped with the necessary aerial gear, trucks, hauling and washing machinery, for treating 500 loads per diem, and from the above report, will learn that immediately Mr. Lisle has proved the ground now exposed, washing by machinery will commence. The board confidently hope that Mr. Lisle's operations will soon prove satisfactory to the shareholders, and will, from time to time, publish the results of operations at the mine.—T. C. WALTON, Secretary.

SOUTH-EAST MYSORE (Nov. 11).—Fortnightly report:—Good progress is being made in driving north from the bottom of winze. The quartz is about 9 ins. wide, and recent samples that I have washed show more gold. I was underground yesterday, and, judging from the appearance of the lode, it should soon improve.—Capt. SCANTLEBURY.

HOLLOWAY'S OINTMENT AND PILLS.—Chest and Stomach Complaints.—The source and centre of almost every ailment is impurity of the blood; dislodge this poison, and disease departs. Holloway's Pills exercise the inestimable power of thoroughly cleansing each component part of the blood, and rendering this fluid fit to perform its important functions. They cope most successfully with chest diseases, stomach complaints, liver disorders, and many other maladies, which were once the besetting dangers of mankind at certain seasons in town and country. The directions for use enable everyone to regulate the operation of these Pills with the greatest nicety. Chronic invalids, nervous sufferers, and all whom other treatment has failed to relieve are respectfully invited to try Holloway's celebrated medicine, which will strengthen and cure them.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Dec. 3).—Watson's engine shaft: In the 172-fm. level east the lode is 3 ft. wide, producing a little saving work of copper and mundic ores. In the 160-fm. level west the lode is 3 ft. wide, and is worth 1 ton of mundic and copper ores per fm. In the 148-fm. level east the lode is 3 ft. wide, producing saving work of copper and mundic ores, and is promising improvement. The stope in the bottom of the 160-fm. level west is yielding 4 tons of mundic and copper ores per fm. The lode in the stope in the back of the 148-fm. level west is producing 4 tons of copper ore per fm. We shall sample on Friday 400 tons of copper ores—W. CLEMO.

DEVON UNITED (Dec. 3).—We shall sample 55 tons of copper ore of good quality to-morrow, for sale on the 17th inst.—W. CLEMO.

LEADHILLS (Dec. 1).—Brown's vein: Five men are set to drive the 145-fm. level, now 173 fms. 4 ft. north of Jeffrey's shaft, at 120s. per fm.; promising vein above 4 ft. wide, mainly made up of quartz and spar with ore; worth 5 cwt. per fm. Five to No. 1 stope above the 145 north of Jeffrey's shaft, at 35s. per fm.; worth 20 cwt. of ore per fm. Four to No. 2 stope, at 42s. 6d. per fm.; worth 20 cwt. of ore per fm. Four to stope above the 145 south of Wilson's shaft, at 32s. 6d. per fm.; worth 90 cwt. of ore per fm. Four to clear out broken ore stope above the 145 north of Wilson's shaft, on shifts. Four to rise above the 130 north of Jeffrey's shaft, at 120s. per fm.; worth 25 cwt. of ore per fm. Five to No. 1 stope above the 130 north of Jeffrey's shaft, at 45s. per fm.; worth 35 cwt. of ore per fm. Five to No. 2 stope, at 47s. 6d. per fm.; worth 25 cwt. of ore per fm. Four to clear out broken ore stope above the 130 south of Wilson's shaft on shifts. Five to drive the 115-fm. level, now 63 fms. 1 ft. 8 ins. north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide, of promising character, charged mostly with spar and ore; worth 45 cwt. per fm. Four to stope above the 115 north of Jeffrey's shaft, at 47s. 6d. per fm.; worth 15 cwt. of ore per fm. Two to drive the 115-fm. level, now 46 fms. 5 ft. south of Wilson's shaft, at 95s. per fm.; vein 4 ft. wide, showing a better rib of kindly spar, with nice dampness, but without ore. Seven to sink below the 100 north of Jeffrey's, at 120s. per fm.; vein 4 ft. wide, well mixed with spar and ore; worth 20 cwt. per fm. Two to clear out broken ore stope below the 100 south of Wilson's shaft on shifts. Four to No. 1 stope above the 35 south of Flat Rod shaft, at 30s. per fm.; worth 40 cwt. of ore per fm. Four to No. 2 stope, at 37s. 6d. per fm.; worth 25 cwt. of ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 39 fms. 1 ft. north of George's Roust, at 100s. per fm.; vein above 4 ft. wide; charged with a rib of nice-looking spar, and wet, but without ore.—T. NEWBIGGING.

PRINCE OF WALES (Dec. 2).—We commenced to blast down the lode yesterday in the 180-fm. level west, which, so far as yet can be seen, looks very well, being now 3 ft. wide, yielding rich tinstone, but appears to be opening wider, with indications of further improvement. We are inclined to believe we shall have something very good here soon. We are preparing to take down lode in this level east, and hope to be enabled to report an improvement in this direction. There is no change to report in the 165 west, as we have to get forth in the country rock by the lode, which is very hard. The ground in the cross-cut south is much the same as last reported.—J. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Dec. 3).—The 155 north on main lode is driven 36 fms. 4 ft. 6 ins.; the vein in the forebreast to-day being 3 ft. wide, and of promising character, yielding good stones of ore. The new winze coming down in front of this end is now 8 fms. deep, and the lode is worth 1 ton per fm. The 155 south-east being up to the boundary of the East Roman's property is suspended for the present. The 140 south-east is driven 30 fms., and the end is, therefore, within a short distance of said boundary. The forebreast to-day shows a further improvement, and is worth 2½ tons per fm. Six men with machine drills are now rising in the back of this level against the new winze from the level above (125 south-east), and the vein is producing, for the part being carried, 1½ ton per fm. The two stopes are together producing about 3 tons per fm. The said winze is 5 fms. deep, and the vein is producing about 1½ ton per fm. The 140 south on main lode is driven 33 fms. 1 ft. 6 ins. from No. 1 winze, the vein in the forebreast being in three or four divisions which are, however, not to value for ore. The new winze coming down from the 125, in front of said forebreast is 8½ fms. deep, and the vein shows a very nice rib of ore. We are just now reaching the footwall of the vein which carried the ore at and about Lewis winze, so that we are expecting an early improvement here. The 125 south is worth 1 ton per fm. The stope in back of this level is worth 1 ton per fm. The three stopes in back of the 110 are worth 3½ tons per fm., and the stope south of main shaft 1 ton per fm. The two stopes in back of the 80 south are together worth 2½ tons per fm., and the stope in back of ditto on east lode is worth 1½ tons per fm. The two stopes in back of the 140 north are together worth 4 tons per fm. We have sampled 50 tons of lead ore to-day for sale next week.—A. WATERS.

SOUTH CONDURROW (Dec. 2).—The ground is favourable for driving in the 138 cross-cut north of Marshall's shaft. We have begun to open out west on the large lode in the 133-fm. cross-cut, which carries good stones of tin. We are also opening on Marshall's lode to prove it away from the influence of the cross-course. There is no new feature in the winze sinking below the 123 on the flat lode. The stopes and pitches in the eastern part of the mine are without alteration to notice.—W. RICH, W. THOMAS.

WEARDALE.—Mines' report for week ending Nov. 28:—Ore raised for week, 56 tons; ore dressed for week, 118 tons; ore and slag smelted for week, 139 tons; producing 70 tons of pig lead.

WHEAL CREBOR (Dec. 1).—No work has been done in either of the ends at the 156-fm. level during the past week, for reasons stated in my last, but we hope the hindrance will be overcome by to-morrow. We have lately had two men driving west on the north part of the lode at the 120-fm. level. We commenced with the intention of blasting a few holes only to see whether the branch, which was very small (not more than 4 ins. wide) and poor, would open out and improve. We have driven on it 9 ft., the lode has widened out to 1 ft. 6 ins., and will now yield 1 ton of good quality copper ore and 1 ton of mundic ore per fm., and it looks likely to still further improve. But be that as it may, it is advisable to drive this end a little further. There is no other change in any other part of the mine to report this week.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Dec. 2).—The lode in the 27 end is in a very disordered state, and we are driving the end a little in the northerly direction to see whether we may intersect the lode above the slide; the country rock is all that can be desired for the production of minerals, and no one knows how soon we may strike a profitable lode. The stope of tin stuff in the Flow is not yielding quite so much tin.—S. P. CURTIS.

WHEAL UNY (Dec. 2).—Setting report, Nov. 28.—The 203 end to drive east by four men at 6L. 10s. per fm., worth, for tin, 9L. per fm. A stope in back of 203 west, by eight men at 6s. per ton, worth 15L. per fm. A stope in bottom of 193 west by 12 men at 6s. per ton, worth 18L. per fm. A stope in bottom of 193 east by eight men at 5s. per ton, worth 15L. per fm. A winze, to sink below the 193 by six men at 6L. per fm., to communicate with the 203 east for ventilation, and hoping to lay open some stoping ground. We are now forking below the 214.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ANTIOQUIA (FRONTINO).—The directors have received advices from Mr. J. H. White, dated Oct. 2, and from Messrs. Restrepo, dated Oct. 12. The statement for the month of Sept. is as follows:—231 tons produced 181 ozs.; average, 13.5 dwts.; estimated value of the gold, 536L.; cost at the mines, Medellin, and in London, 580L. 8s.; estimated loss, 44L. 8s. During the month sums amounting to 55L. 3s. 10d., included in the above statement of cost, were expended in Colombia on capital account, and further sums are included for the purchase of a stock of maize sufficient for nearly nine months' consumption at the mines.

BALAGHAT-MYSORE (Nov. 11).—North engine shaft: I am glad to say the driving of the 600-ft. level north has again been resumed. The end is now 337-ft. from the shaft; the quartz is about 15 ins. wide, and assays 3 ozs. 15 dwts. 4 grs. of gold per ton. The machine rise in the back of this level has been advanced 10 ft., or 56 ft. 8 ins. above the level; the quartz is about 16 ins. wide, and assays 5 ozs. 1 dwt. 6 grs. of gold per ton. The stopes in the back of the 600-ft. level north yield quartz of about 16 ins. wide, and assays on an average 4 ozs. 14 dwts. 8 grs. of gold per ton. The 600-ft. level south has been extended 2 ft. 3 ins., or 25 ft. from the shaft; the quartz is at present very small, and not of much value. The No. 1 winze in the bottom of the 500-ft. level south has been sunk 1 ft. 6 ins., or 46 ft. 6 ins. below the level; the quartz is about 6 ins. wide, and assays about 1½ ozs. of gold per ton. We have changed the men at this winze, and hope to be able to report much better progress in my next report. The cleaning and clearing of the 500-ft. level north is being attended to, but progress made is very slow owing to the heavy nature of the ground, thereby requiring to be strongly supported with timber. The stopes in the bottom and back of this level produce quartz of about 14 ins. wide, and assay on an average 3 ozs. 2 dwts. 11 grs. of gold per ton. The rise in the back of this level has been advanced 8 ft. 6 ins., or 19 ft. above the level, and has been communicated with the No. 1 midway winze in the bottom of the 410; this has laid open some very good stoping ground. The No. 1 midway winze above referred to has been sunk 2 ft. 3 ins., or 62 ft. 3 ins. below the level, and holed to the rise in the back of the 500-ft. level; the quartz is about 1 ft. wide, and assays 2 ozs. 1 dwt. 15 grs. of gold per ton. The stopes in the back of the 410-ft. level north yield quartz of about 1 ft. wide, and assay on an average about 15 dwts. of gold per ton. The stopes in the back of the 330-ft. level north produce quartz of about 1 ft. wide, and assay 1 oz. 15 dwts. 15 grs. of gold per ton. The machine rise in the back of the 270-ft. level north has been advanced 15 ft., or 49 ft. above the back of the level; the quartz is about 1 ft. wide, and assays 2 ozs. 9 dwts. 12 grs. of gold per ton. I am very pleased to say this rise has just been communicated with the winze sinking below the midway level. This has not only improved our ventilation, but will now enable us to bring all the stuff from the upper levels to Haines' shaft, where it can be much more conveniently hoisted than at the north shaft, as heretofore. The stopes in the back of the 270-ft. level north produce quartz of about 1 ft. wide, and assay on an average 1 oz. 8 dwts. 12 grs. of gold per ton. The stopes in the back of the 270-ft. level south yield quartz of about 9 ins. wide, and assay 1 oz. 0 dwts. 18 grs. of gold per ton. The winze in the bottom of the midway level above the 270-ft. level north has been sunk about 2 ft., or 28 ft. 6 ins. below the level, and has been communicated with the machine rise in the back of the 270-ft. level north. In addition to the increased facilities for the discharge of the stuff, the hoing of these places has laid open a good piece of stoping ground. The stopes in the back of the 165-ft. level north produce quartz of about 2½ ft. wide, and assay 1 oz. 16 dwts. 10 grs. of gold per ton. Haines' shaft: We continue to push forward the cutting down and securing of this shaft below the 410-ft. level. Surface: I am pleased to say the additional 10 heads to new battery have been set to work, and are working very satisfactorily.—J. PRYOR.

BONNIE DUNDEE.—Mine manager's report for fortnight ending Oct. 10:—We have continued stoping from the back of No. 7 south-west level. East of winze: We are still stoping back on the flat run of stone into the hanging-wall. The reef averages about 9 ins. West of winze: We have had very little stone for the fortnight, and at present it is looking very poor. I hope to be able to report a change for the better in this stope very soon. Have also continued stoping east and west of winze between Nos. 7 and 8 south-west levels. We have about 15 ins. of stone mixed through from 8 to 14 ft. of formation. The stone coming to hand carries a fair amount of mineral, and shows a little gold; face of stope looking very well at present. We have driven No. 5 south-west level a further distance of 14 ft. with two men, making a total distance from the shaft 214 ft. The reef we had in this level at the commencement of the fortnight cut out, after running to fully 18 ins. in thickness of good stone. There is no reef in the face at present, but we may get it again at any time. Have driven the level west from Just in Time plat a further distance of 32 ft. with two men, making a total distance from the shaft 91 ft. There are still a few leaders mixed through the formation, but no defined reef. We have raised 40 tons of quartz for the fortnight; 20 tons of this has been sent to the mill. All machinery in good order. Crushings: Oct. 10: 265 tons, 265 ozs.; 90L. value. Nov. 30: 177 tons, 160 ozs.; 545L. value.

BRATSBERG.—Report for week ending Nov. 21.—Hoffnung Mine: No. 2 adit level is not looking so well to-day as last week, now yielding only saving stuff. No. 1 rise is worth 1 ton per fm. No. 2 rise remains unproductive, but the winze in the bottom is worth

1 ton per fm. The mid-level in the back of No. 2 is still poor. At No. 3 adit the lode is now yielding ¾ ton per fm., but its character appears to be buncy. The rise here is producing about ½ ton per fm. We have made a few blasts in the bottom of No. 3 adit level in starting the winze, but not sufficient to enable us to judge the value of the lode. The trial level at Murchison's carries ore, but not enough to value at present moment; recently the lode has been buncy in character. Johannes Mine: The western end of level on Howard lode is yielding a little ore, but is without value. The eastern end is worth about ½ ton per fm. The main rise continues to produce about 1 ton per fm. 97 miners have been employed during the past week. Surface work and remarks: Dressing goes on with regularity, but recent falls of snow interferes with outdoor work.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING WORKS.—Report for week ending Nov. 21:—The smelting works are still standing for want of coke, and we have to-day started to burn lime for binding the fine stuff and flue dust into balls. The want of a limekiln is a serious inconvenience, as we have to take out the bottom plate of the furnace, and insert fire bars each time we use it for this purpose. Electro deposition is going on as usual, and there are now only 54 tanks in work. We hope the coke will arrive in time to prevent a stop here. We despatched to you on Saturday 247 plates of copper of the net weight of 4,247 kilos, or 4 tons 3 cwt. 2 qrs. 11 lbs., which we hope will be of good quality, and fetch a decent price.—T. F. SMITH.

CALLAO BIS (Nov. 8).—Advices from the mines.—Independiente: Since the 25th ult. no sinking has been done in the shaft; the men have been employed putting in the water tank and fixing the new plunger lift, which is at work; also the new main rods. I am pleased to say it is giving good satisfaction. As soon as the other plunger lift is fixed at this point we shall be able to do away with all steam pumps. The No. 4 cross-cut has been advanced 14 ft., or 40 ft. from shaft. No change has taken place in the ground since last reported; we are pushing this as fast as possible to intersect the lode. The No. 3 level south has been advanced 30 ft., or 150 ft. from cross-cut; lode, 2 ft. wide, of fair value; water proceeding from the face of the drift very freely. No. 2 level south has been advanced 28 ft., or 233 ft. from shaft; lode, 2 ft. wide, but a little mixed with country rock; still it is of value. Raise in the back of this level has been advanced 42 ft.; total distance, 48 ft.; lode, 4 ft. wide, of good value. The results of 12 days crushing has principally come from this point, and up to date has realised about 350 ozs. of gold. Surface work: The other 10 stamps are very nearly completed. I hope by the next month to commence crushing with our 20 stamps.

CHAMPION REEF (Nov. 11).—Fortnightly report:—Mysore section—Carmichael's shaft: Sinking, 3 ft.; total depth, 253 ft. 6 ins.; there is very little change in the rock, which continues very hard. At the 225-ft. level the south drift has been extended 14 ft. 6 ins.; total length, 165 ft. 9 ins.; the lode is much smaller than last reported, and is almost vertical. The north end has been driven 10 ft.; total, 17 ft.; the lode is split into several small branches, which only give a trace of gold on assay. Ribblesdale's shaft: Sinking, 3 ft.; total depth, 260 ft. 6 ins. At the 240-ft. level the north drift has been advanced 4 ft. 9 ins.; total, 108 ft. 9 ins. The same men have been employed driving 11 ft. in cross-cut east; the lode in the north has improved a little, but is still small and unproductive. Driving south drift, 19 ft. 3 ins.; total length, 151 ft.; the lode in the end has pinched a little, but the quality of the ore has slightly improved, and assays 1 oz. 16 dwts. 9 grs. per ton. Rising in the back of level, 12 ft. 3 ins.; total, 20 ft. 3 ins. At this point the lode has improved, and now carries 3 ft. of quartz, which assays 1 oz. 1 dwt. per ton. Garland's shaft: Sinking, 5 ft.; total depth, 274 ft. 6 ins.; the lode is about 2½ ft. wide, and assays 17 dwts. per ton. At the 240-ft. level the north end has been driven 22 ft. 2 ins.; total, 165 ft. 5 ins. The lode is composed of quartz felspar, and the surrounding rock contains a little carbonate of lime. The cross-cut east of this level has been driven 6 ft. 9 ins.; work suspended. Driving south, 13 ft.; total, 152 ft. 3 ins. We are still in old workings, which are about 2½ ft. wide. Dalyell's shaft: Sinking, 8 ft. 9 ins.; total depth, 296 ft. 9 ins. The lode is small, but continues regular. Driving north at the 240 level, 14 ft. 1 in.; total, 174 ft. 8 ins.; the lode in the end carries a little more quartz. Trial shaft: Sinking, 1 ft. 6 ins.; total depth, 146 ft. 3 ins. Driving north from bottom of shaft, 14 ft. 9 ins.; the lode is 3 ft. wide of quartz, which assays 8 dwts. per ton. The driving north will be continued a short distance in order to prove whether the old workings have been worked deeper further north. Coromandel section—Prospect shaft: Driving at the 380 ft. north, 5 ft. 6 ins.; total distance from shaft, 69 ft. 9 ins.; the lode is disordered, and only carries a few stringers of quartz. The winze below the 320-ft. level has been sunk 5 ft. 6 ins.; total depth, 55 ft. 3 ins.; the lode is 4 ft. wide, carrying 3 ft. of ore; worth 8 dwts. per ton. Driving at the 290 level south, 9 ins.; total distance from shaft, 197 ft. 3 ins.; work suspended. Driving the cross-cut west at this level, 9 ins.; total length, 25 ft. 9 ins. All the operations at this shaft, with the exception of the 380 north end and winze below the 320 level, have been suspended. Surface work: The Italians' bungalows are well advanced, and in the course of a few days more will be complete. Machinery working well, and the health of the camp is good.—R. C. JONES.

COLOR CENTRAL (Nov. 11).—The 200 north has been driven 8 ft. 3 ins., making a total of 70 ft. 6 ins.; the lode is a little mixed with country, but the quartz is 2 ft. wide, assaying 7 dwts. 18 grs. The 200 south has been driven 4 ft. 6 ins., making a total of 59 ft. 3 ins. No change since last report. Winze sunk 6 ft. 3 ins.; total depth, 48 ft.; the lode is 6 ins. wide, assaying 9 dwts. 1 gr. to the ton.

COLOMBIAN HYDRAULIC (Oct. 22).—The following are the details of run No. 176:—A break having occurred on the lower Canterera ditch, I decided to make a clean up a week sooner than I had intended. The run was made on the north side of the channel at the head of the mine. The banks here are very low, and quite half is Spanish tailings, but what gravel there is soft, and best suited to our present pressure. We cleaned up on Oct. 20, and obtained from the main sluice \$6,339.50, which, with purchased gold worth \$485.00, gives a total result of \$6,824.50, or about 1,365L. which gives about 600L. profit.—A. E. OAKES.

COLORADO.—The manager's report for two weeks ending Nov. 15 is just to hand. The mines are being actively worked at 14 different points, the following being the most important. Terrible lode—8th level west: Advanced 9 ft. since last report; lode, 4 ft. to 5 ft. wide; mineral vein, 1 in. to 2 ins. wide. Last sale gave 199 ozs. of silver per

ton, 16 per cent. lead, and 99 ozs. of silver per ton; in two classes. 1st level: Lode, 4 ft. wide; mineral vein strong, at 2½ ins. wide. Last sale gave 173 ozs. of silver per ton, and 540 ozs. of silver per ton and 26 per cent. lead per ton; in two classes. Chelsea Beach lode: Last sale gave 76 ozs. silver per ton. Brown lode—Rockwell adit level: Last sale gave 95 ozs. silver, and .15 oz. gold per ton. Brown adit level: Lode, 4 ft. wide; mineral vein, 3 ins. to 4 ins. wide. Mammoth tunnel level: Lode, 4 ft. wide; mineral vein, 2 ins. to 3 ins. wide. Last sale gave 66 ozs. silver and 17 per cent. lead per ton. Coin lode—Brown adit level: The lode matter is composed of excellent mineral bearing rock, similar to that which has surrounded all good pockets of ore in the Coin lode. The pitch of the walls has considerably changed in the last 20 ft. drifted, and the lode gets wider. The ore is now being found on the hanging-wall instead of the footwall, and we hope soon to uncover ore of a better quality, and make this a good paying pitch. West Terrible: Lode, 4 ft. wide; vein in back of stope, 1 in. to 2 ins. wide. Last sale gave 94 ozs. silver per ton. We are developing new ground as fast as possible with the expectation of opening up some new ore bodies. The sales for Oct. amounted to 22 tons of clean ore.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending Oct. 10:—No. 2 Underlie shaft: This shaft has been sunk a further depth of 8 ft., making total depth from the surface 1,516 ft. We are now in formation, and a little water is making. 1,003-ft. level: A rise is being put up towards the 902-ft. level. A height of 30 ft. from the bottom of the level has been reached. The reef is from 4 to 5 ft. in thickness; worth about 10 dwts. per ton. 902-ft. level: A further height of 17 ft. has been reached in the rise, making total height above the level 40 ft. The reef is between 4 and 5 ft. in thickness of medium quality. 805-ft. level: The western level from No. 1 cross-cut is now 203 ft. in length, with a reef 18 ins. thick, showing in the face of poor quality. The eastern portion of the drive from No. 1 cross-cut is 59 ft. in length, and is standing at present. A winze is being sunk to meet the 902-ft. level rise. The stopes above the level continue to look well. The reef is 3 ft. thick; worth, say, 1 oz. 17 dwts. per ton. 630-ft. level west: This level has been further extended 11 ft., making total distance from the shaft 259 ft. There is no reef in the face at present. No. 3 level east: The reef in the stopes is 1 ft. in thickness; worth, say, 18 dwts. per ton.

DAY DAWN P.O.—Report for the fortnight ending Oct. 10.—The output of quartz is 1,012 trucks; sent to the Excelsior mill 1,002 tons. No. 13 level has been extended a further distance of 10 ft., making a total distance of 123 ft. from the shaft; the formation is 16 ft. wide, carrying 3 ft. of stone on the hanging-wall and 1 ft. on the footwall, of fair quality. In the leading stope we have 4 ft. of stone on the hanging-wall and 2 ft. on the footwall, of good quality. The No. 1 stope is carrying 3 ft. of stone of fair quality. No. 12 level has been extended a further distance of 11 ft., making a total distance of 460 ft. from the shaft; this level is carrying 4 ft. of stone of good quality. In the leading stope we have 5 ft. of stone of good quality. In the No. 2 stope we have 4 ft. of good stone. In the No. 1 there are 3 ft. of stone of good quality. There are stopes going east from the No. 4 winze, and in the stope which I have started going west from the No. 4 winze there are 2 ft. of good stone; this stone will increase in thickness as we advance the stope. In the stope between the Nos. 2 and 3 winzes we have 4 ft. of good stone. The No. 1 winze has been sunk a further depth of 24 ft.; making a total depth of 78 ft.; this winze is carrying 4 ft. of stone of good quality. No. 11 level: The leading stope over this level is carrying 2 ft. of stone of fair quality. In the No. 6 stope we have 4 ft. of good stone, and in the No. 5 there are 6 ft. of stone, of good quality. In the Nos. 3 and 4 stopes the stone will average 3 ft.; in the stope going west from the No. 3 winze there are about 3 ft. 6 ins. of fair stone. In the No. 1 stope the reef will average 4 ft., of good quality. In the stope over the hanging-wall drive the reef will average 2 ft., of good quality. No. 10 level: The stope over the hanging-wall drive is carrying 2 ft. of stone of fair quality. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 107 trucks; No. 12 level, 391 trucks; Nos. 10 and 11 levels, 431 trucks; No. 2 shaft, stope under No. 5 west level, 23 trucks; No. 3 winze on No. 4 west level, 60 trucks; total, 1,012 trucks. No. 2 underlie shaft—No. 5 west level: In the stope under this level we have fully 3 ft. of stone of fair quality. No. 4 west level: No. 3 winze on this level has been sunk a further depth of 16 ft., making a total depth of 75 ft.; the stone has improved in size and quality in this winze during the fortnight; we have now in the bottom fully 4 ft. 6 ins. of stone of good quality. The cross-cut on the east side in the footwall has been extended a further distance of 5 ft., making a total distance of 63 ft. I have discontinued driving this cross-cut, and am driving the main level going east again; here we have from 6 ft. to 8 ft. of stone, but of very inferior quality. No. 3 straight shaft: This shaft has been sunk a further depth of 14 ft., making a total depth of 130 ft. from the surface. The country passed through has been a very hard, grey granite; although hard for boring it shoots fairly well. Lease No. 1,231: The eastern drive has been extended 5 ft., making the total distance of same 32 ft. There is a bit of soft formation making on the footwall, and carrying some small leaders of quartz and spar; the ground is still hard. The western drive has been extended 4 ft., making the total length of same 37 ft.; the formation here has become very hard and is pinching; there is no sign of a reef yet. Taking everything into consideration, the prospects of this drive appear to be very unpromising. The dam has been completed, and the pump placed in position, which works beautifully.—T. LESTER.

EMMA (Nov. 19).—My last report was under date of 13th inst., and I now have the pleasure of reporting explorations the past week. On the Bay City tunnel level the drift south-east on No. 3 fissure advanced 11 ft.; total 95 ft.; worked two men. In the face we have from 18 ins. to 2 ft. of porphyry in the fissure. The cross-seam continues from 2 to 3 ins. wide, filled with oxidised iron and decomposed vein matter, carrying a little silver and lead. Small particles of galena ore appear in the fissure quite often. The drift north-west in this fissure advanced 5 ft.; total, 87 ft.; worked one man. The rock is very much broken, and heavily saturated with mineral; vein from 3 to 4 ft. wide, shows much iron pyrites, with small particles of ore in the seams. Level No. 3 south-east advanced 8 ft.; total, 78 ft.; the ground is getting softer, is quite seamy, shows much oxidised iron, and the rock generally very considerably mineral stained. On the Illinois tunnel level we worked three men drifting in the vein south-east. The vein of iron silver continues strong, with small streaks of ore through the issue. On the Emma tunnel level we worked two

men sinking shaft from footwall drift; sunk 7 ft.; total, 65 ft. The fissure the past few feet has widened to about 2 ins., and the rock not quite so hard. We also worked two men drifting on the seam of ore leading out from hanging-wall: this seam is narrow, but is good ore, and I am in hopes it will open up as it leads to virgin ground. We mined about 1,000 lbs. of good first-grade ore from this seam the past week.—H. C. WALLACE.

FLAGSTAFF (Nov. 14).—In my last report I informed you that a big snowstorm was threatening, and we have since had it. The snow is now about 2½ ft. deep on the level. The storm has lasted three days, but I think it is now about over. I was lucky in getting up about 70 tons of coal from the old engine-house, and in getting the sheds all put up before the storm reached us. The mine is still looking very good. The ore above 6th level still continues to furnish first-class. The good ore here has been as much as 24 ft. high in the breast, and has been from about 6 ins. up to 3 ft. wide. Below 6th it is still holding out, the ore averaging about 1 ft. in thickness. The ore here for two or three days during this week has been as good, if not better, than any I have taken out of the mine; it has been almost solid silver-lead. In the winze below 7th the ore now extends clear across the winze, and looks as though it will extend down a long distance. The machinery is in full running this week, and everything goes well. You will understand that we must now put the shaft in strong condition before we can begin to clear the 7th level. This will take us about a week or 10 days from the present time. I will push this work on as fast as possible. As the machinery is now running we can let the timbers and lagging down in the ship. I want to make a good and safe job of the shaft whilst I have the chance. As soon as the shaft is finished I will hurry to get the waste cleared out of 7. I think I can get to where the first ore is stacked in 7 in about two or three weeks after I finish the shaft. The prospect for a good output of ore for the coming winter is fine. Number of cars (tons) the past week 52, being 30 of first-class and 22 of second-class. I shall commence to-morrow sacking another shipment of ore to Sandy. This lot will be 150 tons in quantity. The tramway to Wasatch has been blocked four days, but it will soon be opened if it does not commence snowing again.—A. L. SWOPE.

GYMPIE GREAT EASTERN (Oct. 15).—Fortnightly report:—During the past fortnight the cross-cut at the 730 ft. east of the Orient reef has been extended 6 ft.; total, 469 ft. from the shaft; at present there are some rock-bound leaders in the face showing coarse gold. I shall know more about it in a few days. The north drive has been extended 12 ft.; total, 124 ft.; there is a large body of crushing stuff showing a little gold. The south drive has been extended 8 ft.; total, 90 ft.; there is about 2 ft. of crushing stuff, no gold showing. The stopes going north over the level are all showing fair gold with a good average of crushing stuff, except the top one, where the reef is very small, being not more than 3 ins. The stopes over the level going south, the crushing stuff is improving and showing more gold. The rise on the reef west of the dyke is up about 14 ft. from the level; the country is keeping very hard. The 690-ft. level: The stopes going over this level are all showing a little gold. The patches have been put on the boiler of the winding-engine. There are 15 head of stampers crushing for the mine, and 10 head for the Nicholl's lease. Everything about the mine, winding engine and battery is in good working order. There are 61 men employed, 51 on the mine and 10 at the battery. The hail storm on Tuesday evening broke 20 panes of glass in the windows of the office and changing room, and about the same amount at the battery.—J. JAMES.

HARRIETVILLE (Oct. 16).—Fortnightly report:—Mons Meg Mine: Shaft below main level tunnel J on main shoot, sunk 10 ft.; total, 75 ft. The lode has been very variable in its size and underlie; for a few feet it became almost upright, and of very fair quality; it is now, however, very flat and poor, only a small vein 3 ins. wide carrying gold. The rise at the back of the 50-ft. level below tunnel J has communicated to the main level, the lode having been payable and averaging 4 ft. in width throughout. Rise at back of north drive 100 ft. above tunnel J advanced 7 ft.; total, 44 ft.; the lode here has become poor. North drive, 170 ft. above tunnel J extended 13 ft.; total 185 ft.; the lode is 3 ft. wide, of which 1 ft. is of good quality. Cross-cut east of drive, north of tunnel K, advanced 13 ft.; total 19 ft.; We have not yet traversed the lode, which is slightly auriferous throughout. Guerdon mine: Rise at back of north drive tunnel J advanced 4 ft.; total, 64 ft. The lode is 5 ft. wide, but poor. We have commenced to open out on the lode 50 ft. above the main level, where fair gold is being met with. One stope has been taken from both the north and south shoots on this lode at the back of the main level, but the average quality has proved to be of low grade. Tunnel K has advanced 23 ft. towards Guerdon lode; total, 151 ft. from the Mons Meg No. 2 lode. The ground continues favourable for driving. Tiddledoe Mine: Drive south of tunnel D towards Mons Meg advanced 23 ft.; total, 1,353 ft. The lode is 4 ft. wide but poor, although a little gold is occasionally met with. Rise at back of tunnel B on new shoot advanced 7 ft.; total, 57 ft. The lode is 4 ft. wide, and carries fair quantities of gold. The stopes on the new shoot between tunnels C and D have somewhat improved during the past fortnight.—T. G. DAVEY.

INDIAN CONSOLIDATED (Nov. 7).—Phoenix section:—No. 1 level: We are still in very hard country here, and have only been able to drive 6 ft. for the fortnight. There is no quartz now showing, though patches have come in occasionally. I have gone back to the make of quartz we passed through some time back, and am following it up, at the same time continuing the drive. Tramway level: Here there is but little change—some quartz, and the same band of decomposed stuff as before. Stopes A, B, C and E are all in full work. I have nothing fresh to report about these, except that at C we are now getting under tramway level, and are also working north. We are still crushing with water with an occasional stoppage. The north-east monsoon is very steady, if not very heavy, and promises to carry us over the month.—C. A. PATERSON.

—(Nov. 11).—Colar section: No. 1 new shaft has been sunk for two weeks 8 ft. 6 ins.; total depth from surface, 230 ft. 3 ins. No. 2 new shaft: This shaft has been put down 17 ft., making a total on the underlie of 189 ft. 3 ins. The 240 main shaft: West cross-cut has been extended 26 ft. 3 ins., making a total distance from shaft of 612 ft. 6 ins. The ground here has somewhat changed during the last few feet of driving, which enabled us to make a little more speed. We have commenced to cross-cut east from this shaft at the 240-ft. level with a rock-drill, which will be worked by coolies. No. 5 shaft, 425 ft. north: Drive has been put out 13 ft. 6 ins., making a distance

of 57 ft. The lode is maintaining its size 2 ft. 6 ins. wide, but has contained very little quartz for the last few feet of driving. This we hope to be only temporary, and that we shall be able to report more favourably in our next.—M. STEPHENS.

INDIAN GOLD (GLASGOW).—The following information has been received to-day by cable from the mines in India, viz.:—"Nov.: Total amount crushed is 900 tons, yielding 115 ozs."

JAY HAWK AND LONE PINE CONSOLIDATED (Nov. 18).—The incline shaft below the 700-ft. level is sunk 40 ft.; the ore is about the same as last week. The 700-ft. level is in good ore, the vein being the full size of the level; the level has improved in value during the week. Stopes: No ore is as yet being stoped from the bottom level; we are having a sufficient supply from the stopes above. In Nos. 1 and 2 levels the stopes are yielding the usual quantity of ore; from here and the Nos. 4 and 5 stopes we are taking out 40 tons of ore daily, which can be increased if necessary. The surface tunnel going under the hill is progressing steadily; we shall make connection with the Greely shaft, and bring out the ore through this tunnel. Mills: The Lone Pine mill up to the 14th inst. crushed 200 tons of ore; 60 tons of this was low grade 10 ozs. per ton, the rest being 30 to 44 ozs. The concentrates from the Frue vanners assayed from 266 to 309 ozs. per ton; this will be shipped to the smelters. Jay Hawk mill up to the 14th crushed 70 tons of ore, most of which was 10 ozs. per ton; we are now crushing from 22 to 25 oz. ore. Our savings have varied from 70 to 84 per cent. assay value; the Frue vanners have helped us considerably. We have a large quantity of amalgam in the mills, and after our first clean up we shall be in a better position to estimate our weekly returns. We melted 161½ lbs. of bullion into three bars, giving 2,229 ozs. fine silver; our bullion was over 960 fine. All the machinery at the mines and mills are in good working order.—H. PRIDEAUX.

LEEDS COPPER (Nov. 19).—The various drives, stopes, and winze continue without change. They are producing the same quantity and quality as when last reported.—T. R. DAVEY.

MACATE (Oct. 24).—The manager writes:—San Pedro has much improved. The drift lately started has cut into some extremely rich ore, two samples giving the very high average of over 8 ozs. per ton. The first sample gave over 7 ozs., and the second over 9 ozs. per ton, both amalgamating very easily and crushing quickly. Another sample from the stope in the other drift gave over 3 ozs. per ton. As this part of the property is turning out so rich, six new claims have been secured. San Juan also improving. Le Escocia: Main level going east from No. 4 has opened out to 18 ins. of quartz.

MOUNT ZEEHAN.—The manager writes for week ending Oct. 16:—Argent section, Block No. 2: No. 4 lode, 72-ft. level, south end, extended further 16 ft., making total from cross-cut 132 ft. Lode formation, 6 ft. wide, composed of siderite, second-class ore, looking better and more defined than last week; 16 tons second-class ore raised. 72-ft. level, north end, not working. Rise back of 72-ft. level north of cross-cut, stoped 9 ft. Lode formation, 3 ft. wide, composed of siderite and galena; 1 ton 2 cwt. of first-class ore raised and bagged, and 6 tons second-class ore raised. Air shaft, south of cross-cut, sunk further 2 ft., making total from surface brace 16 ft. Lode formation, 3½ ft. wide, and looking better than last week; 2 tons second-class ore raised. Work discontinued, and men sent to No. 2 shaft, Queen Extended section, Queen Extended section, Block 5: Main engine shaft sunk 6 ft. further, making total distance from plat 51½ ft., and total from surface brace, 161 ft. Air shaft, No. 2 lode, stoped and driven 13 ft. Lode formation, 4 ft. wide, of which 6 ins. is solid galena; other parts hard light slate; 4 tons 9 cwt. of first-class ore raised and bagged, and 1 ton second-class ore raised. No. 2 shaft: Started on Monday to bale out water, and got water out by Thursday. Started men at 65-ft. level to open out to drive cross-cut for No. 3 and No. 4 lodes. Course of cross-cut to be 10 degs. north of west. Montana section, Block 9: Winze on No. 3 lode, south end, stoped 7 ft. at 14-ft. level. Lode formation, 3 ft. wide, composed of first and second-class ore. North end stoped 6 ft., at 14-ft. level. Lode formation, 3 ft. wide, composed of first and second-class ore. Ore raised, south end: 3 tons first-class, and 4 tons second-class. North end: 2 tons 5 cwt. first-class, and 4 tons second-class. Total for week, 10 tons 16 cwt. first-class, and 33 tons second-class.

NEW CALIFORNIA.—Report for Oct.:—The 2,100-ft. level—Cutting plats: The plats on each side of the shaft are well advanced. In the course of a few days more drifting will be resumed on the vein, and the levels pushed forward to open up new ground. The 2,000-ft. level west—Drift in the 1,002 ft. and stopes: The lode in these workings has improved very materially, and is of great promise, being now from 4½ to 7 ft. wide, yielding on an average for the whole length advanced from 9 to 10 tons per fm. Last milling returns on the ore mined in this place was \$7.50 per ton, which is of paying grade. Intermediate drift and stopes 1,900 to 2,000 ft. west—Winze 3: Here, also, we find a good improvement in the vein and in the grade of the ore. The drift and stopes are yielding 8 tons per fm. of milling ore, averaging \$10 per ton. In the last three weeks of the month the returns from all these workings were 130 ozs. of gold from 208 tons of ore (inclusive of gold in concentrates). The 1,900-ft. level—Prospecting in West drift: The vein in the Prospect drift is of a well-defined and regular character, yielding milling ore of low-grade for the present. The timbermen have been engaged during the greater part of the month in making and putting tunks and reservoirs in the shaft to serve for the drainage of the workings, which has resulted in a better control of the water of the mine. The water flow has decreased sensibly during the past two weeks, and is now from 90 to 95 barrels per diem.—A. RICKARD.

NEW CALIFORNIA.—Mine report for first half of Nov.:—The 2,100-ft. level—Drift west of shaft and cutting plats, in 33½ ft.: The plat on the west side of the shaft was completed, and drifting on the lode is now being pushed forward with all practicable dispatch. The vein is still small; but the rock being favourable, good progress is being made, and we expect soon to be in paying ground. On the east side of the shaft drifting will be commenced during the coming week. The 2,000-ft. level—Drift west of shaft, undercutting lode and stoping: The lode has great width. Having already cut through 8 ft. of vein-stuff without finding the hanging-wall, it would seem that we have something unusually large in this place, and although the grade of the vein-stuff is not for the present very good, we cannot but think these are indications of a valuable character. The 2,000-ft. level—Intermediate 1,900—2,000 drift and stopes west of winze 3 rise to connect with 1,900 level: These workings are all in good ore, yielding from 7 to 9 tons per fathom. The 1,900-ft. level—Prospecting west of shaft:

The vein followed in these workings is 3 ft. wide, and of promising character, although milling yield is still low.—A. RICKARD.

NEW DEVALA MOYAR.—Mine manager's report for the week ending Nov. 5:—The 186-ft. level west has been driven 6 ft.; total, 111 ft. The 116-ft. level, No. 4 winze, has been sunk 4½ ft.; total, 67 ft. The quartz in these workings is of the same black vitreous description as before and the hanging-wall continues regular. In the No. 4 winze we shall have to sink another 8 ft. to bottom the 186-ft. level, and will then drive east to meet the 186-ft. west. The 186-ft. level east has been driven 3 ft.; total, 40 ft. The ground here continues disordered as before, the leader of white quartz continuing about 6 ins. thick, but in this we have met with a little good mundic during the past week.

NEW GOLD HILL (Nov. 21).—All ore since my management up to the time of closing mill was taken out in development work with the exception of a few tons stoped from Martin shaft. We have been taking out this week the best ore for quality and quantity that I have seen since my arrival here. New mill: This work is progressing rapidly, and we now have one part under cover and planked in. The stamp mill frame is almost completed, and the framing of Rocker house almost out. The excavation is about complete. Mine: I am pleased to report that the ore in the upraise has improved throughout the week. Whether this is making a permanent body I cannot say until seeing a little further, but one thing is certain, and that is that we have ore all the way to the surface or old works about 100 ft. This should keep us milling all the winter after we once set in. Four men have risen 3 ft. this week on this good ore, and the vein looks as though it would improve. This makes the rise 23 ft. above 160 level over winze. At present the shoot of ore is but 18 ft., but has every indication of lengthening out as we go upward. Miller north-east: In this working two men have made 4 ft., making a total distance north-east of Miller shaft, 55 ft. Throughout all this length we have had one of the most persistent ore bodies I have ever seen, averaging 3½ ft. in width, and full of heavy sulphurets. At this writing it is poorer in gold than at any time past, but as it is so well defined and mineralised I propose to follow it, believing that if it holds its own it will repay us well for the work.—R. EAMES, jun.

NEW HOOVER HILL.—Report to Nov. 21:—Briol's shaft: Driving south at the 130 we have cut into some quartz that pans \$4 per ton. I cannot tell as yet as to its size. We are cutting east through it, but the ground is very hard, and we cannot make much headway. Sinking south of Provost shaft the vein continues small. The timber around the Gallimore shaft is decayed, and has given way. I have found that the stuff that has caved in will pay to mill, which I am doing.

NEW VIOLA (Nov. 13).—Report from manager:—The drift from the bottom of the bore hole shaft encountered a reef of very hard limestone, which slowed up our progress somewhat. The face is now in a much softer material, which breaks fairly well, so I expect better headway will be made from this on. Some seams of iron are encountered, and I hope the character of the rock will undergo quite a change in the next 10 ft. or 15 ft. The surface work being done to the east of the bore hole has not progressed far enough to allow me to form an intelligent opinion of the ground. The late storm interfered somewhat with our operations, but I anticipate little trouble from this source in future. I am having the men's quarters overhauled and put in good condition for winter.

OREGUM.—Mine report for fortnight ending Nov. 10:—Wall-roth's shaft has been sunk 6 ft. 6 ins.; total depth from surface, 448 ft.; width of lode, 2 ft., assaying 2 ozs. 6 dwts. 2 grs. per ton. The 360-ft. level south has been advanced 20 ft. 3 ins.; total length, 144 ft. 6 ins.; the lode is 3 ft. wide, worth 4 ozs. 3 dwts. 7 grs. per ton. The 360-ft. level north has been driven 5 ft.; total length, 47 ft. 9 ins.; lode, 1 ft. 3 ins. wide; assay value, 1 oz. 12 dwts. 16 grs. per ton. Winze 350-ft. level south sunk 2 ft. 11 ins.; total depth, 10 ft. 1 in.; lode 3 ft. wide, worth 3 ozs. 1 dwt. 13 grs. per ton. The 280-ft. level south has been advanced 31 ft.; total length, 903 ft. 7 ins.; width of lode, 6 ft., assaying 5 ozs. 8 dwts. 21 grs. per ton. The 215-ft. level north advanced 1 ft.; total, 93 ft. 9 ins.; lode 1 ft. 6 ins. wide, assaying 3 ozs. 5 dwts. 8 grs. per ton. The 215-ft. level south advanced 2 ft. 2 ins.; total length, 285 ft. 7 ins. We are this month trying the Italians sinking the shaft—the same party who did the good driving in the 280-ft. level south, while the English sump men are driving the 280. The lode in the bottom is small, which the ground proved to the south of shaft prepares us for. Low's shaft: The 350-ft. level north advanced 8 ft. 6 ins.—total, 112 ft.—by one rock-drill and natives. The 350-ft. level south advanced 9 ft. 8 ins.; total, 212 ft. 6 ins.; driven by natives with rock-drill. The lode is pinched, and we are driving on the course indicated by the walls. Winze 350-ft. level north sunk 3 ft. 5 ins.; total, 32 ft. 2 ins.; lode, 1 ft. 6 ins., assaying 5 ozs. 15 dwts. 18 grs. per ton. Probyn's shaft has been sunk 9 ft. 9 ins.; total depth of shaft, 612 ft. 1 in.; lode 4 ft. wide, assaying 4 ozs. 18 dwts. per ton. The 550-ft. level south driven 30 ft. 6 ins.; total length, 189 ft. 9 ins.; the lode is 2 ft. 6 ins. wide, worth 2 ozs. 3 dwts. 13 grs. per ton. The 550-ft. level north advanced 11 ft. 3 ins.; total, 40 ft. 9 ins.; lode 4 ft. 6 ins. wide; assay value, 4 ozs. 0 dwts. 13 grs. per ton. The 450-ft. level south has been advanced 8 ins.; total length, 332 ft. 3 ins.; the lode is 1 ft. 3 ins. wide; value, 15 dwts. 10 grs. per ton. The rise in back of 450-ft. level south has been risen 11 ft.; total height, 29 ft. 4 ins.; lode, 3 ft. wide, worth, by assay, 1 oz. 14 dwts. 20 grs. per ton. No. 2 winze 450-ft. level south has been sunk 2 ft. 10 ins.; total depth, 39 ft. 10 ins.; the lode is 4 ft. wide, assaying 1 oz. 12 dwts. 16 grs. per ton. No. 3 winze 450-ft. level south has been sunk 4 ft. 4 ins.; total, 16 ft.; width of lode, 1 ft. 6 ins.; worth 1 oz. 1 dwt. 19 grs. per ton. Winze 450-ft. level north has been sunk 5 ft.; total depth, 32 ft.; the lode is 2 ft. 6 ins. wide, assaying 5 ozs. 8 dwts. 21 grs. per ton. No. 2 winze 300-ft. level south has been sunk 3 ft. 9 ins.; total depth, 29 ft. 7 ins.; the lode is 1 ft. 3 ins. wide; worth, by assay, 1 oz. 17 grs. per ton. The 300-ft. level south has been extended 11 ft. 5 ins.; total length, 350 ft. 8 ins.; lode, 1 ft. 6 ins. wide; value, 1 oz. 12 dwts. 16 grs. per ton. This level has been driven by natives with one rock-drill. We have also changed the pares, placing the sump men in the 550-ft. level south, and the Italians from thence to sink the shaft. Stopes—Wallroth's shaft: Plat for air winch and donkey pump in back of 360-ft. level north, 5½ fms. have been stoped; the lode is 4 ft. wide; assay value, 1 oz. 5 dwts. 10 grs. per ton. Stope back 280-ft. level south, 4½ fms. have been cut; lode 2 ft. 9 ins., assaying 3 ozs. 8 dwts. 14 grs. per ton. No. 1 stope back 215-ft. level north, 2½ fms. have been cut; the lode is 1 ft.

6 ins. wide; worth 1 oz. 2 dwts. 21 grs. per ton. In bottom of 215-ft. level north $4\frac{1}{2}$ fms. have been stoped; the lode is 1 ft. 4 ins. wide; value 2 ozs. 12 dwts. 9 grs. per ton. In back of 215-ft. level south $2\frac{1}{2}$ fms. have been stoped; the lode is 1 ft. 3 ins. wide, of low grade; suspended. No. 2 stope bottom 215-ft. level south, $3\frac{1}{2}$ fms. have been cut; lode, 1 ft. 3 ins. wide, assaying 1 oz. 17 dwts. per ton. Low's shaft: In bottom of 270-ft. level south 11 fms. have been stoped; the average width of lode 1 ft. 6 ins.; average assay value, 6 ozs. 3 dwts. 19 grs. per ton. Bottom of 270-ft. level north, $6\frac{1}{2}$ fms. have been cut; the lode is 1 ft. wide, worth, by assay, 1 oz. 12 dwts. 16 grs. per ton. No. 3 stope bottom 200-ft. level south, 2 fms. have been cut; the lode is 1 ft. 6 ins. wide, assaying 1 oz. 1 dwt. 19 grs. per ton. Probyn's shaft: Stopes back 450-ft. level south, $15\frac{1}{2}$ fms. have been cut; average lode, 3 ft. 6 ins., assaying 2 ozs. 7 dwts. 2 grs. per ton. In these stopes 10 $\frac{1}{2}$ fms. have been done by Italians with a rock-drill. Stopes bottom 366-ft. level south, $2\frac{3}{4}$ fms. cut; average width of lode, 2 ft.; average value, 2 ozs. 17 dwts. 4 grs. per ton. Stopes back 366-ft. level south, $3\frac{1}{2}$ fms. have been cut; the lode averages 2 ft. wide, worth 4 ozs. 3 dwts. 6 grs. per ton. No. 1 stope bottom 300-ft. level south, $2\frac{1}{2}$ fms. have been cut; lode, 3 ft. 6 ins. wide; assay value, 2 ozs. 14 dwts. 10 grs. per ton. Back of 300-ft. level north, $4\frac{1}{2}$ fms. have been stoped; the lode is 6 ft. wide, worth, by assay, 2 ozs. 15 dwts. 23 grs. per ton. No. 1 stope bottom 230-ft. level south, $1\frac{1}{4}$ fms. cut; width of lode 1 ft. 9 ins.; worth 1 oz. 10 dwts. 18 grs. per ton. Stope back 230-ft. level south, 4 fms. have been cut; the lode is 3 ft. wide; value, 2 ozs. 14 dwts. 5 grs. per ton. No. 3 stope bottom 166-ft. level south, $5\frac{1}{2}$ fms. have been cut; the lode is 1 ft. wide, assaying 1 oz. 6 dwts. 2 grs. per ton. The machinery is working well, and the mill is fully supplied with quartz, which so far is low grade. The tailings machinery started last month and is working well. The remaining plant will be put in hand at once. Excavations are in hand for the stamps engine loading, and the masons are building the chimney. The piles for the 20 head stamps mill are being concreted. Excavations are also commenced to the south of Wallroth's shaft for the new compressor. We cleaned up the mill on Monday, and, as cabled, the return was 3,146 $\frac{1}{2}$ ozs. from 1,387 tons of quartz; an average of about 2 ozs. 5 dwts. 8 grs. per ton. Health of the camp good. One Italian only suffering from intermittent fever, and one Italian off duty with contused leg.

ORITA (Oct. 29).—Mine: Yesterday I moved Monitor in the channel to see if we can get in a ground sluice between some very large granite boulders which have shown up, and are keeping back the grade; to-day I hope to be able to turn the water on here, and will see if we can avoid the blasting of those large boulders. I do not see that it will help matters to write a long detailed letter on progress of present work in the mine, but I may state every man is working at the faces clearing pipeclay, and while present circumstances exist I do not see my way clear to expend on other work, beyond what is necessary to keep all in good running order.—H. J. PRENDER.

OURO PRETO (Nov. 3).—The manager reports:—Passagem Mine.—No. 1 shaft: Sunk only 2.60 metres owing to breakage on water-course and falling of roof of shaft, the quartzite splitting off from the quartz above, and afterwards the quartz cracking off until roof became arched. Some trouble has also been experienced with pit-work. The bushing of old 8-in. plunger lift being badly worn and continually cutting out the packing, which has to be renewed, a new bushing has been cast, so we hope that this trouble will not be experienced for some time to come. The branch of lode latterly reported as coming in the forebreast is again cut out, leaving face entirely in quartzite. No. 2 shaft: Nearly cleared. Progress here has been retarded by lets in No. 1 shaft, as stated above, but we hope to resume sinking in a few days. The 120 level north-east: Advanced 5.55 metres, through a good body of lode, though at times intersected by small bars or floors of quartzite. Cross-cut from 120 level north-east: Advanced 2.60 metres, for the first 6 metres in good lode, but latterly in quartzite, which we hope soon to pass through. Rise No. 2 over 175 north-east: Advanced 2.30 metres upward, carrying about 1 metre of lode, and then turned and extended 3.90 metres to effect a communication with stopes under 120 for ventilation; this is expected to be holed in a few days. The 265 end north-east: Advanced 6.70 metres; nearly all in good quality mineral. Latterly the end presents a large body of quartz, with both side walls of quartzite. The 315 end north-east: Advanced 6.30 metres in lode, well lined with pyrites and tourmaline. Cross-cut from 315 north-east: Advanced 7.70 metres, principally in quartzite. The 400 end north-east: Extended 6 metres, a large body of quartz spotted with pyrites. The 400 cross-cut north-east: Advanced 6.10 metres in an admixture of schist, with small lines of quartz, tourmaline and pyrites. The 400 end south-west: Advanced 6.10 metres, heading carrying about 1.30 metres of lode in breast and along the floor of level, roof being schist. The 400 cross-cut south-west: Advanced 6.50 metres in lode at first, but latterly in schist. Rise 24 over 365 north-east: Risen 5.90 metres in schist. Rise 25 over 365 south-west: Risen 4.50 metres in the upper branches of the lode, carrying a good deal of schist, with small lines of tourmaline and pyrites. In the stope taking up for laying tramway in this rise preparatory to opening out stopes a fine body of mineral is being uncovered, of very good appearance. The 265 end south-west: Advanced 8.20 metres in barren schist. Stopes: Those near No. 2 shaft opened from 265 cross-cut present a very fine body of tourmaline ore and pyrites, above which is quartz with spots of pyrites. New stope at 315 on lower lode advanced 5.95 metres; the lode at this point has become contracted; this is now suspended, as a stope and a rise started carrying the lode to see if it improves in size onward. At the points in operation there is nothing now to comment on.

OSCAR (Nov. 26).—We are cross-cutting with six men from bottom of shaft to the eastern lode referred to in last report, and hope to intersect it by the time named, when a full report with assays, &c., will be sent you. In the bottom of the shaft the quartz is nearly a foot wide, containing a little pyrites and traces of galena, and showing by assay from 10 dwts. to 15 dwts. gold per ton. As the 200 is connected with the 300-ft. level by a winze, we have put six men to stope north of same. The assays vary considerably in their results, owing to the pyrites and galena in the quartz, but our last crushing test gave nearly 7 dwts. free gold. In the 200-ft. level we see no alteration; occasional bunches and stripes of quartz are met with which carry gold. We shall put out a cross-cut west next week. No alteration to note elsewhere.—J. DAW, Jun.

PAHANG CORPORATION.—The manager writes, Oct. 26:—Pollock's: There is a very promising lode now in the new east bottom drive. The width has been steadily increasing, and is now

nearly 4 ft. There is little to write you this mail. Everything is going well and smoothly, and no material change will be made in the work until the question of raising further capital is decided. The work at plat is, from last advices, getting on well, and the place will be cleaned up within the next few weeks. I shall then bring the coolies, who are in our debt, over here, and leave a native in charge of the place. The monsoon has not broken yet, but may be shortly expected. We have commenced the ordinary fortnightly mail service, as the steamers, other than the *Perse*, are now very irregular. We have purchased our own rice, and made a contract with a storekeeper at the Kuala for other native stores at rates much below those of last year.

PINOS ALTOS.—Under date 11th ult., this company's acting manager writes, progress for the chief point of which we have this week only room. The following is the estimate of work done in the mill for the week ending Nov. 7: 531 tons of ore milled, assaying \$28.81, \$15,298.11; 45 tons of slimes, assaying \$12.53, \$563.85; 486 tons of tailings, assaying \$7.71, \$3,747.06; Mill's product, \$10,987.20. Lost time on batteries, 14 hours; three hours for general repairs, and 11 for engine repairs on first of month. In general, I can only say that everything is going well, and that this month should give us a good bullion shipment.

PESTARENA.—The gold returns from the Pestarena United Mines for the month of Nov. were as follows:—From Pestarena district, 503 ozs. 10 dwts. 2 grs. from 419 tons of ore, equal to 1 oz. 4 dwts. per ton. Val Toppa, 95 ozs. 8 dwts. 2 grs., from 176 tons of ore, equal to 10 dwts. 19 grs. per ton; total, 598 ozs. 18 dwts. 4 grs., obtained from 596 tons of ore amalgamated, showing an average yield of 1 oz. 0 dwt. 2 grs. to the ton.

POTOSI (Nov. 9).—The Potosi Viejo diagonal incline shaft has been sunk a further distance of 11 ft. 6 ins., making a total of 96 ft. 6 ins. from starting point to date, the shaft being of sufficient size for a new station for pump. I am pleased to report an improvement of the vein at the bottom of the incline in the last few feet, and, although still having a horse of blue stone 3 ft. wide, this stands between two strong branches of quartz, the one on the hanging being 3 ft. wide, and the other on the foot, having been opened on to an equal width without meeting the footwall as yet. I hope we are leaving the disturbing influence of the cross vein I mentioned in my last, and the vein we are sinking on is becoming more settled. The quartz has a favourable appearance, but since my return I have not had time to pan any samples. Newly discovered cross-vein: This has been driven on in a westerly direction in the hanging-wall 7 ft., and up to the present has proved somewhat irregular, and is not so defined as where we first cut it. I now purpose driving on it on the opposite, or footwall side of incline, as it requires further exploration before a definite opinion can be formed of it, and this will be proceeded with. The new boiler is working satisfactorily, and the air compressor has been started to supply air for the pump, and one small drill we have from Panama. This will involve an additional consumption of firewood, but will enable us, I hope, to make a little better progress, as also to avoid the excessive heat in the mine, caused by the use of steam, and see that everything is in working order by the time our new drills arrive, which they should in a few days.—ROWSE.

MINING IN VICTORIA.

DURING the quarter ended June 30 the quantity of gold produced in Victoria amounted to 147,062 ozs. 8 dwts. 4 grs., consisting of 100,514 ozs. 11 dwts. 13 grs. from quartz, and 46,547 ozs. 16 dwts. 15 grs. from alluvial. Compared with the yield for the preceding quarter there is an increase of 12,698 ozs., whilst a decrease of 4,128 ozs. is shown in comparison with the returns for the corresponding quarter of last year. The output of gold in the several mining districts was as follows:—Ballarat, 50,613 ozs. 1 dwt. 19 grs.; Sandhurst, 35,804 ozs. 9 dwts. 6 grs.; Maryborough, 16,721 ozs. 10 dwts. 21 grs.; Beechworth, 15,833 ozs. 17 dwts. 6 grs.; Castlemaine, 12,406 ozs. 1 dwt. 13 grs.; Gippsland, 11,851 ozs. 10 dwts. 23 grs.; Ararat, 3,831 ozs. 16 dwts. 12 grs. The quantity of Victorian gold received at the Melbourne branch of the Royal Mint during the quarter was 151,861 ozs. 17 dwts., comprising 122,277 ozs. 13 dwts. of gold bullion and 29,584 ozs. 4 dwts. of rough gold. The amount of gold, the produce of the colony, that was exported during the quarter was 23,989 ozs. There was also exported during the same period 10,836 ozs., which was produced in New Zealand, and gold specie valued at 832,434*l*. Particulars have been received of 198,109 tons 10 cwt. of quartz having been crushed during the quarter, the yield of gold therefrom amounting to 90,094 ozs. 3 dwts. 9 grs., being an average of 9 dwts. 2 grs. per ton. In the Gippsland district the highest average (namely, 19 dwts. 7 grs.) was obtained, due principally to the returns received by the Long Tunnel Extended Co. At this mine 4,217 tons were treated, for a yield of 5,129 ozs. of gold, giving the high average of 1 oz. 4 dwts. 7 grs. per ton. Of the several mines at work the Star of the East Co. had the largest crushing, namely, 10,178 tons, which yielded 8,402 ozs., giving an average of 16 dwts. 12 grs. per ton. The following crushings were recorded in each district during the past quarter:—Sandhurst, 75,146 tons; Ballarat, 73,785 tons 10 cwt.; Castlemaine, 18,831 tons; Maryborough, 9,133 tons; Gippsland, 7,517 tons; Beechworth, 7,297 tons; Ararat, 6,400 tons. Besides the above, 9,772 tons of quartz tailings and mullock were treated, for a yield of 916 ozs., and 1,442 tons of pyrites and blanketings, which yielded 3,799 ozs.

The mining registrars received information of 303,040 tons of wash-dirt having been treated during the quarter, for a yield of 16,642 ozs. of gold, being at the rate of 1 dwt. 2 grs. per ton. Returns were also received of the treatment of 3,318 tons of cement, which yielded 494 ozs. of gold, averaging 2 dwts. 23 grs. per ton.

(To be continued.)

THOMAS THOMPSON,

STOCK AND SHARE DEALER
ESTABLISHED 1862.

8¹/₂, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

MINING SHARE CO-OPERATIVE SOCIETY,

15, COPTHALL AVENUE, E.C.

TELEGRAPHIC ADDRESS: "SIGHTSEER."

BANKERS: LONDON AND NORTH-WESTERN.

MINING AND MISCELLANEOUS SHARES are somewhat in
demand for new account; prices have improved to-day, and heavy
buying was perceived by shrewd operators, who as usual make it a
speciality to accumulate shares standing at low prices before the
termination of the year, and it would be prudent for the speculative
public to take advantage of present prices.

Special price list will be forwarded on application, also terms of
business and advantages offered.

MINING SHARE CO-OPERATIVE SOCIETY.

THE MEXICAN ASSOCIATION,

LIMITED,

Undertakes all classes of business in
connection with Mexico, and by means of
established Agencies can furnish Reports
upon Mines and other Properties through-
out the Republic.

Code: Assuefacio, London.

Offices: 31, Lombard Street, E.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Hopeful.—Will go better. Everything favourable.
Baynton.—Sell.
Tradesman.—There is certainly room for a good rise. Hold.
Bull.—At present time they should be bought.
Eddystone.—Take profit on 2 and 5, but hold the others with the hopes of a
recovery.
Symon, R. W.—Will eventually reconstruct, but before they do a better price
may be seen for the shares. Do not sacrifice your holding by selling now.
Gilmore (Harlesdon).—Keep them. The dividends are substantial, and there
is little to be afraid of, at least for several years.
Nemo.—Steadily coming to the front, and our opinion is a much better price
will be seen. Hold by all means.
L. Snowden.—A purchase at present price will give you quite 7 per cent. on
your outlay.
Diamond.—The dividend, if anything, will be lower this time. Certainly not
more than last under existing circumstances.
Magician.—Yes; the ordinary shares appear good to buy.
T. T. R. S.—They are safe to hold.
Despair.—Very unsteady just now. Hold those you have, but do not buy
more.
Octagon.—Realise, and put the proceeds in those you suggest. It is a good
selection.
Noc.—Nos. 1, 2 and 3 are in progress of development, and time must be
allowed. No. 1 is the best, and No. 3 the worst. No. 4 is worth picking up and
holding, as all the mines in its vicinity are looking well, and several doing well.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.
Sir CHARLES METCALFE, Bart. | Major J. W. M. COTTON.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, DEC. 5, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

OOREGUM.—POINTS FOR INVESTORS.

THE chief feature of the Indian returns, announced in our present
issue, is the tangible proof, in the shape of returns, that the Ooregum
tailings machinery is now at work. To the grand total of 3,029 ounces of
gold produced during Nov. from this mine the tailings machinery has
made the respectable contribution of 124 ozs. from the treatment of
354 tons, or at the rate of 7 dwts. per ton. So far as Ooregum is con-
cerned, this is the first help from this source its returns have had,
and one is not prophetically rash in saying that the revenue
from the tailings will be continuous. At present only six out of the 18
Wheeler pans now on the ground have been erected, and it is from
these six that the above-mentioned return has been made. The
erection of the remaining 12 pans is being proceeded with, and, when
completed, the returns from the tailings, based upon that of Nov.,
should be about 400 ozs. per month. This would be an addition to the
income of the company (less the moderate expenses) of nearly 1,500l.
per month, or not far short of 18,000l. a year. But Ooregum has no
need to stop at 18 Wheeler pans; and we shall be surprised if the
directors do not soon proceed to increase the tailings plant, for there
must be, judging from the information we have been at pains to ob-
tain, an accumulation of tailings not far short of 40,000 tons.

In regard to the general return from the stamps it is interesting to
observe how, nearly from the very commencement, Ooregum quartz
has yielded in the battery a return of 2 ozs. 2 dwts. per ton of ore
treated—a magnificent percentage, and one upon which the manage-
ment is most heartily to be congratulated. The quantity of quartz
just crushed may be considered the maximum that the
present battery can deal with per month. But here again
the management is proving itself equal to the occasion,
and a further battery of 20 heads will, we expect, be com-
pleted next month capable of crushing an extra 1,000 tons per
month, and there is no doubt of the existence of the quartz to supply
it. Assuming that this extra quantity can be dealt with (though
probably it will not be so at first), we are almost afraid to follow the
path in which the figures would lead us. Still, an extra 1,000 tons,
yielding 2 ozs. per ton, would mean an income (less expenses, of course)
of over 90,000l. a year beyond that upon which the dividends of the

past have been paid. The lines have evidently fallen unto Ooregumites in pleasant places.

The foregoing are facts of which intending purchasers of Ooregum shares for investment purposes should not be ignorant. Neither should those who hold them, and who may be tempted to sell at current quotations. As to the law-suit—no decision has yet been come to. We need not revert to this, as the subject was fully dealt with in our issue of Oct. 31 last.

HOW TO MAKE GOLD MINING PAY.

GOLD mining enterprise seems in a fair way to once more attract public favour after the abstention from such investments which followed the collapse of speculation in the Transvaal. This revival is due to a multiplicity of more or less relevant influences—the difficulty of finding paying investments at home, the depression in foreign securities, and the re-appearance of the “bulling” spirit, with the upward movement in American railroads. Though the adverse influences of the financial situation prevent at present any decided manifestation of this tendency beyond a somewhat firmer holding of mining shares, it undoubtedly exists, and will respond at once to any favourable change in the position. One of the most hopeful points in the gold mining outlook is the improvement which has lately taken place in the technical part of the industry. The failure of indiscriminate development in South Africa and elsewhere has opened the eyes of investors, as well as of managers, to the fact that the simple methods of earlier days cannot be profitably applied to the treatment of the refractory quartz nowadays available. Not only modern miners but the ancients have been engaged in working all the world's auriferous deposits capable of easy treatment. Even in so recently discovered a field as Mashonaland experienced Australian diggers are constrained to admit that the old unknown miners have worked out all the readily available gold, and the old workings show an acquaintance with metallurgy by no means contemptible. The unworked gold deposits in South America, India, and in most other parts of the world, consist, in nearly every case, of low-grade amalgam and pyrites, and there is good reason to think that the activity of mining enterprise has exhausted nearly all those ready roads to wealth, which at one time every gold miner was hopeful of hitting upon.

There is no occasion why this fact should operate prejudicially to the future of gold mining, provided that it is conducted in due appreciation of the fact that success is essentially dependent upon low working expenses and approved mineralogical and metallurgical knowledge. Investors must, however, recognise that in the majority of cases the world's “Tom Tiddler's grounds” have yielded as much of the precious metal as could be had for the mere picking-up, and that in the future, success in gold mining must be as much a matter of careful and judicious expenditure as the increasing depth of the workings has made coal raising in England and the continent. It is satisfactory, as we have said, that recent experience has led to an increasing recognition of this necessity. The latest reports from Witwatersrandt show that the reckless management of the past is rapidly yielding place to a better system, and that the mining community, as a whole, is now convinced that adequate transport facilities and efficient reduction are surer means of prosperity than the search after abnormally rich deposits. Public opinion in South Africa is pressing upon both the Boer and and colonial governments the necessity of extended railway construction, and ere long we may hope to see an important mitigation in the disadvantages which at present weigh heavily upon the auriferous industry of the Transvaal.

In Swaziland the working of the mineral deposits will be practically postponed until the construction of a railway. The importance of cheap working is fully recognised by the British Governors of Mashonaland, and steps are being taken to afford adequate communication with the outside world by railroad and water-way. There are thus hopes that the gold belt, curiously varying as it seems to do in the richness of the ore, may be worked with a satisfactory profit upon the whole average of results. The very much improved prospects of gold mining on the Gold Coast are due in large part to more progressive methods and the installation of new machinery, and the amalgamation of managements should largely help forward this favourable change. In Mysore the native Government is showing itself more convinced of the value of a liberal attitude towards gold mining; and in South America the growth of the same feeling on the part of the authorities, and the rapid extension of railways, should do much to stimulate the industry.

It may fairly be said that gold mining has been put upon a new footing as a paying investment—which it has never been, in the full sense of the term, in the past—by the advances which have been made in the treatment of refractory ores and “tailings.” The importance of this technical movement is sufficiently indicated in the fact that the Victorian Government has now in Europe a representative appointed to inquire into the merits of the numerous appliances to this end, which have lately been introduced in this country and the Continent. Large sums have been spent in the installation of such plants at the principal South African mines, and the swelling of the crushing returns from Johannesburg is undoubtedly largely due to the use of improved machinery. That further progress can be made in this

direction is, however, proved by the average extraction of the metal on the Randt not exceeding 55 per cent., whereas, with the best modern plant, the proportion obtained ranges up to over 90 per cent. The principal defect in most of the systems lately introduced is that they either demand too heavy an expenditure upon mechanical plant, or else can only be successfully worked with the aid of a trained chemical staff. A system of extraction has, however, lately been tried at some of the largest mines in the Transvaal, which is stated to yield between 81 to 94 per cent. of the metal from refractory ores, and which demands no other equipment than an electric battery and an iron trough containing mercury. In America the Noble process of amalgamation is claimed to recover from the most refractory pyritous ores over ninety per cent. of the content of gold, at a cost which leaves a considerable profit upon such mineral. The pulverisation of the ores has also made much improvement of late. The newest stamp batteries show a material advance upon the older types, in respect both of greater efficiency and of increased economy of power. Moreover, pulverisers and mills of excellent design are being extensively used to supplement stamps in this work. It is clear from these facts that gold mining enterprise is assuming a more steady and industrial character, and that public bodies, the mining engineer, and the mining machinist are combining to render it equal to the most adverse hazards short of the complete failure of the lode. Where it is honestly conducted, there is hope that gold mining in the future will give, not the enormous isolated profits and the large proportions of losses of the past, but a much more general level, considering the inevitably fluctuating character of the industry, of satisfactory profit.

FOUNDERS' SHARES COMING HOME TO ROOST.

THROUGHOUT the whole history of founders' shares we have lifted up our voice against them—condemning their issue as inequitable in theory, and inconvenient in practice. We need not here repeat what, in so many former articles, we have proclaimed from the housetops, and would not now refer to the subject but for a discussion which took place at the meeting of one of the African companies this week. At this gathering a very earnest desire was expressed to get rid of the founders' shares, which take one-half the profits after 8 per cent. has been paid to the shareholders. Now, the company in question cannot get rid of them, for the simple reason that the holders “sit firm,” and will not part with them. Moreover, the company in question, having issued debentures, cannot get rid of its founders' shares without winding up. Again, to do this, it would not be right in equity. Having issued founders' shares, it would be morally wrong, and, therefore, could not be financially right, to attempt to get rid of them by a side door. The shareholders of this company, and also of many others, brought out at the time when no one considered himself happy unless he was a “founder,” now find a considerable proportion of their past and prospective profits mortgaged to these worthies, and the unpleasantness of the position is striking them in a manner that it previously failed to do. This is the more remarkable, seeing that just now nearly all these companies with founders' shares are in the depth of financial affliction. They are like financial Rachels weeping for their money, and not being comforted because they are not. Still, as we say elsewhere, they should cheer up, for “a better time is coming.” They must, however, “wait a little longer.”

HOPE FOR THE KAFFIR TRADING COMPANIES.

THE meetings of two important companies, having intimate relationships with South Africa, have been held this week, and our readers will be able to judge of their position, financially and otherwise, by a perusal of the *verbatim* reports which appear in our present issue. The first is that of the Transvaal Mortgage, Loan and Finance Co., Limited; the second, that of the Goldfields of South Africa, Limited. It will be seen that both concerns are, in a sense, in very much the same position. They are, in fact, in the position in which nearly all similar companies in South Africa find themselves at the present time. The range is even wider, for it may be truly said that there is no company of any description in South Africa, and particularly in the Transvaal, that has had other than an unsatisfactory trading history during the last 18 months. If the position to-day of the Transvaal Mortgage, Loan and Finance Co., and the Goldfields of South Africa, Limited, were different from that of any other similar Kaffir trading company, some ground for allegations of bad management might lie, but it is not. One or two companies that we could name, of a similar kind, have positively, judging from market estimation, lost all their capital, for the simple reason that none of their securities are at present realisable, but to take that view of the situation would be pessimistic indeed, and unworthy of any commercial mind. The truth is, that companies similar to the two we have in view have cast their bread upon the waters, and the rest of the proverb will most likely come true, that they will find it after many days. The number of those days may be shortened by circumstances which it is impossible to foresee, and it may be lengthened by others equally out of human purview. This, however, may be truly said, that though some of the assets of each concern may, in a sense, be regarded as being in the doubtful category, as a rule they are as sound as the asset a farmer has in the seed he has

put into the ground. Time is wanted to bring the assets of the Transvaal Mortgage, Loan and Finance Co., and the Goldfields of South Africa (we mention them in the order in which their meetings occurred) into bearing, and time is also required to enable the public to get over the timidity begotten of that series of commercial disasters to which Mr. G. H. Thomson, managing director of the former company, referred in his eloquent and common-sense speech.

Whilst on this point we are bound to say that those shareholders who go out into the streets wringing their hands, and who come to the meetings with such statements as that the shares of the company are being "given away," so as to avoid the liability still upon them, little know the mischief they are doing to their own property, and to business generally. They raise up one of the greatest difficulties directors have to contend with. They make it hard for boards to do business, for if the shareholders themselves have not confidence in their own property, how are the directors to inspire that confidence in others. We wish most earnestly that these gentlemen being convinced, as they must be in these two cases, that the respective concerns are well managed, that there is no lack of attention or duty on the part of those in responsible official position, would cease to play the part of Joint-Stock Jeremiahs, and be content to possess their souls in patience. If they manifest a little more backbone, it will be better for themselves and better for the great interests that are at stake.

CUMBERLAND LANDS.

THAT the shareholders of this company were well satisfied with the reports and accounts submitted to them at the meeting on Monday was proved by the unanimous manner in which those documents were passed. But they were still more pleased with the chairman's address; and with good reason. Mr. Borradaile has recently visited the property of the company, and has made such an exhaustive investigation into the mineral wealth of the district that he was able to convey to his hearers a much better idea of the position and prospects of the undertaking than they could have gathered from a voluminous report. The company is less than two years old, and it is not wonderful, therefore, that the period of actual results upon a large scale has not yet arrived; but every step appears to have been taken to build up a great industrial undertaking and to conserve the interests of the shareholders. Rome was not built in a day, and the directors of this company have wisely set their minds against encouraging anything like a "boom" in its shares or in connection with the disposal of portions of its area. They have taken for their motto "slow, but sure," and if they adhere to that policy, as we believe they will, the results can scarcely fail to be eminently satisfactory. The property consists of 46,000 acres of freehold land, to which the company possesses an indefeasible title. The Louisville and Nashville Railroad already passes within a few hundred yards of the Cumberland Lands boundary, and it is anticipated that a branch line from that great system will shortly be constructed right across the company's area to the Cumberland river. In addition to this, a survey has already been made for the Ohio Valley Railroad, past the site of the new City of Carlisle. The company will, therefore, have two strings to its bow in the shape of facilities for transporting the produce of the district to the outer world. And what is that produce likely to be? our readers may ask. Well, for about a dozen miles through the centre of the property valuable deposits of hematite iron ore have been discovered, the outcrop yielding an average of about 56 per cent. to the ton of ore. Some of the deposits have been developed to such an extent, that their commercial value is assured, and there is no doubt that the company will obtain ready purchasers of its ores "if and so long as" they do not themselves undertake smelting operations. Valuable deposits of fireclay and brick clay have also been found. The former will realise high prices for the manufacture of aluminium, while the latter will be invaluable during the growth of the city of Carlisle. Enormous supplies of timber exist upon the property. In short, there are all the essentials for permanent success. Meanwhile, the directors are carefully husbanding the funds provided by the shareholders, and are showing their faith in the future of the enterprise by taking no fees. It is true that they stand as creditors for the amount due to them; but when the company is making profits the proprietors will not hesitate to give the members of the board their just reward.

HENDERSON AND FORBES REEF GOLD MINING CO., LIMITED.

IN anticipation of the general meeting of this company, to be held on Dec. 9, the directors have issued their annual report and statement of accounts to Nov. 30. The promptitude with which these documents have been got out is deserving of the highest praise. During the year a large amount of exploratory and mining work has been done, with the result that numerous reefs of a promising appearance and composition have been discovered, though up to the present they have not proved payable. A large quantity of quartz has been taken out of the various workings, but the bulk of it would not pay carriage and milling costs. A small parcel of 28 tons, however, taken from No. 2 reef, resulted in a yield of 17 ozs. 13 dwts. of gold, equal 12 dwts. 9 grs. to the ton. The company has still about

1,600l. of capital unexpended. The directors consider it would be unwise to exhaust the whole of the funds at the present moment, and they have, therefore, temporarily suspended operations at the mine. They have, however, made arrangements with a prospector, who is a large shareholder in the company, to take charge of the property for a moderate monthly salary, and devote his time to the continuance of prospecting works on the concession. Should any discovery be made on the company's ground, or on either of the adjoining properties, it may be considered desirable to resume operations.

GOLD AND SILVER IN THE UNITED STATES.

CONTINUING our *résumé* of Mr. Leach's report, we find that the mines of the United States yielded during the last year precious metals as follows:—Gold, 1,583,880 fine ozs.; commercial value, \$32,845,000; coining value, \$32,845,000. Silver, 54,500,000 fine ozs.; commercial value, \$57,225,000; coining value, \$70,461,645. The product of the mines and reduction works, including the gold and silver contained in foreign material reduced in the United States, for the same year, was:—Gold, 1,838,366 fine ozs.; silver, 64,920,927 fine ozs. The product of gold and silver in the world, based upon returns to the Director of the Mint, has been for a series of years as follows:—

PRODUCT OF GOLD AND SILVER IN THE WORLD FOR THE CALENDAR YEARS, 1873-1890.

Calendar Years.	Gold.	Silver.		
		Fine Ozs. (Troy.)	Commercial Value.	Coining Value.
1873 ...	\$ 96,200,000	63,257,000	\$ 82,120,000	\$ 81,600,000
1874 ...	90,750,000	55,390,000	70,673,000	71,800,000
1875 ...	97,500,000	62,262,000	77,578,000	80,500,000
1876 ...	103,700,000	67,753,000	78,322,000	87,600,000
1877 ...	114,000,000	62,618,000	75,240,000	81,000,000
1878 ...	119,000,000	73,476,000	84,644,000	95,000,000
1879 ...	109,000,000	74,250,000	83,383,000	96,000,000
1880 ...	106,500,000	74,791,000	85,636,000	96,700,000
1881 ...	103,000,000	78,890,000	89,777,000	102,000,000
1882 ...	102,000,000	86,470,000	98,230,000	111,800,000
1883 ...	95,400,000	89,177,000	98,986,000	115,300,000
1884 ...	101,700,000	81,597,000	90,817,000	105,500,000
1885 ...	108,400,000	91,652,000	97,564,000	118,500,000
1886 ...	106,000,000	93,276,000	92,772,000	120,600,000
1887 ...	105,775,000	96,141,000	94,048,000	124,304,000
1888 ...	110,244,000	108,888,000	102,185,000	140,784,000
1889 ...	122,438,500	123,500,000	115,487,000	159,678,000
1890 ...	116,009,000	128,914,000	134,886,000	165,677,000

The coinage of gold and silver by the various countries of the world (including re-coinages), so far as reported for the last year, aggregate:—Gold, \$149,118,959; silver, \$131,980,621. The Director estimates the stock of metallic money in the United States on Nov. 1, 1891, to have been:—Gold, \$671,139,531; silver, \$539,241,624; total, \$1,210,381,155.

The following table presents the metallic and paper stock and the *per capita* of money in the United Kingdom, France, Germany, and the United States:—

ESTIMATED STOCK OF GOLD AND SILVER, AND THE ACTUAL AMOUNT OF "UNCOVERED" PAPER MONEY IN THE UNITED KINGDOM, FRANCE, GERMANY, AND THE UNITED STATES.

Countries.	Population.	Gold Stock.	Silver Stock.	Uncovered Paper.
United Kingdom	38,000,000	\$ 550,000,000	\$ 107,000,000	\$ 40,000,000
France ...	39,000,000	900,000,000	700,000,000	88,000,000
Germany...	49,500,000	540,000,000	220,000,000	150,000,000
United States ...	64,000,000	671,000,000	539,000,000	409,764,000

Countries.	Total Metallic Stock and Uncovered Notes.	Per Capita.			
		Gold.	Silver.	Paper.	Total.
United Kingdom	\$ 697,000,000	14.47	2.81	1.05	18.33
France ...	1,688,000,000	23.08	17.95	2.26	43.29
Germany...	910,000,000	10.91	4.44	3.03	18.38
United States ...	1,619,764,000	10.48	8.42	6.40	25.30

The value of the precious metals used in the industrial arts in the United States during the last year was, approximately, gold, \$18,000,000; silver, \$9,000,000; of which \$10,700,000 gold and \$7,140,000 silver was new bullion. The Director reviews the work of the Mints in the re-coinage of the uncurrent silver coins in the Treasury under an appropriation of \$150,000 for such re-coinage made by the last Congress. The beneficial results of this re-coinage are shown by the reduction in the amount of subsidiary silver coins in the Treasury, the amount at the commencement of the last fiscal year (all of which were classed in the Treasury statements as an "unavailable asset")

being \$22,805,225, while the amount in the Treasury at the present time is \$13,196,379, a reduction of \$7,608,846. The Director recommends that a permanent annual appropriation for re-coinage be made, or else an immediate appropriation of \$100,000 for continuing such re-coinage. The report, as a whole, is replete with valuable statistics, furnished by foreign Governments through the diplomatic representatives, covering the production, coinage, and movement of the precious metals in foreign countries, and reflects infinite credit upon Mr. Leach and his assistants who have been concerned in its preparation.

AFFAIRS IN SOUTH AFRICA.

(From our Own Correspondent).

Kimberley, Nov. 9, 1891.

THE WEALTHY RANDT.

As time goes on, and as the gold industry of the Randt settles down, so do we find that each succeeding monthly output overtops the previous one. The old days of fatuous speculation are past and gone, and it is more than doubtful whether they will ever return. A few unscrupulous men indulge in the hope that they will, but I think I may say they are in a fast disappearing minority. As I write, the official figures of the Oct. output have not been published, but there seems to be every reasonable hope that they will reach nearly 70,000 ozs. Towering above all others, the Robinson Co. is expected to return 10,000 ozs., and the splendid position of that enterprise, together with the highly effective gold-extracting process in use, give strength to the prophecy. Quite recently, by the chlorination process adopted by this company, the largest bar of gold yet turned out on the Randt was produced, and attracted considerable attention. The milling power of this company will soon be 60 stamps, and as soon as these are at work the monthly output will be 14,000 ozs. There is now known to be at the Randt a practically unbroken area of 1,000 square miles of auriferous beds, of an average thickness of 10 ft., taking the Main Reef series only, and from this fact it claims to be the leading goldfield of the world. Then, again, it is calculated that the banket reefs, extending for 40 miles in length, contain, at a very moderate computation, 24,000,000 tons of stone, which, estimated to yield 10 dwts. per ton, represents 12,000,000 ozs., of the value of 42,000,000*l*. And, moreover, time proves the average yield to be steadily increasing. In Mar. last it was taken at 9 dwts. per ton; now 12 dwts. is nearer the mark. As to the future, it is accepted, as the result of careful calculation, that the existence of the Randt goldfields will last 50 years, but there are many who believe that half a century is too short a period to fix for the life of this recently discovered goldfield, because other conglomerate beds are known to exist, which may be of a lower grade, but will all the same be available as gold producers, especially as in the course of years the process of gold extraction is bound to attain a greater degree of efficiency than is at present the case, and more especially as these goldfields are attracting the personal attention of men of high repute in chemistry and science, not only from England, but from America.

THE KIMBERLEY DIAMOND MINING CO.

As I have already informed you in previous letters, this company is really and truly an offshoot of the London and South African Exploration Co., and for some months past they have been developing some ground just outside the town, and have only recently discovered some diamondiferous deposit, which is now known as the "Belgravia" Mine. The work has been carried on very quietly, under the management of Mr. Davis Allen, and one peculiarity about it is that up to the present only white men are employed at the works. Although they have only quite lately reached the "blue" and commenced to wash, the finds are reported to have been good, and during the past week they have made some sensation by the output of a fine 60 carat stone, of a delicate yellow tint and excellent shape. It is generally considered here that this mine is going to prove a formidable thorn in the side of the De Beers Co. Mr. Davis Allen is the gentleman who, some months ago, in giving evidence before the select committee, said:—"There are not only supposed to be other diamond mines in existence, but there are."

THE PRINCE ALBERT GOLDFIELDS.

Judging from what has taken place lately in connection with these goldfields, I am inclined to think they will make their mark yet. The other day one of the diggers went down to Cape Town with a large parcel of gold from alluvial and reef claims, and placed it before the Commissioner of Crown Lands, explaining to that official that the general opinion on the fields was that the reefs were to be found at a depth of from 100 to 150 ft., and that they were a poor community who could not afford to prove at such a depth. Whereupon the Commissioner then and there gave orders to Mr. Bain, the Government geologist, to have a drill sent up at once to the goldfields to thoroughly test the reef to a depth of 200 ft. in different parts, more especially those parts where the diggers are getting the coarse gold. Quicksilver has also been found on the farm Spreewufontein, and is attracting considerable attention.

THE ASBESTOS (ORANGE RIVER) CO.

Another extraordinary general meeting of the shareholders of this company was held on Thursday last, and was largely attended. Mr.

H. Hirsche again took the chair. In conformity with a resolution passed at the meeting held a fortnight previously, of which I sent you the particulars, the business in hand was to elect a new board of directors, and to pass the necessary resolutions authorising the trustees of the company to institute legal proceedings against the old directors, as advised by Mr. Advocate Solomon. A resolution electing a new set of directors was then proposed and carried without much display of acrimony, but when it came to the question of instituting legal proceedings there was another row. However, it was duly proposed and seconded, and, after any amount of squabbling, it was declared carried by a majority of 24 to 6 votes. Then Mr. Mendelsshon demanded a poll. This was seconded by the chairman, who intimated that himself and Mr. Mendelsshon represented 40,000 shares. The result of the poll was, for the resolution 66,000 odd shares, and against 65,000 odd shares, and the chairman was properly hauled over the coals for admitting that he had voted. The resolution was then declared carried, and we shall now see what the result of an action at law will be in this extraordinary matter.

SAN JACINTO ESTATES.

FROM statements made at the meeting of this company on Wednesday last, it would appear that the shareholders are the fortunate possessors of a tin-bearing property in California of no ordinary value. That this is so is evidenced by the fact that the average yield of the ore is upwards of 5 per cent. to the ton—more than double that obtained from the Cornish mines. California's vast and varied mineral resources are well-known, but hitherto tin has not been met with there to any great extent. The operations, therefore, of this company will be watched with keen interest by persons on both sides of the Atlantic, and particularly so, inasmuch as in 1893 a duty at the rate of 4*c*. per hundred will be imposed on every ton of foreign tin imported into the United States. It is needless to say that this will have the effect of materially assisting the American producers, among whom, in the opinion of experts, this company will by that time be taking a leading place. The company is at present in its infancy, and consequently the property, to use the words of one of the directors, has only been "played with." The working capital was, unfortunately, expended by the former manager injudiciously and on a lavish scale, but the directors have now secured the services of an excellent Cornish miner in the person of Capt. Harris, who is devoting his utmost energies to developing the mine and opening up reserves. A new furnace has been erected, and during the month of Dec., with 22 days' working only, the manager estimates that he will be able to turn out and smelt 25 tons of tin. It must be satisfactory to the shareholders to learn that the deeper the mine is going the more valuable it is becoming; and, furthermore, that there is an abundant supply of water. One battery, capable of crushing 48 tons per day, has been put up, but the engine that works it is of sufficient power to work four, and, as the chairman said, if they can for the present treat 48 tons per diem, the average yield being 5 per cent., upwards of 2 tons of tin would be produced daily, which, at 100*l*. per ton, would leave a very fair profit.

The company also possess landed property covering nearly 50,000 acres, a large portion of which is suitable for agricultural purposes and fruit farming, and they own, in addition, a valuable asset in the shape of 2,000 miner's inches of water, from which, no doubt, something will be realised at some future date. Meantime, however, attention is being concentrated upon the tin mine, in which a director told the shareholders they had undoubtedly "a permanent fortune."

THE BULLION QUESTION.

As Chancellor of the Exchequer, Mr. Goschen, having completed the conversion of the National Debt, has now taken the bullion question in hand, and, we hope, with equally satisfactory results. The ideas which he enunciated at Leeds early this year have now taken more definite form, and from his address on Wednesday afternoon at Merchant Taylors' Hall before the London Chamber of Commerce, bankers and others, it would seem that from theory the proposals will shortly reach the practical stage. Mr. Goschen, in the course of inquiry, has dropped two of his suggestions, viz., the 10*s*. note and the second reserve, and for the present, while recognising the willingness bankers have shown to meet his views in the matter of increasing their reserves and publishing monthly balance-sheets, confines himself to the discussion of introducing the 1*l*. note system, with a view to augmenting the reserve of the Bank of England. His proposals with this object have been well received in City circles, if we except the Stock Exchange, for these disappointment has followed too sanguine expectations, reflected in the fact that Consols, after rising 95 $\frac{3}{4}$, $\frac{7}{8}$, cum. dividend, have fallen to 94 $\frac{1}{2}$, 95 ex. dividend. The principal considerations to be dealt with are the issue to bankers of 1*l*. notes in exchange for 80 per cent. in gold, and 20 per cent. in securities, presumably Consols, and he relies upon bankers for support in taking the notes, with a view to their circulation in the place of coin throughout the country. He estimates that the value of the gold coin circulating is 20,000,000*l*., and this he wishes the notes to replace, and keep the gold as an additional reserve, calculating that the 1*l*. notes

will not be readily available for foreign houses to withdraw gold with a fairly safe assumption, unless the scheme is a failure. The average stock of gold held by the Bank for years past has been 20 to 22 millions, and this would raise the total to, say, 40 millions. Then, in the event of disturbance of credit, through panic, &c., should the reserve be reduced below 21½ millions, he proposes that the Bank should be authorised to issue notes beyond the fixed limit, and that when gold had been acquired, the Bank might, to prevent a crisis, issue notes against some high rates of interest, irrespective of bullion obligation, and against a still higher rate, a further amount and so on, by a sort of sliding scale, and thus avoid the necessity, as at present, of suspending the Bank charter. The question is, will the notes be taken and become popular, and a further doubt is whether the fact of an increased reserve might not, with the increased confidence and easier money, induce the more free export of gold. With the experience of provincial bank note circulation, and Scotland and Ireland before us, and the popularity of the Postal Order system, it would seem likely that the notes, if offered by the banks, would soon be taken, while as regards the danger of increased exports of the metal, this can only be left to the test of the working. Taken altogether, the advantages evidently outweigh the objections, and it is to be hoped that the discussion of the scheme in the Press, and at the quarterly meeting of the Chamber, on the 9th inst., will result in the Chancellor drafting a Bill to carry out his policy.

THREE INDIAN REPORTS.

THE reports anticipatory of the forthcoming meetings have been issued by three of the Indian Gold Mining Companies, to wit—Goldfields of Mysore, Champion Reef, and Indian Consolidated.

Let us in this order consider them.

The directors of the Goldfields of Mysore truly say that the past year has been eventful, and the expression is justified by some remarkable facts. Several important sales have been effected, from the proceeds of which the shareholders have received, and will hereafter receive, substantial dividends. 492 acres of land have been sold. The company, after sales of some of the shares originally held, now retains 2,000 fully-paid Mysore shares; 3,000 fully-paid Ooregum shares; 3,000 fully-paid Nundydroog shares, and 22,000 Champion Reef shares—representing a present market value of 48,500*l.*—a sum, in our judgment, very much below what will be the real value of these assets, should they be retained until the directors issue another report. The sale to the Balaghat Co. is of too recent a date to need reference. Of the 8,400 acres originally owned by the company there remain now 7,598. The board add that the consideration received was represented by fully-paid shares in the purchasing companies, of the value of 231,250*l.* A block comprising 220 acres of land was previously sold to the Champion Reef Gold Mining Co. of India, Limited, for 27,000*l.*, of which 5,000*l.* was paid in cash, and 22,000*l.* in fully-paid shares of that company. A net profit is shown of 212,525*l.* 2*s.* 4*d.*, out of which, two dividends represented by fully-paid shares in the purchasing companies, and equivalent to 18*s.* 3*d.* per share, have been paid. 5,000*l.* has been placed to a reserve fund, and 6,775*l.* 8*s.* 7*d.*, the balance of profit, carried forward. The board have it in contemplation shortly to form a new company to purchase and work an important section of mining land belonging to the company. They have secured a fresh director in the person of Capt. W. Bell McTaggart, whose assistance we feel sure will prove invaluable to his colleagues. It is not outside the language of moderation, in view of the facts we have thus summarised, to say that the Goldfields directors have issued a brilliant report.

That of the Champion Reef Co., though not brilliant, is yet thoroughly satisfactory. The developments have been continued on the property with a dogged determination that has been rewarded with a considerable measure of success. The working capital being exhausted, the prospects of the mine were deemed to be so good that re-construction was not thought of, but a debenture issue of 50,000*l.* was easily placed. Five shafts are now being sunk, most of which are a considerable depth. Dalyell's is the deepest, 296 ft. The directors say that the prospects of the mines continue good, particularly in the Garland, Ribblesdale and Dalyell shafts. It is hoped that in a short time the stamps will be erected and at work, when regular returns of gold may be expected.

We could wish that the report issued by the Indian Consolidated Co. were equally as favourable as either of those named above, but it is not so. The directors have maintained a gallant struggle, but, so far, the stars in their courses have fought against them. In the first place, in the Wynaad the result of crushing 3,048 tons from Apl. to Dec. only produced 474 ozs. of gold, which were sold for 1,868*l.*, whilst during the present year to the end of Oct., 6,212 tons were crushed for a yield of 754 ozs. of gold of the estimated value of 2,965*l.* Mining in the Wynaad will only be continued so long as it pays its expenses. In the Colar Field, the directors suffered a double disappointment in the failure for a time of all payable quartz from No. 5 shaft, and also in the cutting of the lode poor in both the northern shafts and in Plummer's Nos. 1 and 2. The directors say "There is nothing for it but to follow down the lode in the hope

that increased depth will bring us into richer runs of ore." The directors intimate clearly their plan of campaign, and meanwhile it is satisfactory to note that the rate of progress is all that can be reasonably desired. The management has not been successful thus far, but it will be difficult for the most hard-hearted critic to indicate in what way they could have gone better to work to bring about a different result. The meetings of all these companies will be held during the ensuing week.

DORMAN, LONG, AND CO.

THE statement made by the chairman at Wednesday's meeting must have re-assured the shareholders that the falling off in the dividend is only a temporary matter. It was the same tale of financial troubles and low prices that all manufacturing and trading companies have had to tell this year, and especially those who have been doing a large business with the Argentine Republic. By the suspension and cancellation of orders, after the financial collapse of last autumn, this company suffered to the extent of something like 100,000*l.* The result, however, was not so bad after all. A 7½ per cent. dividend in these times of cheap money is a return that very many investors would be only too ready to secure, especially with the prospects of its increase rather than otherwise. One very satisfactory statement made by Mr. Dorman on Wednesday was that in spite of so many orders being cancelled they actually made and sold a larger quantity of material than in the preceding year. The prospects, on the whole, look encouraging.

VAN RYN ESTATE AND GOLD MINING CO., LIMITED.

THE South African Trust and Finance Co., in carrying out the re-construction of the Van Ryn Gold Mining Co., Limited, in liquidation, have issued to the shareholders of that company a circular setting forth the details of their scheme. A new company has been formed under the above title, with a capital of 85,000*l.* in shares of 1*l.* each, and 10,000*l.* in 6 per cent. debentures, due in 1896, which have been issued to Messrs. Van Ryn Brothers, the mortgagees of the late company. The property comprises the freehold farm Vlakfontein, which has been proclaimed a gold field under the laws of the South African Republic, and is situated about 18 miles from Johannesburg. It extends over an area of 6,500 acres, and embraces the surface rights over the whole farm; the mining lease of 514 claims specially selected, and for which an annual rental of 161*l.* is paid to the Government; 13 owners' claims adjacent, which are subject to a total payment of 3*l.* 5*s.* per month and four water rights covering an area of 56,300 square ft. The failure of the Van Ryn Co. is attributed to incompetent management, defective organisation, and extravagant expenditure, and the directors of the South African Trust and Finance Co. believe that under efficient and economical management the company will be successful, which belief appears to be founded on a good basis of fact. The property is apparently well found in plant and machinery, and, according to the report of Messrs. James Bros., who have inspected the property, 30,000*l.* working capital will "place the mine on a permanent and remunerative dividend-paying basis." These gentlemen estimate the ore in sight at 22,700 tons, and the average value of the reefs to be 13 dwts. to the ton. They further state that the working expenses should not exceed 29*s.* a ton, and that existing stamps are capable of treating 3,000 tons a month, which should yield a monthly profit of 2,475*l.* Crushing is expected to commence about the month of March next. All the appearances seem to point to a successful future for the company, and there appears little doubt but that the shareholders in the Van Ryn Gold Mining Co., in liquidation, who are entitled to claim one share in the new company for every five held in the old company, will take up the whole of the shares. The application for shares must be accompanied by a remittance of 10*s.* per share. The shares will be issued 10*s.* paid, and the balance will be payable by calls not exceeding 5*s.* each, and at intervals of not less than two months. Van Ryn shareholders owe a deep debt of gratitude to the South African Trust and Finance Co.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

WEAKNESS has been the only feature in Lombard Street this week, and it may be said that rates have fallen daily. Three months' bills dropped to 2½, ¾ per cent. per annum, and six months' date to 2½, 3, while call money has been even unlendable at 1½. The bullion question as regards exports has quite fallen into abeyance, and the chief factor in the present situation is a superabundance of loanable capital. While that continues ease must remain, and the sense of the market upon the outlook is emphatically expressed by the cheap terms the Government borrowed 2,000,000*l.* last Monday on Treasury bills, this series being so keenly competed for that three and six months' paper was sold at a trifle over 2½. The Bank return is less satisfactory than those immediately preceding, owing to an expansion in the note circulation of 393,000*l.* The reserve has diminished 463,000*l.* to under 15,000,000*l.*, and the bullion is now 23,732,000*l.*, while the proportion of assets, &c., is 41½ per cent., as compared with 45¾ per cent. last week. The repayment of loans by the Bank has increased the private deposits by 1,694,000*l.*, and some of the stock thus regained has gone into Government securities, which have expanded 716,000*l.*

There was never much business passing at the Stock Exchange, and the tendency in consequence ruled irregular. The markets, nevertheless, have at times borne an excellent appearance, encouraged by extreme buoyancy in Consols and other gilt-edged securities, and a

remarkable recovery among foreign bonds. The former have realised over 96 cum dividend, in anticipation of proposals to reform the currency; but as the suggested procedure did not reach all that was expected by the "House," which, as usual, exaggerated the reports beyond the truth, a reaction followed. Internationals, however, held their course in response to Paris, where the "bears" have been nicely caught, and including even Uruguay, whose confiscatory proposals are likely to be carried—prices have risen sharply, Italian, Spanish, Mexican, Portuguese, Russian, Greek, Turkish and Suez Canal Shares leading, but neither Brazilian, nor Argentine have appeared so cheerful. Home Railways on the whole were steady, the traffics being tolerably good, and Brighton "A" once more moving in the right direction, while North Western has also received considerable support. Foreign Railways showed dulness excepting Nitrate on which a dividend and bonus of over 20 per cent. is expected. Grand Trunk are lower, notwithstanding a favourable Oct. statement, and American Railroads exhibit on balance a loss in value, the Field collapse for the moment counteracting extraordinary increased earnings. The market is naturally alarmed at having possibly discredited securities. Bank, Electric Lighting, and Brewery shares of the United States are weaker, but Allsopp's and Guinness's and Miscellaneous descriptions improved.

A further decided fall occurred to-day in rates of discount, owing to lack of bills and a reduction in the allowances on deposits, since there appears to be no profitable employment for superabundant capital. The discount companies have lowered their rates for money at "call" by $\frac{1}{2}$ per cent. to 2, and for that at "notice" to $2\frac{1}{2}$ per cent. per annum. Good commercial paper, expiring in three months, is now negotiable at $2\frac{1}{2}$ to $2\frac{1}{2}$ per cent., while loans are $1\frac{1}{2}$ to 2. The Bank of England has received 5,000L in gold from Ecuador.

Rupee Paper has been sold this afternoon, falling $\frac{1}{2}$ to $\frac{3}{4}$ per cent. to $7\frac{1}{2}$, $\frac{1}{2}$ for the $\frac{1}{2}$ per cent., and $73\frac{3}{4}$ for the $\frac{1}{2}$ per cent. Enfacad, attributable to a nominal quotation ($44\frac{1}{2}$ d.) for bar silver. There was no market for the latter, owing to American advices, but the latter yesterday caused extreme firmness. A demand is being looked for from Spain.

To-day the markets have been what is called, in Stock Exchange parlance, "stupid," that is to say, with little doing there was no definite tendency, prices rising or falling haphazard. A feature, however, was a falling off in the strength of the Foreign market, realisation and weakness following the cessation of the closing of "bear" accounts. The Funds, on the other hand, were good in tone after opening dull, and with other investment stocks improved on easy money and good buying, induced partly by the prospects of financial liquidation. Consols closed $\frac{1}{2}$ higher at $95\frac{1}{2}$, $\frac{1}{2}$, and $\frac{3}{4}$, for account at $95\frac{1}{2}$, $\frac{1}{2}$, and the $2\frac{1}{2}$ per cent. and Indian stocks rose $\frac{1}{2}$. Among Foreign securities the International section has been flat; Portuguese have fallen $1\frac{1}{2}$; Spanish, nearly 1 per cent.; and others, $\frac{1}{4}$ to $\frac{1}{2}$. Russian closed under the best, and Chilean were exceptionally good at 93. Home rails showed little change, but were mostly slightly firmer. Brighton "A" at one time rose to $149\frac{1}{2}$, but fell at the close to $\frac{1}{2}$ under yesterday's price, and Midland was nearly 1 per cent. lower, while Metropolitan was that much better. The American Market, after being very good on New York prices, close dull, with, however, some advance on the day, Illinois being prominently 2 higher; Louisville, $\frac{1}{2}$; and Norfolk and Western Preferred, $\frac{1}{2}$; but Denver, Wabash and Northern Pacific Preference were flatter. Grand Trunk stocks were harder, and Mexican issues steady. On balance Miscellaneous securities were a shade off.

Annexed are the final quotations to-day:—Consols Account, $95\frac{1}{2}$, $\frac{1}{2}$, $95\frac{1}{2}$, $\frac{1}{2}$; Egyptian Preference, $89\frac{1}{2}$, $89\frac{1}{2}$; Egyptian Unified, $94\frac{1}{2}$, $94\frac{1}{2}$; French Four-and-a-Half per Cents., 103, 104; Hungarian, $89\frac{1}{2}$, 90; Italian, $88\frac{1}{2}$, $89\frac{1}{2}$; Mexican, $85\frac{1}{2}$, $85\frac{1}{2}$; Peru Five per Cents., $8\frac{1}{2}$, $9\frac{1}{2}$; Peru Six per Cents., $27\frac{1}{2}$, $28\frac{1}{2}$; Russian 1889, $93\frac{1}{2}$, $93\frac{1}{2}$; Portuguese, $34\frac{1}{2}$, 35 ; Spanish, $66\frac{1}{2}$, $66\frac{1}{2}$; Turkish 1871, $91\frac{1}{2}$, $92\frac{1}{2}$; Turkish Defence, $88\frac{1}{2}$, 89 ; Caledonian 118 $\frac{1}{2}$, 119; Great Eastern, $87\frac{1}{2}$, 88 ; Great Western, $158\frac{1}{2}$, $158\frac{1}{2}$; Brighton "A," 148, $148\frac{1}{2}$; North Western, $172\frac{1}{2}$, $172\frac{1}{2}$; Metropolitan, $99\frac{1}{2}$, 91; Metropolitan District, $31\frac{1}{2}$, $31\frac{1}{2}$; Midland, $161\frac{1}{2}$, $161\frac{1}{2}$; North British, $43\frac{1}{2}$, $44\frac{1}{2}$; North Eastern, $157\frac{1}{2}$, $157\frac{1}{2}$; South Eastern "A," $84\frac{1}{2}$, $84\frac{1}{2}$; Mexican Ordinary, $29\frac{1}{2}$, $29\frac{1}{2}$; Nitrate Ordinary, $18\frac{1}{2}$, $18\frac{1}{2}$; Grand Trunk, 10, $10\frac{1}{2}$; Grand Trunk First Preference, $69\frac{1}{2}$, $69\frac{1}{2}$; Grand Trunk Second, $49\frac{1}{2}$, $49\frac{1}{2}$; Grand Trunk Third, 26, $26\frac{1}{2}$; Canadian Pacific, $91\frac{1}{2}$, $91\frac{1}{2}$; Denver Preference, $45\frac{1}{2}$, 46; Erie, 31, $31\frac{1}{2}$; Milwaukee, $79\frac{1}{2}$, $79\frac{1}{2}$; Lake Shore, $129\frac{1}{2}$, 130; Louisville, $81\frac{1}{2}$, 82; Atlantic First, $37\frac{1}{2}$, $37\frac{1}{2}$; Ontario, $20\frac{1}{2}$, $20\frac{1}{2}$; Ohio, $22\frac{1}{2}$, $22\frac{1}{2}$; Norfolk and Western, $52\frac{1}{2}$, $52\frac{1}{2}$; Reading, $19\frac{1}{2}$, 20; Union Pacific, $42\frac{1}{2}$, $42\frac{1}{2}$; Wabash Preference, $28\frac{1}{2}$, $28\frac{1}{2}$; Ottoman Bank, $11\frac{1}{2}$, $11\frac{1}{2}$; Anglo-Telegraph, 49, 50; National Telephone, $4\frac{1}{2}$, $4\frac{1}{2}$; Hudson's Bay, $15\frac{1}{2}$, $15\frac{1}{2}$; Suez Canal, $103\frac{1}{2}$, $109\frac{1}{2}$; Guinness, 319, 321; Allsopp's Ordinary, 25, 27; Ervant and May, $13\frac{1}{2}$, 14; Eastman's Ordinary, $4\frac{1}{2}$, $4\frac{1}{2}$; Elmore's, $3\frac{1}{2}$, $3\frac{1}{2}$.

EL CALLAO GOLD MINING CO.

THE following is an extract from the half-yearly report of the directors presented to the general meeting of shareholders in Sept. last:—The explorations have been continued with great activity and intelligence, and it is owing to this circumstance that, in spite of the decrease in the mineral produce, the expenses have been covered, and we have been able to undertake explorations in some of the company's concessions. The economies carried out in all the branches of the administration, both here and at El Callao, have also contributed to this result, the miners' wages having been reduced down to the lowest level that is compatible with the present efficient service of the different branches and the works at the mine. On several occasions and where we least suspected, very encouraging formations have been met with, and it must therefore be supposed that we may come across others of similar nature and of more important and permanent development. At the present moment an improvement has been noticed in some of the sections to the south of the mine, which, if maintained, will no doubt increase the product of the mill. If the directors have refrained from publishing the favourable changes which have occurred from time to time in the mine, it is because up to now such changes have been of a purely transitory character. Only in cases when the improvement is maintained due notice will be given, as in mining matters even the best founded hopes usually disappear unexpectedly. We take this step because unfavourable rumours have been intentionally circulated concerning this mine; but as the latter has continued to

produce 5,000 tons of rock monthly, it must be inferred that with such an abundance of mineral and an unexpected area almost equal to the explored grounds, the exhaustion of the lode is still very distant. Besides the works of the mine itself, further extensive explorations have been carried on in the company's concession of "La Culebra." There are other concessions belonging to us showing some encouraging indications, and which will be prospected as far as the funds at our disposal will allow us to do so, but as these explorations are necessarily slow and uncertain, the directors are of opinion that the time has arrived for acquiring other properties of known richness and quite close to El Callao.

COMMERCIAL NOTES.

METALS.

COPPER has advanced in value. The statistics issued on Dec. 1 must be considered favourable, the visible supply showing a decrease of 2,095 tons, compared with Nov. 1. Charters, 3,100 tons. Supply to England and France during Nov., was 7,254 tons; delivery, 9,349 tons. The goodwill and stocks of the old Société de Métaux were sold in Paris on the 2nd inst., for 18,000,050f. G.M.B. warrants improved from 44L 5s. to 47L cash, and three months from 45L to 47L 17s. 6d.; the close yesterday being 46L 15s. cash, and 47L 7s. 6d. three months. To-day's prices are 46L 12s. 6d. cash, and 47L 5s. three months. We quote English tough, 49L to 51L; best selected, 50L to 52L; strong sheets, 59L to 60L; India sheets, 56L to 57L; yellow metal sheets, $5\frac{1}{2}$ to $5\frac{1}{2}$; sheathing, $5\frac{1}{2}$ to $5\frac{1}{2}$; ore, 8s. 9d. to 10s.

TIN rather easier. Spot Straits declined from 92L to 91L 2s. 6d., cash, and three months from 92L to 91L 15s. To-day's prices are 91L 2s. 6d. to 91L 5s., cash, and 92L three months. Arrivals in Nov. were 2,760 tons. Delivery, 1,878 tons, of which 550 tons went to America. Stock here and landing, 3,501 tons. Straits shipments for Nov., 2,450 tons, viz.:—London, 1,350; America, 575; and Continent, 525 tons. The Dutch Market is steady. Banca, $\$55\frac{1}{2}$. Billiton, $\$54\frac{1}{2}$ to $\$54\frac{1}{2}$. English Ingots, 95L to 95L 10s.

TINPLATES dull, and ordinary coke quoted 12s. 6d. to 13s., Liverpool.

SPELTER was flat, and offered at 22L 2s. 6d. ex ship here, but has improved, and is now quoted 22L 10s. buyers.

SHEET ZINC.—In public sale yesterday 95 tons sold at 25L nett at works.

LEAD dull and easier. Soft Spanish, 11L 10s. to 11L 12s. 6d.; soft English, 11L 15s. to 12L; L.B., 12L 5s.; sheets, 12L 15s.

QUICKSILVER.—Rothschild's price is still 8L; seconds, 7L 13s. 6d. to 7L 14s.

ANTIMONY quiet. Hallett still asks 60L for delivery this year. G.M.B. from second-hands is obtainable at 56L.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING DEC. 5.

Agricultural Company of Mauritius ...	10 per cent.
Brazilian Submarine Telegraph ...	3s. per share.
Bristol Waggon and Carriage ...	4 per cent.
Bartholomay Brewing ...	5 per cent.
City of Chicago Brewing and Malting ...	10 per cent.
Commercial Cable ...	7 per cent.
Eastern Telegraph ...	3s. per share.

P. and O. Steam Navigation, Preference ...	5 per cent.
P. and O. Steam Navigation, Deferred ...	10 per cent.
Parkgate Iron and Steel... ..	1L per share.
Seville Waterworks ...	4 per cent.
Western Mortgage and Investment ...	12 per cent.

SAN BERNARDO SILVER MINES.

A CIRCULAR has been issued giving the result of another visit to this property by Mr. P. Alex. Thomas, M.I. Mech. E. This gentleman, after a thorough examination of the property, both above and underground, states he can only see evidences that the good opinion he has always expressed will be borne out by actual results in a very short time. The chief reasons for shutting down the mill during the winter (advocated by the managing director), Mr. Thomas says lie in the water difficulty, and in the apparent impossibility of keeping the mill supplied with sufficient ore per day to enable it to run continually to its utmost capacity. As regards the water difficulty, he thinks there is no doubt when the small streams freeze up, there will not be sufficient power to drive the mill. With the mill shut down a good force can be constantly employed during the winter on development work, so that when it is started again in the spring it can be kept running all the time. In conclusion, Mr. Thomas says, "though it is somewhat disappointing to look forward to another delay, I am satisfied that when the fresh start is made in the spring, everything will be in first-rate order to run continuously for seven or eight months, with large profits to the company; subsequent to which, the consideration of providing additional appliances so as to run throughout the following winter can be entered into with better heart than at present."

REPORTS OF MEETINGS.

THE APPALACHIAN, LIMITED.

SHAREHOLDERS DECIDE TO WIND UP, BUT PROVE THAT THEY ARE NOT UNGRATEFUL TO DIRECTORS, WHO ARE NOT RESPONSIBLE FOR THE COMPANY'S MISFORTUNES.

THE general meeting was held at the Cannon Street Hotel, on Tuesday, to receive the report of the committee.

Notice was also given of a special meeting, to wind up and re-construct.

Mr. John Ogle

(chairman of the company) presided.

Mr. CHAS. E. GREEN (secretary) read the notice of meeting.

The CHAIRMAN said he would first call upon a member of the committee to speak.

VIEWS OF THE COMMITTEE.

Mr. JAMES A. MCKEAND: The committee regret that they have not had something more tangible to report than what is contained in the documents sent out, but we have been hampered by the low state of the company's funds. Any proposal we have made to the directors they have said—"Where is the money to come from?" At the last re-construction a very large sum out of the total raised went to pay the debts of the old company—fully three-fourths, leaving only one quarter for development and other purposes. The amount at command was 7,000*l.*, which was quite inadequate; and as to the concentrates (paragraph 4), the gentleman mentioned, Col. McCoy, was one of the largest holders in the old company, and one of the original vendors. At the time of the re-construction the directors asked him to give a guarantee in respect to those concentrates, because there were certain debts on the mine to the amount of nearly 3,000*l.*, and the one was a set-off against the other. We found the value of these concentrates only about 600*l.*, though said to be worth 2,500*l.*—a serious deficiency. The committee would like to have recovered the difference, but even if they had been successful in a lawsuit it was unlikely that for the present they could get the money—(laughter)—and so the matter was in abeyance. As to paragraph seven, the committee have been struck by the contradictory character of the reports from the mine. Shareholders also could not fail to be struck with the optimistic nature of Mr. Tozer's reports.

DOUBTFUL REPORTS.

The committee saw other reports, but did not feel disposed to place much reliance upon the majority of them, except in the case of the documents emanating from a gentleman known to one member of the committee, in whom he had every reliance. They also had the report of Mr. Skyrme, on which they did not rely, seeing that he suddenly changed his opinion—that is within a period of three or four days. After a long time speaking highly of the prospects of the mine, he suddenly veered round and said it was no good at all. The second adverse report was from a gentleman sent out by the committee, after trying to get an agent from the Messrs. Taylor, but being unable to do so on account of the lowness of the funds. Still, we did not desire to come before the shareholders having done nothing at all, and therefore we sent out a gentleman, not an expert in gold mines, but one having considerable experience in copper mines. The committee strongly impressed upon him to spend a considerable time on the spot, but he only spent one half the period named, and so we consider his report insufficient. We want a further one before coming to a definite opinion. The committee have done what they could to study the interests of the shareholders in the proposals made; and as regards the amount—11,666*l.*—that might seem to be altogether too large for the purposes required, but it is only fair to mention that there are sure to be shareholders who will not come in and executors who cannot. Therefore, on re-construction we do not expect to get the sum stated, and as for underwriting any of it, that will be a difficult operation at the present time. During the last few days

ANOTHER PROPERTY HAS BEEN OFFERED TO THE COMPANY,

and if re-construction takes place the directors would like to test it. It adjoins Appalachian, or is rather three-quarters of a mile distant, and is said to be the most valuable mine in North Carolina. (Laughter.) Development work has been in progress, showing \$30 per ton—half being gold and half silver. "The whole of the property is gridironed over with mineral veins containing gold and silver." If the shareholders were willing, it was proposed to examine this property. I would like to mention, as regards the committee, that Mr. Wightman holds about 31,000 shares, Mr. Norton nearly 15,000, and if anything could be done to make the company successful it would be to their interest to do so. The decision is now in the hands of the shareholders. (Cheers.)

COL. MCCOY AND THE COMPANY.

Mr. COOMBS: I think our thanks are due to the committee for their trouble. (Cheers.) Col. McCoy was the original vendor to this company, and distributed his shares to the public at various prices, but what he had done with the money no one knows. (Laughter.) I think it monstrous that a man calling himself a colonel should get money from the public, sell his own shares, and pocket the proceeds. It is quite contrary to my sense of honour to do anything of the kind. (Cheers.) This statement about the concentrates is another proof of Col. McCoy's action. I wish he were here that I might tell him what I think of him to his face. (Cheers.) I think he should be called to account and made responsible for his mistakes. I say this in justice to the present shareholders, and not out of any personal feeling against Col. McCoy, but I think it is a shame that a man should act like that. (Cheers.)

Mr. FRENCH: Very great thanks are due to the committee, but I am surprised they should have suggested re-construction. The smallness of this meeting is due to the

DISGUST FELT BY THE SHAREHOLDERS.

I have no words to express my opinion of this concern, and the sooner it is wound up and buried the better. How many re-constructions have there been?

CHAIRMAN DEFINES HIS POSITION.

The CHAIRMAN: I had no knowledge of the company until the re-construction. The original company was brought out, and there has been but one re-construction.

Mr. JOSEPH PYKE: I am not here to cast blame on the directors, but to condole with them. The company was re-constructed with a capital of 29,000*l.*, but actually

22,000*l.* WENT TO PAY OLD DEBTS,

leaving the totally insufficient sum of 7,000*l.* for the remaining purposes of the company. Is it not an absurdity for directors to think of carrying on a concern like this? That is No. 1 indictment. No. 2 is that a person named McCoy gave a guarantee of some sort to the directors, which they very badly managed, for it seems even if they made him responsible in law there is not much chance of getting the money. Why did the board not secure the shares? but instead of that the matter has been allowed to slide, until it assumes the position mentioned in the committee's report, whilst Mr. McCoy is, no doubt, enjoying himself with the proceeds. The third count of the indictment is the re-construction of the company, but the only report received to justify it is from a gentleman in whose mining experience the committee say they have not much confidence—in fact, he was a "minor" for aught the shareholders knew. (Laughter.) Gentlemen, do you not think it better to let the company die and decently inter it? I propose that the company be at once wound up.

SHAREHOLDERS REMINDED OF FORGOTTEN FACTS.

The CHAIRMAN: Shareholders are in error in saying that the present board re-constructed the company. The re-construction was by the shareholders of the old company, and not by those of the new, or of the new directors. Personally, I had no interest in the old company, but was asked to join the board to try and save the company, and my colleagues did me the honour of electing me chairman. All the figures quoted, therefore, have had nothing to do with me, for I had simply to carry on the new company with the capital that remained after the debts of the old one were paid. Whether those debts were large or small, they were not incurred by us—all we had to do was to pay them. With regard to the concentrates, Col. McCoy guaranteed that they were worth 2,500*l.*

A SHAREHOLDER: Was it a written guarantee?

The CHAIRMAN: It was a guarantee that our solicitors, as well as those of the committee, said would hold good in law. Sufficient shares had not been subscribed to justify the directors in going to allotment, and we said to Col. McCoy—"Will you give us a guarantee as to the amount they are worth, and we will then go to allotment?" Eventually all the shares were subscribed, but the guarantee remained and is on the minute-book, and I have told you what the legal opinion is about it.

COL. MCCOY IS NOT IN THIS COUNTRY,

but the time may come when we may recover the money. Delay has been caused whilst we were awaiting the issue of experiments carried on at a neighbouring mine by the Gold Ores Reduction Co. This report of the committee does not emanate from us, but from the gentlemen you appointed at the last meeting, who had access to every book and paper in our possession, and every opportunity of examining us. We have

MACHINERY ON THE PROPERTY WHICH COST 30,000*l.*,

and $\frac{3}{4}$ mile from the property is this new one, which we think totally alters the complexion of affairs. Upon a favourable report by an experienced agent sent by Messrs. John Taylor and Sons we could have gone to re-construction, and the public would have had confidence. I do not think directors have ever worked harder for a company than we have, or received less remuneration. (Cheers.) If the company were re-constructed the shareholders who did not come in would be in a better position than they possibly can be in by thrusting the affair into liquidation at once. In the former case they might get something, but in the latter their chances of getting anything are slender. The committee can tell you that everything so far as we are concerned has been straightforward and above board. (Cheers.)

A SHAREHOLDER: Are there any outstanding debts?

The CHAIRMAN: I would be willing to guarantee payment of all the debts for 50*l.*, and there would be a surplus on that amount.

A SHAREHOLDER: I quite sympathise with the directors, for when there is no dividend we are apt to feel cross, and you must bear with us and we must bear with you.

The CHAIRMAN: Quite so. I do not think I have shown any feeling. (Cheers.)

Mr. PIKE: The general view seems to be that this company should not be re-constructed.

The CHAIRMAN: It rests with you entirely. You have our recommendation, and you must bear in mind that if you have lost your money so have we.

Mr. MCKEAND: The committee do not feel that there is one atom of censure that can fall upon them. (Cheers.)

THE RESULT.

The CHAIRMAN moved the reception of the committee's report and the thanks of the meeting to those gentlemen, and it was carried.

An amendment to wind-up the company forthwith was then put and carried.

GRACEFUL TRIBUTE TO THE DIRECTORS.

Mr. PIKE: We have a duty to perform. The gentlemanly and mild tone and the good temper shown by the chairman during a somewhat irritating discussion—I do not remember to have seen equalled at any meeting I ever attended. The directors have given their best endeavours to this company, and the honesty of purpose of the chairman has been manifest to us all—it is palpable on his face—that he has had the interests of the shareholders in view all the time. (Cheers.) Previously I offered him my condolence, and now I offer him my respectful sympathy, and in your name I also offer him a vote of thanks for his services to the company, and for the manner in which he has conducted this meeting. (Cheers.)

A SHAREHOLDER: I fully agree with the gentleman who has just spoken that we have all sat under a chairman who has been kind and courteous in every respect.

The motion was carried by acclamation.

The CHAIRMAN (who appeared deeply moved by the kindness of the shareholders) said: On behalf of myself and Mr. Cummings, I beg to thank you most cordially. We have endeavoured to do our duty to the company, and I have never in all my experience worked harder for any concern with which I have been connected than I have for this, but circumstances were against us and we had troubles from the very commencement. As my colleague reminds me, we had to work under an agreement which we did not make, but which we inherited, and which severely handicapped us. The money nominally placed in our hands was not really spent by us, but was largely absorbed by the agreement under which we were bound. We simply had to make the best of a bad position, and that we claim to have done. I am extremely obliged to you for your kindness and courtesy.

THE INTERNATIONAL TRUSTEE, ASSETS, AND DEBENTURE CORPORATION, LIMITED.

A GOOD YEAR YIELDS 8 PER CENT. DIVIDEND—RESOLUTIONS PASSED TO CANCEL UNCALLED CAPITAL WITHOUT DETRIMENT TO THE STABILITY OR CREDIT OF THE CORPORATION.

The annual ordinary general meeting of this corporation was held at Winchester House, Old Broad Street, London, E.C., on Wednesday, Dec. 2, to receive and consider the income and expenditure account for the year ended Oct. 31, 1891, and the balance-sheet at that date; and to receive the reports of the directors and auditors. To sanction the declaration of a dividend. To elect directors. To elect auditors for the ensuing year, and fix their remuneration.

Notice is further given, "That immediately on the conclusion of the above meeting an extraordinary general meeting of the company will be held at the same place, when the subjoined resolutions will be submitted for consideration with the intent that such resolutions, if passed, may be submitted for confirmation at a subsequent extraordinary general meeting to be duly convened and held, so as to render them special resolutions."

RESOLUTIONS.

"1. That the capital of the company be reduced from 1,000,000*l.*, divided into 200 founders' shares of 5*l.* each, and 199,800 ordinary shares of 5*l.* each, to 400,000*l.*, divided into 200 founders' shares of 2*l.* each and 199,800 ordinary shares of 2*l.* each, by reducing the nominal amount of such shares from 5*l.* to 2*l.* each and extinguishing the liability of 3*l.* per share in respect of uncalled capital on such of the said shares as have been issued; and that the memorandum of association of the company be modified accordingly." "2. That the articles of association of the company be altered in manner following:—(a) By substituting in article 8 the figures '400,000*l.*' for '1,000,000*l.*' and '2*l.*' for '5*l.*' (b) By substituting in article 147 the words 'one-tenth' for 'one-thirtieth' and adding after the word 'directors' in the eighth line thereof the words 'then in England.'"

Sir Stuart S. Hogg

presided.

Mr. G. G. WALKER (secretary) read the notice calling the meeting, and the report of directors was taken as read.

The CHAIRMAN said: Gentlemen, on the present occasion the duty which I have to perform is a very favourable one, as I am about to put documents before you which will fully justify the statement made in the report that the business of the company shows very satisfactory progress. The balance-sheet and profit and loss account are the necessary documents upon which you gentlemen and the public base their opinion as to the company and the prospects for the future. As I told you at the last annual meeting, the books of the company are made up, not by our own accountants or any accountants in our employ, but by Messrs. Cooper Brothers, and the accounts before you are audited by your own auditors (Messrs. Welton, Jones and Co.) I think, therefore, that the balance-sheet and the report must be taken to show in

A PLAIN, STRAIGHTFORWARD MANNER

the actual financial position of the company, as the report has been carefully examined by two of the first-class accountants of the City of London. I think that is a very satisfactory feature. You will remember that the last annual meeting was held at the time when the City of London was passing through a very serious period of anxiety. There was a general disturbance in credit, brought about by the financial crisis, which it brought in its wake, and a feeling of distrust reigned among the public generally. There was a very marked depression in the value of most securities quoted on the Stock Exchange owing to this, and, therefore, in the securities held by this company. All the loss on depreciation was shown in the profit and loss account on Oct. 31, 1890, and amply provided. Your directors thought that after a period of depreciation there would come a period of appreciation, and that things would, in a measure, recover themselves. The amount was, therefore, written off in the accounts for that loss. In the autumn of the year now under review, however, we anticipated that there would be a considerable appreciation in the value of all good securities, and confidence would be restored. Unfortunately for us, however, that depreciation which was shown in the accounts on Oct. 31, 1890, was followed by a further fall. And at the end of the second year our position was such that we had to trench very largely upon the hard-earned profits for the purpose of appropriating additional funds to meet the increased depreciation upon the securities we held in Oct., 1890, and to make further provision for subsequent depreciation from that date. Had we sold our securities after providing for the depreciation in Oct., 1890, we should have shown a much better position in the present accounts. We thought, however, at that time, and I do not think we have any reason to blame ourselves, it would not be well to sell the securities at the time of the crisis of

THE PANIC ON THE STOCK EXCHANGE.

(Hear, hear.) We have had no ground of complaint during the past year on the score of not having a considerable show of business. We have had ample opportunities for doing business of every description, but having regard to the state of the markets, we had to be extremely careful, especially in regard to the taking up of new issues, and to the underwriting of businesses. During the past 12 months the directors

have only undertaken two issues, and I am glad to be able to report that these issues were satisfactorily placed with far greater success than could have been anticipated, which, I think, very creditable, having regard to the circumstances of the market, and we have since had every reason to be satisfied with both the businesses which we have undertaken. I will now refer for one moment to the report and accounts before you, which seem to call for a few remarks from me. The accounts are so clearly set out that I have very little explanation to make upon them. Turning to the credit side of the balance-sheet, the first item represents our investments which stand at, after providing for depreciation, 84,562*l.* As I have stated, we have provided for depreciation of all securities which have any market value. All those securities have been written down to the market price on Oct. 31 last. As I wish to be perfectly candid with you I will tell you that there is one security amounting to 10,000*l.*, which at the present time has no market value, and it has not been written down in the same way as the other securities. The next three heads, namely, loans against securities, bills discounted not due, and sundry debtors, amount in all to 129,241*l.*, and are so clear that you will not need any explanation from me. Turning to the other side of the balance-sheet, the first item is capital account, but as I shall have to speak upon that subject at the extraordinary meeting to be held after this one, I will leave the matter until then. No new shares have been issued since the last meeting, and we are still, therefore, unable to apply for a quotation upon the Stock Exchange. Some 11,000 more shares must be placed before we can obtain a quotation, and it is hopeless at the present time to try and issue shares or debentures so long as the present shares issued remain quoted at such a considerable discount. At the present moment I will say nothing more upon that subject, but will leave it to the extraordinary meeting.

ACCOUNTS.

The entry of advances against securities stands at 85,000*l.* These amounts represent the financing facilities obtained from our bankers and others, which we have to avail ourselves of in order to obtain more money to carry on our business with. Our paid-up capital is, as you know, small, and, as no debentures have been issued, it would be difficult to earn a satisfactory dividend if we did not pledge our credit for the purpose of obtaining more money. The next item is sundry creditors, which stands at 19,036*l.* You will doubtless consider this amount very large, and I fully admit that it is so; but let me assure you that it is made up of items of quite an exceptional character which, by force of circumstances, happened to be outstanding at the close of the financial year. Since then the account has been almost completely adjusted, and it now stands at only 2,800*l.* (Cheers.) The gross profit is, as you will see, 18,572*l.* In the previous year the gross profit was shown at 20,393*l.*, but in that total no allowance was made for the depreciation of investments, which was provided for by a cross entry of 5,151*l.* on the debit side of the accounts. This reduced the actual gross profits to 15,247*l.* In the year under review the gross profit was shown, after providing for depreciation, and was 3,325*l.* in excess of the previous year, calculated upon the same basis, which, I think, is a decidedly satisfactory increase. The expenses of management amount to 4,988*l.*, which was a rather large amount, but if the capital of the company was quadrupled the cost of management would be very little more. The directors' fees are 252*l.* in excess of the previous year, which was owing to a percentage having been taken, which they were entitled to under clause 98 of the articles of association, which provided that when the profits of the company exceeded 10,000*l.* the directors were entitled to 10 per cent. upon the excess of that sum. It is always a satisfactory thing, I think, for the shareholders to know that the directors believe in the success of the business under their management, and I might, therefore, mention that the directors since the last meeting have largely increased their holdings. They now hold shares representing about 43,000*l.* of the total capital of the company.

IT IS CLEARLY IN THEIR INTERESTS TO PUSH THE BUSINESS OF THE COMPANY,

and to guard against loss. In conclusion, I will move, "That the report and accounts now submitted be received and adopted," which I trust will receive your unanimous approval. Before sitting down, however, I should like to acknowledge the admirable services of our manager, Mr. P. E. Beachcroft, and our secretary, Mr. G. G. Walker. I now propose the resolution.

Mr. COLIN J. MACKENZIE: I shall be happy to second it.

Mr. BUCK: Is the 10,000*l.* you referred to, Mr. Chairman, a dividend-paying stock?

Major COTTON: What does the 32*l.* for income-tax refer to?

The CHAIRMAN: I have already stated that the 2,000*l.* is a good security; it consists of debentures taken up by this company some two years ago. The company is doing extremely well, and I believe that there is every prospect of it doing better.

THE INTEREST IS 6 PER CENT.,

and has up to the present been regularly paid, and will, I believe, continue. The income-tax is a small amount. We did not pay at first, and our secretary went and enquired into it, but we were ultimately compelled to do so.

The motion was then put and carried.

The CHAIRMAN: I now beg to move that a dividend at the rate of 7 per cent. per annum for the half-year, and a bonus of 1 per cent., making, with the interim dividend paid on Apr. 30, 8 per cent. for the year, and a dividend of 5*l.* 1*l.* 6*d.* per share on the founders' shares, be declared.

Mr. FREDERIC IM THURN seconded the resolution, which was carried unanimously.

Sir Stuart S. Hogg, Mr. H. W. Blake and Mr. F. C. Im Thurn, the retiring directors, were re-elected, and the auditors, Messrs. Welton, Jones and Co., re-appointed.

The SECRETARY then read the notice of the extraordinary meeting and the resolutions as above.

The CHAIRMAN: Gentlemen, the extraordinary meeting has been called for the purpose of obtaining your consent to reduce the nominal capital of the company from one million to 400,000*l.* This will be effected by reducing the nominal value of the shares from 5*l.* to 2*l.* by extinguishing the liability on the shares already issued. The matter has received the consideration of the board for many months. When the prospectus was issued, for the public to subscribe

for shares in the company, it was stated that the board did not intend to call up more than 2*l*. per share, and that working capital should be obtained, when required, by the issue of debentures. To obtain a Stock Exchange quotation it was necessary that two-thirds of the issued capital should be subscribed by the public. Unfortunately, this amount was not obtained by public subscription, and we have still to place 11,000 shares before we can obtain it. It is true that a Stock Exchange quotation does not necessarily add to the money-earning power, but, on the other hand, I think you will agree that a finance company not quoted on the Stock Exchange was not so likely to contract good business as if it were quoted. We want the company to be well known, and the public to see that the shares are quoted, and command a ready market on the Stock Exchange. We have, I think, in the last two years succeeded in making this company fairly well known, and to a certain measure we have succeeded in establishing the credit of our company in the City of London. As evidence of this, I will refer you to the balance-sheet, and you will see the credit we obtain. I think the credit we obtain, compared with the market price of the shares, shows that they are below their intrinsic value. They are now quoted at 25*s*., and it is impossible to hope to raise further shares or debentures whilst they are so low. I think that the fact that the shares, with 2*l*. paid, stand at a discount, is sufficient to bring discredit on the company, and to prevent good business.

THE CHIEF REASON FOR THE LOW PRICE OF THE SHARES
